DEC. 1898.

PACIFIC RURAL PRESS

TWENTY-FOUR PAGE EDITION.

Vol. XL.—No. 1. SAN FRANCISCO, SATURDAY, JULY 5, 1890. DEWEY & CO., Publishers, Office, 220 Market St.

Santa Cruz and Vicinity.

Just at this season the heart of mankind longs for the seaside. Wherever the sunshine falls upon the heated interior regions, the inhabitants who have means and leisure betake themselves to the cool breezes and refreshing waters of the ocean beaches. California has this recourse in common with most other parts of the world, but California has a decided advantage over most other regions in that both summer and winter the vicinity of the ocean is delightful, at least upon the southern half of our shore line, and our charming seaside resorts are good for all the year, though, of course, most sought for while the interior is too hot for comfort.

Santa Cruz has long been known as one of our best all-the-year resorts, but at present seems to be commanding more and more attention, not only as a place of delightful residence, but as the center of a rich, productive region of country. For this reason, we give our first page this week to engravings which contain at least suggestions of the beauties and developments of the district.

GENERAL VIEW OF SANTA CRUZ AND THE BEACH AT SURFSIDE.

Santa Cruz is located at the northern extremity of the Bay of Monterey, a great indentation on the coast of California, about eighty miles south of San Francisco. The features of the locality that appeal to the eye are the beautiful sheet of water mentioned, stretching inland toward the fertile Pajaro valley, sweeping around past where the vision loses itself in the dreamy horizon of the Salinas, and finding its further extremity in the historic Point of Pines at Monterey, thirty miles to the south, as one looks out from Santa Cruz beach along the line where the waters of the bay and the great Pacific Ocean mingle; the shining band of curving beach projecting from under the sheer precipices that bound the cliff drive, and reaching along by the southern slopes of Beach Hill, around to the point where the San Lorenzo river empties its waters into the breakers—as fair a zone of sand as ever tempted the bather to tread its gentle declivity, or held the day-dreamer in the spell of its inrolling waves; the city itself, with the homes and churches, and business and public buildings, of seven thousand people, sitting in an amphitheatre formed by the slopes of the foothills, and traversed by the threading current of the San Lorenzo; and the charming scope of mountain scenery rising back to the summits of the Santa Cruz range in successive plateaus, from the very beach, marked with smooth rounded spurs, beaches as level as the horizon, canyons deep and timbered, and crests and peaks standing aloft thousands of feet under the blue heaven.

Santa Cruz, however, does not lay claim to fame solely upon its climatic conditions and beautiful scenery. Large areas of the surrounding country are devoted to the growth of hay, grain, vegetables and live-stock, and the dairying interests of the county are large and important. The forests of the adjacent Santa Cruz mountains have for many years supplied a wide market with their products. The fame of Santa Cruz mountain fruit and wine is well known. The greatest lime-producing region in the State is within a few miles of Santa Cruz. Bituminous rock is a product of this locality and a source of large revenue. Near the city, in Powder Mill canyon, are the extensive works of one of the oldest and richest powder companies in the country. Tanning leather has been from an early day one of the industries of Santa Cruz. There are two banking houses in the place; two street railways in operation and one projected; ten or twelve hotels; two water supplies, one the property of the city; gas works; two electric-light plants; two daily and two weekly newspapers; a fine system of public schools, led by a first-class high-school department; and churches of all denominations.

HORTICULTURE.

Cherry Culture.

[An essay by W. H. PEPPER of Petaluma, read at the June meeting of the State Horticultural Society

To make cherry-growing successful in my section, it is necessary to comply with certain conditions. Some, which I consider the most important, I will notice:

First—Selection of Suitable Trees.

Cherry trees are now generally propagated on Mazzard seedlings grown in France. They drill the seeds in rows, and at the end of the first season's growth take them up and assort into three or four sizes, viz.: Extras, No. 1, No. 2 and No. 3. They vary all the way in size from that of a small straw to one-half inch at collar. They use the extras at home and export the other grades. If we take the No. 1 grade (about one-fourth inch in diameter at the collar) and plant in a good loamy soil, in the coast and bay counties, and grow without foroing by irrigation, and bud the first summer or graft the first winter, at the end of the second year we have what we call a one-year-old tree; and we should have at least two-thirds of a planting running from three to five feet in hight. We call such a production first-class trees, and not being stimulated by irrigation, they form the terminal bud in the latter part of the summer and early fall and have the balance of the growing season to ripen and harden the wood. This class trees I call suitable to start with in planting a cherry orchard.

On the other hand, if we take the third-class stock mentioned above, plant it in the interior of the State, where the spring growth commences early and the summers are clear and warm, irrigate it thoroughly—by September we will have stock large enough to bud; in all probability larger than the first-class stock grown without irrigation, and if we follow with a plentiful supply of water the second season, we can produce trees two-thirds of them or over ranging from four to six feet in hight, straight stalks and smooth bark, and to the inexperienced eye better looking trees than the [illegible]. But this class of trees would be an unsuitable one to select in planting [illegible]. The round-[illegible] in [illegible] with the wood [illegible] and winter, [illegible] will not bear [illegible] as well as prune we [illegible] designated suitable. They will go back on the [illegible] in their future growth compared with the suitable trees.

The above [illegible] will apply to all of our stone fruits [illegible] peach and peach. Peach [illegible] stocks are propagated by planting the seed in a nursery (where they are to stand until the trees are ready for sale), and budding the first season those which grow large enough. The smaller ones are pulled out and thrown away (or should be); but suppose we take the small ones, about the size of a straw, transplant and force them up to a budding size the second season, force them the third, and we may grow a fine-looking tree in this way, but it would be one that I could not be induced to plant under any consideration. Yet this is precisely what has been done to a large extent in this State with the apricot on Myrobolan plum stock.

In discussing the growing of the cherry, as well as other fruits, I cannot lay too much stress on the quality of the stocks used. I have no objection to irrigated trees from the simple fact of irrigation, for no trees will grow without moisture in the soil; but too much water is generally used, and too late in the season to produce well-ripened wood, suitable for transplanting. If the nurserymen who irrigate will use none but first-class stocks and less water, so as not to produce overgrown trees, they will confer a lasting benefit on their customers.

And now to the fruit-grower let me say: Buy your trees direct from the grower and demand a guarantee that they are grown on first-class stocks; for there is more difference in the growing of a successful and lasting orchard, between trees started on first-class stocks and those on third, than the average fruit-grower is aware of.

Second—Soil and Situation.

The cherry does best in a sandy loam, but it should be of good depth and well drained. In my district, but a small portion of our lands is suitable for cherry-growing. The character of the soil is all right—a sandy loam, good potato soil; but the depth and drainage are not sufficient. I have been growing the cherry for 30 years with varying results. A portion of my first planting proved a success, while other portions were a failure, and in places the trees are all gone.

There is something about our land that I do not fully understand. It seems to be spotted. We may plant say five acres in a body to cherry trees, apparently all of the same quality of land. In the course of two or three years they will commence to die out, and at the end of 12 or 15 years perhaps two-thirds of them will be gone and the balance will be standing in groups here and there over the five acres. To the superficial observer there would appear to be no difference, no reason why the trees should not do as well on one part of the tract as on another.

In digging ditches, I find a difference in the depth and appearance of the soil below. Those spots where the trees die out the most is generally the shallowest, and below of a more grayish cast. I do not believe that it is the shallow soil alone that kills the trees, because I have one spot of near one-half acre at the top of a ridge, sloping to the north (the most favorable position for the cherry) where none of the stone fruits will last for any length of time. I have planted the plum, apricot, peach and cherry. The soil is about as deep as any in the orchard. I do not know for a certainty, but I suspect that alkali has something to do in causing our spotted orchards.

In selecting suitable land in my district for planting the cherry, I would select land sloping north to northeast and on the highest land to be found. I would dig prospect holes in various parts of the tract, and if it proved to be of a less average depth than three feet I would reject it as unsuitable for the cherry.

The Cassidy orchard is located at the top of the high land on the northwest of Petaluma, sloping to the north and east, and the best paying portion of my cherry orchard is located near the top of my highest land, with quite a steep descent to the north; the highest part 150 feet above the lower parts of the place.

Third—The Care of Cherry Trees

After planting is as simple as that of any other deciduous fruit tree. They should be headed low, trained in the vase form and pruned regularly the same as other fruit trees, but do the pruning early; the month of November is the best time to do the work on trees in orchards not irrigated.

I have made a success in the past three years in reheading some old cherry trees. I did the grafting in the month of November, commencing about the first of the month, and cutting away half of the top the first season and the remaining half the second season. This fact satisfies me that the pruning should be done early in the season.

The cherry is well adapted to the cool, moist climate of our coast counties, but the need of thorough drainage is the greatest drawback to cherry-growing in the coast counties.

The cherry can also be grown successfully in the interior of the State, under favorable conditions. Marysville is one among the hottest places in the State. The old G. G. Briggs cherry [illegible] on the Yuba river above that place was [illegible] of the most successful cherry orchards ever planted in the State until the river filled [illegible] debris from the mines and even [illegible] [illegible] to low-water mark, no hardpan [illegible] to prevent the free passage of water up or down, and when the trees were dormant the water in the river would generally be below the level of the roots. The river would rise from the melting snows in the mountains and bring the water to a higher level in midsummer, supplying the trees all the moisture needed, and then recede in August, which would give the ground a chance to dry out somewhat, and allow the trees to ripen and harden the new growth.

Experience of a Veteran Fruit-Grower.

EDITORS PRESS:—The following points were gained from G. W. Thissell of far-famed Pleasant Valley, who showed the writer an orchard of apricot trees on peach root of his own planting 37 years old, now bearing a crop of fruit that would average 400 pounds to the tree. Not by any means have all of his trees done as well. An orchard of several thousand of a variety of apricot named after the owner himself has failed to bear for several years and has just been grafted to Clyman plum and Tragedy prunes. Mr. Thissell thinks the reason so many trees have failed to bear lately is because of a mysterious mildew or fungus, and that the lime, salt and sulphur wash is a cure. He has great hopes that such can be restored after all by using this wash, but he has still more hopes that the large and productive early plums that are now ready for Eastern shipment will pay. He has also great faith in the Tragedy as a shipping prune and a good drier if any are to spare.

Mr. Thissell claims that a bluestone wash of one pound to ten gallons of water is a certain remedy for curl-leaf of the peach.

Mr. Thissell has made a great study of the habits of the codlin moth. He says they began to hatch out April 15th this year, and are likely to continue hatching out every day until October 15th. They have three principal broods, to be sure, but stragglers keep coming along every day. Three moths can increase to a *million* in one season under favorable circumstance. Before laying eggs the moths emerge with their new wings from their hiding-places. To pass the larval state they crawl into some place where they will be in the dark and out of the way of birds. This they find under the bark of the tree and in places where the tree has been injured or knots or holes are to be found. Mr. Thissell's trap provides a nice hiding-place. He nails a band of burlap around the tree. This he protects with a cage made from a strip of wire gauze securely tacked above and below. When the little fellow is only five-eighths of an inch long and has no wings he passes through easily. When he has grown to seven eighths of an inch and has nice large wings he escapes not at all. The plan is so simple and easy that people feel much as Naaman did when ordered to bathe in the Jordan as a cure for leprosy. They want something more elaborate and expensive. It is not enough that it cleans the orchard at an expense of 3 to 5 cents per tree. There is too little scientific mystery about it, and no cost in proportion to the nature of the evil.

In drying as well as in canning or shipping fruit it is necessary to have it of uniform size. It is hard to do this accurately by hand, and still harder to find the time when you are hurrying off several carloads of fruit daily. To meet this point, Mr. Thissell has experimented for several years until at last he has a cushioned hopper that feeds over a series of gradually diverging rods sloping just enough to have fruit roll freely. A little below is a cushioned platform. This grades accurately and avoids bruising. But the main feature is a series of rods that are so driven by cams as to slowly revolve in half-circles between the rods of the main platform and keep the fruit from lodging between the main rods. Three men work this machine, and have graded as high as three 50-pound boxes of peaches or apricots per minute. This would run up to five or six carloads per day if you could ever get that much fruit at any one place to grade. It is intended to make still further improvements before putting the machine on the market.

Mr. Thissell represents the Japs employed in the orchards as obliging, neat, pleasant and one-third more efficient than the same number of Chinese. Besides this they leave half their wages in the town near where they work, for food and clothing.

F. S. C.

THE IRRIGATOR.

Government Artesian Well Work.

WASHINGTON, June 24.—The Senate Committee on Irrigation and Reclamation of Arid Lands held a session this morning to hear the chief engineer and the agent in charge of the artesian wells investigation. The acting Secretary of Agriculture, Mr. Willets, was present, and also President McLouth of the South Dakota [illegible] College. Senators Stewart, [illegible] and Sanders of the [illegible] ice.

Col. F. S. Nett[illegible] chief engineer, whose field of investigation has required 12,000 miles of traveling the past 12 weeks, read a brief report covering the work performed. The Dakota artesian basin is known to be the largest in the world, so far as at present developed. The northern limit extends westwardly, geologically speaking, as far as Fort Benton and Great Falls, in Eastern Montana. The formation is cretaceous. The water-bearing sandstone lies between two impermeable rocks, but nowhere has the sandstone been penetrated. Geologists unite in declaring that the James valley is not necessarily a controlling center for the basin. Water may, and doubtless will, be found over an area east of it at least 500 miles, and north and south through both the Dakotas.

The central region, which includes Western Kansas and Nebraska, Eastern Colorado and New Mexico, shows several important local artesian basins and a vast area of large springs and of seepage waters obtained from the drainage of foothills and frontal Rockies and of the great river valleys that cross the central plains.

The eastern part of New Mexico is remarkable for a great number of living springs, some of which are of great power and size, which extend into Texas, along the western portion of the Panhandle region and across the Pecos and Colorado river valleys, south by east. The Dakotas and Western Texas hold the large well basins.

Col. Littleton declared that the small appropriation of $20,000 was wisely expended and had already produced good results. Acting Secretary Willets urged a conservative policy in the matter of further appropriations, so as to enable the Department of Agriculture to properly handle the important work.

Special Agent R. J. Hinton, in general charge of the investigation, gave a brief summary of the work and its results. In South Dakota, he said, 148 artesian wells have been recorded, and 16 in North Dakota. As many more minor wells are reported as flowing to the surface in a smaller drift basin. Several hundred such wells are recorded in the northeastern part of North Dakota—that is, in the Red river basin.

In Kansas and Nebraska 84 artesian wells are reported and 280 bored wells that flow to the surface or very near it, several hundred other wells and a large number of springs and a great area of undersheet water supplies.

Colorado reports over 200 bored wells. Inside the limits of Denver of those formerly flowing about 20 still flow. Outside of the city in the basin there are 231 flowing wells. At Colorado Springs and Pueblo there are 20 of an artesian character; elsewhere as many more, while west of the foothills in the St. Louis valley from 3000 to 5000 wells are reported. About 200 farmers are using their waters to irrigate at least 10,000 acres.

The use of artesian water for irrigation is extending. In Texas between the 97th degree and 100th degree of west longitude at least 650 artesian wells are reported. Between 100 degrees and the 103d degree there are 300 wells reported, and west of the 103 d degree as many more. The other bored wells in the territory named that are reported upon by Field Agent Roessler number several thousand.

Moody was instructed by the committee to report an amendment to the Sundry Civil Appropriation bill providing for an appropriation of $200,000 for an irrigation survey and $250,000 for an artesian wells investigation, including the boring of experimental wells, all to be expended under the direction of the Secretary of Agriculture.

THE VINEYARD.

Professor Dowlen's Report on the Vine Disease.

Prof. Ethelbert Dowlen, an expert vigneron, appointed by J. de Barth Shorb, one of the viticultural commissioners, to investigate the history and causes of the vine disease in California, has submitted his report to the commissioners. The professor among other things says:

Last September I sent out 500 circulars in the name of the commissioners, asking for information in regard to the disease in the various districts affected. To these I received 101 answers from 36 localities, and referring to 46 varieties of grapes.

The disease first became prominent at Anaheim in 1884, and spread from there to Los Angeles, and then north and east during 1885, 1886 and 1887. In 1889 it took a jump and appeared around San Diego. In 1887 and 1889 it appeared as far north as Napa, but did no damage.

The first varieties to suffer were the Mission and Muscat, next the Burger, Mataro and Trousseau. The Gariguan and Grenade suffered slightly, the Bruc Alba scarcely at all, while the Lenoir, Gamay, Tunturia and Folle Blanche entirely escaped.

Neither irrigation, time, pruning or climate seemed to make any difference to the disease, but that is now disproved by the experience of the winter just past, which, wet as it was, leaves the vines in excellent condition.

The disease first manifests itself in the leaves. Yellow spots appear and spread until the entire leaf becomes yellow and dead. In the second year the fruit dries up and the leaves shrivel as from heavy frost. In the third year the growth is much reduced and the vine dies. Some vines live as long as five years, but three is usually the limit. Some Mataro vines have been known to die in numbers within six months from being first attacked.

What causes the disease has not yet been discovered. Bacteria and fungi have been found, but it cannot be told whether they are a cause or an effect. No insects that could have caused the disease have been found. It is a fortunate thing for Fresno county that the disease has not reached there.

A disease much like this has been known in Sicily and Italy for 20 years, and is there known as the Mal Nero. But some of the symptoms observed here are so different from this that the diseases are not the same, or that we have more than one kind of disease here in California. Most of the symptoms that do not correspond to those of Mal Nero, might come under the head of Folletage, another Italian disease. But nothing is certain as yet in this respect.

Last spring we planted a large number of diseased cuttings in hothouses owned by the commission of Los Angeles. Half of them we treated with different preparations of Ongerth's powder, and the other half we let alone. In the fall the untreated ones were dead, while nearly all the others were healthy. Later we experimented in a vineyard of 1000 acres, making three applications of the powder. Each application checked the disease, but in the fall it returned again.

Present prospects are very good. The growth was late in starting, but has been excellent and the crop will probably be large. The hot weather of the next two months may alter this, however, by bringing the disease out in full force again.

A Decision on Grape Buying Contracts.

The Napa *Journal* gives the following concerning a court decision affecting contracts for sale of fruit which will interest our readers:

In 1880, G. Groezinger agreed to buy from T. B. Hopper and Hopper agreed to sell to Groezinger all the grapes to be grown by Hopper upon his farm near Yountville for ten years. It was agreed that the grapes should contain 22 per cent sugar and the price was to be $25 per ton. For five years the parties kept the contract and then Hopper sold his farm to H. M. La Rue, at the same time assigning his rights under the contract.

In 1886, La Rue raised upon the place about 600 tons of grapes. Groezinger refused to take any part of them. La Rue then boxed and shipped the grapes to the city, and sold them at a price which, after deducting the boxing and freight, was $2473.20 less than Groezinger was bound to pay for them.

On the crops of 1887 the damage to La Rue

was $5512.48. La Rue brought two suits. Both were tried before Judge Crouch and judgment entered against Groezinger for the amounts named. An appeal was taken to the Supreme Court, where on Friday the first case was decided in favor of La Rue. Commissioner Hayne writing the opinion. The point upon which Groezinger relied was that Hopper had no right to assign the contract. Judge Crouch decided that he had and the Supreme Court sustained his decision. In the judgment in the first case the jury gave La Rue the amount of freight paid for his whole crop.

But as Groezinger was only obliged to take grapes of 22 per cent sugar, and this reduced the judgment in the first case $217 87, but it was affirmed in all other respects.

The one case practically decides all the cases and Groezinger will be out on the four crops, 1886, 1887, 1888 and 1889, between $15,000 and $20 000.

Dennis Spencer and A. C. Catlin were La Rue's attorneys, F. E. Johnson and Judge E W. McKinstry representing Groezinger.

THE PUBLIC LANDS.

The Arid-Land Muddle.

EDITORS PRESS:—In a recent editorial on the effect which the Arid Land Act is having on the settlement of the arid regions, you invite contributions from those who have a better knowledge of the subject than you possess. As I was the first person who interested people in this portion of the State in taking up land in one of the desert sections of this coast, with a view to growing early fruit in a locality which my early geography portrayed as a country uninhabitable by other than Indians, and as I have been practically ruled out of the fruit-growers' ranks by the passage of said Act, I respond to your request for further light.

Mohawk valley, in Yuma county, Arizona, contains about 30,000 acres of sediment land, and was thrown open to settlement about 1885, after its forfeiture as a land grant. A ditch company was organized without capital, with 100,000 shares of stock of the par value of $1 each. Fifty thousand shares of this stock were placed on the market for working capital under a proposition that for every two and a half shares purchased water rights would be given for an acre of land in the ratio of one-third of an inch to the acre.

This was a pretty liberal proposition in a country where the average rainfall was only two inches a year. Four hundred dollars of stock brought with it a water-right for 160 acres of land where the Muscat grape ripens four weeks ahead of California, and from a knowledge of these facts it wasn't long before every acre of this valley was taken up, mostly by people who intended planting orchards and vineyards, or growing alfalfa. But all who made entries did not buy water-rights, fearing that the original company would not succeed, and owing principally to that fact and some errors in management when the three years limit of the Desert-land Act came around there was no water to prove up with. The original entryman had no alternative but to relinquish his filing, those who had water-rights selling out in some instances as high as $10 an acre, the purchaser trusting to a completion of the ditch a year or so hence.

The purchasers filed their entries at the Tucson Land Office, and many of them commenced improving their land, clearing it of brush and constructing ditches, so as to have everything ready to put out trees and vines the moment the water was available. This was only a few weeks subsequent to the passage of the Arid Land bill, and in total ignorance of any feature of it which would vitiate entries on land which had been filed on three years previously under the Desert Act. It was known that desert lands were withdrawn from entry where reservoir sites were to be selected, but even a survey had not been made here, and no one imagined that the object of the Act was to rob people of land which had already been improved to some extent, and over $50,000 expended in securing an irrigation supply which would render a tract 20 miles long independent of a reservoir. The district land office continued to receive filings on this land, and this encouraged residents of this city and other places to go on and improve. Those whose holdings were near the head-gate could get water, and sent in horses, wagons and all necessary farm implements under a heavy railway tariff. They sowed barley, wheat and alfalfa, and put out quite an area of fruit trees. Some of these have proved up on their lands, paid the Government price and hold their final receipts. Now the Attorney General of the United States says a patent cannot be issued, owing to a clause in the Arid Land bill, which reserves from settlement all desert lands.

The Mohawk canal is now completed, and hundreds of acres of land lie under it with the clearing all done and lateral ditches ready to distribute the water. Some of it is fenced and leveled. The owners have paid $2 50 an acre to the canal company and several more to original entry men for water-rights, which under the by-laws must be applied to some specified tract within one year from canal completion, or become forfeit. Through a fake in the wording of the reservation clause, the Interior department refuses to allow these water rights to be attached, although both land and water are paid for; over $25,000 have been paid out by residents of Sacramento alone for these water-rights, which is now being jeopardized by the dilatoriness of Congress in rectifying what all recognize as simply a mistake in the wording of a bill. The object of the Arid Land bill was to withdraw from settlement desert lands which had *not* been filed on, pending the selection of reservoir sites; not land which had previously been entered and diligent efforts made to reclaim, but which had not fully succeeded as early as desired, owing to financial difficulties alone. Fortunately some of our R presentatives are above taking snap judgment on energetic settlers of our desert lands for purposes which are not difficult to fathom, and there is a fair prospect of the passage of an amendment which will establish an equitable adjustment of the matter.

S. S SOUTHWORTH.

Sacramento, June 24 90.

Relief from the Arid Land Law.

EDITORS PRESS:—In answer to your request for communications on the subject of how to provide relief from the objectionable parts of the Arid Land law of October, 1888, I will say that the law practically reserves all desert land from entry or settlement except such as are so peculiarly situated that they can never be reclaimed through the agency of reservoirs. It does not actually reserve such lands; it renders filing on them of such doubtful validity as to be very undesirable, and, to say the least, risky.

As the law reads now, it would not be safe to file on any desert land unless one first explored all the surrounding elevations and water supplies to be sure there was no possibility of its being subject to benefit from a future reservoir.

The land offices are to this day receiving filings on desert land, and many are making filings with the idea of reclaiming their lands independently of any reservoirs, and it would seem that they should be assured that it will not be within the power of Major Powell or his successor to say hereafter that this land lies within a district liable to be benefited by possible (no matter how improbable) reservoirs.

Unmistakably the intention of the Act of October, 1888 was to prevent land reclaimable only by the agency of reservoirs from being gobbled up by speculators who would depend on the Government showing such land to be so reclaimable. An exact construction of the Act does not say that only such lands as are reclaimable in no other way than by reservoirs shall be reserved, but might as easily be construed as embracing all lands, no matter how otherwise reclaimed, provided the Chief of the Survey reports them capable of being irrigated through the agency of reservoirs. *The true relief, then, would seem to be to make the law read so that any land which could be proven to the satisfaction of the Land Department of the Government to have been reclaimed independently of any reservoir would not be subject to the reserve clause of the Arid Land law of October, 1888.*

I have assumed as the basis of my suggestions that the Desert Land Act is a wise law. Many seem to think that the Arid Land bill will prevent speculators from taking up land inasmuch as it reserves the land entirely and provides that if it is ever thrown on the market it shall be in 80-acre tracts to actual settlers. If the Desert Land, Homestead, Pre-emption and Timber Culture Acts are not wise the proper mode of procedure would be to amend or repeal these acts. This would eliminate any discussion from this standpoint. The Desert Land Act allows any citizen to file on 640 acres of unproductive, desert land, and after he has proven to the satisfaction of the Government that he has conducted water on it in sufficient quantity and of permanent supply so as to make it habitable and productive it allows him to purchase it of the Government at a low price. The Homestead, Pre-emption and Timber Culture Acts allow a citizen to take up 160 acres under each Act. The Arid Land law does not abolish these various Acts but restricts their application so that one may take up but 80 acres by actual settlement on desert land. It does not restrict him to 80 acres of fertile land in a rainy region. Surely here is an inconsistency. We are restricted to 80 acres where we have to build our own reservoirs, canals, etc., and are allowed 160 acres if we go where reservoirs are not needed and nature has reclaimed the land. Eighty acres in Arizona with water to be provided at the expense of the settler may be better than 160 acres of our California soil, with rain provided free, but it would be hard to convince the average Californian of the fact. DOUGLAS A. LINDLEY

Sacramento.

A BILL TO RESTORE IRRIGABLE LANDS.—It was telegraphed from Washington, June 22d, that Senator Paddock to-day reported from the Committee on Public Lands favorably a substitute for the bill to restore the irrigable lands of the United States to settlement. The substitute repeals so much of the Act of October 12, 1888, as reserves from entry, settlement, or occupancy of public lands, except sites for reservoirs and rights of way for canals and ditches.

COMPOUND LOCOMOTIVES, burning petroleum, are now being introduced upon Russian railroads.

THE DAIRY.

Feeding for Milk in Southern California.

A Los Angeles county dairyman, signing himself G. E. P., writes to the *Country Gentleman* as follows:

Please give ration for 60 cows, Holstein, Jersey, Shorthorn, and grade, all ages and stages of freshness; in prime condition. A large flow of good milk (at lowest cost) desired. Have on hand 32 tons wild oat ensilage; 50 tons No. 1 wild oat hay, $6; 20 tons old alfalfa hay, fair quality, $5; 30 tons new alfalfa, mixed with wild oats, $4; light or heavy bran (wheat) $17; wheat shorts, $20; cornmeal, $25; linseed meal, $45; No. 1 malt sprouts, $5. Have contract for brewers' grains at $2.50 per load of 2750 pounds; must take full load every or every other day. Brewery brews three times a week. They store the grains in iron tank, which keeps it fairly well, but it frequently turns slightly sour soon after hauling. Wish to make ensilage last 60 days, will then have 10 acres of sugar-cane in condition to feed. Can cut part of hay. Can buy No. 1 alfalfa at $10 per ton, No. 1 barley hay at $8, whole barley at $22, second quality wheat at $25. Can grind it coarse myself or have it ground fine at $2 per ton. I now feed 50 pounds grains, 3 pounds sprouts, 6 pounds light bran, three-fourths pound O. P. linseed meal, 10 pounds alfalfa and oat hay uncut; mix sprouts and bran together dry, soak and mix with brewers' grains. Feed oil cake by measure. Cows have three hours in pasture on alfileria and bur clover (dry). Cows are averaging three gallons per day, but the percentage of cream is not as large as I wish.

Prof. E. W. Stewart, who is an acknowledged authority on animal feeding, makes the following reply to the above propositions:

G. E P. enumerates a profusion of foods for his 60 cows. His malt sprouts, if No. 1, are very low at $5; his brewers' grains are also very low in price. It would be well for him, if he can, to get his brewers' grains fresh before being put into the tank. In using brewers' grains and malt sprouts, he does not need any linseed meal to balance his ration. The best hay raised in California is alfalfa, but it should be cut early in first blossom, and nicely cured. It is then one of the very best foundations of a milk ration. It is worth 50 per cent more than any other hay he mentions.

2. The ration which he feeds is a very strong one. The following would be a good combination: 18 pounds wild oat ensilage, 10 pounds old alfalfa, or new alfalfa and oat hay; 40 pounds brewers' grains, 4 pounds malt sprouts, 6 pounds heavy bran. In analytical formula, this shows the following digestible nutrients, in pounds:

	Albuminoids.	Carbohydrates.	Fat.
18 lbs. wild oat ensilage	0.21	2.16	0.07
10 lbs. old alfalfa hay	0.60	3.80	0.17
40 lbs. brewers' grains	1.62	3.80	0.56
4 lbs. malt sprouts	0.75	2.11	0.04
6 lbs. heavy bran	0.60	2.79	0.16
Total	3.78	14.86	0.98

Nutritive ratio, 1 to 4.4. This is a strong and cheap ration. It is presumed that the wild oat ensilage was cut into the silo. This alfalfa hay should also be cut and mixed with the ensilage. The malt sprouts and the wheat bran should be mixed with the brewers' grains and then this mixed with the ensilage and cut hay. This ration should be fed one-half morning and evening, and with the pasturage should produce rich milk; but the real richness of the milk cannot be tested accurately by percentage of cream. Let a portion of average milk be weighed, set, the cream raised, and then churned to butter and weighed. This will give the amount of milk required for a pound of butter, which is the only accurate test of the richness of milk.

3. When his sugar-cane is in proper condition to feed green, let it be run through the cutter, and then a ration may be made up as follows: 30 pounds cut sugar-cane, 6 pounds of best alfalfa hay, 40 pounds brewers' grains, 4 pounds malt sprouts, 4 pounds heavy bran, 2 pounds cornmeal; all mixed together as before directed. This will be a slight improvement on the other ration and cost about the same.

If P. examines carefully the analyzed formula, he will find that malt sprouts, according to the nutriment contained, is the cheapest food in the list, and brewers' grains next, but these are both unbalanced foods, and cannot properly be used in much larger proportion than given in these rations. P. is so fortunately situated that with these two strongly nitrogenous and very cheap foods he can easily balance any kind of fodder, however poor in albuminoids, and make a productive milk ration. The rations here considered, at his prices, can cost only about 15 cents per day, and must leave a fine net profit.

ORIGIN OF FLAVOR IN BUTTER.—Several Danish chemists and analysts have been endeavoring to find out the origin of flavor in butter, which, according to some, is held to be caused by bacteria—whether the flavor be that of turnips, oily, fishy, bitter or tallowy. Prof. Storch has found large numbers of bacteria of a particular variety in oily butters, though he was not able to produce oily butters by the introduction of these bacteria into cream. In other cases he found bacteria which did not differ materially from the normal acid-producing bacteria, which when present in large quantities in cream, produced butter of a tallowy flavor. Similar results were obtained by Prof. Jensen; while Prof. Fjard found that butter from a farm where turnips were not used for the cows had a turnipy flavor, and it is believed by the investigators that this flavor is derived from the presence of a certain kind of bacteria.

SHEEP AND WOOL.

An East Oregon Sheep Ranch.

A correspondent of the *Oregonian*, in a letter from Vale, describes a recent visit to a sheep ranch in Malheur county. After an exhilarating stage-drive of 35 miles from Vale to the Alder creek flat, the account proceeds:

From the postoffice at Westfall I found it necessary to walk six miles to the sheep ranch on Clover creek. Clover creek is so called because there is no clover within a day's ride of it. The walk was due to the fact that the country is a horse heaven and at the cross-roads store there was, of course, no horse that could be hired for love or money by the wayfarer. The road led me through an abandoned *coulee* over to Clover creek, descending to which and then ascending it, I found myself at the sheep ranch.

Here the shearing of sheep was in full blast. The crest of the western hills threw a long shadow in the valley that curiously enough fell nearly parallel with an irrigating ditch on that side of the ranch. The heat of the day was over and the men in the pens were making the shears clip with a home stretch energy. They get seven cents a fleece, and work from daylight until dark. No cry for eight hours among them. In fact one of them from Gascony divulged the secret that in his youth he worked for a sculptor, clipping Naiads and Graces out of marble, and was so enamored of the work of making the pulseless marble come to the breathing state that he had to quit. The trouble with those who do work that they delight in is to jar loose from it.

I looked around among the shearing pens for Alessandro, but of course Ally wasn't there, but Ramona was at the table when supper was announced by the cook, a strapping big trapper (only a cook *pro hac vice*). The cook was quite as interesting as Ramona. To butcher a sheep, he held the wether between his knees, drew a knife about his neck and twisting the head off he flung it on the ground, disemboweled the sheep and threw it in a bucket of ice-cold water to keep the meat from tasting like mutton. (To suggest to him that a better plan would be to go off and kill a pig if he really wished the flesh to taste unlike mutton, would have probed a stratum of ignorant prejudice inherited from ancestors of ages long ago betid, so I declined.)

His pastry the shearers all praised—and well they did, for it was sweetened sour dough bread (the leaven mentioned in the Bible) and infused with a handful of canary-bird or hemp seeds, or some other kind of seeds for sale by bird fanciers.

Ramona, after supper and when the young moon had arisen, and we were all sitting on the front porch listening to the foothill mocking-bird, stole into the parlor and began playing on a piano, and after a start which seemed to split the notes into a complicated jangle of musical sounds, she sang. The mocking-bird stopped and the babbling of Clover creek.

Next morning we went afield to see how the grass grew. The hills were waving with bunchgrass and the flowers that grow between loaded the air with perfume.

Mr. Coyote disturbed our pastoral musings by tripping across an alfalfa field with a spring chicken in his mouth. Flying back to the house I seized a rifle, Winchester repeating, 45-70, set trigger and Lyman sights, and hastened back. He had gone into the sagebrush outside the field, and stopped once or twice to look back. I thought he was too far away, and waited until he ran up on a sloping rock and sat down, when L. cried: "Hold that sight on the wretch and shoot!" He was at least 400 yards away, but when the rifle cracked, the ball hit between his front legs, which rather surprised him; and then it split off a portion of the soft rock and threw it up against his belly with such force that he went crazy and came running back into the field, where the dogs chewed him to pieces. The chicken came out alive, and will make a good pullet yet.

On the hills the shepherd watched his grazing flock. The lambs, not old enough to graze, had sought the shadow of a sagebrush, and the dogs were equally incautious of the future.

A rancho, which costs little or nothing, which will produce 100 tons of hay and an unlimited range presented gratis by Uncle Sam, which will keep sheep fat throughout the year, with an exception falling about once in five years, ought to enable a flock-master here to compete in raising wool with any country under the sun.

He has, besides, good water, plenty of wood, a lovely and health-giving climate, a house covered with trailing roses, brook trout, mountain sheep or venison, and cheap books. * * * The greater portion of all the land in Malheur county is pastoral, but the people accustomed to hard lines—where one's father's position or family influence or the fortuitous concourse of events keep modest merit from attaining its place on the neck of the unworthy—have not yet been able, despite their arduous efforts, to assimilate themselves to the ideal conditions of their environment. It takes time.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

State Grange Excursion Rates.

TO PATRONS OF HUSBANDRY :—The Southern Pacific Company has agreed to give reduced rates to all who attend the State Grange at Watsonville (commencing Tuesday, October 7th), from all parts of California, over all their lines, according to the following terms and regulations :

Patrons will purchase first-class [unlimited] tickets from their local stations on the railroad lines, being particular to *take a receipt from the station agent*, giving date, name of station and amount paid for the ticket to Watsonville,

Upon application to the Secretary at the State Grange, a certificate will be furnished, stating that the member of the Order has attended the State Grange and is entitled to purchase a return ticket from the Watsonville station agent at one-third unlimited first-class fare. The surrender to the agent of this certificate and the receipt above named will enable the holder to secure a home-bound ticket at one-third price, making the cost of the round trip two-thirds the regular rate.

A. T. DEWEY, Sec'y S. G. of Cal.

San Francisco, June 28, '90.

Our Country's Day.

Patrons, let the boys and girls have a jubilee on the Fourth. Take a good slice for yourselves. The Husbandmen and Matrons of America are noted for working too hard and allowing themselves too little recreation. We are glad to see that Patrons in different places are going to make a merry time of the Fourth.

The Grange should be an instrument for raising higher the standard of American patriotism. Let the spirit of liberty root deeper and branch wider in the next generation than in the past.

Parents, revive the memory and tell the children of your happy experiences on the Fourth in your younger days and some of the old stories that brightened and inspired your own minds and hearts in the long ago.

Let every man, woman and child in this broad free land be gloriously happy and rejoice in the rich heritage secured for us by our grand old Revolutionary sires. Let us try to be worthy of the hardships and sacrifices undergone for us by those never-to-be-forgotten heroes.

In sincere love of country and with heartfelt prayers for her true advancement, and pure aspirations for a higher Americanism, let us go forward, never backward.

Floral and Children's Days.

Stockton Grange, No. 70, is alive, up and doing. We had a large and enthusiastic open meeting on our Floral Day, June 7th. The hall was very prettily decorated with flowers. We had visitors from Lodi, Woodbridge and Waterloo Granges. Our Flora presided with her usual ability. The entertainment consisted of music, vocal and instrumental, readings and recitations, which passed off very pleasantly and were apparently enjoyed by all present.

Next Saturday, July 5th, is set for Children's Day. We will have an open meeting, and a good program—to give a surprise to the young folks—is being prepared by the committee.

Our sister Granges and their friends are cordially invited to meet with us on the occasion. The meeting will be called to order at 1:30 P. M. Fraternally. H. T. ROOT, Sec'y.

Stockton, June 29, '90.

Prepare for Watsonville.

The next session of the State Grange at Watsonville, we expect will be one of the largest and most delightful of the grand gatherings of the P. of H. of California. We expect it will also prove the most useful and important of any. The social, literary and musical inducements for every Patron to be present will certainly be great. Some of these, with others, will be named in our future issues.

THE N. Y. *Commercial Advertiser* points out one indirect effect of the agitation for ballot reform which is very suggestive. The political organizations in the State of New York, headed by Tammany Hall, are holding meetings almost nightly for the purpose of instructing their followers in the workings of the law, and the same thing is happening in other States, notably in Massachusetts, Rhode Island and Indiana. The illiterate voter has public attention called to his illiteracy by being compelled to summon one of the officers of election to his aid, and this is already acting as a powerful spur to acquiring at least the art of being able to read and sign one's name.

Touching Elbows with P. of H.

The purposes of the Farmers' and Laborers' Union of America—now so active in Missouri—are stated by the St. Louis *Journal of Agriculture* in what reads like a good Grange document. To the question "What are we organized for?" the *Journal* makes answer:

It was in order that we might benefit ourselves socially, morally and financially.

How do we benefit ourselves socially? Why, by coming together weekly, semi-monthly, or monthly, as the case may be, exchanging ideas, planning what is best for the members and the country at large, discussing matters for our mutual good, and teaching the farmer and laborer to think more for himself and depend less upon the doctors, lawyers, colonels, captains, and more especially the politicians, to think for him. If we have not as much talent we certainly have as much brains and honesty among the farmers and laborers of this country as in any other class or profession.

How are we to benefit ourselves morally? We don't want any selfish, grasping, vicious characters in our order. If we have such we should try to convince them of their wrong, teach them that man must not live for himself alone, though it is proper to look out for number one. We must not expect all men to think as we do in every particular and condemn them because they do not, for we may be wrong instead of they.

And now as to the point of financial benefit, I will tell what we have done and what we expect to do in that line. We have started a co-operative store at this place, not with the intention of breaking down any other merchant, but expecting to benefit ourselves. My motto is to do ourselves all the good and everybody else as little harm as possible. While we are helping ourselves we are also helping everybody else within trading distance of us, whether they trade with us or somebody else. Merchants in the vicinity are coming down in the price of their goods to a price at which they said they could not, and would not sell before we started. Some say the store is a benefit to the rich and not the poor. I claim the reverse to be the case, as unfortunately for the poor man he must have the cash or he cannot get the goods and if he must have the cash why the cheaper he gets the goods the farther his money will go.

It was predicted by some of the overwise that wholesale merchants would not sell to us. What upon earth are the goods manufactured for but to sell, and what better customer on the globe than the cash purchaser? That did not scare us at all.

What we expect to do is to formulate a plan by which our County Union will be enabled to make arrangements whereby we can get farm supplies of all kinds, such as machinery, plows, drills, wagons, etc., at living prices. A certain machine agent said to me that neither manufacturers nor their agents would sell to us. Pray tell me whom they will sell to if not to the farmers? I suppose he thought to the town people, and what can they do with a binder, mower, or plow?

BALLOT REFORM.—The rapidity with which the Australian ballot system is spreading is very significant; it is a conflagration started simultaneously at a thousand points. In Louisiana, where reform has crept along with crippled wing—crippled by the debauchery of the lottery gamble—the Knights of Labor are clamoring for it; the same in Illinois, where hitherto there has been no organized effort on its behalf. In Pennsylvania a convention of miners heads a long declaration of grievances with a demand for its adoption. High-water mark is reached in the mass meeting called at Cooper Union by the County Democracy of New York, the most prominently advertised feature of which was an exhibition of the methods of voting under the new ballot law. All this is very significant as showing that there is a *spontaneous* eagerness to seek in the ballot-box the eradication of evils universally admitted. For just so far as this eagerness is *spontaneous*, having its rise in the anxiety of an awakened people to shake off the yoke of a plutocracy that is grinding it to powder is the movement full of hope.—*L. A. Weekly Nationalist.*

A RURAL FOURTH.—A delightful "Independence Day" is anticipated at Oak Grove on the Fourth, by Temescal Grange, which invites the Patrons of Husbandry, Farmers, Pioneers, Horticulturists and Florists of Alameda, Contra Costa and neighboring counties (including Oakland and San Francisco), and their families and friends, to join in a patriotic picnic at Oak Grove, on the California & Nevada R. R., 15 miles from Oakland. The Temescal brass band of ten or more pieces has been engaged. The train leaves the depot, near Emery's, on the cable-street car line, San Pablo Ave., Oakland, at 9:45 A. M. Round-trip tickets 75 cents; children 25 cents.

BRO. J. V. WEBSTER has promised to address Carpinteria Grange on the 17th inst., and we have the best reasons for expecting to secure most of his remarks for publication. Give him a good turnout.

'A Footprint" Erased.

Bro. Webster, Master of Creston Grange, emphatically remarks as follows concerning the article headed "Tenderfoot Interrogates Creston," published in our last issue and signed "A Footprint·"

The manifest purpose of its writing is not to gain information on the subjects mentioned, but to satisfy a scurrilous, carping disposition apparent in every line. Why "A Footprint" uses a *nom de plume* instead of subscribing his real name is easily discerned. In light literature and in "airy nothings" fictitious names frequently appear, but when great absorbing questions are discussed and individuals or associations are spitefully held up for ridicule, no one but a light-minded, cowardly nonentity ever signs any other than his own name. Sometimes the name of the writer is unnecessary to measure the man, and "Footprint's" communication is one of that order. If language means anything, he is evidently opposed to many reforms demanded by the people. If he be a member of our Order in good standing, manifestly that good standing is maintained chiefly for the purpose of obtaining the information desired by the spy and informer, for the intent and purport of the article clearly indicates antagonism to several of the leading questions of the times to which the Grange is irrevocably committed.

Had the writer confined his interrogations to the resolutions of Creston Grange, they might have been answered without reservation; but I do not feel called upon, in this connection, to consider carping questions in no wise related to the subjects treated in said Grange resolutions. I shall therefore confine my remarks to the questions which seem to me pertinent to the inquiry.

"Footprint" starts out with the inquiry :

How many voters of the United States do you believe know what are the duties of a senator?

The inference from this question is clear. Manifestly the writer does not believe that the citizens of the United States are sufficiently informed to trust the election of United States Senators to a direct vote of the people, but rather to the corrupt methods now in vogue by legislature manipulators.

This same contempt for popular intelligence crops out again in the following:

How many voters are such judges of character that they would be able to judge from a man's record whether he would be likely to perform the duties of a senator wisely and efficiently?

From these extracts it is apparent that, if "Footprint" is an American citizen and a Granger, his room in the Republic would be of more value than his personal presence.

Are you willing to have *your* lands "condemned and appropriated," and the Government production instituted? If not, will you explain why you think it just to condemn and appropriate the Union and Central Pacific Railroads and have Government distribution instituted?

As "Footprint" very well knows, under the law of eminent domain the Government has the undisputed right to condemn and appropriate any private or corporate property which may be deemed necessary to promote the public welfare. If Congress considers my lands necessary for a public use, it has the undoubted right to condemn and appropriate them for such use, on paying a fair consideration for the property so taken. Under the same rule of law, the Government has the right to condemn and appropriate any or all railroads and telegraph lines; and especially is this the case with the Union and Central Pacific roads, because they have forfeited every right possessed under the laws of their creation.

In support of this position, I beg leave to copy some sentences used in the report of the Railroad Commission, appointed by President Cleveland, as provided under an Act of Congress, approved March 3, 1887, entitled "An Act authorizing an investigation of the books and accounts and methods of railroads which have received aid from the United States and other purposes." Commissioner Pattison said that the actual cost of the construction of said lines and their branches was, in round numbers, $96,000,000, and the same roads were aided by the Government in lands, stocks and bonds to the enormous extent of $447,729,470.54—an amount nearly five times as great as the whole cost of their construction. After reciting these facts, the report of Commissioner Pattison continues:

The original purpose of Congress, as set forth in the Act of July 1, 1862, in granting subsidies for the construction of the Union and Central Pacific railroads and their branches was "to promote the public interest," and the companies were made trustees for that purpose, but the public interest has been subordinated by these companies to the stockholder's interest. Nearly every obligation which these companies assumed under the laws of the United States, or as common carriers, has been violated. Their management has been a national disgrace since the date of their inception; they have been conducted upon a purely speculative basis. Their permanent prosperity has been lost sight of, while their managers greedily strove for temporary advantage. They squandered millions of their money to protect their territorial claims, while expending other millions to foment encroachments upon the territory claimed by other companies. They constituted themselves the arbitrators of trade. They charged all the traffic would bear, and appropriated a share of the profits of every industry by charging the greater part of the difference between the actual cost of production and the piece of the article in the market. They discriminated between individuals and companies, between localities and between articles. They destroyed possible competitors and they built up particular localities to the injury of other localities, until matters reached such a pass that no man dared engage in any business in which transportation largely entered without first soliciting and obtaining the permission of a railroad manager. They exerted a terrorism over merchants and over communities. They participated in election contests. In their relations to the Government, they resorted to every device their ingenuity could invent in their efforts to evade the plain requirements of the law.

These are some of the reasons given by the Commissioner why the roads should be condemned and appropriated by the Government. They have certainly forfeited their rights under their charters. But waiving the rights of the people, certainly acquired because of the failure of these companies to keep faith with the Government, the urgency of the case is such that no extension of time as proposed by Congress for the payment of the $120,000,000, due the Government from these companies, should be made. In five years' time the bonds will mature, and if not paid the roads will inevitably fall to the Government, upon its paying the first mortgage bonds, amounting to $27,000,000, voted and allowed the companies by a corrupt and venal Congress.

The chief and vital reason why said roads should be condemned and appropriated by the Government is that such action will open the way for the *only* apparent solution of the transportation question. In addition to these roads, the Government must own and operate a continuance of the line through to Boston, via Chicago and New York. With this line, and one starting at Richmond, Va., and running through the Gulf States via the "Sunset Route" to San Francisco or San Diego, the Government will regulate and control the carrying trade of the United States; for all other roads will have either to adopt the Government rates or become feeders of the Government roads.

Two or three telegraph lines across the continent will likewise have to be controlled and operated by the Government for like reasons.

Are you in favor of paying extra taxes to buy the telegraph plants and franchises, or would you have the Government ruin the owners of the present system by competing lines?

In answer to this inquiry, I have to say that the Government should, if possible at a fair rate, acquire control of two or three prominent lines across the continent, already constructed. If not obtainable at fair rates, the Government should construct its own lines, for this necessary regulation and control of railroads and telegraphs will inevitably come sooner or later, "Footprint" to the contrary notwithstanding.

As to "ruining the owners of the present system by competing lines," it does not necessarily follow, for the Government would assuredly establish a fair rate for the service rendered, both by telegraph and railroad, and fair rates ruin no one. The purpose in Government ownership is simply to *protect its citizens from extortion.* There is no disposition to ruin even Jay Gould, who runs and controls the telegraph system to the ruin of everybody who dares dispute his right to regulate and control.

How many tons of unused silver already coined do you think there are in the United States Treasury vaults, and in the vaults of the various banks; and how many millions of dollars of unused silver certificates are there in the aforesaid vaults and stowed away in private unused tea-kettles, old socks and such private receptacles?

The coined silver in circulation in the United States is about $100,000,000. That in public and private repositories is estimated at $300,000,000, nearly all of which is represented by silver certificates which pass as currently as gold everywhere; and if there are any of them stowed away in "unused tea-kettles and old socks," it is because the owner thereof is aware of the fact that they have a fixed and secure value.

If "Footprint" had an inch of breadth between his eyes, he would be able to discover the fact that nine-tenths of the people of the United States are either in favor of the free coinage of silver, or at least the *maximum* coinage of $4,000,000 monthly, as provided for under the Bland-Allison Act. The House of Representatives has conceded more than this in a bill recently passed by that body, and the U. S Senate two weeks since passed a Free-Coinage Act.

In the face of all these facts, manifest to every intelligent mind, the conviction must be irresistible that "Footprint" (of "Tenderfoot Grange") is of an age too tender, or mentally so unfortunate, as to be unable to grasp the plainest and most evident of propositions.

If two men may buy as low as they can, and sell as high as they can, one wagon-load of the produce of the chief industries of the nation, why may not two other men buy and sell, on similar terms, a million wagon-loads? How many million wagon-loads can they buy and sell without constituting themselves a trust?

In answer to this question I will simply say that the amount of any product bought and sold does not necessarily constitute a "trust." The more of any product bought and sold in *the open market in competition with others in the same line of business,* the less the current price on such product. In this manner two men could buy and sell as many million loads of produce as they wished, and have no connection with a trust. But if two men, or any any other number, should buy a million loads

In digging ditches, I find a difference in the | wings he passes through easily. When he has

of flour, and that million loads should constitute all the flour in the United States, and after getting control of the supply these men should demand $20 a barrel for the flour, that kind of an operation would be deemed and treated as a trust—such a one, in fact, as would justify hanging the trustees and the division of their supply pro rata among the starving millions made desperate by such a soulless combine.

J. V WEBSTER.

THE GRANGE PRESS.—Bro. J. J. Woodman, after a long experience in Grange work, having occupied every position from high private to National Master says: "I am satisfied that more good can be accomplished through the influence of the Grange press, and at less expense than by any other means." This is the unanimous verdict, but what troubles the Grange press is to know why it is not acted upon.—*Grange Bulletin.*

Seriously, we too!—PACIFIC RURAL PRESS.

OREGON.

Surprise Grange.

EDITORS PRESS:—The meeting of June 19th was one of much interest.

The W. Master being absent, Bro. I. M. Wagner was called to the chair.

Applications for membership were received from two of our noble farmers; first and second degrees were conferred on two, and third and fourth degrees on a class of six.

During the quarter ending June 30th Surprise has increased its membership 24. Many of that number are excellent singers, and as we have just received a dozen "National Grange Choir" song-books, our hall now rings with melody.

Matters of a business character were discussed with great interest by all present, and finally a plan was decided upon. In all, we think it one of the best day's work of the year.

C. T. M., Sec'y.

Past S. G. L., Simpson Scores Two!

Though our "old warhorse" John Simpson has changed from Lecturer to Deputy, his labors are by no means finished. Less than one week after the close of the late session of the O. S. G., Bro. Simpson and Deputy White organized a new Grange in Polk county, and now comes the cheering news that the Grange at Coburg, Lane county, is reorganized with 25 members.

Over 400 Granges are already added to the roll-call for 1890, Pennsylvania being still in the lead. With two such workers as Simpson and Holder in the field, Oregon ought to stand only second. Then there is S. M., Hayes always at the front strong and ready to help.

May the good work go on, and may this year's Deputies and Lecturer double and quadruple the work of 1889.

Sherman Grange.

EDITORS PRESS:—Sherman Grange held a called meeting Saturday, June 21st.

The Committee on Good of the Order submitted a fine program for the next meeting.

Worthy State Lecturer Holder being called upon, made a very good speech on co-operation and Grange principles.

Bro. F. Pike of Wheat Grange spoke on the fire-insurance question.

Bro. Holder is now on his way through Wasco county and will not reach home for some time yet, as he will make a thorough canvass of that county. He is a zealous Granger and a fine talker and Lecturer. Eastern Oregon is fortunate in his election. PATRON.

Moro, Oregon, June 23, 1890.

GOOD NEWS FROM UMATILLA. — Union Grange, No. 244, comes to the front with a membership of 42. Now will not Sec'y Turner send us a line occasionally from this new and promising Grange?

SURPRISE GRANGE is thinking of trying to work up a Business Council for Marion county. If conducted on the same business principles and with like zeal as the L C. C, no better step for the advance of the Grange of Marion county could be taken; but *it takes work* to make the council "go," and business must be the principal factor. I. L. H.

JORDAN VALLEY GRANGE has a membership of 86. Its meetings are well attended, interesting and instructive. Let us hear again, Bro. Huber.

WASHINGTON.

Rambles Among the Granges.

EDITORS PRESS:—It is a long time since I reported from Washington. I hope you will excuse my shortcomings, as there are more able correspondents writing to your valuable journal.

The State Grange of Washington had a very profitable session—one calculated, I think, to build up the Order in this State. I became acquainted with your noble California treasurer on wings, Bro. Cressey, who was the life of the S. G. Brother Simpson and Sister Hilleary also did good work for the RURAL PRESS.

On Friday, I attended a picnic at Fourth Plain, and heard that veteran Patron, Brother Hare of Hillsborough, right nobly instruct the farmers in the duty they owe to their family, their country and themselves; also good words from Brother Russell, W. M. S. G. I only wished Brother Cressey was there, and can assure him, from the appearance of the dinner-table that his vest would not have been too loose for him on his way home and there would be no need for him to educate his daugher to fill him up on French recipes as we had something more substantial than paper. The Patrons of Clarke Co. are determined to make the Grange a success. God bless them!

On Saturday, I attended a business meeting of the mercantile association at Washougal, which elected a board of directors and adjourned to meet at the call of the chairman, Brother Russell.

June 14th, I visited Cape Horn Grange by invitation of the W. L. and found them in good working order with a class of two for the third and fourth degrees, one for first degree and one application. This Grange is alive and well up in Grange work, with all the field work practised. They are to celebrate our National Independence Day, the proceeds going to build them a hall and when they say they want a hall, that means they are going to have one. This is due to the sisters; they hold the handle of the broom and right nobly do they use it. I see but one thing wanting in this Grange—they do not write for the PRESS and let us know what they are doing! Cape Horn has doubled its membership in one year and is not going to stop until every boy and girl over 14 years old is in the Grange.

Now what is the matter with Bro. Nevin? This is his own Grange and no one writing for the RURAL PRESS! Come, brother! Wake up and do some work in your own Grange, and have some of your members correspond for the RURAL. Brothers and sisters of Cape Horn! Do not keep your good work hidden under the bushel; let it shine, so that others will profit by your example.

As you say, Mr. Editor, build solid as you go. Yes, this is the counsel of our noble Master. The State Lecturer, also, told me he thought it was lost time and money to organize 20 Granges and let ten die. We must hold all we organize, and if the brothers and sisters visit neighboring Granges more, such fraternal meetings will have a good effect, and revive drooping members.

I want to visit some more Granges and write you more anon. Fraternally yours, in F. H. and C. with F. A WANDERING JEW.

June 25, 1890.

[We thank the Wanderer for this interesting letter, and hope he will write again; also, that others will be moved by his good counsel and example to "go and do likewise." In order to make a good paper for Patrons, we must needs have the help of Patrons' pens. Let us hear from *your* Grange, too.—EDS.]

Not Transferable.

[Written by the PRESS by A. T. DAVIDSON.]

A pretty little maiden was dusting with brush and broom,
Looking here and there, exploring, in her auntie's room,
Being very, very busy, as such little ladies are;
She chanced on something curious as she removed a chair,
And she placed it underneath her uncle's picture in comparable—
It was an old, old ticket, and read thus: "Not transferable."

Little maiden, in your glee, you have given a good motto,
Which we may well adopt and place in every niche and grotto;
There above the fire-place hang it as a chart,
And then enshrine it deeper in recesses of the heart.
So if a friend should ask us to do something we ought not to,
We'll in a firm but kindly way just point them to our motto.

When the pearly gates shall open to that blessed land above,
For us to enter in where all is happiness and love,
The King of Outer Darkness there his last, last plea will make
For us to come and dwell beside his fiery brimstone lake—
Will ask for us most spitefully in angry tone and terrible—
Please God we then be suffered to make answer: "Not transferable."

Fitting Herself In.

"Well, there's one thing certain," said Alice Barnes, "I'm not likely to get much unless I get it for myself; and there's another thing very uncertain, and that is how I'm to do it. I've thought and thought about it, and the more I think, I don't see my way. All the wise folks nowadays are writing and talking about girls doing for themselves. They say, Find out what you can do best, and then do it. But I can't do anything best—that is, any of the things that people can make a living at. I can't teach, and I can't write stories, nor do astonishing fancy-work. I can only do the common, every-day things; and father wouldn't let me go away from home to do those, even if I wanted to, which I don't."

Alice was situated exactly as a great many young girls find themselves. The oldest girl in a large family with a slender income, she had picked up a moderate amount of schooling and had done plenty of work. She could play a little, paint a little, and sew and cook a great deal. The younger children, for whom she had given willing service, were now growing old enough to assume their own shares of the household burdens; and Alice began to find time to think of things which she wanted, and things which she would like to do if only she knew how.

"I want more books, and I want more clothes; and father has enough to do without my looking to him. O dear! I wish I had been brought up to something regular to do; but how *could* I be?"

With a tender thought of the toilworn mother whose right hand she had been all through these years of struggle, she took up a monthly magazine which had strayed into her way.

"'Around the Fireside.' This is just the kind of a thing I'd like to take. It's full of good talk about girls helping themselves, and ten to one, before the year was out I might get some suggestion that would show me a way; but I couldn't afford it any more than I could fly."

In turning over the advertising pages, her eye fell upon the terms for subscription.

"'And one to the getter-up of the club.' There, now, I might try that. I could do any amount of walking about and talking. Five subscriptions and then I should have it. It's no harm trying, any way."

To think and to act meant one with Alice, and it was not long before she was entering the house of one of her neighbors in the little rambling country town.

"May I come in?" she asked, pausing at the door.

"Oh, dear, yes, of course you can, Miss Alice, if you'll only excuse the mess I'm in. I set aside all my other work to-day to see if I couldn't fix over the children's last summer hats—millinery costs so much, you know, when there's four of 'em, and myself, too, though everybody knows I don't spend much on myself. But the girls is gettin' a little fussy since they've grown so big, and it's hard to suit 'em any more; and the same way with their dresses. They want more fixings about 'em, ain't satisfied no more with Jane Ann Perry's work—that just does plain sewing—but thinks they ought to have a reg'lar dressmaker. At a dollar a day! Now look here at this."

With all her sympathy for Mrs. Drake's perplexities, Alice could not help smiling at her wooden arrangement of ribbons and flowers.

"Let me see if I could twist that into any better shape," she said, taking the hat out of Mrs. Drake's hands.

"Oh, you're so good, Miss Alice. There now—if you haven't the real milliner touch. Some folks can do anything they sets their hands to. I ain't a bit of knack myself."

"Oh, I've had to have a knack," said Alice, laughing. "I have a tribe at home to do for. Mother never has time for such work, like you. But don't you think some book like this would help you on such things, Mrs. Drake? It gives a lot of information about doing things at home."

"Bless your heart, Miss Alice, I never have a moment for reading, even if I could afford the money, and I can't. But I do hope you'll have good luck. My! ain't you made that hat look just like a new one!"

"Yes, that looks something like," said a half-grown girl just then entering the room with a look of great discontent on her pretty face. "I ain't going to wear this dress to school any more, mother."

"Why not?" asked Mrs. Drake.

"The girls laugh at it. They say that looping up in the back looks like a plowed field."

"Dear me! I worked and fussed half a day over that," said Mrs. Drake, looking ruefully at the expanse of snarled-up puffs. "I couldn't make head or tail of how that bought pattern meant 'em to go."

"Rip them out, Katie," said Alice, "and I can drape it for you in a few moments, if you'll let me."

"Now, did you ever!" exclaimed Mrs. Drake, as under Alice's deft fingers a few graceful loopings took the place of the puffs. Then, with directions for a little pressing, she said good-by, amid a shower of admiring thanks from mother and daughter.

Alice took her way to the house of young Mrs. Garde, who was one of her good friends.

"Yes, Alice, I'll take the book 'Around the Fireside.' I'd take a dozen books if they would show me any way to make things a little smoother around my fireside. My hands are so tied with these two children that I have no time to see to things in the kitchen; and, if I had, I don't believe things would be much better. We're living the forlornest kind of a life. Frank is half-sick most of the time, and I'm beginning to think it's the wretched cooking. How can a man live on poor bread all the time and be well? It's sour one week and heavy the next, and that's about all the variety we have."

"Too bad," said Alice. "I wish with all my heart I could get you a good girl."

"You can't. I've searched the entire country. Mother has sent two or three out from the city, but they always get homesick and go back. I see nothing but to resign ourselves to the prospect of being hopeless dyspeptics. It makes me feel so good for-nothing, too. You will never make such a failure when you come to the real duties of life."

"Don't talk so," said Alice, shaking her head. "Why, I was just making up my mind that I am good for nothing. I can do plenty of things, but they're not the kind that I can make my living by, unless I go regularly and hire out, and I don't want to do that so long as I have a good home."

"Of course not. It seems a pity," said Mrs. Garde with a sigh, "that just such abilities as yours couldn't be fitted in somehow to places where they are needed."

"Oh, don't put a book at me," said the mistress of the next house at which Alice called.

"Why, Mrs. Warner, what is the matter?" asked Alice in concern, as that lady, after placing a chair for her, sat down and burst into tears.

"Oh, it's my eyes troubling me again. Your book would do me no good unless you came and read it to me. And books are not the worst part of it, although it's hard enough not to be able to read. But look at that mending-basket, piled up with two weeks' mending. I try to do a little bit at a time, but it hurts my eyes so I can't go on, and the doctor says they will never get well unless I give them perfect rest. Why," she said, half laughing, "I had to pin the children's clothes on this morning where the buttons were off."

"Never mind the pins, but do take care of your eyes," said Alice. "It is real trouble, and I am so sorry for you. Let me read you one of these stories. Or perhaps you would rather I did some of this mending. Do let me help you a little. It wouldn't take me very long to do that whole pile."

"Of course it wouldn't, you are so quick and handy. How fortunate you are, Alice—eyes and strength, and so bright and smart. You can do anything you want to do. Yes, you may do it if—if you'll let me pay you for it. And you don't know what blessed help it will be. No; you shan't touch them unless you'll agree to it."

"It is just the kind of work you can't get anybody to do," continued Mrs. Warner. Alice laughingly consented, and settled herself at work. "I sent for Sarah Crandall, the other day, to come and do up odds and ends for me—that's what I must get somebody to do for a while now. And she sent word that she'd come in three weeks. She's always engaged ahead. What is the reason, I wonder, that you can't find folks to do the little useful things just when you need them most?"

Alice walked home with some new ideas in her brain.

"I haven't made up my book club, but I wonder if I haven't done better than that. I believe it's just as they say, there's enough to do of what I can do if it only could be fitted in. I'm going to try if I can't fit myself in somehow."

A week later she said:

"Mother, I'm going to work."

"I suppose so. You're always at work."

"But I mean I'm going to earn my own living."

"Not away from home?"

"Well, partly."

"Alice, you can't. Haven't I often said you shouldn't go away as long as there is a home for you?"

"Don't be frightened, mother," said Alice, laughing. "My goings won't be serious. I'm going two days in the week to Mrs. Garde's to bake and to wind up her housekeeping so that it will run smoothly between whiles. I'm going one day every week to Mrs. Warner's to mend her up, and half a day to Mrs. Drake's whenever she wants me to be hat-trimmer, dress-draper and toucher-up in general. Do you think that what I can do at home the rest of the time will pay for my board and lodging?"

"I think it will."

"What I earn outside will clothe me and a good deal more. So I am self-supporting; for, when any of these are done with me, there will surely be others to whom I can fit in my work."—*S. Layre in Chr. Register.*

America's National Bird.

A Plea for the Hen.

"I could never understand," remarked Uncle Abner, when the conversation turned on National emblems, "why the eagle was selected as the ornithological representative of the United States."

"Why, is it not the king of birds?" asked Nephew James.

"A king it may be," assented Abner, "if by a king we mean something that lives on the labor of others and doesn't earn its salt, but we haven't much use for such monarchs in this country. The eagle soars toward the sun, the orators tell us, and looks the orb of day in the eye. There they leave him. They do not watch him as he comes back, wondering if some humble subject has prepared breakfast for him. He sees a patient and enterprising fish-hawk hovering near the surface of the lake, and he waits until the hawk has secured a nice, fat fish, when Mr. Eagle swoops down, taps Mr. Fish-hawk on the shoulder, and says: 'Beg pardon, but that's the very fish I had selected for my breakfast.' The hawk drops it and the eagle breaks his fast. That is the kind of a bird he is, and he makes me tired."

"What bird would you prefer as the American emblem?" asked two or three at once.

"The hen is my choice—the patient, uncomplaining North American hen of commerce. The energetic way in which she scratches for a living is exactly typical of the people of this country, and when she has, by diligent perseverance, accumulated a store of eggs for the purpose of running opposition to the patent incubator, and that is broken up by boys or by housewives, she goes to work at another just as patiently as an American goes into business again before he is well through with his first failure. And then her persistence! Boys, did you ever try to set a hen when her mind was made up not to set, or endeavor to dissuade her from setting when her conscience told her that spring chickens were needed? If you have ever done either, you will understand something of the hen's claims to represent this active, restless, progressive country. She is energy and clear grit all through, and she is, on account of these characteristics, entitled to supplant the eagle in the armorial bearing of this country. Besides the appropriateness of this on account of her industrious habits, the adoption of the hen as the national bird would help to keep in the minds of the American people two incidents related of men intimately connected with the discovery of this continent and with the formation of this great nation."

"What are they, uncle?"

"Columbus' egg and Washington's little hatch-it."—*Jury*

IS PURELY SCIENTIFIC TRAINING DESIRABLE? Men of purely scientific training are of less assistance in practical affairs than their education would suggest. The man of science has little faith in new methods or new inventions. He is seldom an originator. His knowledge is that of tradition. He frequently scouts at new ideas as impracticable, because they are not recognized in the books. The inventor seldom travels in the same road with the scientist. The inventor needs to leave the beaten path and press on to the unexplored forest of possibilities. He is often handicapped if he endeavors to conform to rules already laid down by pure science. Few college-bred men have proved inventors. Original thought, bold action, patient persistence, knowledge of nature's laws, are prime factors in the successful career of the inventor.

A correspondent who has been reading Stanley's letters asks how to pronounce "Mpwapwa." Take a mouthful of hot coffee, and try to say "papa" without swallowing it.—*Quincy (Ill.) Whig.*

A Chat with Girls.

[Written for the RURAL PRESS by MAUDE S. PRABLEE.]

Nothing appeals to me more strongly than girlhood; and just because of the things I missed knowing in my own girlhood, I extend a hand of friendship to you all.

Some of you have busy, weary mothers who have never learned the blessedness of living *with* you instead of *for* you; some of you have none, and to you all my heart goes out in warmest affection and sympathy. Not for what you are now, for that I may not know, but for what you may be, for the possibilities you hold in your hands.

I hope you will understand me if I speak to you first of your personal appearance.

I know "the spirit is more than the raiment," and yet as in a difficult and intricate problem the first self-evident facts are used as the foundation, so must we give due deference to the "outward and visible sign."

I would not have you overnice or fastidious, but I *would* wish you to be dainty. Why? Because it is elevating, refining and ennobling; because it will cultivate your ideas to a liking of beautiful things—things that we may have in this world if we will.

Because, too, of the benefits others will receive, even if unconsciously, from seeing often before them a bright, tidy, dainty little woman, who is desirous of making the most of what she has.

Scrupulously perform each duty of the toilet necessary to make you absolutely cleanly, you will soon grow to enjoy the incomparable comfort of knowing you are clean throughout, from dainty ears to feet, and from undergarments to pocket handkerchief.

Do not fancy that one bath a week with change of clothing at that time is sufficient to keep your body "God's temple," pure and sweet. It matters not how varied your duties are, or how busy you must be with household cares, you may, by rising five minutes earlier in the morning, *make* time to enable you to take a quick sponge bath in cold water. If you begin it in the summer weather and rub quickly and well after this hasty bath, you may safely continue it in all but the coldest weather. This with the hot bath at least once a week will be enough to keep your body sweet and clean.

Be neat, too, about your own private room. Take pride in knowing that closets and bureau drawers will at any time bear close inspection.

In buying new clothing make a strong effort to get the best, even if you have to darn and mend the old a little longer to wait for more money. You will find it the best economy in the end.

A strong point is to select pretty and becoming colors. So much depends on a girl's taste in dress that it is really worth while to attach a little importance to it.

No one denies that personal beauty appeals very strongly to most natures; and it is only natural and right that girls should desire to look as well as may be.

God made the world beautiful; let us follow in His footsteps by showing a proper amount of interest, untinged with vanity, in our personal appearance.

If the dress is but calico, it may be durable, and of fast and becoming colors. Then, if daintily and becomingly made, the effect is all that need be desired. The same degree is necessary in working with better and richer materials. Be sure to have them becoming, well made and of durable material.

Next to your own neat personal appearance, I would place the adornment of your home, that your surroundings may be a fitting setting to your own sunny, unselfish disposition—the disposition you must strive for and carefully cultivate.

However plain your furniture, you may at least have each article scrupulously clean and arranged so as to appear to the best advantage.

Let the warm sunshine stream in through shining glass, and if possible linger lovingly on pots and hanging baskets of growing flowers. They can be coaxed to grow from tiny slips, which even if you have to buy, will be worth far more to you than their cost.

Often you get some to start with from an obliging friend, and can afterward add to your stock by exchanging with friends who have different varieties. All such things lend an air of artistic refinement to even the plainest and poorest room.

Arrange your pictures to the best advantage, and drape your curtains in the prettiest way you have seen. Many tidies, picture scarfs and table covers are cheap and durable. Have the best you can afford, and if necessary, limit the number to one of a kind; do not make the mistake of filling the room with cheap, unserviceable finery.

Take pains, too, to have the colors harmonize. Just as in the matter of dress, you should choose things this winter that will blend or contrast well with what you have left to wear of last winter's wardrobe, so when you buy anything new for the house, have it of a color and texture that will compare favorably with what is already within the rooms.

Do not be discouraged or dissatisfied with your surroundings. Make the best you can of them, and over all, let fall the sunshiny grace of a happy, contented spirit.

A Hungry Census Man.

After a ride of about forty miles one day last week, Census-taker M. drove up to a farmhouse near this city, hitched his horse, went in and proceeded to take the census of the family. He questioned the lady of the house as follows:

What is your name and where were you born?
Are you married or an old maid forlorn?
What do you think you'll get for your corn?
Are you the head of your "household" or no?
Have you a daughter? Has she a beau?
Do you expect to reap what you sow?
How many pigs? And four-wheeled rigs?
And pounds of figs? And cattle (meat)?
Bushels of wheat? And meat to eat?
Does your farm produce any apple juice?
How many sheep have you got in pens?
How many pullets, roosters and hens?
How many eggs do the whole of them lay?
What do you call a ton of hay?
What is the length of your working day?
How many loads has your wagon hauled?
How many times has a book-agent called?
Is your grandmother living? if she isn't, why not?
What do you owe on the ten-acre lot?
What is the cost of your fence and rails?
How many times have you been in jail?

"Is that all?" inquired the lady.

"Oh, no," said M.; "I overlooked one question. How many pies have you?"

"Six," replied the lady.

"Well, give me one," said M. as he grabbed his book and hat and ran out of the door in time to miss the stick of stovewood which was hurled at him.—*Woodland Mail*

FALSE PHILANTHROPHY.—One of the strange inconsistencies of human nature is that men prefer to do good through the medium of benevolence rather than through that of justice. It is not uncommon to find the seller exciting every energy to get more than a fair price for his goods, and the buyer putting forth equal efforts to obtain them for less than their true value, and yet both subsequently uniting to found some charitable institution, to uphold a church to promote a reform, to relieve distress. There are men who will grind the faces of the poor in the morning in their business and in the afternoon subscribe a good round sum to provide them with food and shelter. There are woman both wealthy and of moderate means, who will drive a sharp and hard bargain and will give only the smallest possible sum to those whom they employ to work for them, yet who will willingly give far more than they thus save when a tale of distress arouses their sympathies and excites their pity. Schemes of philanthrony cannot atone for acts of injustice.—*N. Y. Ledger.*

YOUNG FOLKS' COLUMN.

The Dove and the Magpie

EDITORS PRESS:—"Chris," a German orchardist, who is employed by one of our neighbors, told our little ones a legend of the mourning dove which I had never heard before, and which I am sure would be enjoyed by some of the RURAL'S young folks. Chris is full of quaint legends and weird stories which he has brought from the old country, and which are the common property of the children in that land so celebrated for its folk-lore, and whose literature is so rich in story and ballad. Who has not read the delightful stories of Hans Christian Andersen—about the Marsh King's Daughter, the Goblin and the Huckster, and all the others? The children of that country are the possessors of many fine stories which have never been printed in English, and I shall probably, some time, give some more of Chris's versions, if the young folks like the story of the Dove and the Magpie.

The dove could never build a comfortable nest, and had long wished for one like the well-constructed and softly padded thing which her neighbor, the magpie, enjoyed. Though naturally timid, she at last summoned up courage to ask the magpie how she did it. So the magpie bargained with the dove to show her how to build a nest, if the dove would give her in return a fine, fat cow. Although the dove was very much attached to her cow, which was her only possession, she at last consented to give her up in consideration for a fine, warm nest. The magpie, which is known the world over for its craftiness, began a nest for the dove, and when it had made a foundation of a few sticks, demanded possession of the cow as an evidence of good faith on the part of the dove. But as soon as the cow was delivered up the magpie drove her away and left the dove without a cow and with a very poor apology for a nest. The poor dove has ever since been mourning for her "fine, fat coo-oo-coo-oo."

The magpie also has the reputation of being a great tattler, and of meddling with other people's affairs. She may enjoy the fat cow if she can, but she must endure the knowledge that she is universally despised, while the gentle dove is loved by everybody.

Creston. LADY INEZ.

The Advantages of a Country Boy.

I have always found it an advantage to me that part of my boyhood was spent on a farm, or rather on several farms. There are so many little domestic arts that a farmer boy learns and to which the town-bred lad is a stranger. One day, when there happened to be nobody else left on the place who could milk the cow, and the prospect was that my grandchildren would not have a cup of milk for supper, I was glad to show the skill in that line I had acquired on an Indiana farm. My neighbor, Mrs. Murphy, passing by, exclaimed: "Och, now, Mr. Eggleston, and it isn't ivery jintleman from the city that could lind a hand and milk a cow that way!"

I remember to have read of two great poets, Wordsworth and Southey, who once went on an excursion with their publisher, Mr. Cave. All three of them tried in vain to pull the collar off of their horse, but it seemed to them impossible to get it off without taking the horse's head along with it. They finally concluded that the horse's head had swelled after the collar was put on. But a milkmaid came up and turned the collar round, and so pulled it off to the surprise of the great men, who had not thought of that plan.

There is no reason why farm life should not be favorable to education. That which makes an educated man is the habit of thinking about what he sees, hears or reads. Reading alone will not do it. There were many men working in the stone-quarry with Hugh Miller; but Hugh was the only one of them that thought about anything beyond his wages and his dinner. He studied to find out about the fossil animals which he saw in the rocks under his hand. By the time he had worked in the quarry 16 years, he had become a great geologist, and the world delighted to read the books which he wrote.

There was once living in Pennsylvania, before the revolution, a Quaker farmer by the name of John Bartram. One day in plowing he plucked a violet and pulled it apart. "Here," he said, "are the various parts of this flower, the names of which I do not know, nor their uses. It seems a shame that I have walked over violets and other flowers all my life without knowing anything about them." He then made up his mind that he would study botany. But as all the books on botany at that time were in Latin he had to begin by studying Latin grammar. Nevertheless, he became a very famous botanist before he died, and he remained to his death a very good farmer, and did much to improve the methods of farming in his time.—*E. Eggleston, in American Agriculturist.*

MR. OLDS: Will you be my wife? Miss Youngs: No, but I—— Mr. Olds: Don't say you will be a sister to me. Miss Youngs: I wasn't going to. I was just going to say that I wouldn't mind being a widow to you.—*Puck.*

GOOD HEALTH.

The Liver.

The liver is the largest gland of the body. It carries on several separate and distinct lines of work. We are best acquainted with its work of making bile, which is largely, if not entirely, made up of waste elements taken from the blood. Bile is a golden-yellowish fluid, but when vomited from the stomach it is green, and many people suppose that this is its natural color. The change is due to the action of the gastric juice.

It is an excretory and digestive fluid, converting fats which are not acted upon in the stomach, but in the small intestine, into an emulsion. Bile also acts upon the mucous surfaces, stimulating the absorption of food after it is digested.

The digestive fluid of the stomach is acid, the bile is alkaline, and the two being poured into the small intestine simultaneously with the food, prevent an irritating action of the gastric juice. Pure gastric juice is so strong an acid that it will irritate the hand if it is placed upon it. Were not the stomach protected in a peculiar manner, it would itself be digested with the food, as often happens in cases of sudden death after a person has just eaten a hearty meal.

Bile stimulates peristaltic action, by which means the food is moved along through the entire length of the intestines. It is an antiseptic, and preserves the food from fermentation and decay in its slow progress through the 25 feet of alimentary canal. This is one of its most important uses. With the food is always taken a quantity of germs, and they would surely induce fermentation but for this preventive agent. About 14 hours are required for the complete process of digestion from the time food enters the stomach until it is entirely absorbed. If a single one of these several offices be absent or interfered with, it seriously affects the health of the individual.

The liver itself is a digestive agent. All the digested food, with the exception of a small portion of the fat, is absorbed and carried by the portal vein to the liver. The heart pumps blood direct into the general circulation, but all of it which goes to the stomach, spleen and other abdominal viscera is carried to the liver before it is allowed to go into the general circulation. Thus the liver acts as a filter for the blood received through the portal circulation and completes the work of digestion. The stomach is only the ante-chamber where the process of digestion is commenced.

There are 25 feet of intestines, and the work of these upon the food is vastly more important than that of the stomach. When the stomach and intestines have done all that they can do to the food, its nourishment is expended and it is carried off as waste matter by the kidneys. The liver acts upon all its elements, which no other organ does. Starch constitutes one-half to two-thirds of all our food. When we take it into the mouth, the saliva begins to change it into sugar. It furnishes heat for the body and muscular and brain force, hence we need a large amount of it.

In the process of digestion, a large amount of sugar is manufactured. If all this were poured at once into the circulation, it would thicken the blood and render it so sluggish that the blood corpuscles would all be destroyed, and it would have to be hurried out of the system to save the person's life; so the liver goes immediately to work to change the sugar back into liver starch, and stores it up in its tissues. Then it begins slowly to change the starch back into sugar again, and doles it out for use as needed for force, heat, etc.

The liver is also a sort of rendering establishment. It takes what would otherwise be offensive and dangerous elements and utilizes them, just as the rendering establishments of large cities take the dead animals and offensive garbage and make them of value. The liver takes all the broken down tissues, the millions of dead blood corpuscles, works them over and changes them into material of which corpuscles can be made. The coloring matter found in these corpuscles is worked over into material which furnishes coloring matter for the eyes and hair, as well as furnishing color to the bile. Nature shows wonderful economy in thus taking old, worn-out material and converting it into such a variety of new uses.

The bile containing waste alkaline substances, also makes a little soap out of the fat that aids in preparing the rest of the fatty material for absorption.—*Hall's Journal of Health.*

THEISM, THE NEW NERVOUS DISEASE.—Attention has recently been drawn to a new nervous disorder said to be especially prevalent in England and America. It is called "theism," or tea-drinker's disease, and is said to exist in three stages—the acute, subacute and chronic. At first the symptoms are congestion of the cephalic vessels, cerebral excitement, and animation of the face. These physiological effects being constantly provoked, give rise, after awhile, to reaction marked by mental and bodily depression. The tea-drinker becomes impressionable and nervous, pale, subject to cardiac troubles, and seeks relief from these symptoms in a further indulgence in the favorite beverage, which for a time restores to a sense of well-being. These symptoms characterize the first two stages. In chronic cases, theism is characterized by a grave alteration of the functions of the heart, and of the vaso-motors, and by a disturbance of nutrition. The patient becomes subject to hallucinations, "nightmares" and nervous trembling. With those who take plenty of exercise, an habitual consumption often may be indulged in with impunity, but with women and young people who follow sedentary occupations this is not the case. The best treatment for theism is said to be indulgence in free exercise, such as walking and open-air life.—*Journal of the American Medical Association.*

DOMESTIC ECONOMY.

Tapioca.

Upon your pantry shelves a good supply
Of tapioca keep unfailingly;
For many dainties, wholesome, rich or rare,
You from this starchy product may prepare.
First, then, Ambrosia, food meet for the Gods—
They ne'er partook of it, but "what's the odds?"
One cup of tapioca soak o'er night;
Then when you're stirring with the morning light,
Place it where it will slowly cook till clear—
A double kettle is of value here.

And now one cup of sugar; and meantime
Have one nice pineapple chopped very fine,
On this the boiling tapioca pour,
And stir together; 'twill need nothing more.
Pour into molds, which shall the shape preserve;
When cold and firm, with cream and sugar serve.
This delicate and always welcome dish
You may prepare with peaches if you wish;
Or other fruit, soft, ripe, or even canned,
Such as at any season may command.

If apples you would use, best, pare and core
Enough to fill your baking dish—no more.
The space of cores with sugar fill, and spice;
A dash of lemon juice is very nice!
Bake till the apples tender grow; then pour
The cup of warm, soaked tapioca o'er,
And bake till clear. Most surely you will deem
This "about right," served warm with sweetened cream.
A little salt the tapioca'll need,
As almost every pudding does indeed.

For tapioca cream, in water swell
Four tablespoonfuls; only cover well;
Then with a quart of milk you'll set it on,
And gently cook till sure it is well done.
Four eggs; the yolks with sugar you will beat—
A cupful will not make the cream too sweet—
Stir in with care and add a little salt;
Vanilla flavor will not prove a fault;
Lastly, the whites well beaten. Serve when cold,
And how acceptably need not be told.

Or, these two recipes you may combine
In apple pudding, if you so incline.
Apples to fill your dish you'll peel and core,
Filling with sugar, then bake as before.
The tapioca you will soak and swell;
Three tablespoons, or four, will do quite well.
Mix with a custard made of milk, one quart,
Three eggs; vanilla flavor (or some sort);
A cup of sugar. O'er the apple pour;
Bake till the custard is well set, no more.

A custard pudding baked is very nice
With tapioca, or with this and rice,
The first—proportions as for "cream" will do;
Cocoanut added may be something new;
Three tablespoonfuls with your yolks you'll beat,
And sugar; 'twill look "good enough to eat!"
The tapioca soaked, and as before
In the milk scalded, you to this will pour;
Lastly the whites, that all may be well done,
For frosting beat, and in the oven brown.

For invalids a jelly may be made,
Quite palatable, too, so it is said.
The tapioca you will cook till clear.
As for Ambrosia, no fruit needed here
Except a lemon; juice and grated rind
A simple nourishment you'll surely find.

—*Good Housekeeping.*

QUICK BISCUIT.—Two cups flour, one tablespoonful mixed lard and butter, one cup milk, one heaping teaspoonful baking powder, pinch salt. Handle little, roll out and cut quickly, and bake in a steady oven.

CHOCOLATE ICING.—Allow one pound of icing sugar to every two ounces of chocolate; grate the latter into a sauce-pan, and mix with it eight tablespoonfuls of water; stir well and let it cook gently for ten minutes, then add the sugar, and use while warm.

POTATO SOUP.—Three pints of rich milk, one pint of mashed potato, two tablespoonfuls of butter, salt and pepper to taste. Boil the milk, add the potato and boil again, stirring frequently, that the potato may become thoroughly dissolved, and season just before serving. Serve very hot.

PUREE OF CELERY.—Boil two heads of celery in plenty of salted water with an onion, a blade of mace and some whole pepper. When done, drain them and pass them through a hair sieve. Melt a piece of butter in a sauce-pan, mix a little flour with it, then the celery pulp, and work it well on the fire, adding a little cream or milk and some of the gravy of the ducks.

BAKED RICE WITH CHEESE.—One pint of boiled rice, half a cupful of grated cheese, placed in alternate layers in a buttered earthen dish. Spread powdered cracker over the top with bits of butter, and over the whole pour one egg, well beaten, one cupful of milk, one saltspoonful of dry mustard, half a teaspoonful of salt and a shake of cayenne pepper, thoroughly beaten together. Bake 20 minutes in quick oven, and serve very hot.

The Week.

We are right in the middle of Fourth of July week, and as anticipated in our last issue, events are being largely shaped with reference to the break in the current of business and industry which the National holiday causes. The patriotic spirit easily assumes a statistical expression this year of the census and finds satisfaction in the statement that the population of the United States now exceeds 64,000,000 instead of a little over 50,000,000 of ten years ago. In California there has been a notable increase, but the enumeration is hardly complete. Some cities are grievously disappointed, and claim serious omissions by the enumerators. Such have undoubtedly been made and it is to be hoped that corrections will be feasible.

Another patriotic theme is the birth of more States into the national family. Idaho and Wyoming are the latest arrivals—twins of 1890 following the quartet of 1889. It is expected that President Harrison will sign the bills for the admission of these two States on the National holiday.

Wheat Product and Prices.

The wheat-grower will find in this issue of the RURAL much of significance. We give on page 5 of this issue a valuable table prepared by Mr. Montpellier, cashier and manager of the Grangers' Bank, showing the course of wheat prices, ocean freight rates and bag prices for a long term of years. This table is useful for reference and should be preserved. The most notable feature of the last year's record is the exceedingly small fluctuation in values throughout the 12 months. There was only a variation of seven to eight cents in the market price of shipping wheat during the whole period. Low monotony was characteristic of the year, not only in wheat but in bags and freight rates. Such has never occurred before in the wheat history of California. We believe it was but the quiet which precedes the storm and that this is so is already apparent in the character of the market at present—during the first week of July at the very beginning of the new crop year. Our market review this week presents much data which foreshadows an advance in wheat values and to all appearances a notable one. Conditions in other supply countries have been very unfavorable to the product, and this with indications of only moderate output on this coast naturally hardens values. It is true, of course, that the present spurt may be the result of gambling rather than the influence of actual demand, but it seems to us that all indications point to a considerable improvement in values. It is natural, then, that there should be no general disposition to sell at present. While the figure is distressingly low, the chances always are for an improvement and this chance is strengthened by the conditions affecting the year's product, to which we have alluded.

We have claimed for a number of weeks that the California surplus would show a considerable reduction this year. It is true that individual and local experience is in some cases in the other direction. For example, there will be a yield of a few sacks per acre from arid regions, which only occasionally yield anything; but this is more than offset by the vast tracts which almost always yield generously, but this year will not turn out half a crop. It is easy to be misled by narrow views, and wheat buyers are naturally not slow to enforce such views when it is to their interest to do so.

The disappointing results which many are experiencing from the thrashing calls attention again to the importance of the spring rains on the wheat crop which we set forth last year from data furnished by Mr. Montpellier. This close student of influences affecting our staple crops has just issued his rainfall table showing the precipitation at various points in the State. This shows that the rainfall began the *first week of October* and ended *late in March*, making five full months of almost continuous rain. It was especially heavy in December, January and February, but very light in April. This will show that it is *not* the enormous rainfall of December, January and February, but the *spring rain* that produces yield of crops in California. Thus, with all our heavy winter, which this year put the farmer at his wits' end to get his land plowed and sown, we do not realize large returns even from lands sown, because the winter rains were not supplemented by spring rains, which maintain late growth and enable the plant to fill out its head. For this reason so many are disappointed in results, even from fields which bore a fair look at cutting. It is these observations, coupled with telegraphic tidings from abroad, which make our wheat-growers indisposed to sell. Dealers also seem to have much confidence in the situation, and, between themselves at least, admit the likelihood of a considerable advance in wheat values.

THE DAIRY AT THE WORLD'S FAIR.—The Illinois State Dairymen's Association has called a National Dairymen's meeting, to be held in Chicago, at the Sherman house, on the third Wednesday in July, 1890, at 10 A. M.; the meeting to be composed of three or more delegates, appointed by each of the several State Dairy Associations and Breeders' Associations representing dairy cattle. The object of the meeting is to consider and take action on the best means of representing the allied interests of the dairy industry of the country in connection with the World's Columbian Exposition of 1893, and to take definite action with reference thereto. We trust there may be representation from the Pacific Coast, and any dairy proprietor who may be in Chicago at the time should apply for admission to the meeting.

Winter Dairying.

An Oregon reader sends us an expression of opinion in the form of a resolution as follows:

Resolved, That more butter should be made during the winter season, and less in the summer season.

If farmers would only heed this resolution, their wives would fare better and the pocket book be the plumper.

The RURAL advocated such a proposition at least 15 years ago, and no doubt within certain limits it is sound doctrine. The fact is that there has been a gradual change in this direction in California, for more butter is now produced during the winter season than when we began to advocate the practice. The same thing is true in the dairy regions of the Eastern States and the winter product is profitable, providing extra precautions are observed and extra arrangements provided.

Winter dairying requires greater foresight in the providing of winter food and forage. This involves the securing of abundant *well made* hay, and where the climate favors, it should include succulent field crops, which on moist land may be planted late and held for feeding while the natural grasses are slow in starting, as is often the case during the dry, cool weather of the early winter months. In this provision of food ensilage presents itself as a boon to the dairyman. It is also possible to secure artificial pastures by sowing grasses which start earlier and grow well at a lower temperature than our natural forage plants, or than alfalfa, the winter growth of which is usually very unsatisfactory.

Although our winter climate on this coast is so much milder than east of the Rocky mountains, it is still necessary that one who intends to practice winter dairying, shall provide better buildings both for cattle shelter and for dairy manufacturing, than are required for summer dairying. California dairymen have learned this lesson pretty well during the last few years. Milking in corrals, where the mud is so deep that pans have to be used instead of pails, so as to slide the receptacle under the cow's teats, and cheese and butter making in open sheds, floorless and filthy, these are old practices, which have now been superseded by spacious dairy barns and by neat dairy houses, where cleanliness and warmth can be secured. There has also been great progress secured in improved dairy appliances. In fact, dairying on the Pacific Coast is assuming features of excellence in practice, appliances, buildings and cow-power, which were almost unknown even a decade ago.

We are prompted to these few general remarks upon our correspondent's resolution merely to show that the change to winter dairying is not in a resolution alone, but that wisdom and wise investment are necessary to carry it out. It may be said that the same improvements are desirable even in summer dairying, and this is strictly true; but at the same time a slip-shod system of dairying in summer may be moderately successful, which in winter work would not yield any success at all. The whole subject is one of much interest and importance and we would like to have it discussed, not alone on general principles but in detail, and in this way our dairy readers may mutually aid and advance each other.

GERMAN DAIRYMEN COMING.—Secretary Boyd, of the Oregon Board of Information, is in receipt of a letter from a dairy society in Germany who are desirous of branching out on the Pacific coast. The dairy business in Germany is not paying as well as it has in years past, and as they have more people in their association than they can handle to advantage, or support satisfactorily, they are thinking of sending about half their number to the Pacific coast to try the experiment here. They have heard of Oregon as the most favorable State for locating such a colony, and if they can get 20,000 acres of land in one piece they will doubtless give the web-foot State preference. A committee of five will be sent out some time this summer and upon their report the society will act.

Crop Notes.

Heading and thrashing are now in full blast, but as yet any attempt at a close estimate of the wheat crop of this coast is little more than guesswork. Although, as stated elsewhere, there will be, on the whole, considerable reduction in the wheat output there are some places where farmers have been agreeably surprised by the large yield of their grain when thrashed, but this is an exceptional experience, or enjoyed only in limited areas.

That the fruit prospects of California are unusually good this year is now certain. The yield, on the whole, will not be as large as last year, but the shortage in the Eastern crop will so raise prices that the money value will be much greater. Eastern capitalists are making efforts to secure the crop and Eastern canneries and drying establishments are moving their plants out to this coast for the season. For instance, Lester & Co., of Chicago, have moved their plant to Monrovia, in Los Angeles county, and have contracted for all the fruit in that locality they could secure. Local canneries throughout the State are buying and are being worked to their full capacity.

Vine-growers are jubilant, for not only do the grapes look well, but the pests which generally do so much damage in the vineyards at this time of the year have failed to put in an appearance.

With the exception of a few local disturbances such as grass-hoppers at Anderson, Shasta county, and Cayucos, San Luis Obispo county, and a hailstorm which visited the vicinity of Colusa on the 24th ult., doing much damage, everything has been favorable both for harvesters and fruit-growers. More detailed information about crops in this and adjoining States will be found in our Agricultural Notes.

The Fairs of 1890.

We give here below our usual list of the fairs of the year which we have compiled from all available sources and regard as reasonably complete. It is likely, however, that some exhibitions have been omitted, and we will welcome corrections or additions to the list from those interested. These changes will be embodied in a later publication:

Ione (26th Dist.), Aug. 5-9.
Los Angeles (6th Dist.), Aug. 4-9.
San Jose (5th Dist.), Aug. 11-16.
Willows, Aug. 12-16.
Napa (25th Dist.), Aug. 18-23.
Red Bluff, Aug. 19-23.
Nevada City (17th Dist.), Aug. 19-23.
Petaluma (4th Dist.), Aug. 25-30.
Chico (3d Dist.) Aug. 26-30.
Placerville (8th Dist.), Aug. 26-30.
Oakland (1st Dist.), Sept. 1-6
Marysville (13th Dist.), Sept. 2-6
S. L. Obispo (16th Dist.), Sept. 2-6.
Auburn (20th Dist.) Sept. 2-6.
California State Fair, Sacramento, Sept. 8-20.
Oregon State Fair, Salem, Sept. 15-20.
S. F. Mechanics Institute, Sept. 18-Oct. 25.
Nevada State Fair, Reno, Sept. 22-27.
Stockton (2d Dist.), Sept. 23-Oct. 4.
Rohnerville (9th Dist.), Sept. 22-26.
Quincy (11th Dist.), Sept. 22 ——.
Lakeport (12th Dist.), Sept. 23-27.
Independence (18th Dist.), Sept. 23-26.
No. Pac. Industrial, Portland, Sept. 25-Oct. 25.
Bishop (Eastern Slope), Sept. 23-26.
Fresno (21st Dist.), Sept. 28-Oct. 4.
Watsonville (24th Dist.), Oct. 1-4.
Walla Walla, Oct. 6-11.
Visalia (15th Dist.), Oct. 7-11.
Escondido (22d Dist.), Oct. 14-17.
Santa Barbara (19th Dist.), Oct. 21-25.
Salinas (7th Dist.), Oct. 30-Nov. 4.

A New Herd Premium at the State Fair.

We are pleased to announce that the State Board of Agriculture, at a meeting on Monday of this week, decided to add a young herd premium of $30 for cattle under two years old, the herd to consist of one male and four females in each class.

For the purpose of making a more intelligent announcement for the additional herd premium given, it might be well to give the conditions under which the premium for both herds are offered for each class as follows:

Best herd over two years old, to consist of one male and four females owned by one person, silver pitcher or $60.

Best young herd under two years, to consist of one male and four females owned by one person, silver pitcher or cash $30.

Heretofore the Durhams were the only class in which was offered two herd premiums—one for old herd and one for young herd. This change gives all classes these premiums the same as Durhams.

Water on the Pacific Coast.

(Concluded from last issue.)

San Francisco Water Improving.

Nothing is done at the storage reservoirs to improve the quality of the water before entering the conduits. The water first passes the fish-screens and thence through open flumes and aqueduct tunnels, and finally through wrought-iron pipes to the city. At the outlets where they empty into the several service-reservoirs, is located the so-called screen-house, where the water is made to pass through a system of cloth screens before it is allowed to empty into the service-reservoirs. These cloth screens are constructed as shown in Fig. 1, page 435. The sash-frames are six feet long and two feet wide. Brass-wire netting is tacked on, and over that is stretched a good quality of cotton cheese-cloth. In midsummer, when the water is foul with animal and vegetable matter, the screens clog rapidly and have to be removed and clean ones put in their place. The fouled screens are taken to the wash-room, where they are thoroughly cleaned, and the foul wash waters are allowed to escape by a suitable drain-pipe to the bay. Each one of these screen-houses requires the constant employment of double shifts, four men 12 hours each, raising, cleaning and replacing the screens, some 300 being required for each house. Generally the water passes through two screens. When it becomes necessary to make a change, the outer screen, being little fouled, is removed first and a clean one quickly put in its place; the inner, or fouler one, is next removed and a clean one quickly put in its place. This screening apparatus is unquestionably very efficient in its way, but, as will be seen further on, it does not touch the fundamental seat of the chief trouble, which lies in the storage reservoirs. It should be mentioned that these service-reservoirs have a division wall through the center, thus enabling one-half to be emptied and cleaned while the other is in use. In summer this requires careful attention.

The Method at Oakland.

The water supply at this city adopts a different method, in some respects, and it is interesting to know that the results obtained are much less satisfactory. Here the screen-house is placed at the storage reservoir, instead of in the city limits, and distant some 9 5 miles. Two varieties of screens have been in use, both identical in principle. Those introduced in 1879 are best shown in detail by the accompanying drawing (Fig. 2) with descriptive notes thereon. Those used in 1889 differ only in design. The foul water is made to pass through six thicknesses of cheese-cloth wrapped around wire cylinders, and the screening process is necessarily more efficient. This system is shown in detail in Fig. 3, page 435.

The screened water passes into a clean-water basin, capacity about 2,000,000 gallons, which is not covered. The hot summer sun has developed a large amount of vegetable growth in this basin and a second one has thus been built, thus enabling one to be emptied and cleaned when occasion requires it.

The screened water from the basins passes into the 37½-inch supply main, and travels slowly to the city of Oakland and direct to the consumers, there being no service-reservoir.

Results Accomplished.

In the case of San Francisco, the quality of the water delivered to the consumers throughout the year may be characterized as reasonably good, and as a rule complaints are seldom made and can always be traced to some local temporary cause. In the case of Oakland, however, the entire water supply delivered to consumers during winter, summer and fall, is always bad, but is reasonably good in the spring. In the summer and fall of 1889, when the water in the storage reservoir got very low, a large number of citizens ceased to use the water either for potable or culinary purposes. They organized a company and brought spring-water from the hills at considerable expense and inconvenience.

This extraordinary difference in the quality of the water naturally calls for an explanation. After studying over the existing facts, I have come to the following conclusions:

First—Experience at San Francisco shows that the quality of the water is greatly improved by flowing through open flumes and aqueduct tunnels before it reaches the city. On arriving at the service-reservoirs, the water is further improved by passing through cloth screens, and thence passes into the distributing reservoir, and *soon reaches the consumers before secondary deterioration in the pipes has had time to develop.*

Second—It is clear that the Oakland Water Company made a mistake in placing their screening apparatus at the storage reservoir. I sampled the surface water in the latter and found it to be reasonably good; then I sampled the screened water near by and found it to be much better. This screened water entered the supply main, and thence travels a distance of 9 5 miles to Oakland consumers. Experience shows that the *quality of the water delivered is always worse than the water in the storage reservoir.* This secondary deterioration is unquestionably due to the putrefactive fermentation in the pipe system. The water company now proposes to build a 150,000,000 gallon settling-reservoir within the city limits, and then transfer the screening apparatus to the same site. I have no doubt but that these new works will improve the quality of the water considerably.

These systems of cloth screens, when properly managed, have certainly proved to be quite effective, as far as they go, but they do not, in my opinion, strike at the fundamental seat of all the worst troubles. This conclusion is based on the results of a long series of observations, which have been under way for four years, and are still going on. They show conclusively that the main trouble from contamination in midsummer is primarily due to the fermentation and subsequent putrefaction of the immense deposit of oozy mud in the bottom of the reservoirs. Hence the experience on the Pacific Coast goes to show, that generally speaking, *the older the storage reservoir the worse the troubles become.*

The immense deposits of mud in the bottom have been subjected to certain examinations. Its composition is found to be a mixture of vegetable and animal matter in all stages of decomposition interstratified with clayey sediment and vegetable mold brought in by tributary streams in the rainy season. The depth of this deposit averages ten feet and in places as much as 20 feet in the older reservoirs.

It is impossible to conceive how these storage-waters can be maintained in a healthy condition as long as this source of contamination is allowed to exist. It must be removed, and the question is, how? In India this is done regularly by emptying the reservoirs, and cl[illegible] them on the first of the monsoons, and then by closing the under-sluices they catch all the subsequent drainage. Of course this is not always practicable. I hereby submit a suggestion, which has developed itself during these examinations.

Samples of mud from the bottom were easily obtained in any desired quantity by means of an ordinary hand-pump and 100 feet of stout rubber hose. The same apparatus was useful in getting the temperature and samples of water at different depths. Now the facility with which this oozy mud could be pumped up, without disturbing the purity of the water in the slightest degree, at once suggested the idea of extending this system, and adopting it as a ready means of getting rid of this objectionable deposit at a comparatively small expense, and without emptying the storage reservoir. Also, I think it proper to state that a Gwynn centrifugal pump with a runner, 5 feet diameter, having a suction pipe 17 inches diameter and discharge pipe 15 inches diameter, was used under my inspection, to remove a large quantity of black oozy dock mud. The lower end of the suction pipe was simply allowed to sink down into the oozy mass. The engines were started up, and it was soon ascertained that this kind of material could be removed at the rate of 1370 cubic yards per hour, and this rate was maintained for 9 5 hours, or a daily capacity of 13,000 cubic yards, and without changing the position of the machine. I merely mention this fact in order to show what has been done in this line.

The next question naturally arises, how will the material be disposed of? In some cases it could be discharged into the creek bed below the dam, and be carried off by storm-waters, or preferably, if there be any shallow flowage or lowland near by, heavy embankments of sand faced with gravel could be built, and material pumped behind them, thus making new high land, which would be greatly enhanced in value thereby.

Recapitulation and Conclusions.

After carefully studying all the facts and circumstances obtainable so far, I am led to draw the following conclusions:

First—That the great deposit of putrid mud in the bottom of storage reservoirs is the primary cause which gives rise to the deterioration in quality of the water. That it should not be allowed to accumulate from year to year, as is generally the case, but should be removed from time to time, and the bottom kept reasonably free from annual deposits capable of undergoing putrefaction. That it is practicable to remove this mud at an expense not much in excess of that incurred in pumping water under like circumstances. That if this is properly attended to, the conditions which give rise to excessive vegetable growth will be practically removed, and as a result vegetable life will become so small in amount as to be a matter of little consideration. That as a final result the construction and maintenance of a system of filter-beds would become entirely practicable.

Second—That the trouble with the quality of the water delivered to consumers is largely independent of the contamination in the storage reservoirs, and can be traced to two separate sources, namely, turbidity during the stormy months, giving rise to deposits in the pipe system, which subsequently, when the water gets warm, takes on putrefactive fermentation and gives rise to offensive odors during the summer and autumn. That neither of these can be properly removed except by means of subsidence followed by sand filtration.

Finally, if the above fundamental sources of contamination be eradicated as far as possible, I am of the opinion that the greatest of all reasonable objections to storage-waters will be practically removed.

FLORIDA LETTER.—An old editorial friend writes in another column some truths about farmers raising their own supplies, which should be taken as a good lesson by many on this coast. We have no doubt some New England husbandmen are doing as they consider well, annually, on a profit from their farms of no more than could be saved in the expenses of living and running many a farm here on the Pacific Slope.

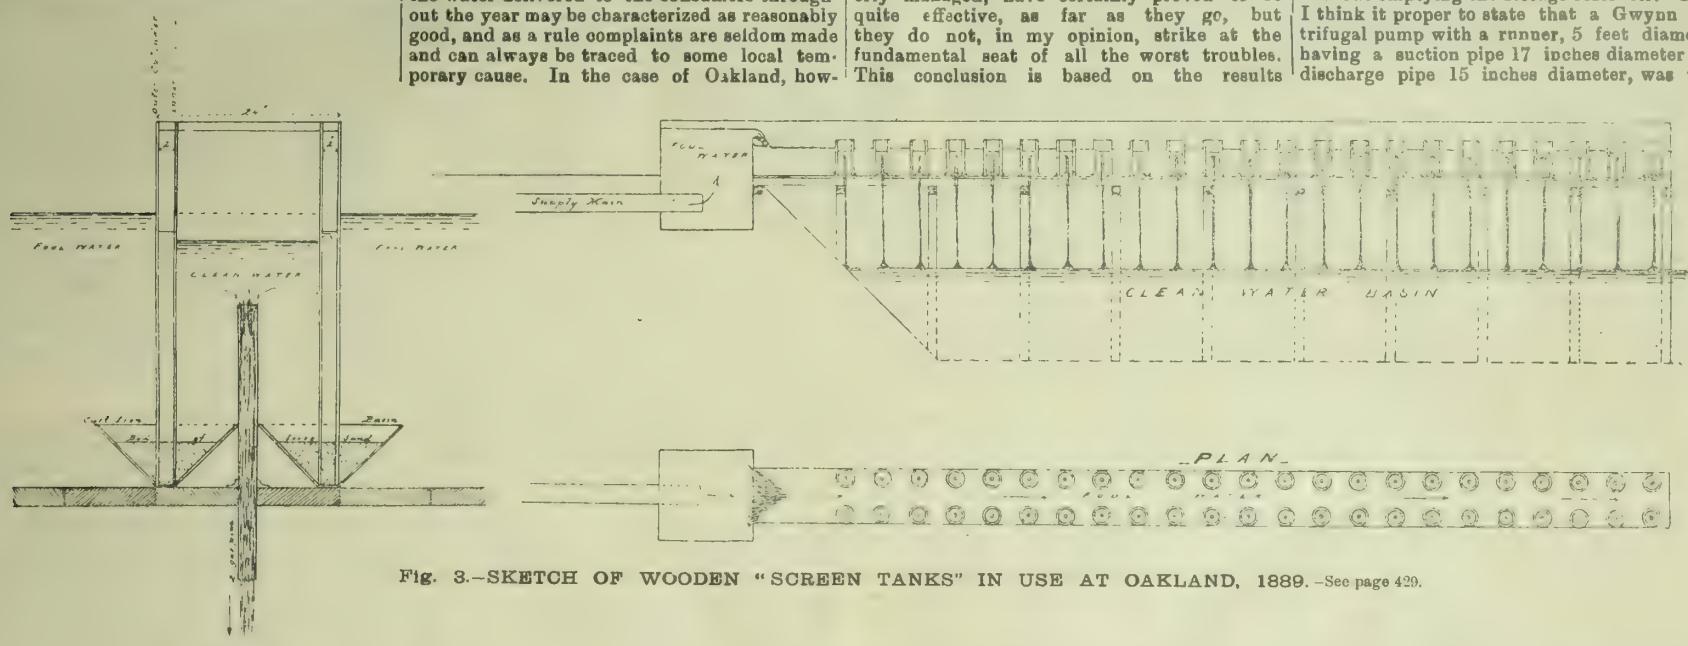

Fig. 3.—SKETCH OF WOODEN "SCREEN TANKS" IN USE AT OAKLAND, 1889. —See page 429.

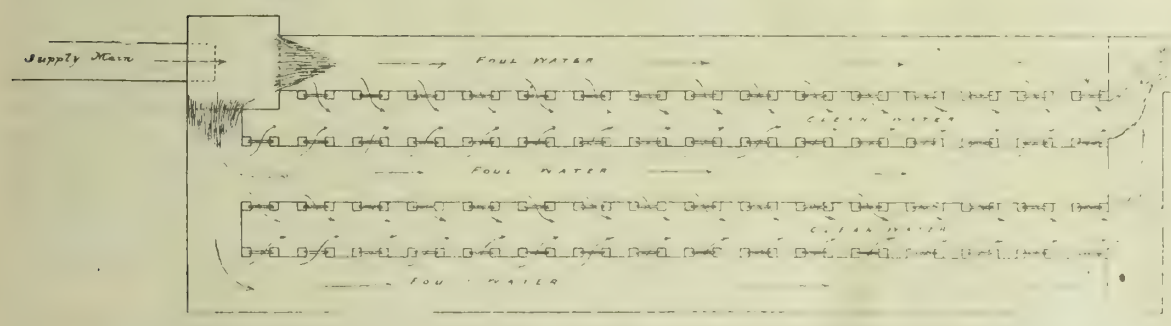

Fig. 1.—SKETCH OF WOODEN "SCREEN TANKS" IN USE AT SAN FRANCISCO.

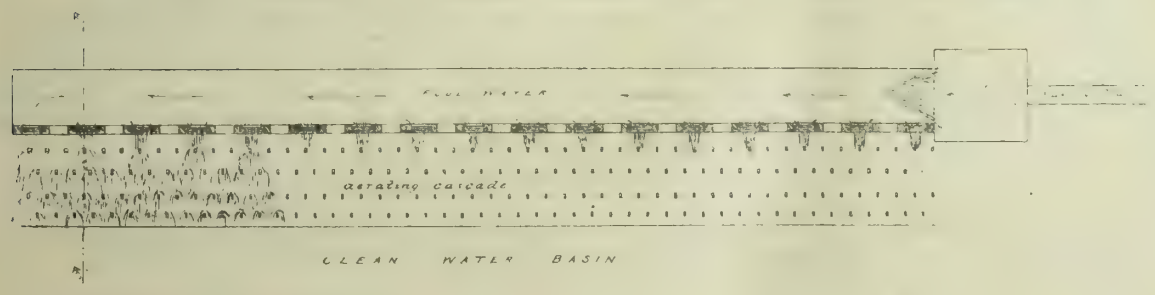

Fig. 2.—PLAN OF WOODEN "SCREEN TANKS" IN USE AT OAKLAND PRIOR TO 1889.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

TO PREVENT CONTAGION.—Oakland, June 30: A petition was presented to the Board of Supervisors to-day by the Pacific Coast Stockmen's Mutual Protective Association requesting the passage of an ordinance requiring veterinary surgeons and others to report all cases of glanders, farcy and other contagious diseases among horses and other stock.

Butte.

OROVILLE ORANGES.—*Bulletin*, June 21: As to the reported dropping of young oranges around Oroville, Senator A. F. Jones says that these fallen oranges are always noticed under trees which blossom so heavily as do those on the Sierra foothills. It means only that the blossoms provided for more fruit than the trees can nourish and mature. The orange crop will be large.

PLANTING AND WATERING.—Thousands of fruit trees have been planted this spring on the slope between Rio Bonita and Oroville, and evidently it is only a matter of time when this section will be one vast orchard. There are several irrigating schemes projected, all to take water from the Feather. One, in which Robt. Williamson, Fleming Bros. and Jack Wright of Sacramento are interested, will take water from below Thermalito and carry it in a natural creek-bed southwesterly toward Biggs and Gridley, in quantity sufficient to irrigate that whole country.

NEW BARLEY.—Chico *Chronicle-Record*, June 30: G. M. Jones brought in on Saturday the first load of new barley, grown on T. M. DeLaney's ranch and cut by the Hicks and DeLaney harvester. It was taken to Croissants to be crushed. The grain was very plump and heavy, weighing 118 pounds to the sack, in old sacks.

Colusa.

DESTRUCTIVE HAILSTORM.—Colusa, June 25: At 2 o'clock Tuesday afternoon the hardest and most prolonged hailstorm ever known in Colusa county struck Colusa, coming from the northwest. Along the sides of the buildings in town the hailstones piled up 1½ feet deep. Some of them were 1½ inches in diameter. The severest part of the storm lasted a few minutes only. Skylights and window-glass were broken all over town. Sash, the youngest son of Walter Calms, a prominent farmer, was struck on the head by hailstones and knocked senseless. Several people were injured by hailstones striking them. The storm originated somewhere west of Sites, in the foothills, and was about three miles in width. Its course seems to have been almost east. It did not reach Norman, nine miles north of Maxwell, nor Colusa Junction, four miles to the south. The fruit crop in its course is practically ruined. Trees were stripped of both fruit and leaves, and in many instances large limbs were broken. Grapevines were almost entirely denuded of foliage and grapes. About one-third of the young prunes were knocked off the trees. Peaches and apricots fared little better. Almonds seem to have stuck to the trees better, but how much they have been bruised the future will determine. The track of the storm covered the best fruit district around Colusa. Watermelons, beans, tomatoes, onions and such vegetables were ruined. Wheat was threshed out and damaged to an enormous extent. At Sites, chickens and turkeys were slaughtered by hundreds. The damage to fruit and vegetables will be in the neighborhood of $25,000; to the grain crop not less than $75,000. J. B DeJarnatt is the heaviest loser of fruit. He places his loss at $5000.

Contra Costa.

SOUTHDOWN WOOL.—*Democrat*, June 28: If any one is skeptical as to Contra Costa being adapted to wool-growing he should step into J. J. Jones' office and examine the specimen from H. P. Hoesley's place, about one mile from Martinez, on the Pacheco road. It is of the finest quality, free from burrs and dirt, and will compare favorably with the higher grades of wool. It was taken from Southdown sheep, and is practical evidence of the value of this breed as wool-producers.

El Dorado.

PEARS AND SOUR SAP.—EDITORS PRESS:—Your correspondent, "F. S. C." says: "Pears will stand the water. They seem to be safe, no matter what the subsoil or how long the water stands around them." Now I have lost 20 out of 700 Bartlett pears with sour sap, besides about the same number looking very sickly, and a neighbor of mine has lost close on 100 from the same cause. My orchard was a perfect quagmire all winter, and in the spring it was wet in patches till the end of May, with water running from wet weather springs; so it is not surprising that some trees died under the circumstances. No fruit tree could be expected to stand it. The trees are on pear roots and were planted over five years ago.—I. P. D., *Diamond Springs, June 28th.*

Fresno.

BERMUDA GRASS ON ALKALI.—Fresno *Republican:* E. Polkinghorn paid $6000 for the 40 acre lot on which he has been living four years. He now values it at $15,000 but will not sell it. "My experience," said he, "warrants me in saying that this 40-acre tract is good for an annual income of $3500. Some acres of my raisins netted me $250 an acre. I have three acres of apricots, peaches and nectarines and they yielded me 30 tons of fruit, for which I got $27 50 per ton. I have 17 acres in bearing vines, and they are good for 30 tons of raisins this year.....That green patch of seven acres that you see fenced in there is impregnated with alkali. I sowed five acres of it in Bermuda grass and two acres in alfalfa, and my experience has demonstrated that there is not one inch of Fresno county land that ought to lie waste because of alkali. My stock has fattened on Bermuda grass. It needs no water, and there is no trouble about cultivation or irrigation if it is planted in May. I have 15 head of cows and horses grazing on it now, and it will support 30 head of stock easily."

Inyo.

WHEAT AND POTATOES.—*Independent*, June 27: Potatoes were planted at Lone Pine Station in April last, and 54 days from the day of planting, new potatoes were gathered. At the same place, wheat was sown and is of such great growth that a few sheaves will be preserved for exhibition at the Fair of the 18th District. The potatoes are excellent. This shows what the land under the East side canal will do, as the tract at Lone Pine Station is below average quality.

Lassen.

SAINFOIN OR ESPARCET.—Susanville *Advocate*, June 26: B. E. Shumway has made an interesting experiment at his ranch with the new German grass called esparcet. It is claimed for this grass that it will grow in arid places, where no trace of moisture can be found, and will soon cover the ground with a thick green sward. Mr. Shumway procured five pounds of the seed last fall, and sowed it high up on a perfectly dry knoll, never expecting to hear from it again; but, much to his surprise, this spring he found it sprouting all over the knoll, and now has quite a patch of rich green grass, with a leaf something like common clover. He is going to save it all for seed, expecting to have about 75 pounds, and will put in a much larger piece this fall. The land where the seed was sown was absolutely barren, no water, except rain, ever having touched it, and the seed was just harrowed into dry dust. It looks as if it might be a bonanza to our stockmen, making good pastures on barren hillsides which are now utterly useless.

Los Angeles.

FRUIT-DRYING WHOLESALE.—Pomona *Progress*, June 26: The busiest place in this valley is the Pomona fruit cannery. Cook & Langley have already expended a large sum of money in preparing for handling all the deciduous fruits of the valley. A force of 50 men has been hard at work there for two weeks. The whole area between the cannery building and the Pomona Pipe Works shops has been filled with racks for the holding of the drying trays. Last year the racks there had a capacity of only 700 trays. Now they have 12 times that capacity. A railroad track has been built from the building, where the fruit will be cut and pitted, to all parts of the area occupied by the racks. Eight large and complete sulphur bleachers have been built to take the place of the one-horse affair that answered that purpose last year, and thousands of new drying trays and boxes have been made. The first and second floors of the building have been made ready for about 200 men, women and children to be employed there in cutting and pitting the apricots, peaches and nectarines. Every available space of ground or floor in or about the cannery will be utilized by the firm, and when it is known that Cook & Langley have contracted to buy over 850 tons of our deciduous fruits during the next 12 weeks, it will be realized that some lively work will be necessary to make good every pound of that quantity.

Orange.

COUNTY FAIR.—Santa Ana, June 28: The constitution and by-laws of the Orange County Fair Association were adopted to-day. The first annual meeting will be held on Saturday, July 12, when arrangements for the first fair will be made.

San Bernardino.

A LARGE APIARY.—Beaumont *Sentinel:* At Wheeler & Hunt's apiary, on the hills south of Brookside, there were about 300 hives last spring; now there are 560. As there were sometimes from 15 to 20 swarms in a day, some escaped, and some, being weak, were doubled up. The hives are arranged in regular rows 12 feet apart, and aisles the other way, giving it the appearance of a diminutive city. As we passed among these at night with genial Mr. Wheeler as guide, the humming, buzzing noise of 2,225,000 busy workers sounded like a moving train or roaring waters. Several tons of honey have already been taken this season from these industrious employes, and before it closes the owners expect to get at least 60 tons, about $7000 worth, or a net profit of not less than $5000.

ORCHARD NOTES.—Ontario, June 27: A canvass just completed shows 600 acres of this season's orange planting in Ontario. The evaporator is now running 50 hands, with over 500 tons of apricots, peaches and prunes engaged.

San Diego.

SAN JACINTO GRAIN.—L. A. Cor. *Chronicle*, June 29: Reports of the cereal yield of the San Jacinto valley have been received by S. B. Haynes, general freight and passenger agent of the Santa Fe R. R. Co., showing that it is the largest ever made, 600,000 sacks of barley and 200,000 sacks of wheat being the result. The barley is of the very finest quality, running 48 pounds to the bushel, while the average is only 46 pounds. Mr. Haynes has sent some samples to large Chicago brewing firms to be tested.

ON PALOMAR MOUNTAIN.—Escondido *Times*, June 26: S. J. Mendenhall and his father came down from Palomar last Monday. They brought a four-horse team and a load of produce, including 100 pounds of prime butter. It is their intention to fence all their lands on the mountain, as they find some of the campers who come up there impose on them by camping in the best portion of their grazing land to the detriment of their stock. The past week there has been frost every night on the mountain, severe enough to nip the potato plant. The pasturage is still good and fruit trees are doing well. They say they are ready at any time to do their part in building a road, but at present there are hardly settlers enough to build an expensive one.

HEADING COMMENCED.—Fred Roberts, with a large force of men and teams, started heading last week. He states that the crop will not be nearly so large as last year, but the price he can sell for out of the field, without storage expense, will be double that of last year. Then 50 cents per hundred for barley was the most that could be realized; this year Mr. Roberts can sell for $1 per hundred. He estimates that he will have about 600 sacks of wheat and 2000 sacks of barley, the quality being good.

San Luis Obispo.

MORE FINE HOLSTEINS.—S. L. O. *Tribune*, June 27: A small herd of five highbred Holstein cattle arrived in town Saturday en route for the ranch of W. H. Taylor from Mr. Polhemus of San Jose. The herd comprised the noted young bull Arthur Field, which is considered about as near perfection in his line as anything which the State can boast, and four young heifers. Our stock men who examined them, spoke in terms of strong admiration. It is a notable addition to the highbred stock of the county.

SIMMLER ITEMS.—Cor. *Tribune:* Everything is flourishing on the Cariesa. We have two headers running now, and they are putting 100 acres of fine grain into the stack every two days. There has been a great amount of good hay put up here this year. The weather has been very pleasant all this month, the hottest day being 91°, and to-day the thermometer marked only 75° at noon. This cool, damp weather is making us bushels of dollars in our fine, plump wheat. There are a number of fine patches of corn growing here, which was a great surprise to a newly-arrived town man who was here last week. It was a hard matter to convince him that we had had no rain for two months, and that we had not in some manner watered the corn.

Santa Barbara.

CROPS—GAS WELL.—EDITORS PRESS:—Crops in Carpinteria are looking as well as I have ever seen them at this time of year; everything is good to extra except hay and grain, which were almost a total failure; weather very fine—could not be better; farmers generally happy, with prospects of good prices for all kinds of farm produce. Lima beans are our principal field crop and we expect three cents per pound, which is about a fair price for labor and interest on capital invested.....A roaring natural gas well was struck one day last week by H. L. Williams of Summerland at a depth of only 30 feet. It shoots up a flame from 10 to 20 feet high and at night lights up the whole town. There is probably 20 times more gas escaping from the two-inch pipe, which is sunk but 25 feet, than is manufactured in Santa Barbara, a city of 10,000 inhabitants. I inspected the well thoroughly yesterday and see no reason why it should not hold out.—P. C. HIGGINS, *Carpinteria, June 24, 1890.*

Sonoma.

MORTALITY AMONG CALVES.—Petaluma, June 30: Some unknown disease has attacked calves and young cattle about Bloomfield and Tomales. They appear as well as usual at night, but next morning are found dead. Several farmers report losses. H. P. McCleaver of Tomales has lost five out of eight animals. Several have been cut open and their intestines examined, but, with the exception of lungs and liver abnormally enlarged and of a darker color than usual, nothing was discovered to be wrong. Most of those that have died were calves a few months old.

Santa Cruz.

SUGAR BEETS.—Watsonville *Pajaronian*, June 26: It was supposed sugar beets could be planted late this year and produce a heavy yield; but it was a hard matter to get the ground into good condition, and then, when the beets began to show above ground, worms made their appearance and rapidly ate away the young plants. Fields were re-seeded, and in several places the worms came again and ate the beets. These difficulties have reduced the acreage that was planted in beets in this valley fully one-fourth; and though the acreage planted was greater than that of last season, it is probable that, through the loss referred to, the yield will not be much greater than it was in 1889. The long wet winter and the beet worms are responsible for this shortage. There are several fine stands of beets in Pajaro valley, and disinterested parties who have examined many of the fields tell us that the crop is looking better than it did a week ago, and may yet come out in fine shape. On the San Andreas there are some fine stands, and Horace Cowles has a field of beets that would be A 1 in a big year. At Moro Cojo considerable re-seeding is being done; a considerable acreage of the ranch shows a strong stand, and the yield therefrom promises to be good. About 100 boys are at work there thinning out the beets. It is safe to say that the beet yield this year will not be as great as was looked for six months ago, but the factory people believe it will be greater than was estimated early this month.

BELLFLOWERS DROPPING.—From the northern part of the county and from the Corralitos district reports reach us that the Bellefleur apples are falling from the trees to such an extent that a very light crop is expected. Charge another loss to the wet winter.

Sutter.

FEATHERED FRUIT-PESTS.—Marysville *Democrat*, June 27: At the meeting of the Sutter County Horticultural Society in Yuba City Wednesday the discussion on "Destructive Birds" was very interesting. R. Davis gave it as his opinion that English sparrows, linnets and California orioles are doing as much damage to trees as the San Jose scale, and he thought prompt action should be taken by the society toward the suppression of these enemies to the fruit-grower by offering a bounty of one-half a cent a head for them. A number of cherry trees that had contained from 300 to 400 pounds of cherries were almost entirely stripped of their fruit by birds. He stated that one-third of his cherry crop has disappeared in this manner. J. W. Mills gave a few practical illustrations of his experience. He knew of an orchard of seven acres that had lost all its fruit through the depredations of linnets. No action was taken on a motion that a committee of three be appointed to wait on the Board of Supervisors and ask them to offer a bounty for destructive birds. The discussion will be continued at the next meeting.

Tulare.

THE GRAIN CROP.—Tulare *Register*, June 27: Grain-buyers who have been out through the county say the wheat crop is turning out fully as well, if not better, than was expected. In the Alila and Tipton countries, it is said, there is a good deal of grain of not first-class quality, about $1.02 being the highest price yet offered; but there is enough of it to put the settlers on their feet. Wm. Swall, out in the Oakdale district, is now harvesting his 900-acre field of wheat. Much of it is turning out ten sacks to the acre, and the entire field will average eight sacks or over. All the grain in that vicinity is yielding abundantly this season, and the farmers are in better spirits than for several years past. S. Witkowski bought 1200 sacks of wheat from J. L. Presely to-day which was raised on J. Sadler's place, four miles north of town, and was one of the best fields out in that direction, the yield being something over ten sacks to the acre. We have seen larger wheat, but none cleaner or better colored. E. W. Kay thrashed his Seneca Chief wheat yesterday, and the yield is slightly above ten sacks to the acre.

BEEVES AND PORKERS.—A great many fat cattle have been shipped from this point within the past two weeks. L. L. Gill drove in 100 head of the finest steers we have seen in a long time. He shipped seven carloads of his own and is now buying from other parties in the foothills.....Wm. Crabtree sold 40 head of hogs to L. D. Whitt at 4½ cents per pound. They were taken to Visalia by wagons for fattening on grain stubble. There is considerable inquiry for stock hogs at present.

FIRST DRIED APRICOTS.—Hanford, June 26: Charles King & Co. of this place shipped a carload of dried apricots to St. Paul, Minn., today, the first shipped out of the State this season. The fruit was of prime quality.

Yolo.

YOLO SPUDS.—Woodland *Mail*, June 28: Yolo county is becoming renowned for its large potatoes, as well as big pumpkins, juicy grapes and handsome girls. An agent of W. H. Wood & Co., the well-known commission merchants of Sacramento, was in this city yesterday, and purchased four carloads of potatoes, two of which he shipped to Butte City, Montana, and two to Portland, Oregon. The potatoes are fine large ones.

A NOTABLE ALMOND ORCHARD.—Among the almond orchard which have been planted in the last few years, the one owned and cultivated by Anderson Bros., three miles south of Davisville, attracts the attention of the passer by more than any other. The trees, which are set out in rows about 20 feet apart, appear to be in healthy condition, and the limbs are one mass of nuts. The land where this orchard now grows was used for farming until three years ago, when the present proprietors purchased the tract, which contains 75 acres, and set it out in almond trees. They agreed to pay $5 an acre rental each year, and at the end of five years could have the land for $100 per acre. They have sold the entire crop this year to W. Treat of the Oak Shade Fruit Co. for 11 cents per pound. Mr. Treat, an experienced orchardist, estimates that, at the rate of 11 cents per pound, the entire crop will bring $4000.

CONVENIENT FOR FRUIT-PICKERS.—We were yesterday shown a fruit-picking machine invented by Mr. Biddall of the West End. The plan is similar to that of a derrick. A person sits upon a platform, and, by means of a rope, draws himself up among the branches of the tree. A pulley is provided by which the bucket of fruit is lowered to the ground. The invention is a valuable one, and will prove a good substitute for a step-ladder during the picking season.

The Mysterious Vine Disease.

A Report from the U. S. Department of Agriculture.

EDITORS PRESS:—The annual report of this department for 1889 has just been issued. Thinking that what is said about the vine disease in the report might interest your readers, I send you a copy herewith.—B. T. GALLOWAY, Chief of Section of Vegetable Pathology, Dept. of Agr., *Washington*.

The Report.

For a number of years the grapevines of Southern California have been dying in a mysterious manner. Hundreds of acres of flourishing vineyards have been swept away, entailing losses impossible to calculate. In 1887, Prof. F. L. Scribner, my predecessor, in company with Prof. P. Viala of Montpellier, France, visited the infected region, the Professor acting under instructions from the Commissioner of Agriculture of this department. Professors Scribner and Viala remained in the field but a short time and did not arrive at any definite conclusions as regards the cause of the malady.

Aside from a general correspondence with various parties in the State, no further effort in the way of investigating the subject was made by the department until early in March of the present year. Soon after assuming charge of the department, the matter was laid before you, and you immediately instructed me to make the necessary arrangements for sending a special agent to the infected region. Mr. Newton B. Pierce of Michigan was selected for the work, and early in May was appointed by you and immediately left for the field of labor. At my request, Mr. Pierce has furnished a brief synopsis of the work to date, a copy of which we give below:

SANTA ANA, CAL., Dec. 6, 1889.

SIR:—The following brief review of work on the California vine disease is submitted in accordance with wishes expressed for such an outline, and is chiefly intended as indicating some of the lines of investigation pursued. To properly establish the special or general conclusions to which my work has thus far lead me would necessitate the analysis and presentation of a mass of observations and notes incompatible with the extent and purpose of this account.

Most of the time since my arrival in California has been devoted to active field work, and the facts accumulated and the observations made are invaluable as a foundation for the laboratory work and experiments which will naturally follow. Through personally field work, covering the greater portion of the worst infected district, we are also enabled to fairly judge of the merits of the various local opinions or of individual observations and views, and to be in a position to draw conclusions not to be arrived at with a more limited view of the field. I believe, however, that this position should be strengthened by a thorough canvass of grape-growing districts of the northern portion of the State. Very respectfully, NEWTON B. PIERCE,

B. T. GALLOWAY, Special Agent.
Chief of the Section of Vegetable Pathology, Department of Agriculture, Washington, D. C.

The disease now destroying the vineyards of Southern California and working to some extent in the northern portions of the State began to attract the attention of the general public in 1885. The older vineyards located in the Santa Ana valley, and particularly those of Anaheim, in what was then Los Angeles county, were the first to show marked signs of the disease in this region. At Anaheim the first request was made for a special investigation into the nature and origin of the trouble, and were forwarded to associations or individuals of the State. Later, as the trouble began to seriously affect the great raisin industry of the valley, correspondence was opened with those in authority at the Department of Agriculture at Washington.

Pursuant to directions from the Secretary of the Department of Agriculture, issued May 16, 1889, I proceeded to Santa Ana, Cal., to prosecute investigations into the nature of this disease under instructions from you. On May 23d I arrived at Santa Ana and at once began the work.

After making the acquaintance of some of the leading grape-growers of the valley, it became my primary object to acquire familiarity with the effects of the disease on the vineyards as a whole, and more particularly the special effects on the vines attacked. To this end a large number of vineyards of the Santa Ana valley received personal attention. In reviewing this matter, I see that at least 100 vineyards of the valley were inspected, in most cases with care, and these vineyards ranged in extent from garden patches to those comprising several hundred acres of vines. At the same time the owners of these vineyards, as well as those gentlemen formerly interested in grape culture but now having their vineyards removed, were visited, and their experience as a whole, or any special observations or experiments which they had made, were carefully recorded.

On working over the field here mentioned, a general study was made of the foliage, body and roots of the diseased vines. The study has been continued throughout the field-work of the season, and has resulted in a thorough diagnosis of the effects of the disease, numerous descriptions in general and special cases being prepared and preserved. The material now in hand illustrative of the characters and effects of the disease is of considerable extent and value. It comprises, besides descriptive matter, a series of photographic plates of the effects of the disease upon the fruit, the vine, and the vineyard as a whole. Besides this, I have procured several excellent water-color plates representing the effects of the disease upon the leaves and canes of the vine, the use of colors being the only means of properly bringing out these characteristic features.

In gathering data relative to the introduction of the disease at various places, it became evident that the trouble had spread in Southern California from a common center. As we passed out from that center, vines similarly located, of like age and of the same variety showed signs of the disease in later and later years. Facts of this character, bearing directly on the contagious nature of the disease, at once showed the importance of procuring as complete records as possible of the dates of the first appearance of the disease in each locality. With this object in view, the vicinity of Anaheim, where the Mission vines first died, was thoroughly canvassed, and various facts and dates brought together sufficient for the construction of a map of that region. These have now been supplemented by like data from other portions of the State, and the material in hand at this time is sufficient for the draughting of a map of approximate accuracy for all the counties included in Southern California, showing the spread of the disease and other facts of importance.

Much attention has been given to the probable origin of this trouble, but from facts already gathered, I incline to the view that this matter must also be investigated in the northern portion of the State before any definite or satisfactory results may be looked for. I have, however, accumulated much material which may tend to throw some light on this branch of the subject.

Different from European Diseases.

It has been advanced by some who have studied this disease here that it is identical with that of Italy and adjoining regions known as *Mal nero*. Viewed from an anatomical and physiological standpoint, there are many features of this disease reminding one of the Italian disease, and this is also true with the external appearance of the canes. On the other hand, I have examined the foliage of five varieties of Italian vines from the diseased district, and find no similarity between the two diseases so far as this material is concerned. Even were the identity of our disease with the Italian *Mal nero* thoroughly established, the benefits to be derived from such a recognition would be next to nothing, for up to this time the European authorities have been wholly unable to agree among themselves as to the nature of their disease, and no satisfactory remedy or preventive has yet been found. Owing to the similarity of these diseases, I have thought it best to work up the literature of the *Mal nero*, which is quite extensive. Translations of the reviews of the various Italian papers published for many years back have been made, numbering some 20 to 25 papers, and many of the original articles and specimens of the Italian diseases have been procured, and more are to follow.

Certain other effects noticed in European vineyards, and spoken of as *Folletage* or *Apoplexie*, have been identified with our disease by certain persons in the State. This view might have justly been held when the disease first made its appearance, but since that time facts have developed which leave no good ground for supposing the trouble to be due to the direct action of the sun, as in the case of sunstroke. Owing to a remarkable connection existing between the temperature of the air and the virulence of the disease, however (as is also true in the case of *Oidium* on vines, or of yellow fever or cholera with man), and the difficulty of determining the true nature of this relation, I have given more than ordinary attention to this feature of the subject. This has brought forth many facts of observation by others and by myself, and resulted in supplying me with what seems to be abundant evidence of the inefficient nature of heat when considered as a lone factor in the causation of this disease. In this connection, the effects of certain warm spells of winter, to the action of which the trouble has been ascribed, have received attention. For instance, vineyards set since these warm spells occurred and from cuttings brought from other portions of the State have taken the disease; but the various reasons for my conclusions respecting the non-causal action of heat can not well be presented short of the space obtainable in a special report.

Most of the non-parasitic agencies for the production of the disease, as their action has been presented by numerous adherents to such views both here and elsewhere, have been carefully considered.

The subject of pruning has received all the attention required. That of irrigation has had special and exhaustive attention. All conditions are noted on irrigated and non irrigated lands, and the evidence is abundantly sufficient to prove that there is no causal relation existing between irrigation and the disease. The subject of soil poverty has been fully considered, as well as the matters of artificial fertilization and alkaline soils. The various drainage problems which have a direct bearing on the effects of some of the well known root fungi have been carefully reviewed during the field work, and if a root fungus be at the bottom of the trouble, it is certainly not working according to the habits ascribed by Europeans to *Dematophora* and *Agaricus*. This fact, however, is not evidence against the presence of root fungi. The bearing of elevation has also been considered, but up to the present time I have had no favorable opportunity to make observations along this line at elevations greater than 2000 feet. The matter of atmospheric humidity has likewise been partially covered. Much statistical information relative to the conditions of climate during the past and present decades, the effects of prevailing winds or those of unusual severity, has been accumulated, and when combined with the results of personal observation will, I believe, show the slight bearing these matters have on the subject in hand. The beneficial or detrimental action of other forms of Phanerogams about vineyards has been sufficiently studied. Under this head the effect of shade on diseased vines has been marked, and, as its bearing on the nature of the disease is important, it has had continuous investigation, at the same time being compared with observations made as to the temperature of the soil at certain depths beneath the surface.

Under the head of degenerated stock, due to long-continued propagation of vines from cuttings, I have been able to make several observations, but for the sake of bringing together a greater amount of material, my attention to this subject will be continued. Yet I may say that up to date there is no good evidence that seedlings will exist longer in the face of this disease than vines long propagated from cuttings.

Lines of Investigation.

When considering the disease as due to parasitic or pathogenic organisms, three lines of investigation have been pursued, viz.: Entomological, mycological and bacteriological—the last as distinct from mycological work mainly in the method of treatment.

The work in these branches of the investigation is in no sense matured. It should be followed by much careful laboratory work, for which my time has thus far been insufficient, and by numerous careful experiments, which are essential and important features in arriving at true results.

Work pursued in the field soon established the fact that phylloxera did not cause the trouble, and although there are numerous insects and worms found upon the vine both above and below the surface of the ground, and which have been more or less studied, yet it seems evident that none of these bear any causal relation to the destruction of the vineyards. I might add that every order of insects is represented upon the vine, and some of these forms are doing sufficient damage to well deserve the expenditures of the time required in making a careful study of them. I have given some time to the *Termitidæ*, which are doing much damage to the older vineyards, and will devote more time to certain *Acarina* and *Nematoda* found infesting the roots.

On the roots of the vine I have found *Vibrissea hypogœa*, but thus far only on varieties from the East. The gonidial stage of another fungus has been observed; also, an extremely fine mycelium, clear, variably septate, branching as it passes *outward* through the cortical parenchyma to the epidermis. Much of this mycelium measures about 2 inches diameter. The study of these forms is now in hand, as well as that of the various effects of the disease observable throughout the tissues of the root.

On the foliage and canes of the vine there are several saprophytic and some parasitic fungi observed; some of which are determined and others have to receive continued study.

Downy mildew, *Perono spora viticola*, has not been found by me in Southern California. The same may be said for this region respecting black-rot, *Læstadia Bidwellii;* neither the *Phoma* of the berry nor the *Phyllosticta* of the leaf having been seen. No fruit affected by anthracnose, *Sphaceloma ampelinum*, has been observed.

Powdery mildew, *Uncinula ampelopsidis* or *Oidium Tuckeri*, which is a very common parasite throughout California, and which has occasioned much loss since its introduction a few years back, has been considered with much care and will continue to be the subject of attentive investigation. The indirect effects of this parasite, as well as those of phylloxera, may easily be confounded with those seen at an early stage of the disease in question. In fact, any parasite whose action is to materially reduce the nutrition of the plant as a whole may produce effects analagous to those which may be termed the general or constitutional effects of the present disease upon the foliage of the vine. Besides these general effects there are those of a special nature, however, which will not be so easily mistaken for those produced by other causes. In the present disease, especially well marked in the Muscat vines, we may usually see in the first stages several small yellow spots within the parenchyma of the leaf farthest from the main veins of the same. These spots are often very well defined in outline, more particularly when the leaf is held between the observer and the light. Often no indications of the effects of higher fungi or of insects can be detected externally or internally in these spots. The peculiar appearance and location of these spots led to a careful study of the same, which resulted in finding bacteria-like bodies (*Micrococci?*) in large numbers within the chlorophyllose cells of the spongy parenchyma immediately surrounding the spiral vessels supplying that region.

Recognition of Bacteria.

After a long series of observations, made on material from various portions of the diseased district, which in no case failed to disclose the diseased vines as swarming with these bodies in all portions where sap had a ready flow, I believe it proper to undertake a series of experiments to determine if these bodies always present, bore any relation to the disease as a whole. I had little doubt that they were micrococcisms and gave to the local spotting of the leaves their characteristically sharp outline. Cultures from various parts of the vine were made in agar-agar and other media. Three sorts of bacteria were found with enough constancy to warrant further study, but I have not so far been able to determine whether any of these are the cause of the disease. Healthy vines were procured, set, and inoculated; but in due time I found both inoculated and control plants showing signs of disease. Owing to our inability, thus demonstrated, to make a fair test of the action of the germs in the infected district, these and analagous experiments—such as grafting, the testing of hardy stocks, etc.—have been inaugurated in Washington, outside infection being carefully guarded against These experiments may demonstrate the non-pathogenic nature of these germs. In view of the observations mentioned, however, and the fact that several Italian students have for years claimed that an Italian disease of similar characteristics is caused by bacteria, it is proper the matter should be decided if possible.

Remedies Employed.

For three or four years vine-growers have been trying to save their vineyards by treating them with Bordeaux mixture applied both as a preventive and as a cure. Most thorough and persistent tests of this fungicide and stimulant have been made. Various proportions of the ingredients have been used, and applications have been made at nearly all seasons and under all conditions. The result has simply been to produce the action of a stimulant on the vines. After an application the vines send forth a new growth. Through this encouragement other and repeated applications have been made. In some vineyards the foliage has been especially treated, while in others, acting upon the theory that the seat of the disease is in the cane or body of the vine, the applications have been made to these parts. Often vines have been carried over by stimulation for a brief period of time. The ultimate result has been, however, that not one vine is saved by this treatment, and yet thousands of dollars have been expended by vine-growers in an effort to save their property. A powder recommended by individuals of the State who have been conducting experiments, and which it was claimed would master the trouble has been extensively made and sold upon the market here in the infected district, and has been thoroughly tested both as a preventive and cure. It was a part of my labor to collect records respecting the results obtained by those who have carefully applied this powder, and up to date I have not found a person who has saved a vine by its use.

Many experiments have been conducted by vine-growers who have studied the workings of this disease, and in all cases their efforts have been seconded by me to the best of my ability, many tests having been made with more or less favorable results. Several series of experiments have been conducted with bi-chloride of mercury, one of the best of germicides; but although for a time a stimulated and approximately healthy growth was obtained, this soon showed signs of disease and the vines ultimately went back as with the use of the Bordeaux mixture. I have records of a number of tests made with other substances, but the whole may be summed up in the plain statement that a preventive or remedy for this disease is not yet known.

Observations of value have been made relating to resistant stocks, and this feature of the work will be continued. Yet from what is known it is probable that Vinifera tops cannot be maintained on native roots in this region in the face of the present virulence of the trouble. The variation in the hardiness of varieties is evident and many notes are in hand on the subject. The effects of grafting on stocks of perhaps 20 different varieties have been recorded. I have noted the effects upon the raisin when considered from a market standpoint, the loss in productiveness of vines, etc.

The financial losses caused by this disease in Southern California are very grave. From the disease being first confined to a small section of Los Angeles county, I have now seen it well developed in Santa Barbara, Ventura, Los Angeles, San Bernardino, Orange and San Diego countries. I have also received typical specimens from several sections in Northern California, but will know its distribution more thoroughly after having worked over that portion of the State.

Although the grape industry where the disease is doing its work has been and is receiving a heavy blow, and the interests involved are extensive, still I cannot but feel that the check in production will be of comparatively short duration, as has been the case in Europe with Oidium, Anthracnose and Peronospora. Further than this the investigations are being pushed as rapidly as time and careful work will permit, and I see no good reason for supposing that they will not result in a thorough understanding of the causes of the disease in question. This, like all other work of its class, requires time, but with the conquering of the vantage ground of a complete understanding of the trouble we may hopefully look forward to the mastering of the matters of prevention and cure.

CAMPHOR, which lately doubled in price, owing to the demand for it to make smokeless powder, has now receded to near its normal value in consequence of the fact that the European governments have abandoned its use.

THE FIELD.

The Advantages of Baled Hay.

Though young in agriculture, California is teaching practical lessons to the older regions in many points of agricultural practice. The benefit of hay-baling is one of these, and any one who has labored under the disadvantage of handling loose hay, or in drawing the same to the eastern village or city markets in imminent danger of cutting his throat on the telegraph wires which cross the streets, will appreciate the following essay which J. W. Clark of Placer county writes for the *Country Gentleman*:

Grass and hay, contrary to anticipation, are more abundant than for many springs. Live stock have done well on wild oats, which grow as a volunteer crop all over this country, and are abundant this season, on even naturally dry and thin soils. The hay harvest now in progress will be plentiful, including alfalfa, wheat and oats, with less areas of barley. Our hay grasses are nearly all baled in the field here, as soon as lightly cured, and then set up in blocks of bales, three or four tiers high, ready for drawing at any time before Oct. 1st—rain enough to damage the hay rarely falling before that date. As a safe precaution, sail or tent-cloth covering, or even green grass, is put over the piles of bales, and various kinds of other cheap covering may be used according to convenience.

I would again express surprise that baling hay in the field is not general in all North American countries. In the Mississippi valley and in most of the States east of the Rocky mountains, very little hay is baled in the field though some is baled from the stack, when intended to ship to distant places in considerable quantities—nine-tenths of the hay crop being moved to barns, or stacked in the meadow, or on the prairie where grown. In stacking, more labor is required than in baling from heaps drawn together by horse-raking. When this stacked hay is drawn to the farm for stock feed, there is a second stacking or moving of the same hay, and when stacked hay is hauled to market—3 to 10 or 12 miles distant, as in Northwestern Iowa, where I have many times seen hay drawn in large racks, with vertical sides four feet high to prevent the high winds blowing the hay off the wagon, many of the racks weighing 800 pounds, or more, and being very difficult to put on and off the wagon gear. The large size of such racks prevents the load being driven into any barn or under cover in case of rain. Hence the loads of loose hay in such racks are pitched through some end door, or stacked again, convenient to the winter feeding yard. But when baled where it is made, as much weight can be loaded in an ordinary wagon box as in a loose state fills a rack that is 16 feet long, 8 feet wide and 4 to 6 feet deep! In California the weight of bales ranges from 200 to 300 pounds—200 pound bales being very convenient to handle, and 10 bales, or a ton, is a small load in a common-sized wagon-box.

If baling were practiced in the hay-field instead of stacking the hay loose, neither hay-loading nor hay-stacking machinery would be necessary, as two men with bale-hooks could set up 20 tons in a block of bales five or six tiers high—the bales now in my stable loft are 3½ feet long, 2 feet wide and 16 to 18 inches thick—taking the bales from the ground in less time than five tons could be stacked from a wagon or by the use of any horse-worked machinery. In fact the loss of time and waste of labor in handling hay loose, in comparison with saving of labor, time and expense, by baling, is so great as to make the practice of handling hay in a loose, bulky condition appear as absurd. Why, even in the field, a portable stack-cover, which can be put on in five minutes and will last ten years, will safely secure five times as much baled hay against rain as the same cover would secure of unbaled hay. Again, less than a quarter as much barn room is required for 40 to 100 tons, or any other quantity, of baled hay, than the same quantity will fill when not baled. It is also true that hay can be safely baled with less curing than is required for hay in large stacks, and even if damp, hay will keep better in bales than in stacks. It is also an advantage that if any of the bales are not as good hay as others, as may happen from inferior grass or catching weather, all such bales can be used without opening others. As to hauling baled hay, four bales fit easily on a one-horse spring wagon behind the seat. On fair roads, a horse will trot five or six miles an hour with two bales, and I frequently see two tons loaded in a common wagon-box pass near my residence. In fact, hay-racks are so few in California that we see none in passing a dozen hay-fields. Then how easy it is to take a four or five-inch layer of hay from the end of a pressed bale by hand without loosening the remainder of the bale. If a livery barn or hotel runs short of hay, a horse with a light spring wagon can speedily bring in two, four or half a dozen bales, without injurious delay, and the fact that one man or stout boy alone can load and unload baled hay readily is worth considering, hooks of course being used in handling the bales. Having worked at haying in detail in several States and on both sides of the Atlantic, I believe I have not overestimated the advantages of baling.

Corn for Grinding and Ensilage.

As there is a growing interest in this State in growing corn for grinding "cob and all," and for putting down in silos, the following conclusions, drawn from experiments at the Pennsylvania Agricultural Experiment Station, may be of interest:

Of the ensilage varieties, when cut for putting in the silo, the Burrell & Whitman Ensilage corn gave the largest yield of green material per acre, but the White Southern the most dry matter. Breck's Boston Market Ensilage yielded nearly as much dry matter as the Burrell & Whitman, but not as much green material, yet was the earliest or most advanced of the five varieties grown. When field-cured, Breck's Boston Market Ensilage and the White Southern varieties exceeded the Burrell & Whitman in yield of dry matter per acre in order named. Salzer's Ensilage and Blount's Prolific made the lowest yields except in the field-cured material, when the former had the largest yield of ears and stood second in yield of green material, but the yield of dry matter was low.

Farmers can safely be guided in the purchase of seed corn by results of germination tests. The lower results that will be obtained in the field are explained by the fact that many seeds will sprout but have not strength to vegetate.

The four varieties of Flint corn ripened at nearly the same time and a few days before the Dents, but had lower yields. The Self-Husking was the earliest but had the lowest yield.

The Queen of the North, Wisconsin Earliest White Dent, Minnesota King, Leaming, Queen of the Prarie and Cleaver corns matured, the Queen of the Prairie giving the largest yield and the Queen of the North and Minnesota King being in best condition. Golden Beauty, Golden Dent, Hickory King, Champion White Pearl and Pissa Queen did not mature, but proved earlier than the Chester County Mammoth, Mammoth White Surprise and White Giant Normandy.

Those varieties grown and sold for ensilage and fodder crops are preferable when a large yield of forage is desired.

Fully one-half of the dry matter (food material) was found in the ears and one-fifth of this in the cob. One-fourth to one-third of the total amount in the plant is found in the leaves and husks. Of the remaining one-fourth there are four or five times as much in the butts as in the tops. It will readily be seen that on account of the great amount of dry matter in the butts there will be considerable lost when the stalks are fed whole. Much of this might be saved were they cut before feeding or preserved in silos.

The results show that fully 20 per cent of dry matter is gained by allowing the crop to mature.

Harvesting Peanuts.

Whatever you do, it is best to do it well, especially as in some cases the doing of it well makes all the difference as to whether or not it is worth while to do it at all. This will be particularly the case with the growing of peanuts this year in Southern California. The quantity will so far exceed the previous yields that the price will go nearly down to half what it has been within a few months, and the most economical methods of harvesting will have to be resorted to to keep the cost of production within the market value of the nuts. Not only is this economical question involved, but also one of *quality*, on which also depends so large a percentage of the value of the nuts as to come very near determining whether or not it is worth while to grow them. When we state that the difference in value may amount to a cent a pound and their wholesale price may not be over six cents, it will be seen how largely their profit depends on the care taken of them. The following instruction is from Mr. A. F. Reynolds, 204 West First St., Los Angeles, whose intelligent direction of this young industry we have previously had occasion to refer to:

There are so many peanuts growing this year and the price will be so low that it will require some method in harvesting the crop, or it will be a dead loss to the farmer. I said in a former article which was extensively copied by the public press throughout the State, that they should be left on the ground after being pulled, *with the nuts underneath the tops*, to protect them from dampness and the hot sun, thereby preserving their bright color, and at the same time leaving them to hang down as much as possible, so they may be easily knocked off. One other important point, let them get *thoroughly dry*, or they will get moldy and spoil in the sack. Put under cover as soon as dry.

Now many have planted this year who have had no experience in the business, and they will turn them over so the sun can dry them quickly—that's what the sun is for, of course. Well, they *will* dry quick that way, *and be black*, and hang down among the vines so they will have to be picked out one at a time, which will cost more than they are worth in the market.

Some farmers fasten an old knife-blade to the end of a stick and cut the main root (which is hard to pull) near the surface of the ground, and on which there are no nuts; then they are easily pulled, and the long tap-root will not be in the way of machine picking or knocking them off by hand.

A very effective picking machine, if properly made, is fashioned after the windlass we used to make in the mines for hoisting dirt. Make the drum somewhat larger and drive into it big nails in rows, near enough together and projecting enough to catch hold of the nuts; fasten a bar or rest to the frame, parallel with the drum, just near enough to let the heads of the spikes pass; bevel the rest or bar to a thin edge; hold the bunch of vines on the rest with the nuts against the drum, turn the crank, and it will snatch them off in a hurry.

Now let all the papers that copied the other article copy this one also and save to their patrons many times the price of their paper.—*Pacific Monthly for June.*

From Florida.

A Welcome Paper—Drouths and Wet Seasons—Diversified Products—Encouragement for the Future.

EDITORS PRESS:—Though the width of the continent separates us, the RURAL spans the distance every week as regular as clock-work, with a miss very rarely indeed; and a very welcome and entertaining visitor it is. I should feel lost without it. In fact, an important part of my weekly mental pabulum would be lacking and the loss would be sorely felt. I have thought for years that the RURAL PRESS was as good as it could be, but somehow you keep improving it year by year. Surely, you keep in the forefront of the progress of the times and cannot but be the means of great good throughout the wide area in which it circulates.

In Florida we are in the midst of our regular summer rainy season, which commenced this year the first part of May, instead of the middle of June, as usually expected. The past two years the weather has been very peculiar. The unusually wet winter of 1888-9 was followed by a very severe spring drouth; this was broken by the late beginning of the rainy season, which lasted through July, August and September, 1889. Then the drouth took hold again and held on till the last of April, seven months. Even the usual heavy dews were conspicuous by their absence. To cap the climax, we had two severe freezes in March. These experiences were altogether unique in the history of the State.

The individual losses have been great in some sections; certain localities, for some unknown reason, feeling the effects much more severely than others. The outcome of the whole matter will be decidedly beneficial to the State at large, as it will cause a much more general adoption of irrigation, which will result in the adoption of a more intensive system of cultivation with greater certainty and amount of production.

Another gratifying feature is found in the fact that there is a more general attempt to produce the necessary supplies of provisions at home, in place of excessive imports from other States. People are rapidly learning the folly of buying abroad that which can be produced at home. They are learning that to be prosperous they must diversify their industries, their productions; must give more attention to growing the staple crops, feed for their cattle, vegetables and fruits of many kinds for home use. The golden text being deeply impressed upon their minds is: "Buy nothing whose equivalent you cannot produce at home."

Altogether the prospect was never so encouraging for Florida as now. The immense discoveries of phosphate and other minerals are giving a greater stimulus to development. New railroads are being built and projected. Phosphate and fertilizer works are locating in various parts of the State. A feeling of great confidence is everywhere manifested, and Florida is triumphantly marching on

1890—THE STATE FAIR—1890

OF 1890 AT

SACRAMENTO,

SEPTEMBER 8th TO 20th INCLUSIVE.

CALIFORNIA'S ANNUAL EVENT!

Showing Progress Made in Agricultural, Mechanical and Industrial Arts.

LIBERATI'S FAMOUS MILITARY BAND OF FIFTY SELECTED ARTISTS AND DISTINGUISHED VOCALISTS

Will give a Grand Musical Concert at the Pavillion each evening from September 15th to 20th.

THE COUNTY EXHIBITS made at these exhibitions have attracted more attention to localities represented than any other form of advertising advanced.

EVERY COUNTY IN THIS STATE should have an exhibit. Begin with harvest and secure samples of your products. The money premiums will almost pay the entire cost of your exhibit.

NEW-COMERS ARE AWAITING to view the products of the State before locating. Hence it behooves every county to be up and stirring.

IT IS AT THESE EXHIBITIONS the Manufacturer meets the Merchants of the interior.

IT IS AT THESE EXHIBITIONS the Merchant views progression made in all mechanical and industrial callings. Hence it behooves the Manufacturer to be up and stirring.

AT THESE ANNUAL EXHIBITIONS the visitor may combine business with pleasure, as the Board of Dirrctors provides for all kinds of recreative amusement in the varied program of events.

THE CONTESTS OF SPEED showing advancement made in the breeding of high-class horses, will be a feature.

THE GRAND PARADES OF LIVE-STOCK will embrace the various classes of horses, and all the improved breeds of cattle.

OPEN-AIR AMUSEMENTS FOR THE DAY and MUSICAL CONCERTS FOR THE EVENING will afford ample entertainment for all who visit the State Fair.

Every attention will be rendered exhibitors by the Board of Directors.

Premium lists are now ready, and will be furnished upon application to the Secretary, who will also furnish other necessary information that may be desired. Apply at once for space.

Remember, the Southern Pacific Company TRANSPORTS ALL EXHIBITS FREE OF CHARGE to and from the Fair, and gives EXCURSION RATES TO ALL THAT ATTEND.

CHRISTOPHER GREEN, President.

Iron cut, punched and formed, for making pipe on ground. All kinds of Tools supplied for making Pipe. Estimates given. Are prepared for coating all sizes of Pipe with a composition of Coal Tar and Asphaltum.

TRACK AND FARM.

Our Horses in Front.

There has never been a more sensational period in the history of the American turf than that which has passed over in the past two weeks, and the California horses running in the East are responsible for it. Salvator, the Haggin colt, surprised them all by winning the Suburban, and the noise of that victory had not ceased to be heard when he came to the post in one of the greatest match races ever run on American soil, and made the unprecedented run of a mile and a quarter in 2:05, carrying 122 pounds.

The comments upon that extraordinary victory had not ceased when Firenzi, the mare of the Haggin stable, came to the post in the Coney Island Cup, and with 117 pounds on her ran the distance and won in one second better than record time. The people were still talking about Salvator and Firenzi, when Racine, one of the Palo Alto colts, started in a race at Chicago and broke the record for a mile—a record that has stood for 13 years.

Three such performances to come in one week, and all of them to be done by Californians, is a record that will stand for years, and gives the home people the chance to truly say that the best of them all belong to us. California has the greatest trotting filly that the world ever saw, the best four-year-old colt that ever ran, the best mare that the country has produced, and the greatest three-year-old of his year. No other State in the Union—not even Kentucky, the boasted home of the horse—can make such a showing, and the State may well be proud of her equine victors. Neither Salvator nor Firenzi were bred here, but they have been brought to their excellence in the California stables and they will pass their last days on the California ranches. Racine and Sunol were both born and trained here.

Some Rich Programs.

Oakland, Napa, Petaluma and San Jose announce their programs for the fall fairs, and one glance over them is sufficient to show that the people are awakening to the importance of the trotting horse in California, and they offer to the horsemen the most liberal purses ever known in the State. The four associations offer an aggregate of $50,000 in purses and stakes for the trotters, pacers and runners, and the trotters get more than half of it. Oakland puts up $10,000 for the trotters alone.

The programs are the best in many respects that we have ever had in the State, and are worth more than a passing notice. Oakland gives $600 to the three-year-old 2:40 class; $1000 to the Stamboul 2:27 class; $1200 to the Electioneer 2:20 class; $1200 to the Mountain Boy three-minute class; $1000 to the Grand Moor three-year-old new-list purse; $1000 to the Hawthorne 2:35 class purse; $500 to the Guy Wilkes two-year-old purse; $1200 to the Director 2:24 class purse; $1000 to the Sidney free-for-all pacing purse; $1200 for the Dexter Prince 2:40 class purse; $800 for the Mambrino Wilkes 2:30 class; $500 for the pacing 2:30 class, and a sulky set of harness and a gold medal to the three-year old that will beat Sable Wilkes' record of 2:18.

The events in the program of the Los Angeles Association closed their entries on the 1st of July, and a private note from the secretary says that everything filled and that the Los Angeles Fair will be one of the largest of the year. The trotting events filled with a good number of northern horses among the names. The fair begins on the 4th of August.

A meeting of the State Agricultural Society was held last Tuesday, and some unimportant changes were made in the program, which was published some time ago in the RURAL.

Notes at Random.

The California horses at Chicago, with the single exception of Racine, have done anything but good running.

The stables of Marvin and Hickok are now at Detroit, Mich., where they will await the opening of the grand circuit.

Joe Courtney has been deposed from the management of the Winters stable and Tom Conley has been installed in his place.

Jim L, 2:20, by Dan Voorhees, has been taken from the stud and put into training for the circuit. He is being worked at San Jose.

After the close of the State Fair, nearly all of the running stables will go to Reno and Carson for the meetings there, where liberal purses are offered the runners.

Frank Baldwin, the manager of the Fresno track, has also been made the manager of the new track at Coronado Beach, and the first races of the new course are to begin this week.

Ringwood, the Sydney stallion, has been sent to the Bay District track and placed in James Dustin's hands for training. It is intended to give him a low record this year if possible.

The Napa 2:30 class trot, in which there are eight nominations, will be the first hot race of the season, and the horsemen believe that at least three of the contestants will get records near 2:20 in the race. Five horses that are in the 2:30 class give promise of beating 2:20 before the season is over.

The thoroughbred stallion Enterprise, owned by Price Bros., of San Luis Obispo, was exercising on the track a few days ago, and in a collision with another horse on the track, while at full speed, was killed.

The entries to the colt stakes of the Los Angeles Association closed on the first of June, and all of them filled well. Among the sires represented in the stakes are Stamboul, Alcazar, Guy Wilkes, Gossiper, Will Crocker and Woolsey. The 2:30 class trot and the District Races closed on the same day, and they, too, received a large number of entries. None of these events will go unfulfilled.

One of the Eastern papers says of a California horse: "Esperanza by Grinstead out of Hermosa is the crack two-year-old filly in the Santa Anita stable, and is said to be one of the grandest youngsters ever owned by Baldwin. In her work at Morris Park the other day, in company with Cleopatra, she ran the three-quarters very handily in 1:15, carrying good weight. She is engaged in the Lakeside, Friendly and Hyde Park stakes to be run at Washington Park, Chicago, and her trainer has his heart set on winning the valuable Hyde Park with her. The entire Santa Anita stable has arrived from New York at the Washington Park track."

FORESTRY.

On Spontaneous Forest Reproduction.

EDITORS PRESS:—The last issue of the RURAL PRESS, June 28th, contained an excellent photo-facsimile of new forest growth on abandoned mine site in Placer county.

The interest which pictorial illustrations always arouse would have been enhanced did the context tell us with what species this washed-out country was being re-forested and what the character of the old timber, if any, in the immediate neighborhood. The cut, good though it be, of course, fails to illustrate this point, though it does show from the sparsity of the young growth the improbability of the final product ever yielding the best quality of timber for mill uses.

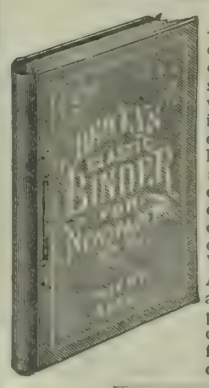
It is unfortunately true of most, and in particular of California pine forests, that the destruction of the primeval woods is subsequently followed up with a new growth of inferior species.

Along the western slopes of the Sierras, in the very heart of the timber country, large areas, formerly covered with yellow and sugar pine, are chiefly wooded with the relatively worthless "tubercled," "digger," or other "scrub" pines; the probabilities are, that these preponderate in the illustration referred to.

The valuable timber sorts reproduce themselves freely when the first growths are felled; but after being burned over a few times, and trampled and pastured out by sheep, their vitality succumbs more readily than these apparently tenacious but less worthy kinds. It is almost certain that private enterprise will never be directed toward any elaborate or extended artificial forestation of these denuded tracts; and almost as problematical are the chances of their reclamation at the hands of the General Government, if one may be guided in forming such an opinion, by its apathetic indifference upon a subject that has called forth the exercise of a broad-minded and patriotic public policy from every progressive government under the sun save ours. If the energies of the Government are ever aroused to activity in this direction, it will require years of patient toil and careful and intelligent observation to demonstrate if any practical inducements can be held out to justify a resort to any other than the purely natural system of re-forestation now going on in Placer county. Meantime, could the well-wishers of the country and those alive to a knowledge of the transcendent importance to the prosperity of this coast involved in the problem of forest preservation, have the faintest assurance of the early inauguration of *any* policy other than mismanagement, or non-management, of the remaining timber lands of the federal government, they would gladly drop all agitation and trust to nature, supplemented by good sense to accomplish the rest.

No conceivable contingency, or possible expansion of our population, can occur within generations, to require the occupancy of these lands for other purposes than forest. During this time, while they are exerting to the full the primary functions and benefits of forestry, they are as surely accumulating a reserve of State and national wealth, as to which the uncertain and fluctuating yield of our breadstuffs is but an insignificant trifle.

To disabuse those who may think this presentation of the subject is but the overdrawn picture of an enthusiast; it may suffice to say that the dispassionate and qualified estimates of so conservative and competent an authority as Prof. C. S. Sargent places the annual value of our forest products in excess of seven hundred million dollars!—a sum more than sufficient in two years to completely extinguish the national debt. Without disparaging or underrating in the least the value of what nature is doing for us, we fully believe that the intelligent intervention of man in matters pertaining to forests, can be as pregnant in good results as his interposition has been in the fields of horticulture and general agriculture; but lacking that, we can only rejoice most heartily that the unassisted forces of nature are at work upon the devastated, abandoned and soil-denuded wastes of the upper foothills to rehabilitate them in *any* fashion, and in a measure repair the ravages of man's cupidity and wanton criminality.



True, this rehabilitation may not be contemplated to yield the greatest final results to ourselves and posterity, still it is a point gained; and if the sentiment of the communities in the districts where these young forests are struggling to re-assert themselves can be awakened strongly enough to result in concert of action that will declare a vendetta against their constitutional enemies—fire and sheep, for all time, they will be happy not only in the consciousness of well-doing but in directly advancing their own immediate and material prosperity as well.

WM. S. LYON.

Los Angeles.

[This important communication from the head forester of the State Board will be read with much interest, and we trust its suggestions will be heeded.—EDS PRESS.

To Subscribers and Readers.

A HANDY PAPER BINDER—A. T. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, and very cheapest of all economical and practical file binders. Newspapers are quickly placed in it (as received) and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price (size of this paper, Harper's Weekly, and Scientific American), 75 cents; postage 10 cents. Postpaid to purchasers of this paper, 50 cents. For sale at this office. Send for illustrated circular. Agents wanted.

DRYING FRUIT.—Secretary Young of the San Diego Producers' Union, says reports from various parts of the county show that a goodly number of the growers are preparing to dry their crops. Some will dry in the sun, some have bought evaporators and others are building kilns.

Consumption Surely Cured.

To the Editors:—

Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption if they will send me their Express and P. O. address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl St. New York.

I will give $100 in case the exterminator does not kill (if properly applied) every ground squirrel that it deathly fumes comes in contact with. Thousands are in use. Price $3.00. Send for circulars to

F. E. BROWNE,

30 S. Main St., Los Angeles Cal.

State Horticultural Society.

At the regular meeting held June 27th at the State Board of Trade, Judge Blackwood presided in the absence of President Hilgard, who was in Southern California. Dr. Gustav Eisen was elected a regular member.

The Board of Directors reported that a proposition had been received from Dewey & Co. to furnish a stenographer and publish a full report of the proceedings of the society in the RURAL PRESS for $5 a meeting. The directors advised that the proposition should be accepted on trial, the arrangement to terminate whenever deemed advisable by the society. The proposition was agreed to.

The directors also presented the following for the approval of the society:

That the State Horticultural Society desires to impress upon those intrusted with the California exhibit at the Chicago World's Fair the desirability of having departments under the immediate management and control of experts in the branches of production represented, and in accordance with this plan it urges that the display of horticultural products should be conducted by practical horticulturists.

That our delegates to the World's Fair Convention be instructed to present this proposition for the approval of that body.

The resolutions were adopted.

Mr. Lelong exhibited peach apricots from R. C. Kells of Yuba City, of which seven weighed two pounds and the fruit measured 6½x7 inches in circumference. Mr. Lelong showed also the *Prunus Simoni* grown by Mr. Thomas of Visalia, which was reported to have sold in the East at $12 per crate, after having been 20 days en route—showing the durability of the variety as well as its acceptability at the East. He also showed the Clyman plum, a California seedling, which has sold this year notably well at the East.

The Secretary showed the Grelck plum as grown and propagated by Chapin & Meeker of Poway, San Diego county, a plum of the cherry-plum class, but ripening two weeks earlier than the common cherry-plum, and notably superior to it in quality and in appearance.

Howard Overacker, Jr., exhibited the trunk and stump of a prune tree worked on the apricot root, on which the top had broken squarely off at the juncture of the two woods, although it had attained four inches in diameter. Mr. Overacker also showed peaches thinned and unthinned to illustrate the attainment of size by thinning. Mr. Wolleb exhibited Schmidt's Bigarreau cherry, a handsome black variety recently introduced.

Fruit Prospects and Prices.

Rev. A. H. Perkins of Alameda reported the prune crop fair in his region, and early peaches excellent.

Judge Blackwood of Haywards reported apricots a light crop, Bartlett pears fair; prunes have gained in size, and will produce fair weight, though less in point of numbers. He had been offered 2½c. per pound for his apricots, which is much better than earlier in the season, and he had come to the conclusion that, as a rule, it is not advisable for growers to sell futures on their fruit.

Howard Overacker, Jr., of Niles, reported apricots a short crop, prunes good, Bartlett pears fair. Prices have improved; 2½c. is offered for peaches and 3c. for Bartletts.

I. A. Wilcox of Santa Clara reported that some fruits had dropped badly. Peaches were a good crop. Prunes had sold for 2½@2¾c. per pound.

W. G. Klee, who had recently visited Ventura county, reported the apricot crop very large.

Dr. Eisen reported the outlook for the raisin output of Fresno about the same as last year.

I. H. Thomas, of Visalia, reported by letter as follows: "The grape yield in this county and Fresno will be large; prices in sweat boxes 5 to 5½ cents. Apricots will all be dried in a few days; selling at 11 to 12 cents dried. The peach crop will be fair. Prices for green fruit for drying 1½ cents per pound. Prices offered for dried peaches 11½ to 13 cents per pound."

There was a general discussion concerning the desirability of obtaining fuller reports of crop prospects and prices. Mr. Bancroft urged that the society should undertake this work, and Rev. A. H. Perkins thought it would be feasible, by aid of blanks sent out to growers, to get valuable reports. Upon motion, the subject was referred to the Board of Directors, to perfect and submit a plan of operation which could be tried during the next fruit season.

A letter was read from John G. Jessup, of Oregon, asking the society what steps had been taken in regard to committees appointed to erect a monument to the memory of his father, W. H. Jessup, who died in New Orleans while attending to the business of the society at the exhibition two years ago.

The Secretary stated that it was understood that the money due the society for premiums for fruit exhibited in Mr. Jessup's name at the New Orleans exhibition should be devoted to erecting the monument, but Mrs. Jessup had received the money and devoted it, by the advice of friends, to other purposes.

An essay on cherry growing, written by W. H. Pepper, of Petaluma, was read by the Secretary. The essay is given on another page of this issue.

A general discussion of the coming World's Fair, at Chicago, was had but no action was taken.

B. M. Lelong distributed copies of his printed report of his recent investigation of fruit prospects and insect matters at the East and South, and exhibited specimens of the injurious and beneficial insects which he had collected. The subjects were received with much interest by members.

Mr. C. B. Turrill suggested that the chief of the department of the census embracing the statistics of horticulture be communicated with and asked, if it be found impossible for him to visit California, to appoint a Californian horticulturist to supervise the collection of statistics relative to California horticulture. The secretary was instructed to correspond about the matter.

Dr. Gustav Eisen accepted an invitation to address the society, at its next meeting, on the raisin industry.

Against Brutality.

Governor Waterman has placed himself honorably upon record as earnestly opposed to the brutal slogging matches which are, by their viciousness and frequency, giving our State a vile name and outraging every sense of decency. He has written the following letter:

G. A. Johnson, Attorney-General, Sacramento—DEAR SIR: The fair name, honor and renown of California has ever been dear to me, whether in the private capacity of a citizen or as one in the occupancy of official position. In my devotion to the interests of California, in the endeavors I have always made in behalf of her progress and prosperity, and my ambition to see her occupy the front rank in the States of the Union, I have been actuated by the purest and sincerest of motives. In this I have not occupied an isolated place, but have found myself one among many. In my official and personal intercourse with yourself, it has been my good fortune to be thoroughly in accord with yourself on many propositions, and particularly those affecting the progress and prosperity of California, and I take this opportunity in connection therewith to thank you thus publicly for the many courtesies I have received personally at your hands and the assistance at all times rendered the Executive office.

Therefore, in furtherance of our mutual views respecting the position occupied by California at home and abroad, I desire most sincerely to direct your attention to the fact that the State has been thoroughly and completely disgraced by the maintenance of organizations given up to degrading and disgusting exhibitions of brute force in the so-called scientific contests between so-called scientific athletes, which are nothing more nor less than prize-fights, in opposition to decency and the good order of society, against which the law made and provided in such cases should be operative in those localities of the State where these unlawful practices take place. They should no longer be permitted to defame and degrade the soil of our State, and the mere fact that is advanced that their patrons consist of those in the higher walks of life, should be a still further incentive to put an end to the exhibitions alluded to, in order that their pernicious example may not affect those in the lower walks of life.

As it is now, it is an evil and a shame, producing no good or benefit, and only indulged in as a mere speculation by those who pursue prize-fighting as a means of subsistence and support, and for gambling purposes. Will you do me the favor, in the absolute interests of the State, of inquiring into the matter, and if the local officers of law are not able to cope with the subject, I invoke your aid, as the chief law officer of the State, and ask you to proceed immedtately and take such decisive action and measures as will in the future preserve and protect from so foul a blot the escutcheon of the State of California. Yours, very truly,

R. W. WATERMAN, Governor.

From the Huer-Huero.

EDITORS PRESS:—While we highlanders of the chaparral may see ourselves outstriped by our neighbors of the valley in many ways, still, like Donald of the Glen, we have our recompenses and enjoyments. At Creston our friends have a Grange and a Farmers' Alliance, both in full blast. They also have a beautiful schoolhouse with gingerbread all over it and a silver-tongued bell away up in the dome. The carpenters are hammering away at two new church buildings for them, and their goose seems otherwise to honk at a considerable altitude.

We of the Huer-Huero do not envy our neighbors for these things nor expect to rival them in their prosperity. We are plain country folk and do not try to put on city airs. Our schoolhouse is modest, for it had to be measured by our purses. It is being built from the proceeds of a tax upon the district, which was carried without a dissenting voice.

We had a picnic there the other day—the first one ever enjoyed by us in this neighborhood, and the Rev. Mr. Allan of Creston a few Sundays ago delivered to us the first sermon that ever found its way into these hills.

A neighbor also a short time ago had one of his horses stolen, so you see we are coming rapidly to the front in the ways of civilization.

The young orchards set out last spring are promising well and we are persuaded that before many years we will be heard from in the way of fine fruits of almost every description that can be grown in the State.

The Government land hereabouts is all taken except the very roughest. Good land can still be had at a low price, but will soon rise in value, as it is proving its great adaptability for fruit trees and vines. J. K. T.

Creston, S. L. O. Co, June 25, 1890.

THE first drive of logs on the Truckee river made by a local lumber company contained 4,000,000 feet.

430,710.—WELDING MACHINE — Toulouse & Delorieux, S. F.

430,904.—CAR COUPLING — G. W. Weller, Baker City, Or.

The following brief list by telegraph for July 1, will appear more complete on receipt of mail advices:

California—Peter Abrahamson, S. F., oven-door; George D. Crocker, Oakland, swinging-window; George Cummings, S. F., automatic damper for steam boilers; Frederick Gutzkow, S. F., elevator; Charles R. Hay, assignor of one-half to R. H. Marchant, S. F., can-printing device; Bartlett McIntyre, assignor to Vulcan Iron Works, S. F., gang-edger; George W. Thissell, Pleasant Valley, fruit-grader. Washington—Hans O. Strand, Montisano, shingle-cutter and dresser. Oregon—George B. Williams, Portland, automatic air-brake; George B. Williams, Portland, releasing attachment for air-brakes.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Progress in San Diego.

San Diego is not to-day considered a booming city and possibly has less inhabitants than when the census enumerator began work, yet he who thinks that when the "boom" died the city also died errs greatly. The reaction from the wild excitement of speculative days caused city and county alike to pause, but after a few short months when values had again settled to a working basis, new enterprises were projected and to-day the faith of the people in their beautiful city and its tributary country is stronger than ever. This summer finds more street-paving being done than any other one season in the history of the city. I might almost say more than all former efforts combined. Within the past few weeks the first cable-car line of the city has been opened to the public and as a model of construction and equipment it bears inspection. Throughout the county increased willingness to invest capital is shown. The Jamul cement works are being developed and will soon be ready for business. This summer the Otay Watch Co. made their first watch. This summer also the West Coast Match Co. of National City manufactured their first matches. The manufactures of asbestos, paints, and terra cotta ware is rapidly increasing. Iron works for the production of mill, mining and ranch machinery are doing their part to develop the surrounding country. Of these and other industries, many and varied, I shall in the future give a more minute description. J. B. H.

An Excellent School for Girls.

The Snell Seminary—a view of which appears upon another page—has been established in Oakland for a dozen years. It enjoys a well-won reputation as a school where pupils not only receive thorough intellectual drill and instruction in all branches deemed most desirable for young ladies, but are also subject to such influences and training as tend to form noble characters and adorn them with the graces of true womanhood. The location and appointments of the buildings, the high aims and long experience of the principals, and the general esteem in which the institution is held, all commend it to the favorable consideration of parents who have daughters to educate.

A Holstein Dairy in Berkeley.

The San Jose *Mercury* of June 26th says: A carload of fine Holstein-Friesian cattle sold by Geo. B. Polhemus to P. G. Galpin of the firm of Doyle, Galpin & Co., lawyers of San Francisco, passed through the town last night. The cattle presented a magnificent appearance, and are not only a credit to Mr. Polhemus but to Santa Clara county. It is safe to say that a finer lot of cattle cannot be found."

These cattle were *en route* for Mr. Galpin's ranch near Berkeley, Alameda county, where he has fitted up a dairy with the latest improved machinery and appliances to properly match the fine cattle with which the lands are to be stocked. Mr. Galpin will find much satisfaction in this progressive undertaking.

TACOMA PORTRAYED.—Will Carson has published a very large view of Tacoma in colors. Accurate sketches of the buildings and the general surroundings give a very good notion of the city and its location.

FRUIT OUTLOOK IN SOUTHERN OREGON.—H. Carter, volunteer United States Signal Service observer at Ashland, speaking of the crop outlook in Southern Oregon to a reporter, said: "We will have the finest crop of fruit this year, size and quality considered, Southern Oregon has ever seen. The yield, too, will be larger than in any year past. A number of young orchards are just beginning to bear, and the trees are all healthy and thrifty. As for peaches, we can beat any other section in the State. They are absolutely as fine an article of that fruit as the world produces. Ashland will ship more fruit this year than ever before, and we also have prospects of getting one or more canneries."

A RACER UNDERVALUED.—A Terre Haute dispatch says that the famous racehorse Axtell has been assessed at $8000. The Farmers' Alliance is not satisfied. The members claim that Axtell cost $105,000 and earned $40,000 the past season, and that $75 000 is a fair cash valuation. Axtell's owners threaten to remove him from Terre Haute if the assessment is made high.

GLANDERS IN SANTA BARBARA CO.—The Lompoc *Record* refers to Soren Larsen, an experienced veterinary surgeon, as authority for the statement that there are quite a number of glandered horses in that vicinity—enough, if not disposed of or cured, to spread the disease through all that portion of the country.

AGRICULTURAL DIRECTORS.—E. C. Voorhees of Amador county and Eugene J. Gregory of Sacramento were appointed directors of District Board of Agriculture No. 26, by the Governor, on the 26th ult.

TWENTY FIVE stone-cutters at the Stanford University were discharged on Monday of last week. They will not be re-employed until Stanford returns from Europe, in August.

Recent Improvements at Santa Cruz.

Pertinent to the views of Santa Cruz, which appear upon the first page of this issue, are some statements concerning the recent improvements and development of the country, for which we are indebted to the Carnall-Fitzhugh-Hopkins Co. of San Francisco, a firm which is taking a leading part in the progress of the region:

The magnificent beach, the delightful climate, and the picturesque environment of Santa Cruz have made it a name in almost every land in the world, and lately the denominational church societies have here followed the example of the Methodists in founding their now widely known summering place at Pacific Grove. The natural advantages and the abundant rail facilities of Santa Cruz have attracted more than one church to establish here a summer home at the seaside. The most important of these is

Garfield Park,

The establishment of the Christian Church of California. It is located within the city limits, and occupies ten acres of land on a handsome plateau in full view of Monterey bay, in the center of which tract there is now in course of construction a Tabernacle with a seating capacity of 2000, to cost when completed $15,000. Already cottages of the members of this church are going up on the lots of Garfield Park, and by midsummer of this year the Tabernacle will be completed, and an encampment of many thousands of people will be in session at this point. Here will be the very life center of this flourishing and ambitious church society; and before the end of this year its educators propose to found in the vicinity of Garfield Park a sectarian college of first-class order, and thus establish an educational center that will be of great advantage to the locality.

Surfside.

Another enterprise which is now claiming much attention is one in which the Carnall-Fitzhugh-Hopkins Co. and their resident manager, E. A. Crennan of Santa Cruz, are conducting with much enterprise. The tract is properly named "Surfside," and it occupies a high tableland in the southwestern part of the city, and commands the most extended views of all that picturesque scenery described above—from the farthest end of Monterey bay to the summit of the Santa Cruz mountains. It lies adjacent to the curvilinear streets of Garfield Park and extends down to the shore line, fronting on the famous Cliff drive and overlooking the wildest part of the whole coast of the bay, where the most magnificent displays of surf may be seen. Its avenues are the nearest thoroughfares from the business part of the city, and from the Tabernacle in Garfield Park down to this part of the cliff, which attracts thousands of people, winter and summer, to view the wild play of the waves upon the rugged shore.

Surfside has been laid off with broad streets and avenues, and subdivided into large, handsome lots. Its drainage is perfect. The pipes of the water company are laid to it. Its position is unparalleled. Its views are charming. Its roads and drives are delightful.

An advertisement in this issue gives other facts concerning this property, and indicates how those interested may by inquiry receive still further information.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE.

JERSEY BULL No. 468 P. C. J. C. C. for sale cheap. A fine four-year-old animal. Address Dellwood Poultry Yards, Napa, Cal.

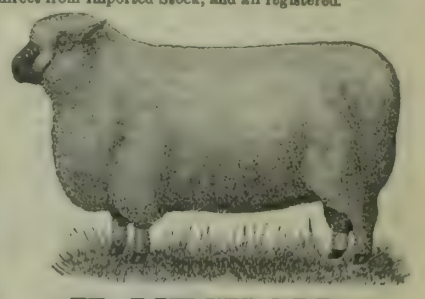
Red Polled Cattle.

We have 19 head of Imported Stock.



Young Bulls and Crossbreds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

They were all imported from England in '88, or bred direct from Imported Stock, and all registered.

H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address:

Stony Point, near Petaluma, Cal.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, July 2, 1890.

The weather continues favorable for harvesting. There is an absence of hot drying winds, and in their place we have fairly cool weather, which is all that can be asked for securing the crops. Trading in farm products continues quite active in fruits, and a growing demand for cereals at advancing prices for wheat. The Eastern and European markets for wheat have advanced since last Monday, closing strong to-day. The following is to-day's cablegram:

LIVERPOOL, July 2.—Wheat—Steady. California spot lots, 6s 10½d to 7s; off coast, 36s 3d; just shipped, 35s 9d; nearly due, 36s 3d; cargoes off coast, firm; on passage, quiet; Mark Lane wheat, quiet but firm; English country markets, generally dearer.

Foreign Grain Review.

LONDON, June 30.—England is likely to require all the cereals America can send this year. The continued wet weather and cold, blighting winds are rapidly destroying the crops. Hay is rotting on the ground; wheat is getting mildewed; fields are being turned into ponds, and nothing is ripening. As for fruit it nearly all comes like most other things from abroad. People are dependent on foreign supplies for provisions and delicacies of every kind. Every year makes the prospect worse for the English farmer. Fortune seemed likely to be more favorable the present season, but rain set in, and since the beginning of June the country has been wrapped in gloom.

The *Mark Lane Express* says: The weather has been exceedingly unfavorable for wheat. Oats promise well, but barley is less regular. May English wheat is firm. Owing to the scarcity of samples, flour is inactive. *At Liverpool there was a decline of 3d to 6d per sack on American. Punjab advices are that the last yield of wheat is 2,000,000 quarters below the previous yield. Reports to-day of the scarcity of good English wheat caused an advance of 6d to 10s. Foreign wheat is firm in request while it has advanced 6d. Flour is steady and maize is stiffening.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	June.	July.	Aug.	Sept.	Oct.	Nov.
Thursday....	6s11½d	7s½d	7s¾d	7s10d	7s9d	7s9½d
Friday	6s11½d	7s9d	7s10d	7s11d	7s9½d	7s9½d
Saturday	7s0d	7s0d	7s9d	7s11½d	7s9½d	7s9½d
Monday	7s½d	7s½d	7s½d	7s9½d	7s9½d	7s9½d
Tuesday	..	7s½d	7s11d	7s9½d	7s9½d	7s9½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	35 6d	35s3d	35s6d	Firmer.
Friday	35s6d	35s3d	35 6d	Steady.
Saturday.....	35s6d	35s3d	35s6d	Firmer.
Monday.....	35s9d	35 6d	35 9d	Strong.
Tuesday	35s9d	35s9d	35s9d	Firmer.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	June.	July.	Aug.	Sept.	Dec.
Thursday	92⅝	92⅝	91½	91¼	91⅞
Friday.....	92⅝	92⅝	91¼	91	91⅞
Saturday	92½	9	91½	91½	92½
Monday	...	93	92	91⅝	93⅝
Tuesday.....	...	91¼	93½	93⅝	95

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	June.	July.	Aug.	Sept
Thursday.....	86¼	86¼	87	87⅞
Friday.....	85⅞	87½	88	88⅞
Saturday	85⅞	86	86⅝	87⅛
Monday.....	86	86¼	86⅜	86⅞
Tuesday.....	...	...	88⅜	89⅛

NEW YORK, July 2.—Wheat—96⅝c for cash, 94⅛c for July, 93⅞c for August, 93⅜c for September and 95¾c for December.

CHICAGO, July 2.—Wheat—88⅜c for August and 89⅜c for September.

Increasing Cost of Canned Fruits.

PHILADELPHIA, June 28.—An investigation has been made by the *Press* into the effect the increased rate of duty proposed on tin plate would have on the price of canned goods. The figures are as follows: The proposed increase of duty to $2.15, so far as the increased price on canned goods is concerned, would amount to about 3c per dozen cans of the standard quart measure.

Eastern Wool Markets.

NEW YORK, June 27:—*Bradstreet's* says: A waiting disposition is manifested by most operators in wool, whether at mills, city lofts or in the country. Much machinery is temporarily idle, and there is no prospect of an immediate revival of activity in manufacturing. Requirements for material for consumption are accordingly reduced. Hitherto the country markets have been stronger than those on the seaboard, as is usually the case during the clip time, but of late weakness has developed in the interior as well as in New York, Philadelphia and Boston. A great deal of stock at the points of production is held above the views of Eastern buyers. Quotations for many descriptions of wool on the coast are nominal on account of reduced supplies. Little or no speculative interest is manifested. The London sales opened with prices five to ten per cent lower than at the close of the last series. This, coupled with a dull goods market abroad, tends to discourage the American wool trade still further. The latest dispatches, however, indicate rather more buoyancy here.

NEW YORK, June 29.—Weak streak in wool. Speculators assert that the juice is squeezed out of the prices. Manufacturers are somewhat gloomy over the prospective condition of woolen goods. It is certainly nearer a trade-buyer's market than at any time since the new clip. Some of the principal points are said to be ready to receive bids once refused. London market dull. Sales of 20,000 lbs. Spring California and 75,000 lbs. of scoured at private terms; 126,000 lbs. Spring Texas, part Western, 17@20c; 80,000 lbs. Fall, 20c; 22,000 lbs. scoured, 52½c; 100,000 lbs. XX Ohio and fine Delaine, 35c; 130,000 lbs. XX and above, 34c; 3000 lbs. unwashed Delaine, 27½c; 20,000 lbs. Kentucky Braid, 22@23c; 40,000 lbs. foreign pulled, 17½c; 228,000 lbs. domestic, 835,000 lbs. foreign, private terms. Boston reports many idle mills and consequent light business. Sales, 2,005,000 pounds foreign and domestic, including 210,000 pounds of Spring California at 17@27c. The Philadelphia market is lightly attended.

Messrs. Sherman Hall & Co. of Chicago write under date of June 24th as follows: The amount of business transacted in wool last week is less than for the previous week, but is considerably in excess of the receipts, indicating a healthy condition of trade. Manufacturers are buying steadily to meet current needs, and are not overstocking in anticipation of any increase in prices of woolen goods. Prices are consequently firm, with light stocks of all grades, giving an advancing tendency to the market as soon as the demand will cause a scarcity of any grade. The volume of sales foot up nearly 800,000 pounds, covering all descriptions of wool, from pulled to the best unwashed. The sales of pulled from Armour and Swift forming a less percentage than for times past. Woolen-goods market continues steady and firm, excepting on very heavy winter woolens, which are quite dull. Spring and summer wear, and also worsted goods, are well sold ahead and are very firm. The demand for Colorado and New Mexico wools is still very urgent. Long wooled pelts are strong with a large inquiry.

Miscellaneous.

NEW YORK, June 29.—New samples of California barley were shown, and the quality was commended. The opposition to the proposed tariff on Canadian barley is bringing large delegations of maltsters and merchants from many prominent Eastern points who are working vigorously and jointly for a reduction. These committees strongly support the bill against adulteration of beer products, and they ask the West to add its influence.

Peaches of 1889 pack scarce from $2.10@2.25. New goods would find buyers, but few are now offering. Well-known brands of raisins range here at $1.65@1.80, loose; $1.90@2.10, layers, free on board at the coast. California hops are full at last figures with light offering, but rather more of a brewers' demand than usual for summer. There was a fair inquiry for fine brewers.

BAGS—The market is steady at 7c for standard size grain bags.

BARLEY—The sample market has exhibited more strength toward the close of the week under review. Receipts are free, but the demand is good. In futures, trading has been quiet, owing to dealers not being disposed to short the market at present prices. The following are to-day's Call Board sales:

Morning Session: No sales. Sales yesterday afternoon were: Buyer season—200 tons, $1.14¾; 100, $1.15; 100, $1,15½ ₩ ctl.

BUTTER—The market continues to be well supplied. The local consumption is large but the shipping demand is slow. It takes the best gilt-edged to fetch our outside quotations, and this too in a small way. Large consignment parcels would have to be placed at slightly lower prices.

CHEESE.—The market is fairly steady at current quotations. The demand appears to be enlarging.

EGGS—The market is liberally supplied with eggs from east of the Rocky Mountains. As a rule they are good. Selected California eggs bring full prices.

FLOUR—The market has a stronger tone. The scarcity of gilt-edged milling wheat is against millers.

WHEAT—The sample market is very strong at an advance. As usual exporters are paying more in the country than in this city. Our quotations cover to-day's bids in the interior. Still higher prices are reasonably expected by large operators. In options, trading has been quiet owing to short sellers fearing that the market will go to still higher figures. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—500 tons, $1.41; 100, $1.41½; 400, $1.40⅞; 500, $1.40¾. Buyer season—200 tons, $1,46¾ ₩ ctl. Sales yesterday afternoon were: Buyer 1890—100 tons, $1.40⅝; 800, $1.40½; 100, $1.40⅝ ₩ ctl.

[COMMUNICATED.]

Cereals.

Messrs. Clapp & Co. of New York write as follows: Looking back over the past 60 days we cannot perceive any reason to conclude that the 1890 world's crop will reap more than expected.

Present indications point to a:

SURPLUS.

United States and Canada (if we reduce reserves to the minimum points) of	90,000,000
Australia	20,000,000
India	26,000,000
Russia and Roumania	88,000,000
Austro-Hungary	8,000,000
Turkey and Principalities	10,000,000
Sundries	20,000,000
Total	262,000,000

SHORTAGE.

United Kingdom	145,000,000
France	25,000,000
Belgium, Holland, Spain and Portugal	20,000,000
Italy and Sicily	30,000,000
Greece	4,000,000
Germany and Switzerland	20,000,000
West Indies, Central America and China	25,000,000
Total	269,000,000

Inspector Abel of the Produce Exchange reports stocks of grain in tons in city warehouses July 1st as follows:

	Wheat.	Barley.	Oats.	Corn.	Bran.
June 1, 1890	3,596	13,869	2 509	524	150
July 1, 1890	2,102	9,619	2,321	1 161	200

At Port Costa the amount of wheat was: June 1, 55,095 tons; July 1, 45,760 tons.

The receipts in June were 5652 tons barley, 1682 tons oats, 1862 tons corn, and 3562 tons bran.

The local wheat market held weak up to Friday when a better tone set in resulting in a decided improvement on last Monday. The advance was brought about by adverse crop advices abroad, and confirmation of a short crop in India. The situation in this State is in favor of the holding interests, for when prices recede to very low figures it is only a question of time when they recover and make quite an advance, particularly with the statistical situation and crop advices being favorable to the selling interest. The crop in this State will be short of last year's while the tonnage supply will equal that of the past season. It is stated by those well informed regarding crops that there are more fields foul this year than for a long time past. This is said to have particular reference to the Sacramento valley. While the grain will be more foul the grade will be largely improved. Millers continue to meet with difficulty in buying the more choice grades of wheat. While this is partly owing to scarcity, it is probably largely due to strong holding.

Barley has ruled fairly steady throughout the week. The general feeling among the better informed is that prices will rule higher during the season of 1890–91 than they did during the past season. This opinion is based on the light carry-over, short crop and large consumption. The grade this year will average higher, both in size and weight and in color, than for several years past. It now looks as if England will again draw from us, provided the Canadians are prevented by high duties from selling to the New England and Middle States. Without the latter outlet, Canada will have to ship to England, in which event our barley will have stronger competitive selling abroad. This may be partly offset by better prices at the East, provided the railroads do not get, as they have always done, the advance brought about by higher tariffs by charging higher freights.

Oats have held dull but strong. The available supply is light, but buyers do not express any uneasiness owing to new coming in soon. The consumption continues free.

Corn is steady under moderate receipts. The buying appears to be confined as far as possible to legitimate requirements. Crop advices are favorable.

Rye is fairly steady.

Feedstuff.

In ground feed there is nothing new to report. The demand is free, but the supply is liberal. With a falling off in the supply which is liable to occur, there may be another slight advance in the price of bran and middlings. Ground barley is firm and meets with good sale.

Dealers report more liberal offering of new hay, which causes easier prices. It is not at all unlikely but they are pursuing their usual tactics of bearing the market so as to contract for supplies at a low range of prices. It is claimed by many that the crop will be less than it was last year, while others again are very pronounced in the opinion that the crop will be larger. There is one thing both parties are agreed upon, and that is that the carry over of old is very small while the consumption will probably be larger.

Fruits.

Cherries are nearly out of the market, as are currants. The receipts of apricots, plums, peaches and apples, while fairly free, are not up to former seasons. There are more of the first three being dried and also being shipped to the East than there was in 1889, this, of necessity, cuts off a large source of our supply. The quality of the peaches and apples show a decided improvement. Pears are coming in sparingly,

In berries there are no material changes to note in either raspberries or strawberries. Blackberries are in freer receipts, but yet prices do not shade off much.

For green fruits, dryers and canners pay previous quoted prices, but it is claimed that fully ¼c a pound more has been paid in some instances for prunes, apricots and peaches than we quoted. The first consignment of canteloupes came from the ranch of F. S. Hill, at Winters, arriving in good condition and selling readily at 50 cents apiece.

In dried fruits there continues an exceptionally good demand with full prices paid; even a slight advance on our outside quotations has been realized by some driers. The run is chiefly on peaches and prunes, but apricots are not neglected. Nectarines are steadily gaining in favor. Figs promise to meet with a good demand.

For raisins in the sweat there is a good inquiry. From 5 to 6c is paid. It now looks as if the raisin pack will meet with a better market than it did in 1889. The cholera in Spain ought to operate against the importation of Spanish raisins, for it is claimed that the paper in the boxes can bring the germ of the disease.

The first consignment of watermelons came to hand on yesterday. The shippers were W. R. Strong Co. of Sacramento and G. W. Thissell, Winters.

New dried apricots are coming to hand and sell at 12½@14c in sacks, and 14@15½c in boxes for sun-bleached. Sun-bleached, dried peaches, future delivery are quoted at 12@13½c for unpeeled. Dried prunes, 6@8½c, according to size.

Live-stock.

Bullocks are weak under free offerings and only a fair demand. Mutton sheep are very strong. Missouri points are drawing from this coast while there have been free shipments by sea up north. The local demand is active, while the supply is less than last year owing to the past winter being of the worst kind for sheep. Hogs are steady. Cows and horses are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4@4¼c ₩ lb; dressed, 6@7c ₩ lb.; heavy, 3¾@4c ₩ lb.; dressed, 5½@6c ₩ lb. Stock hogs, 4¼@4⅝c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¾@—c ₩ lb.; second quality 5@5½c ₩ lb.; third quality, 4½c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₩ lb.; ewes, 7@7½c ₩ lb.; lamb, spring, 7½@8¼c.

Vegetables.

In garden truck rhubarb is about out of market, as is asparagus. Summer squash, tomatoes and cucumbers are lower under freer receipts. String beans and peas do not show any material change. Corn is coming in more freely with quality improving. Egg-plant, okra and peppers are in slightly better supply.

The receipts of onions do not show much of an increase, but owing to a more restricted outlet the market is in buyers' favor. The quality shows to better advantage.

The receipts of potatoes have been quite free. The shipments from this city are not very large, but from interior supply points there are free shipments to distributive points that draw from us, which in cutting our dealers off naturally brings about lower prices here. The quality of the potatoes is good.

Miscellaneous.

Poultry holds steady for all kinds except for broilers which are lower.

Honey continues easy under free receipts quotable as follows: New White comb, 10@11c; do, in 1-lb frames, 11@11½c; new White extracted, 5½c; Amber, 4@5c ₩ lb.

Beeswax is firm at 22@24c ₩ lb.

Beans come in sparingly but owing to a slow demand prices do not rally.

Hops continue strong. Recent contracts for new crop are reported at 15@19c. *Four Corners*, published at Wheatland, says: The crop on Bear river will not be so large as anticipated, but will be of excellent quality; crops in Washington and Oregon are reported not so promising. The Sacramento crop will be short. Stocks on hand are very small. There seems to be a great demand growing in England for California hops, as is evidenced by the fact that four or five heavy dealers of London have been to this coast making connections. California hops stand next to Kents in London, as the writer found by personal investigation last fall. A large part of the Pacific coast crop is contracted for, and those who have not already secured them will probably have to pay good prices all around. Everything points to a curtailed yield and fair prices, and we think the growers will manage to get a fair return this year.

Wool continues to move off freely owing to growers meeting the market. It takes the very best selected clips to fetch top quotations.

Exports by sea last week aggregate as follows: Wheat ctls, Liverpool, 75,420. Flour bbls, China, 14,819; Japan, 2791; Hong Kong, 16,023; Nanaimo, 101, Honolulu, 250; Tahiti, 1120. Dried fruits lbs, Guaymas, 1109; Victoria, 750. Beans lbs, Hong Kong, 14,374; Sydney, 2148; Honolulu, 8168; Victoria, 1886. Broomcorn lbs, Sydney, 31,564; Melbourne, 93,629; Auckland, 6497. Hay bales, Honolulu, 1005. Bran sks, Honolulu, 2024. Wine gals, Guaymas, 2622; New York, 208 696; Victoria, 370; Honolulu, 1927, Tahiti, 485. Wool lbs, New York, 1,044,486. Mustard seed lbs, New York, 19 304. Brandy gals, New York, 25,850. Barley ctls, Honolulu, 3574, Victoria, 201; Tahiti, 460. Corn ctls, Honolulu, 366.

From the *Commercial News* of July 2d the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	246 052	254,871
On the way to neighboring ports	17,477	29,829
In port, disengaged	13,567	11,455
In port, engaged for wheat	32,821	46,511
Totals	309 917	342,666

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1889, to June 26, 1890, the following are the exports from this port:

	1890.	1889.
Wheat	13,495.859	13,008,653
Flour	1,148,340	845,232
Barley	952,248	1,298,153

Rope.

Baling, Duplex, lb	12
" Manilla, lb	15
Twine, for hops, balls, tarred, lb, Manilla	16
" " grape vine, balls, lb "	16
" " " coils, lb "	16
" spring, lb "	18
" binder (600 ft. to lb), lb	10

Duplex twine 3c per lb less.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

California Fruits East.

CHICAGO, June 26.—The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co. and others, two cars of fruit. Royal Ann cherries brought $2.40@2.15; black Bigerreau cherries, $2.05; Black Republican cherries, $2.55@2.40; peaches, $1.35@1.15; apricots, $1.15@1; cherry plums, $2.05.

CHICAGO, June 27.—Porter Bros. Co., agents for the California Fruit Union, have just sold two carloads. Peaches brought 95c to $1.35; apricots, $1.10 to $1.65; plums, $1.15 to $3.40; figs, $2.

NEW YORK, June 27.—The latest quotations for foreign products in this market which come into competition with California products are given herewith, to enable Californians exactly to estimate the present competition here: Malaga raisins, loose, per box, from $1.75 to $2.60, the latter being for four-crown Malaga raisins; $2 25 for Valencia raisins; off stock, 7½ to 7¼c; same, layers, 9½ to 9¼c; Sultana raisins, 9 to 12½c; London layers, $2.25 to $2.45; French prunes, sixties to nineties, 8¾ to 9c; Turkish prunes, boxes, seventies to one hundreds, 7¾c; Turkish prunes, bags, 5¾ to 5⅞c. The first Valencia raisins are expected to arrive about the 1st of September.

NEW YORK, June 27.—A prominent dealer in canned goods says there has been a large increase in the sales both of this year's and last year's California pack, and large quantities of California goods are being handled at Philadelphia. There is an advance of from 10 to 15 per cent on the opening prices for California peaches, and the market for apricots is firmer. Apropos of this statement the *Commercial Bulletin* has the following: Quite a fair amount of 1889 pack, standard California peaches, has been moved here at $2.10 to $2.25, as to the brand, and apricots, new and old, are decidedly firmer at $1.60 to $1.65 here for standard brands. It is also reported by dealers that some of the more progressive retailers are placing orders for first-class brands of new salmon, recognizing the fact that the article is cheap at the present prices.

NEW YORK, June 28.—A sale of California fruit took place this morning and was largely attended. A smash-up on the Erie railroad delayed the consignment 24 hours, making an immediate sale necessary. The fruit was soft, but brought good prices. Plums averaged $2, cherries $1.75, peaches $2, and apricots $2.15.

Goodsell auctioned a lot of California fruit to-day. Thirty boxes of plums brought from $1.20 to $2.25; 185 boxes of cherries, $1.05 to $1.85; 100 boxes of peaches, $1.80 to $2.20; 200 crates of apricots, $2.15 to $2.20.

CHICAGO, June 28.—Porter Bros. Co., agents for the California Fruit Union, sold apricots to-day at 35c to $1.75, peaches at $1 to $1.70, plums at $1.20 to $5.60, and figs at $1.55.

NEW YORK, June 30.—It is ascertained that a number of offers for California prunes, apricots and peaches went out from here last week at a considerable advance over the offers of the previous week. Better offerings are made for both canned and dried fruits from California. Several packers have withdrawn prices the past few days. Some who previously adhered to the opening figures now quote 10 cents per dozen advance on peaches. Meantime it is reported, on seemingly good authority, that the pack of fruits in this State will be short. It is also reported in the green-fruit market that the cherries in New Jersey are attacked by the cherry rot, thereby further shortening an already short crop.

At the sale of California fruits this morning, at Goodsell's auction, the following prices were obtained: One hundred boxes peaches at $2.10@2.20 per box; 100 boxes apricots, $1.90@2.25 per box; 25 boxes cherries, $1.35 per box.

CHICAGO, June 30.—Two auctions occurred today of California fruit. Sgobel & Day auctioned one carload at the following prices: Royal Hative plums, $2.50@2.80 per box; Alexander peaches, $2.05@1.85 per box; Royal apricots, $2.10@1.60 per half-crate. All this fruit came in good condition, and was from the California Fruit Union; but some apricots were a little green. There was a large attendance of spectators. The demand is strong, there being little fruit in the market, excepting bananas and oranges.

Goodsell auctioned a lot at the following prices: Peaches, $2.20@1.60; apricots, $2.25@1.80; cherry plums, $1.85.

Porter Bros., agents for the California Fruit Union, sold four carloads of fruit. Peaches sold for $1.45@$1.85, with the exception of rotten stock at $1.20; apricots, $1.50@$1.85, with the exception of overripe at $1.30; plums, $1@$5.60; Bartlett pears, $5.90; figs, $1.40@1.55.

CHICAGO, July 1.—Porter Bros. sold to-day two carloads of fruit:

Plums, small boxes, brought $1.10 to $1.45; regular size, $1.50 to $4.40; apricots, $1.65 to $2.50; peaches, $2; Bartlett pears, $5.80.

CHICAGO, July 1.—The Montgomery Auction Co. sold to-day one carload of California fruit at the following prices: Peaches, $2 to $1.80; apricots, $1.95 to $1.60; Royal hative plums, $2.65 to $2.50; cherry plums, $1.90.

CHICAGO, July 2.—In the market for California green fruits, apricots and peaches are a shade firmer, but plums are a trifle easier. Apricots, 20-lb boxes, according to quality, $1.80@2.20. Peaches, $2@2.25. Prunes, crates, Black Tragedy, $3@4. Plums, 20-lb crates, Claude, $2.25; do, Cherry, $1.50@1.75; do, 10-lb crates, Cherry, $1.15@1.25; do, 20-lb, Royal Hative, $1.75@2.25. New figs, 10-lb boxes, $1.25. Oranges rule quiet with sales as below: California St Michael, paper rind, $6@6.50; Rodi, small sizes, ₩ box, $6.50@7; Rodi, large sizes, ₩ box, $5 @6.50. In beans there is but little movement. The late hot weather has been calculated to curtail consumption and cause a corresponding reduction in sales. The supply is ample, and prices range as below: California Lima beans, choice, 5¼@5½c ₩ lb; do, common, 2@4c. Hops are quiet on account of being scarce; the demand is fair and the market rules firm. Washington, according to quality, 24@ 25c. Oregon, 23@25c.

A RESERVOIR which will make a lake three miles in diameter, with an average depth of 65 feet, is to be built by the Hemet Land and Water Company at San Jacinto. Work begins inside of two months.

BUGGIES AND BUCKBOARDS.—A complete assortment of vehicles in every grade and style. For circulars write Frank Brothers, San Francisco.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

VAQUERO CONTEST AT THE STATE FAIR.—The Board of Agriculture has decided that inasmuch as the old California vaquero's life is a novelty to a great many of our present residents, that an exhibition of the manner in which experts handle the California bronco, would not be out of place. And to that end, they have directed that one morning, Monday, Sept. 15th, be devoted to this novel sport. The announcement will no doubt attract wide attention both from contestants and spectators.

FISH BROS. WAGONS of pioneer merit and sold by the trade everywhere. Ask for them or write Frank Brothers, San Francisco.

A NEW BOOK.—NOW READY.

CALIFORNIA FRUITS

—AND—

HOW TO GROW THEM.

A MANUAL OF METHODS WHICH HAVE YIELDED GREATEST SUCCESS; WITH LISTS OF VARIETIES BEST ADAPTED TO THE DIFFERENT DISTRICTS OF THE STATE.

BY EDWARD J. WICKSON, A. M.,

Lecturer on Horticulture in the College of Agriculture, University of California; Horticultural Editor of the PACIFIC RURAL PRESS, of San Francisco; Secretary of the California State Horticultural Society; President of the California State Floral Society, Etc.

Contents.

PART I: GENERAL.—The Climate of California and its Local Modifications; Why the California Climate Specially Favors the Growth of Fruits; The Fruit Soils of California; The Wild Fruits of California; California Mission Fruits; Introduction of Improved Fruit Varieties.

PART II: CULTURAL.—Clearing Land for Fruit; The Nursery; Budding and Grafting; Preparation for Planting; Planting the Trees; Pruning Orchard Trees; Cultivation; Fertilizers for Fruit Trees and Vines; Irrigation of Fruit Trees and Vines.

PART III: ORCHARD FRUITS.—The Apple; The Apricot; The Cherry; The Peach; The Nectarine; The Pear; Plums and Prunes; The Quince.

PART IV: THE GRAPE.—Rise and Progress of the Grape Interest; Propagating and Planting Vines; Pruning and Care of the Vine; Grape Varieties in California.

PART V: SEMI-TROPICAL FRUITS.—The Date; The Fig; The Olive; The Orange; The Lemon, Lime, etc.; Minor Semi-Tropical Fruits.

PART VI: SMALL FRUITS.—Berries and Currants.

PART VII: NUTS.—Nut-Growing in California.

PART VIII: FRUIT PRESERVATION.—Fruit Canning, Crystallizing and Drying.

PART IX: FRUIT PROTECTION.—Injurious Insects; Suppression of Injurious Animals and Birds; Protection from Winds and Frosts.

PART X: MISCELLANEOUS.—Melon Growing; Fruit Packages.

A New and Splendid Technical Treatise.

The Manufacture of
VINEGAR AND ACETATES,
CIDER & FRUIT-WINES;
Preservation of Fruits and Vegetables.

JUST READY.

A Practical Treatise on the Manufacture of Vinegar and Acetates, Cider and Fruit-Wines; Preservation of Fruits and Vegetables by Canning and Evaporation; Preparation of Fruit Butters, Jellies, Mamalades, Catchups, Pickles, Mustards, etc. Edited from Various sources by Wm. T. Brannt, one of the Editors of "The Techno Chemical Receipt Book." Illustrated by 79 engravings. In one volume, 8vo, 489 pages.

Price $5.00, by mail, free of postage to any address in the world.

CONTENTS.—PART I. The Manufacture of Vinegar. CHAPTER I. Introduction. II. Theory of the Formation of Vinegar. III. The Vinegar Ferment and its Conditions of Life. IV. Products of Acetous Fermentation. V. Methods of Fabrication of Vinegar. VI. Quick Process of Fabrication of Vinegar. VII. Arrangement of a Vinegar Factory. VIII. Artificial Ventilation of the Vinegar Generators. IX. Automatic Vinegar Apparatus. X. Operations in a Vinegar Factory. XI. Preparation of the Alcoholic Liquid. XII. Execution of the Work in a Vinegar Factory. XIII. Disturbing Influences in the Fabrication of Vinegar. XIV. Method of the Fabrication of Vinegar in Apparatus of Special Construction. XV. Further Treatment of Freshly Prepared Vinegar. XVI. Preparation of Vinegar from Various Materials. XVII. Preparation of Vinegar Specialties. XVIII. Fabrication of Wine Vinegar. XIX. Chemical Examination of the Raw Materials and Control of the Operation in a Vinegar Factory. XX. Examination of Vinegar as to the Presence of Foreign Acids and of Metals, as well as to its Derivation. XXI. Manufacture of Wood Vinegar. XXII. Preparation of Pure Concentrated Acetic Acid. XXIII. Acetates and their Manufacture.

PART II. Manufacture of Ciders, Fruit-Wines, etc. CHAPTER XXIV. Introduction. XXV. Fruits and their Composition. XXVI. Practice of the Preparation of Cider and Fruit-Wines. XXVII Cider from Apples and Pears. XXVIII. Fruit-Wines; *a*, from Small Fruits; *b*, from Stone Fruits.

PART III. Canning and Evaporating of Fruit, Manufacture of Catsups, Fruit-Butters, Marmalades, Jellies, Pickles, and Mustards. CHAPTER XXIX. Preservation of Fruit. XXX. Evaporation of Fruit. XXXI. Preparation of Pickles and Mustards. Appendix of XVI Tables. Index.

Our illustrated circular, 6 pages, 4to, giving the full Table of Contents of this volume, will be sent free of postage to any one in any part of the world who will apply by letter.

Our new and Revised Descriptive Catalogue of Practical and Scientific Books, 80 pages 8vo. A List of Books on Distillation and Rectification of Liquors, Brewing and Fermentation, Wines, Sugar, Starch, etc., as well as a circular showing the full table of Contents of "The Techno-Chemical Receipt Book," sent free of postage to any one in any part of the world who will furnish his address.

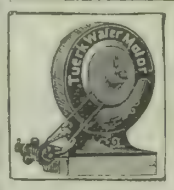
THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.

These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.



The cost, considering capacity and efficiency, is fully 50 per cent less.

Circular, giving full information, sent on application.

Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

THE PELTON WATER WHEEL CO.,

121 Main Street, San Francisco, Cal.

MANUFACTORY AT LINCOLN CAL.

The Cylinder Grader

Has proved the most rapid working machine for GRADING PRUNES, BOTH GREEN AND DRIED, that has ever been introduced. Wherever it was used last season it gave perfect satisfaction, both in the quantity of fruit graded and the way it did the work. The capacity is practically unlimited, as it will grade the fruit perfectly as fast as it can be shoveled into the machine.

I make all sizes of this Grader, from the large 30-inch cylinder down to a small hand machine for the use of growers whose crops are small. I furnish the Grader mounted complete, or the Cylinder alone if, as is often the case, the purchaser prefers to mount it to suit himself.

Send for circulars and prices.

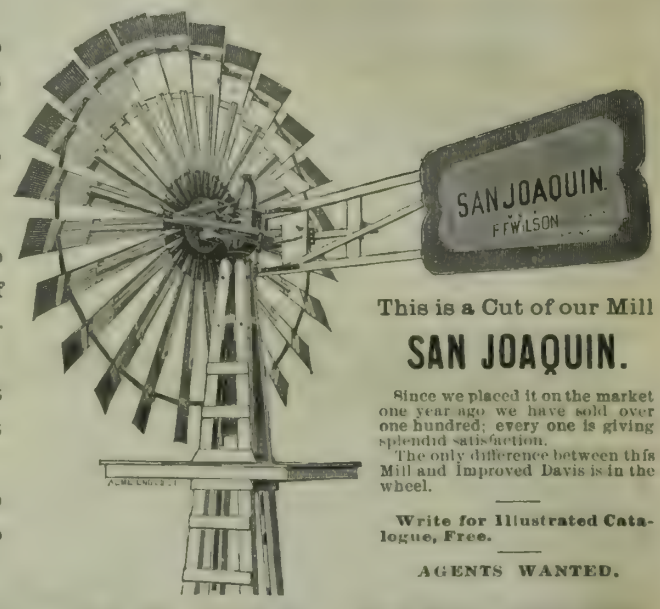
IMPROVED DAVIS WINDMILL!

Put Your Windmill Up to Stay!

Cal State Library



San Joaquin County has purchased Three More Large Windmills and Tanks from us this year for Road Sprinkling.

This makes EIGHTEEN of our Mills in use for the County.

Supervisor Carson says they are the Cheapest and Best Method of furnishing water for the above purpose.

We think the CONTINUED SALES to the County ought to convince "Doubting Thomases" that our Windmill is not an experiment.

THE NORTHERN GAS WELL CO. of this City have just got one for filling the large reservoir so as to get the full capacity of the gas from the well.

This is a Cut of our Mill

SAN JOAQUIN.

Since we placed it on the market one year ago we have sold over one hundred; every one is giving splendid satisfaction.

The only difference between this Mill and Improved Davis is in the wheel.

Write for Illustrated Catalogue, Free.

AGENTS WANTED.

EVERYBODY WHO HAS GOOD SENSE

Gets the Improved Davis.

They are Warranted to Stay Up in any Storm, no matter how Severe.

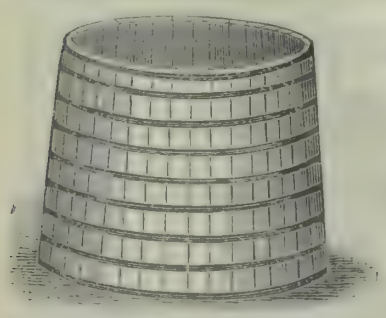
SAN JOAQUIN AGRICULTURAL SOCIETY, using Three.
J. HOBART, Ventura.
RICHARD ROBINSON, Ventura.
WASHINGTON HURD, French Camp, using Three, one fourteen, one twenty, and one twenty-four-foot. The twenty and twenty-four-foot mills he uses to fill a reservoir, which has a capacity of two million gallons. He says those two mills will fill the reservoir in five days. When the reservoir is full, the gate is opened and twenty acres of alfalfa, several acres of fruit trees and a young vineyard are irrigated.
SIMON NEWMAN, Newman, using over Thirty, and many other parties too numerous to mention.

This is a Cut taken from the Outfits we furnished to San Joaquin County.

SIZE OF MILL, 16-FT. TANK, 12,000 GALLONS.

With ordinary trade wind the mill will pump the 12,000 gallons in five hours.



The pump is a five-inch suction and lift pump, 7-inch stroke.

Other Windmill Companies are saying that we will BANKRUPT OURSELVES because we sell at such LOW PRICES.

We answer that strict attention to business, together with a sufficient supply of cash to buy all our material, enables us to quote prices that cannot be met, quality of goods considered.

THERE ARE NO DRONES IN OUR SHOP.

We are quoting Special Prices where our Mill is not in use, and we find that orders invariably follow the first, at advanced prices. Get your orders in first and get this advantage. We think that this is the best way of introducing our Mill in new places. Where our Agents are appointed we cannot offer these Special Prices.

Tanks at Prices that will Surprise you.

Songsters From Fatherland.

A little over a year ago several hundred singing birds — skylarks, thrushes, finches, nightingales, etc., were imported from Germany and set free at Portland, Oregon. No fears as to their doing well were entertained by those who introduced them, but the question was—would they know whither to migrate at the approach of winter, and would they return the following spring?

Now we are pleased to learn from the *Oregonian*, several persons report seeing some of these songbirds in different parts of the valley. One has heard nightingales in the vicinity of Silverton. James Watt reports that a pair of strange birds which sing late into the night are nesting in his orchard, near Amity, doubtless another pair of nightingales. Many persons have noticed that there is an unusual number of native birds in the gardens about town, and that they are much tamer than usual. This is owing to the fact that since the German songbirds have been brought here there has been more care taken to protect birds of all kinds, and boys have not persecuted them so much. The little songsters are quick to notice this, and show their appreciation by making themselves more at home in the city.

STAKING HOPS.—Mr. Daniel Flint of Sacramento has experimented with four acres of hops in a new system of staking. He used redwood stakes 8 feet long 2x2 inches, set in the ground one foot, and 8 feet apart. Instead of cord he has used wire running at right angles fastened on top of the stakes with a staple. The pickers can reach the arms of the vines and strip them. Mr. Flint finds that this system is far ahead of any other in point of economy.

THERE are fig trees on the ranch of John Fulgham, 12 miles west of Visalia, the limbs of which have bent down, entered the ground and taken root, thus giving promise of another tree from the branch of a living one.

Silk Culture Before Congress.

In a recent allusion to the silk industry, we remarked that there were propositions before Congress ostensibly in the interest of the promotion of silk culture, which the people of California had no confidence in. The statement had a broad application which was not intended. We did not refer to measures for the promotion of silk culture which placed the disbursement of funds under the direction of the Department of Agriculture. We understand that Mr. Amos Adams, the well-known Californian, prepared a bill for the promotion of the silk industry which met the approval of Secretary Rusk, and was introduced in Congress by Mr. McKenna. We intended no reflection upon that measure. It is possible that an effort may be made to enlist the co-operation of prominent friends of silk culture in this state in support of this measure and thus supplement and extend the work now in progress in this State.

A Scene on Lake Zurich.

To give our readers a little change from contemplation of Pacific Coast scenery, we present this week an engraving of one of the most beautiful scenes in Europe, a part of the Lake of Zurich and its surrounding mountains. The Lake of Zurich, lying in the northeastern part of Switzerland, is celebrated for its picturesque beauty and its historical interest. The lake is 23 miles long and 2½ miles broad, and it extends from the city of Zurich in a southeasterly direction, nearly filling the valley to the hills on either side, which are the foothills of the Alps. The shores nearly its whole distance on both sides are sprinkled with the finest villa dwellings, owned by people of all nations. The engraving on this page represents the southern part of the lake, with its beautiful islands and shores, and shows the Alps in the distance. On the island upon the right are graves of some of the leading men of the Reformation, for here they took refuge from persecution.

VIEW OF THE SOUTHERN END OF LAKE ZURICH, WITH THE ALPS IN THE DISTANCE.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Napa Valley Notes.

EDITORS PRESS:—Propitious weather for the farmer has prevailed in our valley since the winter rains. Crops have grown well, as a whole, though late sown grain will not amount to much, and many fields have already been cut for hay. Thus far the season has been pleasantly cool, a few days only of warm weather now and then being noted. This has made it exceedingly agreeable for field men on our rancher, and in fact, for "all classes and conditions of men."

Our cherry crop, which was in many orchards an excellent one, in all a fair one, has ripened, been picked and marketed. Some disturbance in the weather—either rains when the trees were in bloom, or late frost, or we know not what—shortened the crops somewhat. Several orchardists, who took advantage of the Napa Valley Fruit Union, shipped their fruit to different points East and received excellent returns therefor. Our cherries have long been noted for their superiority in our State markets, but when we lately read in the market reports from New York City that ours were the finest white cherries ever sold on Broadway, retailing at 40 and 60 cents per pound, we were naturally elated.

Five or six carloads of cherries were shipped Eastward from Napa City this season, netting, as before stated, fine prices. Present indications are that more of our orchardists will send their fruit East another year through the Union, the success met with this year tending to infuse new life into the fruit business.

This, in fact, was needed, for the complaint of small returns from local or S. F. markets has not been infrequent. The large cannery, located in Napa, which was in operation last season, and where considerable of our valley fruit was sold, is closed this year. Agents for canneries in other parts of the State, are frequently in our orchards and make large purchases.

It is true that quite a large number of trees in our orchards were killed by excessive moisture last spring, but that fact should not discourage our orchardists, for so severe a season will not, in all probability, come again for a score of years, if ever. Our loss, too, is small compared with that of several other localities in this State. Our younger orchards, planted to the more approved varieties of fruit, better pruned and more carefully cultivated, are coming into excellent bearing condition, and are not disappointing their owners.

The apricot crop will be light in many parts of this county, as, also, will that of early peaches. A few varieties of this latter fruit are ripening and are selling in the local markets at good figures. In valley orchards apples will not yield largely.

The fruit-drier at Napa has been enlarged and will probably soon commence operations.

The vineyards that cover the valley and spread over many of the hills, from Yountville northward to Calistoga, are in splendid condition. To see this large area (one may ride for 12 or 15 miles through solid vineyard) is worth coming far to behold. The contrast between this mass of bright green verdure and the golden yellow stubble-fields later in the season, is particularly pleasant, though, for a fact, very few stubble fields are now to be found in the upper valley.

As one views this large tract of vineyard the question naturally arises, "Where will all the help come from to handle this crop?" For the vines will yield largely this season. Then, again, comes up the matter of cooperage. The capacity of our many cellars will be taxed to their uttermost. We note very few quotations for the prospective crop, though some fair offers have been made.

H. W. Crabb of Oakville has laid out a fine race track in the midst of his large vineyard, where he or his drivers speed his fast horses. You have probably noticed Mr. Crabb's application for space at the World's Fair at Chicago, and what he proposes to do in the way of displaying his wines. He is one of our most enterprising vineyardists and wine-makers.

Haying is over. The yield, in the aggregate, is large, though per acre it is smaller than last year. Much is now being baled; rates $1 10 per ton. The larger portion of the crop is thus cared for. Prices are not very encouraging for farmers. Some of them will feed their crop, or a greater portion of it, to stock, buying sheep or cattle, afterward selling them to the butcher. There is but little money made in raising hay, yet the annual production is quite large—large enough to keep prices down.

Early wheat is almost ready for the header, and the harvest will have commenced by the time this letter reaches you. Late sown wheat has not done very well.

The very high figure at which potatoes were rated last winter, induced many of our farmers to plant a large amount of this esculent. This crop looks well, generally speaking, and disproves the theory, a long time prevalent, that good potatoes could not be grown in this valley. We know of one man who realized handsomely on his crop last season.

The annual fair of the Napa and Solano Agricultural Society, which will be held at Napa next fall, promises to be a notable one. The two that have been given here proved successful, and, profiting by past experience, the directors will endeavor to make the coming one more so. The track, one of the finest in the State, is always kept in excellent condition. The tall, close board fence surrounding the track and the stalls, have been whitewashed lately, making the premises very attractive. Since these fairs were inaugurated there has been an increased interest manifested in many parts of the country in horse and cattle breeding, particularly in the former. Cattle and sheep are raised in limited numbers only in the larger valleys of this county, but in the hilly portions their number, in the aggregate, is quite large. Still, our local butchers frequently draw on Oregon and Nevada for supplies of beef cattle.

Very little real estate has changed hands in the county for a year or more, though prices have not lowered to any great extent. There has been a very small demand for farm lands throughout the State, during the last year, so we are not alone in this matter. Orchard property has proved so valuable this season, it is patent that land suitable for fruit culture will not depreciate in value, but rather will be held firm at present prices, which are lower than in many other of the bay counties.

Constant improvements are being made in Napa. Though some are disposed to cry "hard times," yet there is no place of its size in the State that is more prosperous or stands on a firmer footing than Napa. Forty or fifty thousand dollars worth of new buildings are now being erected, or will be this season. This speaks well for a dull year. R

Napa, July 3, 1890.

Arizona Notes.

EDITORS PRESS:—The correspondents' page of the RURAL of June 21st skipped! Ay? I, for one, plead: "Excuse me. Too busy." So, too, all round. But we all turn up at the post-office on time, and expect the RURAL to be just the same, whether we help a mite, with our page so generously allotted to correspondents, or not. Arizona is not forgotton; but the average reader of the RURAL, I dare say, is puzzled to know where all those fat cattle come from; and how comes it that a country of climatic conditions such as is attributed to Arizona can produce anything!

Let some reader of history examine the report of Commodore Wilkes, who, under the high authority of the United States of America, reported California a dreary waste, scarcely able to sustain the population then in the country (A. D 1837). Lieut. Cushing says of Arizona (A. D. 1889) that when the resources of Arizona are as well in hand as prehistoric man of the stone age had them, Arizona will be the pride of this American people; will be a garden.

Our Bees.

While the winds of California are "playing sad havoc" with our brother bee men, our alfalfa fields are blooming, and our bees are busy. We can't boast of the big things on the work of a day or a season, but for one year, with another I find Arizona for honey business safer than Southern California.

The reason I know. "I've been there!" Last October, between the 1st and 10th, my bees made a run of storing in honey, filling up very full, after I had very cautiously gauged their supply for their winter use, and I had to go over the whole apiary, to give the queen room to get into winter shape, else spring would have found my hives blocked up with hard crystalized honey.

Our Indians.

Last week a certain gentleman and his most estimable spouse from San Francisco, stopped off for a day or so at our town of Tempe. Soon after taking quarters at the Tempe hotel, a party of Indians rode into town. Our new guest flew, screaming to her room, creating some little attention. Our hotel proprietor succeeded partially in quieting the lady by assuring her that one's person and property were 50 per cent safer in Tempe than in the City of San Francisco or New York.

Our Mormons is another source of supply to the "penny-a-liner."

Not long since, our county had a convocation of teachers, known popularly as teachers' institutes. In the duties of the day a certain young lady reported, read her piece, and represented Mesa City, our Mormon colony. In the evening, at the hotel, a certain lady lately from the East, a graduate of one of those Eastern normals, accosted Miss H. of Mesa City, with:

"And you have been teaching out in the Mormon settlement!"

"Oh, yes."

"Well, do you know," continued our lady from the East, "that I am coming over there one of these days, just to see a Mormon! I have read and have heard so much about them that I really am anxious to see a Mormon."

"Well," replied Miss H., "if just to see a Mormon is the only cause of the trip," rising to her feet with a gentle bow, "I can save you the trouble. Behold, a Mormon! Born of Mormon parents and zealous in the faith; yet I speak the English language and pride myself in our free schools and in being a school-teacher."

Our Eastern lady had really been picturing a Mormon out in her mind as something quite different, but her face turned red, just a little.

Tempe, A. T. GEO. KAY MILLER.

THE APIARY.

Some Bee Talk.

EDITORS PRESS:—A few days ago I made a visit to my friend C——, who is somewhat interested in bees. He had just finished irrigating his garden, and was preparing to put a few sections on the most populous of his hives, when I made my appearance.

"Hello! you are just the fellow I want to see," he exclaimed, as he caught sight of me; "just come here and take a look at this colony. I hived them last Thursday, and I want you to see what they have done in a week."

He gave them a few puffs of smoke at the entrance and then removed the cover, exposing to view a beautiful mass of white-capped honey.

"They have the foundation in both stories drawn out and filled with brood and honey," said Mr. C——. "I took every frame out this morning."

"Yes, they have done splendidly," I answered.

"Don't you think that they are pretty bees?" he asked, as he removed a frame and held it to my view.

"Yes, they are pretty bees surely; they are as well marked as any Italians I have ever seen. Where did you get the queen—one that you raised yourself?"

"Well not exactly," he answered. "Do you remember those queen cells that you gave me last spring, when I visited you? After they were all hatched out I distributed the queens around through the apiary. You gave me eight queen cells, and they all came from the same hive. Well, you know all my bees were pure blacks before I introduced these queens, and there were nothing but black drones here; and how this one queen came to be purely mated I cannot understand. I do not think that she got mated with a drone from your apiary, as it is ten miles from here."

"Such a thing might be possible," I answered; "drones make wonderful flights sometimes, and worker bees, too, for that matter. If I remember right, Mr. H. A. March of Fidalgo, Washington, had bees that went between seven and eight miles away in search of stores."

"How did he find out that they went that far?"

"Why, the bees went across the water to an island seven or eight miles distant; he watched them, saw them go toward the island, took a boat and went there and found his Italian bees there by the hundreds. He watched them after they were loaded up and saw them take a direct line toward his apiary."

"Well, according to that, I should not be much surprised if drones did really go ten miles."

"Yes, I am inclined to believe that bees will mix at that distance, and no doubt that queen of yours was mated by a drone from my apiary."

"I have been bothered considerably this spring by skunks eating the bees, and to remedy this I had to elevate the stands as you see them. I set a steel trap and caught a couple, and since then I have not noticed any signs of their presence."

"Yes, it is a pretty good idea to have your hives off the ground at least 16 inches. When Mr. Schaeffle visited me at Placerville, he told me that he did not like my style of having the hives so close to the ground; it was too handy for skunks and toads. I was never bothered by the toads eating bees, but sometimes by skunks; my hives, as you know, were set only about four inches from the ground; but whenever I noticed the presence of skunks, I set a figure-four trap in the apiary, bated with honey, and I have always managed to catch them. A few good healthy skunks would soon destroy an apiary, as they kill the bees only for the honey they contain, and it takes several thousand bees to satisfy their appetite. I have never caught a skunk in the act of killing bees, and I do not know how they do it."

"Well, I have, and I will tell you," said Mr. C. "I got up early one morning to go to town, and as I went down to the barn I noticed some black object in front of the hive, and upon closer inspection I found it to be a skunk; it was switching its tail at the entrance of the hive, getting it full of enraged bees, and then it would turn around and pick the bees out of its tail, one at a time, crush them between its teeth, some way to get the honey out, drop it and pick up another. I think that a skunk would destroy a great many bees in a few hours. Oh, yes! Mr. W., I have a hive here I wish you would examine before you go; three weeks ago it contained a virgin queen, and this morning I looked at them, expecting to find a laying queen, and instead, I found it infested with laying, or fertile, workers. What do you think I had better do with them?"

"Oh! that will be easy to remedy," I answered; "let me have your smoker, and I will get a frame of larvæ from this fine Italian colony; you bring me that empty hive yonder, and we will set it where the fertile-worker colony stands; we will place this frame of unsealed brood in the empty hive, and carry the fertile-worker colony to a new location." No sooner said than done. "Now let us remove all the combs in the fertile-worker colony but one; we must shake all the bees off, and put nothing but the combs at the new stand; the bees, being mostly old ones, will return to the old location, and the fertile workers will remain with the old hive, at the new location; in two or three days, take the one frame from out of the old hive, and drown the bees that are on it or kill them some way. The fertile workers must be killed, because if they go back they will return to their old tricks again, and the colony soon dwindles out of existence."

"How do you suppose the queen got lost? She was a fine-looking queen, and I remember of taking especial notice of her."

"Possibly when she was out on her wedding flight," I answered; "a great many virgin queens are lost that way. Some seasons I notice as high as 15 queens lost in an apiary of 100 colonies. Sometimes the queen's wings are defective, which prevents her from flying out to get mated; generally, in that case, you will find her in the hive laying drone eggs; but never kill a queen that lays drone eggs, until you are pretty well convinced that she is actually a drone-layer, as many young queens, when first beginning to lay, commence with drone eggs, and keep it up quite awhile sometimes."

"Yes, I have noticed that several times; one queen, that I have, laid drone eggs for about a month before she commenced to lay worker eggs, and I was about to pinch her head off, when I discovered she had been mated. Hello! Mrs. C. is calling; supper must be ready, so let us go."

More of this interesting visit anon.

Grizzly Flat, Cal. S. L. WATKINS.

THE VINEYARD.

Table Grapes on the Foothills.

EDITORS PRESS:—Mr. Whitcomb of Colfax has carried off the honors on table grapes for years past. When in Colfax I visited the different vineyards and orchards, and would like to predict that Colfax will make a record not only in grapes, but in peaches as well this season. Why Mr. Whitcomb has all the notoriety is difficult to understand, as Messrs. Baker, Irvings, Hubley, Harkness and Hanson have equally as fine and larger vineyards.

I found the vineyardists busy, sulphuring, suckering and cutting back. The preferred method of sulphuring was by means of a small box with wire cloth tacked over the bottom. The box was about half filled with sulphur and a sufficient quantity dusted on to each vine by moving the sulphur over the bottom of the box by the hand. It occurred to me that a "Hunter Flour Sifter" would be "just the thing" for this work. The grapes in this section are free from mildew. The sulphuring at blossoming is done to make the grapes set.

All of the fruit and grapes of this section are grown without irrigation, cultivation alone producing the finest table grapes in the State. I think it possible for some of the growers to do still better, as in Mr. Whitcomb's vineyard I saw great clods of earth that would have brought a Sacramento or Sutter county fruit-grower out with his pulverizer at once. That the section does so well with moderate cultivation is proof that it is the right location for table grapes.

I asked Mr. Whitcomb: "What grape is the most profitable?"

"The Purple Damascus."

"Is it better than the Tokay?"

"Yes; it's ever so much better a grape—a fine grape—and once it is known the Tokay will be a drug in the market."

"How about its shipping qualities? Will it open up as fine as the Tokay?"

"Yes, sir, I've shipped them to London and they arrived in the very best condition. Mark my words; for this section the Purple Damascus is the coming grape."

Mr. Hubley is counting on his Emperors making a showing this season. In the past he pruned them too short. Mr. Woolsey of the famous Q ranch of Ione, in an evening's pleasant and profitable conversation, stated in reply to my query as to his opinion of the proper method of pruning the Emperor:

"I think the Emperor belongs to the same family as the Sultana and in consequence the first two buds would not bear, and therefore the canes should be left with three to five buds." Then he smiled and laughingly added, "For years I pruned my Sultanas as I did my other grapes and wondered why I couldn't get the yields other growers did. Finally, in looking up grapes in my 'California Fruits,' I found that all these years I had been cutting off my grapes by close pruning. The Emperor and the Sultana want lots of wood."

Grapes, like other fruits, have a great range of adaptations. Up at Georgetown the altitude is too great for any but Eastern grapes, which do well where even the Mission fails. The Tokay has had the field as a shipping grape, but now, as already stated, Mr. Whitcomb claims the Purple Damascus must excel it. My friend Mr. Felix Gillet, of Barren Hill Nursery fame, took me through his vineyard at Nevada City when his 400 varieties were ripe, and, without knowing the varieties, I selected from taste and sight those that I specially preferred; and this spring Mr. Gillet treated me to one of his pleasant surprises by sending me five rooted grapevines of the kinds preferred by me. They proved to be the White Mal-

voise, Bordelais, Gen. de la Marmora, Chasselas de Port and Ramonia of Transylvania. I want no better grapes than I feasted on in Mr. Gillet's model vineyard. I visited Mr. Gillet at one time near the spring of the year, and he treated me to grapes that were as fine in appearance and flavor as though they had just been picked from the vine.

Murphys, Cal. E. H. SCHAEFFLE.

HORTICULTURE.

How to Dry Apricots.

At the last meeting of the Sutter County Horticulural Society, a committee of five, consisting of Messrs. H. P. Stabler, J. P Onstott, B G. Stabler, R. Davis and R. C Kells was appointed to prepare and publish a series of bulletins on fruit drying. The object of the publication is to reach the small growers who do not attend the fruit meetings and who usually make a very inferior article of dried fruit. The committee claim no originality, but are simply setting forth the methods of the most successful driers in the State.

Allow the fruit to become thoroughly ripe on the tree; pick carefully and immediately haul to the drying ground, where the fruit should be graded into at least three sizes.

Trays for drying are usually two by three feet, and made of sawed lumber not dressed. In cutting use a sharp knife, or a Mosher patent pitter. See that the fruit is cut entirely in two pieces, and not pulled apart leaving a rough edge. As soon as possible after picking, cut and place the fruit on the tray, cup side up.

The fruit is now ready for the bleacher, which consists of a box three by four feet on the bottom and seven feet high, the inside to contain cleats which allow the trays of fruit to slide in. The amount of and time of burning the sulphur are disputed questions among fruit men, but for a bleacher of the size above indicated, a double handful of sulphur ignited on the ground under the fruit and allowed to burn for 30 minutes will be found sufficient. The trays are then placed on the ground in the sun. After two or three days, some driers prefer to bunch the fruit from seven to eight trays into one, leaving a day or two. Before the fruit is so dry that it will rattle on the tray, and while it still has a leathery feel, it should be taken up in the heat of the day and spread about ten inches thick on a tight floor in a room protected from moths by wire screens on the doors and windows. As often as once a day for a week the fruit should be turned with a wooden shovel.

Grade again just before packing. It is then ready for sacking or boxing. Only the best quality of white sacks should be used, or if boxed, the regular 25 and 50-pound boxes are the proper kind. Line the bottom and sides of the box with oiled paper, face the bottom with average fruit and press with a common lever press.

Disease of the Walnut.

The Santa Ana *Blade* gives the following: There is a disease prevalent among soft-shell walnut trees known as the "black knot" which gives the walnut growers some trouble. It is a growth, or rather an accumulation, of diseased wood at the surface of the ground or just beneath it, which if allowed to accumulate will in time destroy the tree. This disease is to the tree about what the cancer is to the human system.

There has been considerable discussion as to the cause of this disease. Some claim that it is produced from a bruise or cut of the trunk of the tree, while others claim that it is caused from an insect of some kind that is working on the affected part. The latter theory appears to be the more plausible one. Dr. Miller, who owns a fine young walnut grove consisting of 19 acres, has made a special study of the black knot, and has from his study and experiments found a remedy that is a sure cure. The first thing he does is to clean the dirt from around the diseased part of the tree, then take a sharp instrument and trim off all the diseased portion of the trunk. To prevent the tree from blowing about and thus aggravating the diseased and weakened portion, he braces it with three or four guy ropes, as the case may require.

Often the entire circumference of the trunk is diseased. When this is the case the Doctor treats one side at a time, always treating the north side first. After that side has healed over he then operates on the south side, taking pains always to protect the diseased portion from the hot sun immediately after removing the diseased wood.

Dr. Miller says he has had about 20 trees in his orchard affected with the black knot, and has succeeded in curing them all. He showed a representative of the *Blade* some of the trees operated on that present a healthy and natural appearance, the abnormal growth having entirely disappeared.

THE PEACH APRICOT.—A prominent fruit-grower of Sutter county in a recent letter to a local paper gives the following opinion of the peach apricot, which is gaining such a reputation in the orchards of that region: "It attains to enormous size, is a regular bearer, a good canner and a splendid drier. This locality seems to be especially adapted to this variety of apricot, while it does not do well in other localities, and vice versa with some other varieties. The Blenheim does well in the coast counties and grows to a good size, but as yet has not grown to be large in this locality, while the Moorpark grows to a good size but is a shy bearer. Hence I think the peach apricot is the apricot to grow in the vicinity of Marysville and in Sutter county. I mention these facts for the benefit of those who are about to plant apricots. As we now hold the reputation of growing the finest peaches in California, I think we can soon gain the same reputation with the apricot, especially when we can grow specimens that will weigh over a quarter of a pound each."

Olives in the Foothills.

EDITORS PRESS:—Three years ago we decided to transform our very poor grain field of seven acres into an olive orchard. The soil is red, sandy loam—lava formation, not more than 18 inches to 3 feet in depth, underlaid with rotten sandstone, and originally covered with a thick growth of chaparral and manzanita. After seeding for hay about ten years, it really no longer paid for seed and labor.

We could not afford to buy many olive trees, so we began with 200 very small ones—one-year-old cuttings—none of them a foot high, and the stems scarcely as large as a slate pencil. These were planted out in March of 1887. In July only three or four had died, the rest making a most vigorous growth.

One day, however, about 30 were killed by irrigating while the thermometer was at 103°—scalded, I suppose.

The second year they made an astonishing growth, and now most of them are over seven feet in height, with stems from two to three inches in diameter. About ten of them bloomed the latter part of April, and now have fruit.

No sign of scale appears, and we scarcely fear that pest in this hot, dry climate.

These trees were irrigated four times the first season, three times the second, and twice last summer. They have also been mulched twice with about a wheelbarrow load of stable manure to each tree. JESSIMA LEIGH.

Butte Co., June 27th.

[It would be an ungrateful tree which would not grow under such generous treatment.—EDS. PRESS]

LATE ORANGES.—There are many of the older and more experienced orange growers in California who are turning their attention to the profit in oranges that come into the market late in the season. After four yoars of almost exclusive planting of Navel oranges we find the sentiment is growing that the Mediterranean Sweet or Valencia are really the best oranges for profit to be planted. The great demand there is always for oranges in the months of April, and especially May, has caused the change in opinion concerning the Navel orange. J. DeBarth Shorb of San Gabriel advised a Pomona fruit grower the other day to plant Mediterranean Sweets. He argued that this variety of oranges kept better, hung on the trees weeks longer than the Navels, were always popular and were very abundant bearers. He said he sold, two weeks ago, Mediterranean Sweets from five acres for $2.55 a box, and the net profit was nearly one-third greater than for Navels at $3.50 a box. Mr. Shorb believes that the Mediterranean Sweet will always be the best-selling orange there is, and he quotes the fact that it has sold in Chicago and St. Louis for weeks at a better price than the far-famed Navel.—*Pomona Progress.*

THE FIELD.

Wheat Sown too Deep.

A Report From the Oregon Experiment Station.

On the 28th of April last, John S. Vinson of Nolin, Umatilla county, Or., addressed to following letter to B. S. Pague of the U. S. Signal Service, and Oregon Weather Bureau, Portland:

SIR:—I send you a sample of growing wheat, and am willing to expose my ignorance in the effort to assist in discovering the cause of so much trouble in raising wheat in this section. You will notice the grain started to grow, but for some cause the growth was checked, and new roots were sent out from the stem, the old roots dwindling away. I think the grain was put in the ground too deep.

If I am right, this will account for the poor stand obtained on old mellow soil, as it would require very favorable seasons to produce crops where two growths are necessary.

Please let me know your opinion of the causes of the second growth, and if it is the best condition to produce crops.

I am not an experienced farmer, nor do I find any one that is able to enlighten me on this subject.

We expect a very fair yield of good quality, of all kinds of grain, but fall-sown grain is not a good stand.

Mr. Pague promptly referred the matter to Prof. E Grimm, director and agriculturist of the Experiment Station at Corvallis, who reported as follows:

Prof. Grimm's Report.

The wheat plants sent me I find not unlike some grasses which I have observed growing in the arid regions of Colorado. The leaves of the plants are attenuated, and the bleached appearance of their lower portions show that they were covered with soil to the depth of 2 to 2½ inches. The plants showed two sets of roots, one of which was at the base of the leaves and the other set from 1½ to 2 inches lower, and which had started from the seed, as is easily shown by the old seed which remains. This would place the seed at the depth of 3½ to 4½ inches. It has been found if wheat be sown too deeply germination is impaired, and often re-rooting takes place at the upper joint and the parts of the original stem and roots die away, thus causing great loss in the vitality of the plants. With fall-sown grain this evil is usually corrected to a great extent, but spring wheat is always weakened, as there is no time for the plant to remedy the evil. In loose soils, and where the rainfall is light, the danger of deep planting is greater than with retentive soils in moist climate, as the moisture required to mature the crop must be husbanded in the former case, and the plant rushed through its different stages of growth as rapidly as possible. It has been found by carefully conducted experiments that wheat planted at a depth of one-half inch will come above the ground in about 11 days, while at a depth of 3 inches it required 20 days, and at 4 inches 21 days to come to the surface. These figures will vary in different soils and under different climatic conditions, but it is evident that in a dry climate depth of planting is an important consideration as regards the length of time required to push the plants through their first and most critical period of growth. In Umatilla county the effect of deep planting would affect the fall-sown grain similar to spring-sown grain in the Willamette valley, as the time lost in Umatilla county with fall grain would extend the time of root development so long that evaporation from the soil directly and exhalation from the plants would exhaust the soil moisture and not give the plant sufficient time to rectify the evil.

This is especially true in comparatively dry climates. It is to be remembered that for every one pound of dry matter stored up the plant has evaporated 300 pounds of water, and for an average crop of wheat, or barley, or grass, there would pass through the plant 700 tons or seven inches of water. It is evident from this that when soil moisture is limited as in Umatilla county, deep planting would be next to ruinous to the crop. One or two inches would be the best depth of planting; beyond this the wheat is liable to joint rooting, as just noticed, and besides losing much time in coming up, they become thin and attenuated and do not stool or tiller, or if so this process is weak and irregular. Lateral buds spring from the axils of the leaves, and as the growth of one succeeds that of another, upward decay and irregularity in the growth of others is the result. If only the upper bud succeeds as was the case with the specimens sent, much time is lost by decay of the lower part and the formation of a new system of roots. In this case I do not think there was sufficient soil moisture to supply the water which a large leaf surface would require, and hence the condition of this crop observed.

In transmitting the above, Assistant Director Pague adds:

Questions relative to soils and products, effect of climate on same, etc., will be gladly answered if submitted. It is one of the main objects of this Bureau and of the Experiment Station at Corvallis to enlighten the soil-workers upon any questions that may arise in their occupation relative to soil, climate, productions, insects, and the like.

Hay Rakes.

EDITORS PRESS: An important point in hay rakes was brought to my attention by Mr. Morris of Yolo. When cutting volunteer hay the old stubble has been a serious damage to the crop. A wire rake gathers all. Mr. M. has lately started in with an acme rake, such as is advertised by Byron Jackson. He finds that it rakes the hay all right, but that the stubble drops down between the teeth, as it works back toward the wheels. This leaves the hay clean and bright as though it had been sown on purpose.

Mr. Morris claims an important advantage over driving the horses, as illustrated in Mr. Jackson's cuts, by placing a boy on each. When they come to the winrow, the bunch or the stack, instead of backing out, each boy turns his horse about and drives the other way, easily making short turns in any direction desired.

Mr. Morris is a very practical and successful farmer, whose enthusiasm in behalf of this new departure in hay-making will be of great advantage to the manufacturers. F. S. C.

POULTRY YARD.

Growing the Mongolian Pheasant in Oregon.

EDITORS PRESS: — Regarding the Chinese Pheasant, I am having extra opportunities of observing their ways and manners and customs while young. We found a nest and set the eggs under a domestic hen, and now have 12 China pheasant chickens, five weeks old, running at large with the hen the same as any chickens. They are as tame as ordinary chickens, but their native disposition for running and hiding is still there. They are funny little fellows, and act like little turkeys, only they are more sprightly and comical. They come home regularly to their roosting coop at night, or in case of a storm, and appear to appreciate shelter and something to eat as well as their more civilized cousins. But they eat—like the "Shanghai chicken" of the old song, they "eat most anything they can overhaul." They are "rustlers for grub," as a miner would say, and the vineyardists and fruit and berry men, and market gardeners of California will be able to recognize that characteristic whenever they become plentiful in that State. They will eat grapes now (and the grapes are not bigger than peas), strawberries, cherries and nearly everything else in the fruit or vegetable line. They eat all kinds of insects as well, and as active and vigorous birds must, who get around as much as they do, consume large quantities of food. They are constantly on the go, and to say of them that they run with the hen is hardly correct; the hen runs with them, that is, when she can keep up. But they are of no practical use. We have plenty of other birds which do all their work without their destructive habits. The quail is very much preferable. But we have got him, and there are still men foolish enough to want to introduce him into other places. They are welcome to do so, so far as my consent goes. I wish they would take away all there are around here.

Aumsville, Or. F S. MATTESON.

How I Glutted the Egg Market.

"I have made the hen a study for many years and love to watch her even yet as she resumes her toils on a falling market year after year."—BILL NYE.

EDITORS PRESS:—This pathetic sentiment wakes a mournful echo in many a heart.

I have had the usual experience, fired by glowing editorials in local papers on the "Profits of Poultry-Raising." I made calculations on envelopes and newspaper wrappers, figured up a fortune, started into the business with ardor, kept scientific book accounts, found that the outlay was considerably more than the income, that hens would lay only when the price of eggs was at the minimum, and then—gave it up and left the incorrigibles to shift for themselves.

This spring, however, most of my 40 hens being young, they astonished me by laying several dozen eggs more than we could possibly consume at the table. This encouraged me somewhat. I even sold enough to come to $5.40 when eggs were at 15 cents. Then the price advanced to 20 cents, and those hens with one consent immediately stopped laying without even a cluck, posting up a notice on the poultry-house door, "On a Strike."

I know that hens *ought* to "cluck" when they leave off laying, so I set about searching for the reason why. I found it. I had left the care of feeding to alien hands, and my 40 hens only received a dole of one pint of wheat morning and night. I found two or three sacks of middlings that were left over from last year's hog feed, and began to experiment.

I mixed five pounds of middlings with sour milk, adding a tablespoonful of cayenne pepper, feeding this once a day in addition to their grain. The result was marked and delightful. For a month I had received one or two eggs a day, but under the new regimen the egg supply gradually increased to 20 eggs per day, *within ten days.*

We now eat eggs three times a day, and I took twelve dozen to market (the country store) yesterday, receiving 25 cents per dozen.

Pentz, Butte Co. JESSIMA LEIGH.

Raising Chickens.

EDITORS PRESS:—As the season is far advanced for an article on the raising of young chicks, yet I deemed a few thoughts would be appropriate for the later hatches of the season, and especially at a time, too, when fowls have not the vitality and vigor that they have earlier in the season to impart.

In the first feeding of young chicks, care should be taken not to give them soft food. We boil an egg *hard* and mix it with oatmeal and have it as dry as possible, and feed with that kind of food during the first week, and when the chicks begin to pick up wheat, feed with dry wheat the last feed at night, or with cracked wheat, which is better. The water in the drinking vessels should be changed quite often during the day, and the coops ought to be cleaned daily. By following the above methods, there will be but few losses by disease.

We commenced late in the season to raise chickens, and have 75 or 80 chickens, and have lost but two from disease. Although it is late, we are still hatching as fast as we can get hens to sit. I will add that we never let the hens out of the coops with the young chicks in the morning, when there is a heavy dew or when it rains. O. F. SHAW.

Soquel, June 30, '90.

DIFFERENCE IN TIDE LEVELS NEAR NEW YORK.—Observations of the tides of the Harlem at Forham Landing with those of the Hudson at the mouth of Spuyten Duyvil Creek show that the level of mean high water in the Hudson is nearly a foot lower than in the Harlem, and that the mean rise and fall of the tide in the Hudson are a little more than two feet less than in the Harlem.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Think up Your Plans.

While you are busy in harvest time and Grange meetings are slack, Patrons, just try to keep your eye on the main chance, thinking and planning for extra good services in reviving Grange work when harvest is over.

Owing to severe and long-continued rains, farming was delayed through our past winter; work being belated in the winter, made our farmers very busy in spring and early summer to catch up. Otherwise, we believe much more time would have been devoted by zealous Patrons to forwarding Grange interests this year. So just keep the matter in mind, brothers and sisters, and have your plans ready for some splendid work in August and September before the State Grange meets. Write out some good suggestions for the RURAL PRESS and then follow them up.

Election is Approaching!

EDITORS PRESS:—As another election is close at hand, the question naturally comes up whom should we elect to make laws for us? The farmer says we have too many lawyers and politicians in the Legislature to expect much good for him.

Who is to blame for this but the farmer? Things will be so just so long as the farmers stay at home from the primaries and allows politicians and saloon men to fix up the ticket for them to vote.

Now, brother Patrons and farmers, suppose we stop this grumbling because somebody don't do something for us, and try to do something for ourselves. We as Patrons have been trying to educate ourselves and our sons in the Grange to be able to fill positions of public trust, either as delegates or representatives in the halls of legislation, and I think we have succeeded in fitting a sufficient number to represent us, if we only put them forward. If we are ever going to do anything in this way for ourselves, why not now?

Well, then, begin now to think and talk together as to whom you want to put forward in your party to represent you, and do not stay at home, but go to the primaries and elect none but a good, sober, industrious man as delegates to your county conventions, and you will have done a day's work that will be worth more to you than any other you have done in a long time. Don't say that you have no time except to go to the general election—that is too late! Don't trust yourself in a structure built on a rotten foundation; but let us all come out and, as good citizens, do our duty to ourselves, our families and our country. V. W. S.

Highland Ranch, June 30, 1890.

[This timely plea commends itself to every thoughtful reader, and we desire to add our hearty endorsement to V. W. S.'s cogent appeal.—EDS. PRESS.]

Stockton Grange Up and Doing.

The Children's Day, mentioned in the PRESS last week, was decidedly a success and the surprise complete. The happy faces of our children, with their bonbons, flags and national bags of good things, were indeed a pleasing sight. The Grange hall was beautifully decorated with flags of all sizes, filling the room and all present with enthusiastic patriotism. The exercises commenced with a march by the children in their different-colored caps, and embraced music, recitations and songs, closing with another march. The older members indulged in speaking, discussed the merits of the Grange, and came to the conclusion that the day could not have been better spent nor the children been much happier. The committee then furnished everybody with delicious iced lemonade, which was greatly enjoyed, and thus closed the Children's Day.

Stockton Grange has taken a new departure and instituted a series of open meetings on the first Saturday in each month, to continue through the summer and fall, the last one to take place the first Saturday in November. Members from the different Granges in the county have attended and assisted in these entertainments, and many, not members of the Order, have voluntarily offered their services.

It is hoped that good results will attend these meetings, that the brothers and sisters of neighboring Granges will continue their interest in them and take part with the sisters of Stockton Grange. NATHAN T. ROOT, Sec'y.

Stockton, July 6, 1890.

WILL Brother Nash, Master of Hollister Grange, and Worthy Overseer Roache correspond with the officers of Gilroy Grange and if feasible unite in a visiting and revival meeting as soon as harvest work will permit?

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

The propriety of holding political conventions under the auspices of any secret or fraternal organization is very questionable. Our Order is doing well. Its influence is most salutary and effective. With the profoundest regard for the Grange and its individual membership that proposed to have a convention of Masters and Past Masters for political purposes, I feel that I have no authority as Master of the State Grange to call such meeting, and as a private citizen I most certainly decline to take such action. Let the Patrons of Husbandry do their full duty as citizens and political parties and conventions will not *dare* to trespass on the rights of the agriculturists. Farmers, do your duty. Be honest, be just and fear not. Dare to do right regardless of politicians, parties or conventions. Be men of America. Vote as you think!

The Childrens' Day picnic at Sebastopol, June 28th, was a grand success. Bros. Past Masters David Flint and S. T. Coulter, with a host of enthusiastic Patrons, were present. All had a good time and the day was profitably spent. Long life to Children's Day!

Sonoma County Grangers will hold their next Children's Day jubilee at the splendid Grove and hall of Bennett Valley Grange on the Fourth Saturday of June, 1891.

Subordinate Granges in this jurisdiction will, before this is read, have received from Pomona Grange of San Joaquin county a copy of a proposed election law. Let every Grange examine it with care, and if found deficient in any particular send amendments to the Secretary.

The several committees heretofore appointed by the Master of the State Grange have some very important work to do. The trust that is in their keeping is more responsible than they may think. Let the Chairman of each committee go at once to work. Consult and prepare a report, so that when the State Grange convenes no time will be lost in waiting for reports of standing committees.

There is some talk of the organization of a Grange at Glen Ellen; also at Forestville, and at Healdsburg. All these towns are in Sonoma county.

What can be the reason our Worthy Steward—Bro. W. W. Greer—does not give us some of his hot shot?

The railroad company proposes to give reduced fare to all who attend the State Grange next October. Patrons, prepare to be with us at Watsonville the first Tuesday in October. Save your pin-money, sisters; and brothers, lay by a few spare dollars, for we want to see you one and all.

Sister Ceres lately sent to the readers of the RURAL a communication that is a credit both to her pen and to the station she holds in the Grange. Favor us often, Sister Sanders. We enjoy such mental bread.

Be strong of heart, be steadfast of purpose, and the Grange will prosper.

The Fourth of July has slipped by us, harvest is well along, the crop is fairly good, and why not do a small share of work for the Grange? Remember one good turn deserves another!

Santa Rosa Grange has just elected two candidates and has three more at the outer gate.

Remember, when you go to the State Grange, to buy a *first-class unlimited* ticket to Watsonville, and be sure to *take the agent's receipt* for the money paid. If you do this, you will get home at *one-third* the regular fare.

Worthy Pomona's season is close at hand. Our Patrons will be pleased to read something from her pen on the subject of fruits.

The Grange will *never die*, provided it is constantly supplied with young, vigorous, intelligent new growth. Bring in the best material in your neighborhood, and *especially* don't forget the boys and girls over 14 years of age.

Sister Kinney's address to the members of the Order on the sphere of woman and her work in the Grange deserves to be read and favorably acted upon by every subordinate Grange in California. Think, sisters, of your opportunities, and having thought, then *act*.

The Morrow County Alliance of Ohio have "*Resolved*, that *no elective officer in that county should have an annual salary of more than* $1000." How that sort of fee bill would knock out candidates for office in California!

Facts don't fit where lies prevail.

Will the farmers of this State see to it that the coming Legislature pass some law that will bring relief from the burdens now borne by all persons who patronize insurance companies? It would seem that a healthful competition in the insurance business would not be a bad thing for all classes of people who are now insuring property from the dangers of fire.

A Visit to Salinas.

BY PAST MASTER STEELE.

DEAR BROTHER:—In company with my grandson, Ira Steele, I drove to Santa Cruz, June 27th, on the way to meet with Salinas Grange on the 28th.

Meeting Bro. Pilkington, W. Sec'y of Santa Cruz Grange, I was in consultation with him about Grange revival in that section until close upon train time—which had been changed, without my knowledge, from 4:50 to 4:45 P. M.; so I missed the cars by two minutes, which was a great disappointment.

A telegram to Bro. Hill informed the Grange of our mishap and of the hour we would arrive. Bro. Hebbron, W. Sec., met us at the train and we were kindly provided for during our stay at Salinas.

Bro. Cressey arrived from the south in time for the afternoon meeting, which was called to order by W. M., Hill at 2 o'clock. Bro. Cressey remained just long enough to give a short address, full of mirth at first, followed by telling points, with a vigor peculiar to his earnest nature. It must have cost him considerable effort to attend this meeting, as he left the regular train and traveled on a slow train, far into the night to reach his home.

After he left I presented such facts and thoughts as seemed to me suited to the occasion. It was an open meeting, but the attendance was not large. Those present gave good attention and appeared to be interested.

W. M., Hill presided with dignity and ease He introduced the speakers in well-chosen words, expressing kind appreciation, and entertained the audience most acceptably after my address.

W. Sec. Hebbron also made timely and interesting remarks.

I accompanied Mr. Edwin St. John on a very pleasant drive across the Salinas river over one of the long bridges built by Monterey county. There are four of them constructed by the San Francisco Bridge Co. at a cost of about $10,000 each. The Salinas is a dangerous stream to ford on account of quicksands.

The wheat and barley is fine in this portion of the valley. Mr. St. John estimates the yield from Soledad to Monterey bay at three-fourths of full crop. We visited the fair-grounds and saw a fine lot of young horses being trained for speed.

There are many nice buildings in Salinas. The town is growing and appears prosperous. Farmers are now very busy with their harvest. I intend to visit them again later, when they have more leisure, and hope for good results. Fraternally, I. C. STEELE.

What San Miguel Purposes.

EDITORS PRESS:—San Miguel Grange has decided to take a vacation through the hot weather and harvest time, and reopen on the third Saturday in August.

We have planned our campaign for the vacation. Through our local papers, personally addressed circulars and individual conversations, we are going to try to reach the farmers of our community and get them "in touch" with Grange principles.

When we reopen we propose to have our regular business meeting in the morning and an open meeting in the afternoon, with short addresses, recitations, music, etc., to which all farmers and their families will have a cordial and pressing invitation. I trust we shall gather in a harvest for the Grange. In September we expect to give an entertainment for the financial benefit of the Grange. Like every other enterprise, the Grange can be made a success only by enthusiasm and labor. Fraternally, EMMA A. FISK.

San Miguel, July 7, 1890.

THE OBJECT OF ALL DISCUSSION ought to be the elicitation of truth, and whenever argument is resorted to for the purpose of confirming us in preconceived beliefs, the true ends and aims of reasoning are defeated. We should approach every subject with an unbiased mind, prepared to accept the truth as demonstrated by the facts adduced. We should weigh carefully whatever is worthy of consideration, and then conclude, and not follow the common practice of first forming a conclusion and then casting about for arguments to bolster up a belief that has no logical foundation. There is great pertinency in the remark of an old theological writer, that "Two-thirds of the people do not know what they believe, and one-half of the remaining third do not know why they believe as they do."—*Farmers' Friend.*

NON-RESIDENT ALIENS IN IOWA.—Judge Kavanagh of the Polk county District Court, Iowa, has rendered a decision that an alien can acquire by inheritance no right or interest to real estate in that commonwealth. On Sept. 10, 1889, Bernard Callan, a resident and citizen of Iowa, died in Polk county, leaving a small amount of personal property and several parcels of real estate. He left no widow or children surviving him but several remote heirs in the State of Massachusetts and several others who are citizens and residents of Great Britain. Claims were filed against the estate, to the allowance of which the foreign heirs objected. The claimants contended that the foreign heirs had no standing in court, for the reason that they are aliens and their objections should not be heard. The Court coincided in this view. The law passed by the 22d General Assembly prohibits non-resident aliens acquiring title to, or taking, or holding any lands or real estate in this State by descent, devise, purchase or otherwise.

Sebastopol and Santa Rosa Granges.

BY PAST MASTER DANIEL FLINT.

EDITORS PRESS:—On Saturday, June 28th, W. M., Davis, his two children and the writer went to the picnic at Sebastopol called the "Children's Day." For the sake of independence in going and returning at our convenience, we chose to drive over in a comfortable carriage behind a strong horse.

The roads were good, and we passed many a fine farm with large orchards and improvements.

Sebastopol has the honor of being the terminus of a broad-gauge railroad of which they seem very proud.

The picnic was held on an elevated piece of ground, thickly covered with young oaks, pines and madrona trees. With a little thinning out it will make a fine grove. On arriving, we found a large platform erected and the exercises in full operation. We were escorted to prominent seats and listened to a well-selected and well-rendered program, all except the instrumental and part of the vocal music being by the children. Some of the features were decidedly novel. One was called "The Ten Lazy Boys," and to enact it in a realistic manner, one of the ten was so lazy that he did not get there on time and the Chairman had to pass it for awhile. The ten boys stood in a row, each holding some instrument or implement. No. 10 recited his part or verse and sluggishly manipulated the saw; No. 9 the ax; No. 8 the hoe, etc., then all rested in concert. It caused a good deal of merriment and received more applause than any other piece.

The singing was good, and the persons who took part in training the children deserve a deal of credit.

The children appeared to enter fully into the spirit of the occasion.

The wind seemed to blow right down from the tops of the trees on to our heads, and as Bro. Davis and myself carry around small specimens of our skill in tanning, we feel grateful to the sister who saw our peculiar situation and suggested that we replace our hats.

We had so many invitations to lunch with the Granger sisters that we were in a dilemma just how to act. Finally we followed those who had the largest basket and most boxes, and did not err in our judgment.

After lunch we were called on for remarks, when Bros. Davis and Coulter made some stirring speeches.

The audience on the platform was dismissed, and invited out to participate in the contest for prizes which were quite numerous.

There were a goodly number present and the young folks seemed to enjoy it greatly.

The Children's Day bids fair to become an important event.

The same officers were elected to take charge of it one year hence, in Bennett valley.

The members of Two Rock Grange wore their badges which, I think, a fine feature at all of our picnics. It advertises us and shows we are not ashamed of our Order. Let badges be worn at all Grange picnics next year. I staid with Bro. Davis and his father three nights. They have a fine farm in Bennett valley.

One gets a very good view of a part of Santa Rosa valley in passing to and from the Davis farm. I can see that the town and valley is improving every time I make it a visit and I predict this will be a favorite place for private residence on account of its climate and public schools. The fog that rises over the coast hills has a tendency to cool the air and make the evenings delightful. The streets and roads are paved and graveled, making nice drives for the fine turnouts I saw on the streets.

By previous invitation I attended Santa Rosa Grange on Tuesday, July 1st. I hardly know how I could have spent the time more profitably and agreeably than in attending a Grange like this. In their invitation they said they wanted me to give them a good long talk. I gave them a long talk, but as to its quality, there may be various opinions. I must give them credit for being a well-bred and forbearing people, for they showed me the courtesy and patience of over an hour's listening, and they did the honors of the Grange in good shape, too. Past Master Coulter and two or three other brothers were appointed a committee to escort and introduce Bro. Davis and myself to the Grange, when we accepted the proffered seats beside the Master.

I felt a little encouraged when I saw Sister Le Boyd there from Elk Grove, and when she was called on to entertain the Grange, she did not make any apology for nothing to say, but got right up and gave them an offhand recitation, which was favorably received.

After lunch, which was both choice and ample, Bro. Davis was called on as Master of Ceremonies. I never saw him more at home and in the true elements of a Granger than today. He was the life and soul of the Grange, and roused enthusiasm in all present by his eloquence and earnestness.

Bro. Coulter made some excellent remarks on

taxation, the one-tax theory, election of U. S. Senators, etc.

Ex-Senator Hinshaw of Sonoma Co. spoke in an interesting way on the ways and benefits of legislation, as well as some of the attendant evils. He gave great credit to every Granger in the Legislature, and believed they were there for the very best of motives.

The young Master of Bennett Valley Grange, Bro. Crane, was listened to with attention. Bro. Carr, the veteran of Bennett valley, dropped some good words of encouragement. Sister Huntly gave several stirring pieces of music, which greatly helped out the entertainment. Several others contributed, whose names have have just now escaped me. The meeting was well attended, and great interest was shown in the exercises.

I expect nothing but success from Santa Rosa Grange, from its surroundings and talented members. Let us hear more often through the RURAL PRESS. D. F.

Stanford's Loan Bill.

EDITORS PRESS:—May I express my opinion on Senator Stanford's Loan bill?

It may be a good thing for some small farmers, but I think it will be more help to the rich land-owner than the poor man. It may help in Eastern States, but in the section of California where I live, I can't see much help in it for the farmer who owns 80 or 160 acres of poor land, and nothing at all for the man who rents.

Here land is assessed at from $12 to $20 per acre. The bill gives you half the assessed value; that would be $6 and $10 per acre. Now on 160 acres you would get $960 at $6, and $1600 at $10 per acre. There are but few farmers here who would want so small a sum of money. Few places are mortgaged for less than $2000, and on up to $5000. The rich man with land assessed at $50 to $100 per acre, would reap the harvest. He could borrow money at two per cent on 160 acres or 200 acres of land, and loan it to his poor neighbors at five or six per cent, and maybe a higher rate—it would be according to how tight a pinch the poor farmer was in, or it need not go to a farmer. You may loan to whom you please after you get the money in your hands.

This is taking only a small amount of land for a rich man, but take thousands of acres, as some own here in this State, and see what a harvest it would be! We would soon have millionaires in California as thick as grasshoppers. Stanford put a limit on the down-grade at $2.50, but he overlooked the more important part, the up-grade. In my opinion, there should have been a limit fixed there, say $5000 or $10,000 to any one farmer. It looks to me as if that would be enough of Uncle Sam's money to speculate on.

Most Eastern farmers try to get out of debt. In California we don't care. It rather looks like the more you are in debt, the smarter business man you are.

Now how is Stanford's bill to help us? I think it would make us more extravagant. Then I wager Bro. Snow would buy Betsey a new gown and take her to the State Grange! Maybe I don't see the best side of the bill.

BROTHER TOM.

Letter Notes.

From Past Master Overhiser.

I like the PRESS well. It fills the bill as an agricultural and Grange paper, and I will try to send you some subscribers.

From Worthy Master Davis.

Bro. Flint and I were at Sebastopol Grange 28th ult., and he spoke before the Granges of Sonoma county at Hahman hall, Santa Rosa, the 1st inst. His speech was splendid and will do good. I never heard him do better. There is prospect of several new Granges yet this fall. How is Galt Grange? Can anything be done for Lincoln?—[Cannot some of our good Roseville brothers and sisters note the above and with Wheatland Grange get up a union meeting and fraternal visitation at Lincoln? Some of the old members of Lincoln will help arrange for the gathering?—EDS]

FOURTH OF JULY PICNIC.—Temescal Grange enjoyed a fine day's outing at Oak Grove on the Fourth. The ride to and fro was a pleasant one over the new California and Nevada railroad route. Major Edwin Sherman, secretary of the Alameda and Contra Costa Co. Pioneers, a true and zealous patriot, made forcible and telling remarks, which were loudly applauded by the representative Patrons and Pioneers present. He also exhibited a rare relic to the audience—nothing less than a miniature bell made from metal taken out of the original Independence Bell of Independence Hall, Philadelphia, at the time the attempt was made to repair the crack in that old "Liberty Bell." Nearly every one declared they had a good time. Some mistakes were made which will not likely occur again with Temescal picnic arrangements, one of which caused a lack of time and of a sufficiently numerous rural audience for setting forth the grand principles of our Order to advantage. Financially, the enterprise was a success, the funds received being sufficient to meet expenses for band, printing, advertising, etc. The Grange returns thanks to all attending friends.

A thought is valuable both as a present and as a keepsake.

The Australian Plan of Voting.

A copy of the following circular letter has lately been addressed to every subordinate Grange in California:

The undersigned Committee, who were appointed by the Pomona Grange of San Joaquin county to prepare a form of ballot law after the Australian system, herewith forward to you for your consideration a copy of a law so prepared, the same being approved by the said Grange, and hope you will carefully consider the same, and after due consideration, if you have any amendments to offer, please write them out, by reference to sections, and return the same to the Secretary of the Committee at as early date as possible that we may prepare a bill embracing the amendments offered as near as practicable; same to be submitted for consideration at the next meeting of the State Grange. Fraternally yours,

J. D. HUFFMAN,
Secretary, Lodi, Cal.
E. FISKE,
W. L. OVERHISER,
Committee.

The proposed law is so nearly identical in its provisions with that formulated by the Federated Trades, published in full in the RURAL PRESS of January 26, 1889, and subsequently mailed as a circular to the various Granges, that we deem it unnecessary to reproduce it at the time; but the subject is one of deep interest to all loyal citizens and friends of good government, and we presume the committee will furnish copies of the bill on application.

In Memoriam.

Malachi Jordan, who died June 23, 1890, was one of the old settlers of San Joaquin county, and had done much to develop its agricultural resources. He joined Woodbridge Grange when it was in its infancy, in 1875. Those who knew him speak of him as a true type of "God's noblest work, an honest man." The following preamble and resolutions were adopted July 5, 1890:

WHEREAS, It has pleased our Heavenly Father to remove from our midst our worthy brother Malachi Jordan, we bow our heads in humble submission to Him who holds in His hands the destiny of all; and

WHEREAS, By his demise, his family has lost a loving husband and a kind and indulgent father, the Grange a worthy member, and the community an old and respected citizen; therefore be it

Resolved, That we extend to his bereaved family our most sincere sympathy and condolence in this their hour of affliction.

Resolved, That the charter of this Grange be draped in mourning for the period of 30 days.

Resolved, That these resolutions be spread in full on the minutes of this Grange, be printed in the PACIFIC RURAL PRESS, and a copy be sent to the family.

BRO. E. G. WILLIAMS,
BRO. E. J. MCINTOSH,
SISTER M. A. WHITE,
Committee.

Granges Reported.

The following Granges have reported to June 30, 1890: Carpinteria, Danville, Enterprise, Eureka, Hollister, Lodi, Magnolia, Merced, North Butte, Pescadero, San Miguel, Sebastopol, Stockton, Tulare, Two Rock, Valley, Watsonville, West San Joaquin, Wheatland, Woodbridge.

KELSEYVILLE GRANGE.—This Grange, in Lake county, formerly had 90 members. Some 45 of these have died or moved out of the county. Quite a number of those remaining are anxious to have the Grange revived, and with the help of new members, we expect Kelseyville Grange will soon again be in good working order. Success to those who are laboring for it. Parties interested can address W. C. Coffin, Kelseyville, for further information.

IF brethren in Fresno or Tulare county will do a little canvassing, we are confident a good, substantial Grange can be organized at Centerville, in Fresno county. Why should there not be new Granges at Sanger, Traver and Porterville? Visalia Grange should be revived in full force before the next State Grange. Who will stir up and organize a plan for instituting at least a dozen new Granges this season in Tulare, Fresno and Kern counties?

HOLLISTER Grange is to have a visit from Bros. Cressey and I. O. Steele on Saturday, August 9th. How would the W. M., W. O. and members of Gilroy like to have these old patriarchs cheer up a rousing farming meeting at Gilroy on Friday, the 8th? Now is your time to invite them. Get some new candidates ready for them to finish.

FARMERS' TURNOUT IN KANSAS.—The Farmers' Alliance and other kindred organizations united in a grand demonstration at Emporia, Kansas, on the 5th inst. The procession was five miles long and over 20,000 people were in attendance.

CARPINTERIA GRANGE, it will be remembered, has changed the date of its meeting and picnic from July 17th to Thursday, August 14th, on account of the ripening fruit which must be taken care of during the current month.

EVERYTHING bids fair for a large attendance and an interesting season at the Watsonville session of the State Grange.

The Grange cordially invites every farmer and his wife and children to enroll their names on its roster.

OREGON.

Crops and Grange in Umatilla.

EDITORS PRESS.—Umatilla county has been favored with a splendid season so far. Wheat in the vicinity of Helix, Adams, Pendleton, Athena, Milton and Weston, will make a fine crop. Continued cool weather, with frequent showers, has been all the wheat-grower could ask. The grain promises to be of the best quality, and the yield up to the average. The same cannot be said of other parts of Eastern Oregon, as the rainfall seemed to go in streaks, and in portions of the country that were not favored with early rains, the crops are not so good.

Hay harvest is progressing very well. This is a delightful climate for the curing of hay, seldom, if ever, a shower or dew during harvest. Heading will not commence before the 15th of July.

Juniper Grange

Held a meeting on the 28th. A good attendance was noted, and a progressive spirit was manifest among the members.

Umatilla Pomona Grange

Meets with the Weston Grange July 5th, and a large attendance is expected. At the last meeting of the Pomona Grange it was determned to erect a building at Helix, the lower room to be used as a store, the upper room for a Grange hall.

One of the most important questions demanding the attention of the Grange is the prices that we receive for agricultural products. Whenever circumstances arise that interfere with the rights of producers to market their grain, so as to deprive them of the profits legitimately arising from their labor, some steps should be taken to help relieve the oppressed. I know the idea is prevalent that we can do nothing in that line, but such is not the case. Note the advances that have been made in the last decade by the Grange and kindred organizations, in the way of educating the great army of producers. Where mistakes have been made lessons have been taught, and the breakers can be avoided, to a great degree. If the coming decade is marked by like advancement among agriculturists, accompanied with the experience of the past, great changes will be noted. The progressive spirit of the American people will not allow them to remain in quiet or go backward, and when the expenses of any country or community are greater than their income, bankruptcy is sure to follow. Statistics conclusively show that the producing classes are not enjoying the profits that rightfully are theirs: Corners in produce of all kinds, second and third hands getting immensely rich off the business we create, while the same cannot be said of the farmers. This inequality has wrought sore oppression—oppression as broad as the United States. The same cry comes up from every country. Our cause looks no more doubtful than did the cause of the colonists when the first gun was fired at Lexington, as the same independent and progressive spirit is still to be found in the American people. I believe some of these wrongs will be righted, class legislation will be corrected, by the uniting of the class oppressed. By common consent must this burden be removed.

Helix, Oregon. W. A. S.

A Paramount Question.

Oregon farmers have talked long and loud about agricultural depression. They have discussed the subject on street corners and in Grange-halls, advanced theory upon theory, and adopted plenty of preambles and resolutions. Even politicians have taken cognizance of and studied the all-important subject. Secretary Rusk says:

No possible relief can come to our farmers or to the country, no permanent remedy for present ills is to be found in measures which are rather the outcome of resentment than the product of reason. I would say to the farmers, stand firm as the everlasting hills in demanding what is right and in resisting any possible infringement on your rights as citizens by any other class or combination of people; but beware, lest in your just eagerness to secure your own rights you seek to infringe upon the rights of others. No measure that conflicts with the rights of any one class of citizens but is sure to follow the course of the boomerang and return to injure the hand that shaped it. On the other hand, let it be borne in mind by all classes of our citizens that the present conditions demand consideration now, and that consideration must be full and fair. For the time being, it is paramount to all other questions, and, if necessary, every other interest must be prepared to stand aside in favor of measures looking to the relief of agricultural depression.

Wasco and Sherman Business Council.

We learn that the Wasco and Sherman Counties Business Council of the P. of H. (whose meeting at Erskineville with Milbra Grange was mentioned by W. S. L., Holder in our issue for 28th ult.) was composed of 13 Granges, 8 belonging to Wasco and 5 to Sherman county. The total membership embraced about 500. The recent Council consisted of 51 voting members. There were also present 100 visiting members.

It being an annual meeting, the election of officers for the ensuing year was held, resulting as follows: John Medler, Pres.; E. Pitman, V. P.; H. S. McDanel, Sec'y; A. Canfield, Treas.; L. Bolton, Steward; J. J. Butler, G. K.; P. P. Underwood, Chaplain; Andy Allen, Agent; J. W. Messenger, J. A. Gulliford, M. W. Freeman, Executive Committee; J. W. Messenger, M. W. Freeman, E. Olde, Committee on Co-operation. The next quarterly meeting of the Council will be with Highland Grange, at Kingsley, Wasco Co., Sept. 9th.

Dedication of Mono Hall.

EDITORS PRESS:—July 5th is a day long to be remembered by Mono Grange, No. 25, situated at Lewisville in the southwest part of Polk county. It was the dedication of their Grange hall. W. S. M., H. E. Hayes, was to be present, but as he could not come, he deputized Bro. Voorhees, W. O., to perform the service, Bro. Moore of Corvallis Grange, being master of ceremonies.

It was the first time I ever had the pleasure of witnessing a Grange dedication. It is certainly a beautiful ceremony. Mono Grange was well prepared in every particular. The music was especially fine and suited to the occasion. The part assigned to each was well performed. The visiting member from different parts of Polk and Benton counties were many, and the invited friends from outside the gate were numerous also; but the generosity of the good sisters was sufficient for all, and many lunch-baskets were left intact.

After dinner and dedication came interesting talks by Bros. Voorhees, Moore, Haley, Chitwood, Dodson and others, interspersed with sallies of wit and good humor, which made the occasion pleasant indeed. This Grange is located in the midst of as fine an agricultural district as can be found in the valley. It had the misfortune to lose its hall by fire, several years ago, since which time it has kept running under adverse circumstances.. With a new hall and increased membership, I hope to see it grow to be a power for good.

It is pleasant to see so many visiting Patrons here. It shows a social, fraternal feeling which is the result of Grange work.

Crops look well, considering the dry season, and will soon be ready for the binder.

J. B. STUMP.

Crop Outlook.

The Bulletin of the Oregon State Weather Bureau for the week ending Saturday, July 5th, says: The fore part of the week was extremely warm, latter part cool and cloudy, with local rains to-day. Local thunder showers prevailed on the last two days of June and first day of July. The heat of the fore part of the week did little injury to crops. The weather during latter part of week was very beneficial. Fall wheat is now generally past the point where the weather could injure it. Spring wheat is doing remarkably well, and if no unforeseen causes interfere, the yield will be much greater than anticipated. Corn is growing well.....Columbia Co. reports hay a fair crop, on uplands very good. In Washington Co., hay is an average. In Clackamas Co., fall wheat will be ready to cut inside of two weeks. Crop will be an average one or more, spring wheat and oats growing well. In Yamhill, Polk, Marion, Benton and Lane, wheat outlook is very promising. Spring wheat will make more than was expected. Corn, oats, hops and hay will average well. Codlin moth doing some damage. Fall wheat will soon be ready to cut; heads are well filled. In Douglas Co., good crops are now assured. Josephine and Jackson counties will have fair cereal crop. Fruit crop will be large, except peaches; melons promise to be plentiful; berries are abundant. Clatsop, Tillamook, Coos and Curry counties will have very good crops, fully up to the average.....Hay is generally reported to be short in Western Oregon and an average crop in Eastern Oregon. Wasco Co. has indications of a better wheat crop than for years; the same for Morrow Co. Sherman and Gilliam counties, report average crops. In Umatilla and Union counties, reports indicate a yield of from 30 to 50 bushels per acre. Wallowa, Baker, Crook, Grant and interior counties bid fair to make average or more than average yields. The present outlook is most encouraging for a fine harvest throughout.

LAND for farming purposes can be had in the Grande Ronde at from $20 to $40 per acre. Within ten miles of Salem, Marion Co., Or., land is meeting ready sale at from $30 to $50 per acre.

WASHINGTON.

INDIAN RESERVATIONS.—The House Committee on Indian Affairs has favorably reported on Wilson's bill creating a commission of three persons to visit the Puyallup Indian Reservation in the State of Washington, ascertain certain facts connected therewith and negotiate for the purchase of surplus acres. The Commission is also to determine the northern boundary of the Warm Springs Indian Reservation, Oregon.

THE oat crop in the Palouse country this season is estimated at 18,000,000 bushels, being an increase of 50 per cent over last year's crop. The value of the barley yield for 1890 in the same district will be $1,000,000.

THE hop crop in the vicinity of Puyallup is in excellent condition and resembles that of 1888. It is estimated that the crop for Washington will exceed that of last year by fully 10,000 bales.

My Little Hero.

Earth's bravest and truest heroes
Fight with an unseen foe,
And win a victory grander
Than you or I can know.
Where the heart of the evil beast
Fought in each human soul,
And Earth knows not of her heroes
Upon God's honor roll.

One of earth's little heroes
Right proud am I to know;
His name for me is Mother,
My name for him is Joe.
At thought of a ten-year-old hero
Perhaps have many smiled,
But a battle-field's a battle-field
In the heart of man or child.

There were plans of mischief brewing,
I saw, but gave no sign,
For I wanted to test the mettle
Of this little knight of mine.
"Of course you must come and help us,
For we all depend on Joe,"
The boys said, and I waited
For his answer—yes or no.

He stood and thought for a moment.
I read his heart like a book,
For the battle that he was fighting
Was told in his earnest look.
Then to his waiting playmates
Outspoke my loyal knight;
"No, boys; I cannot go with you,
For I know it wouldn't be right."

How proud was I of my hero,
As I knelt by his little bed
And gave him the bedtime kisses,
And the good-night words were said!
True to his Lord and manhood
May he stand in the world's fierce fight,
And shun each unworthy action,
Because it "wouldn't be right."

—*E. E. R., in The Christian Union.*

Juliet Blanchard's Wedding.

[Written for the RURAL PRESS by KATHERINA ERYANT NOLAN.]

Juliet Blanchard walked along the narrow path under the wide-spreading foliage of the old beeches and through the saplings, which waved their branches directly in front of her. The waning rays of the glorious September sun cast glancing shadows on the tinted brown leaves, whispering and rustling fiercely in the stiff breeze that penetrated even to the depths of the woods, and the quick whir and rush of a partridge frequently fell on her ear as the bird lured her away from its young. She took no interest in baby partridges that afternoon, yet the mother bird, thinking she must have some sinister design, continued to flap on before her until the girl left the shadows of the trees behind and turned up the narrow road which stretched through the little village with many crooks and turns and windings.

The houses lining the street on either side of the way were mostly of simple construction, but occasionally one assumed the airs and graces of an ancestral home, with the pretentious driveways and flower-beds pertaining thereto. Still such places wore an air of faded gentility, as if the owners had made despairing efforts to be grand and then had died, leaving all trifling temporal matters to take care of themselves.

Juliet went along with downcast eyes until she came to one of the more modest of these abodes, when she turned in, walking up the side path to the back door. The children, a saucy, noisy group of frowsy, rollicking youngsters, heard the gate click, and each took a pane of glass into their possession to see who was pervading the precincts of the Blanchard domain like little watch-dogs on the look out for whilom intruders.

"Hallo, Juliet," they yelled in a chorus, and then disappeared as meteors cross the starry heavens for an instant of time and then go out, leaving darkness behind them; but she was not cheered by their lively, loving greetings and made no response whatever.

Entering a door which opened directly into the large room used as a kitchen, dining-room and sitting-room, she hung up her hat, put on her apron, and helped her mother get supper, going about in a dejected, stubborn way, which caused Mrs. Blanchard to look at her anxiously, and speak caressingly to the girl who was her first born. Juliet's hair and eyes were black, and she was rather plain appearing, her nose being too long for beauty, her mouth too large and her lips too thin for the size of her face. She was tall and slender, and carried herself very straight, in direct contrast to Mrs. Blanchard, who was a round-shouldered, light-haired looking little woman, and gave evidences of faded youthful beauty.

The children raced around, playing with the cat, but they were eagerly watching lest the supper be ready and they not on hand to devour it. They helped themselves surreptitiously to the eatables already brought out, but the reason of such secretiveness was not apparent. Mrs. Blanchard did not notice any of their pranks, and Juliet never was known to find fault unless they scattered crumbs. At these evidences of guilt she was wont to indulge in harangues somewhat uncomplimentary to the noses, eyes and hair of the young troop whom she had rocked and lugged around with unfailing devotion during their babyhood as they appeared one after another in the Blanchard household. A perfect ocean of crumbs might have surged through the old kitchen this eventful afternoon without any interference from Juliet whatever, and they danced about, like veritable imps of mischief; but there was a great lull when the gate clicked again, and they all rushed to the windows in a body.

The door opened admitting a man somewhat past the prime of life, who proceeded in a silent, taciturn way to make himself presentable for supper at the kitchen sink. He filled a tin basin with sparkling water from a wooden pail hard by, and hung the long-handled dipper up carefully with a spat, as if he resented finding it rusting in the depths of the water; and when his face emerged from the depths of his capacious hands which held small rivers of water, he rubbed it with a towel until it glowed and reddened under his shaggy, grizzly locks and heavy eyebrows like a fire.

Every movement betrayed the fact that he was a man who did not propose to be trifled with, and Juliet carried herself in an impenetrable way, under the surveillance which his eyes kept up, through the course of combing and plastering his thick locks at the glass between two windows on the opposite side of the room. He handled the coarse bristle brush grimly, and the steely gray eyes were sharply reflected in the old-fashioned looking-glass; but he never opened his somewhat thick lips until he sat down to supper, and then he answered the few questions addressed to him in monosyllables, going off down the street immediately after the meal was over.

His goings and comings did not affect the happiness of the Blanchards particularly, as he did not believe in broils more than in unseemly gayety, so the children improved the shining hours of his absence to enjoy themselves to the full, and thus demonstrated their belief in a world made for frolic and fun. Juliet washed up the dishes and then sat down by the western window with her knitting-work, which rested idly on her lap, until it grew quite dark and the beautiful glowing of the sunset sky had faded out, leaving the stars, a host of twinkling diamonds, to light up the lately glorious track. She finally arose with a sigh, lit a candle and fell to knitting furiously; but when she heard her mother's returning footsteps, she snatched the candle and ran off upstairs. Her room was small and the floor uncarpeted, with the exception of a slight strip at the bedside. She set the candle down on a little square stand, which was covered with a white cloth trimmed with lace, and walked restlessly around the room awhile as if it was too small for the perturbed soul within her. At length she perched herself upon the bed, on the old fashioned counterpane made of patchwork squares, and as she fingered it with one hand, holding her chin in the other, she sat in a profound reverie quite a long time. The patchwork was her own handiwork and was the result of long hours spent with that small dagger which pierces so many tender fingers and wrenches tears from so many despairing hearts who cannot understand why they were born to wield the needle rather than the hammer and saw.

John Blanchard had attended to the smallest details of his eldest daughter's bringing up, but with each succeeding youngster, he had seemed to be more contented to allow her to remain a bright example of his good training, without sharing any honors, so the younger Blanchards profited somewhat through her childish woes. When she slid off the bed, she took up the snuffers, which rested upon a black-looking tray beside the tin candlestick, and pinched the wick off short, with a decision strongly like her Puritan father's movements with the long-handled tin dipper; then she got her best bonnet out of its bandbox, which was stowed away in primitive fashion under the bed, and tied it on before the looking-glass in a mechanical way, smoothing out the narrow ties with deliberation, and gazed spellbound at her reflection in the glass as if it were some one else rather than herself standing there. Suddenly she took it off and hung it on a chair, then brought out a thick, warm shawl to keep it company. Gathering a few articles together, she tied them up in a neat package, blew out the candle and laid down without undressing herself. The boards cracked and creaked as she turned restlessly from side to side, the trees brushed and scratched viciously against her window-panes, and she heard the faint ticking of the big clock down stairs above the beating of her heart. The Blanchards lived in Northern Vermont, in the village of Wrenham, which was noted for its rugged climate and the beauty of its winding, hilly roads, which stretched over hill and dale in every direction, and the inhabitants were true sons of Nature, though in many cases they lacked any of the softness she at times displays.

John Blanchard came home and went to bed, and then the house relapsed once more into silence, and at length, during a lull of the strong wind which blew fiercely, Juliet heard a shower of pebbles strike the window-panes. She got up and lit the candle, put her bonnet and shawl on, took up her bundle, and then, after extinguishing the light, she crept cautiously downstairs. It seemed an age until she reached the outside door, and she tried in vain to still the beatings of her heart; the boards creaked so loudly under her uncertain tread she expected to hear her father call out, but she undid the fastenings, went out and closed it after her, standing for a moment under the starry heavens before starting swiftly and softly on her way. She turned into the path under the old beeches, and here she found a strapping young giant awaiting her.

"O John!" she cried gently, "I was so frightened, but I cannot give you up. I had to come. Oh! I don't see what makes my father so hard, John; other girls have their lovers, and you are so good, John."

He soothed her in rough and manly fashion, hurrying along the path, holding the branches aside, with his big, awkward hands, until they were out upon another road and here a team stood at the bars, which were let down for convenience. He helped her into the carriage, unfastened the grey mare, who whinnied in her delight at his return, took the reins in his strong grasp and they were off up the road, talking in subdued voices, until they came in sight of a little cluster of houses which were in a neighboring township. John explained that a superannuated minister lived at this place, and as he had obtained a license at the last moment that afternoon, the clerk having agreed to keep his secret, he thought the old gent would marry them without any demur. This was quite the case, and proved that John Rutledge had a clear head, for the minister had nothing to lose and everything to gain, so he got out of bed with alacrity, married them hastily, and blessed them heartily, according to the size of the greenback which made his heart glad. They turned the grey mare toward home and she stretched her long legs and made very good time, so that almost before they knew it she stood at the gate of the little cottage, where they were to begin their married life. They were very happy as they realized that the deed was done and well done, and no hard-hearted parent could part them.

In the morning when John Blanchard found that Juliet had not slept in her bed, that Juliet's best bonnet was gone, and his eldest daughter, the shining example of his parental training, gone too, he set his lips firmly, and drew his mouth into a straight line that meant mischief for John Rutledge, Juliet's husband. Mrs. Blanchard was too busy to fret herself very much, but she was heartily glad when Juliet walked in about 11 o'clock to recapitulate with her stern parent and get some of her clothes. Her mother cried a little as she embraced her and said:

"Your father is very angry, but perhaps you can talk it out with him. At any rate I wish you and John happiness and I don't know why your father does not like him I am sure."

Juliet was all ready with her bundle when her father came home to dinner, and she at once charged upon the enemy, while he endeavored to distract her and show that he did not intend to have anything more to do with her. Juliet grasped the back of a chair firmly as she looked at him with a white, set face and she concluded by saying:

"As you would not allow John to come to the house, and I had no opportunity to meet him with your permission, we thought it best to get married, but we don't want any hard feelings."

"You've suited yourself," said her father shortly, as he plastered his hair with all his accustomed precision and vigor.

"Won't you stay to dinner, Juliet?" her mother asked, as she turned to the door to go out. She shook her head, lifted the latch and was gone, the children being spellbound listeners of the colloquy, and the hot tears scorched her eyelids as she thought of them and her mother, but she was not disappointed as she never expected her father to forgive her or voluntarily speak to her again, and he revenged himself upon his son-in-law in a crushing way. In a very short time his disagreeable looks were reflected in the faces of the simple village people in a surly, unjust way extremely galling to a person of his independence. Juliet was made to feel she had committed an unpardonable sin in contracting a marriage under romantic and unbidden auspices, and found no pleasure in going anywhere without John, so he sold his farm and they set out, two brave spirits, to conquer a somewhat hard fate. John Rutledge opined that city folks would not trouble themselves as to whether they had been married at midnight or morn, in season or out of season, with a father's malediction or a father's blessing, and they settled in one of the most thriving manufacturing little cities of Massachusetts, and John soon found work. He was a shoemaker by trade and they lived happily in their cosy home until at the end of ten years John was taken in as a partner in the manufacturing firm where he had begun work at the bench, and three beautiful children had come to grace their pleasant home, so they were on the good road to fortune. At that time Mrs. Blanchard succeeded in perfecting her plans to visit her daughter, and came down from the mountains, bringing the two youngest children with her. She bloomed and flourished into gayety under the genial influence of a happy, prosperous home life, and every one was at the hight of enjoyment when Juliet's baby, a fair-haired, blue-eyed darling, fell ill. He was feverish and very weak, and his grandmother nursed him tenderly, while Juliet hovered round, like a distracted guardian angel. The doctor looked grave, pronounced the dread word, diphtheria, prescribed his medicines, and the very way he put on his hat and walked out, struck alarm to these motherly souls. In two days the little spark of life died out, as the blue eyes rolled upward, and the small hands clinched in a convulsive struggle with the poison in his veins. Juliet knelt at her mother's side with clasped hands and tearless eyes, while strangers performed the duties her nerveless fingers were unable to do.

The physician prescribed disinfectants, and precautions were taken for the spread of the disease. It was useless, for Charlie Blanchard, the youngest boy, fell ill, and a telegram was sent to his father, with the intelligence of the baby's death and the illness of his own child. This summons was a most unwelcome one, but it was not to be disregarded, and his sense of justice must have awakened him somewhat to his deficiences and littleness in the eyes of the great world, as the cars shook and rattled and bounded on after the mad engine, which screeched and snorted and rushed on over the iron track, in defiance of all control, excepting the firm hand of the engineer, who stood at his post and kept his eyes on the straight lines of steel stretched before him, for he returned John Rutledge's greeting with a hearty grasp of his big, brown hand, kissed his wife and Juliet awkwardly, and took up his station at Charlie's bedside, where he watched night and day until the child was out of immediate danger.

When the boy was able to be dressed he signified his intention of returning home and suggested that all of them follow him on a visit to the old homestead as soon as possible. He went to the grave of the grandchild he had never seen, and Juliet knew that the hardness had all gone out of his heart when he placed a bouquet of sweet white roses on the little grave. So they all parted on the very best of terms, and John went to the station to see his father-in-law off. In due time they followed him to Wrenham, and the villagers had gossip for many a day. They retailed the story with many variations as to what the two Johns said, what Juliet said, and the pathetic death of the child received graphic notice under the efforts of these long-tongued dames.

John Blanchard was always a taciturn man, but there was a touch of gentleness which the children of tender years received the benefit of whenever he was brought in contact with them. To see them running after him, clinging to him, it would never have been mistrusted he had treated his own child with harshness for so many years; thus the child in heaven healed the breach as no earthly source ever could have done, and Juliet Blanchard's wedding refuted for once at least that marrying in haste brings repentance with time, as those fond of repeating sage proverbs sometimes aver.

Los Angeles.

The Training of Our Children.

[By MRS. S. M. COOK, McMinnville, Or.]

When I look upon the different lines of work in our Order, and the many others waiting for our attention, I am impelled to speak of just one, that is, the education of the children. I regard this as the most important issue before the American people. If we raise our children properly, the future of this country will be a success—it cannot be otherwise.

The mind is easily influenced in youth. If good thoughts and examples are kept constantly before them, children will grow up good. It is our duty, therefore, as parents and guardians, to live almost exclusively for this purpose, and it is a small sacrifice on our part, if thereby we increase the happiness of future generations. We can inculcate a spirit of purity and patriotism by providing plenty of good books upon these subjects. Let us see that our children do not read the trashy literature of the day, and that their minds are not poisoned by outward influences. It is easier to teach a child the right way than to unlearn the wrong. We should constantly set good examples before them. Teach them that they have certain duties to perform, and while so doing, show them the moral attached to every duty, explain to them that they must be prompt in all things, for by so doing they will form a character unreproachable.

It is also our duty to be interested in our neighbor's children, for we shall find it much easier to train our own aright if their playmates are pure and noble. Let us be ever ready to give a kind word, and encourage the taking and keeping of such pledges as the temperance, white cross and anti-tobacco, for it makes them feel the responsibility resting upon them. If woman's work embraced but this one line—that of teaching the young—we should feel richly repaid for its having been started; for through this line we can make it so desirable to be pure and noble, as to banish evils from the land.

We should also cultivate a taste for flowers, music, and the fine arts, for whatever refines and purifies the mind will also improve the heart.

While I do not believe in hiring our children, yet I would grant them certain privileges, for instance, give them a portion of the garden and products for their own. This will encourage as well as teach them how to work. You will be surprised to note the pleasure with which

they display their flowers, and many a playmate and teacher will receive bouquets from their liberality, thereby learning to be unselfish.

You can understand why it is necessary to be constantly studying to improve our children, for, dear sisters, this life is the field, our children the flowers, and the impure thoughts and deeds the weeds. Shall not we, as good agriculturists, root out the weeds? For one, I will do my best.

*This paper was originally prepared for the Oregon State Grange. Owing to press of business, its reading was not called for; but so beautiful and suggestive an essay should not fail of its mission, and we are pleased to be able to lay it before RURAL readers.

Used to Riding a Thoroughbred.

A wealthy rancher of Wyoming Territory lately told a story of a rich young Englishman who while looking about the West for good investments, visited his ranch. He stayed there a few days, and one afternoon as the cowboys were about to round up a bunch of cow ponies the young man said he would enjoy a good ride in the saddle. He said he was used to riding only thoroughbreds, and he didn't think they had a horse good enough for him.

The boys convinced him that they had one of the finest horses on the plains, and if he knew how to ride he was welcome to the animal. He was apparently insulted when questioned about his ability to ride, and answered that he could ride any kind of a horse. A sleepy-looking bronco was brought out from the corrals and saddled. Though he appeared half dead he was the worst bucker in the herd. "E's lifeless," said the foreigner, when the pony was brought to him. The boys said the "nag" would wake up after the first mile, and the visitor got into the saddle. He didn't linger long. The first buck jump placed him on the horse's neck, and after a second he was in the atmosphere. He turned a double somersault and landed on the sharp end of a cactus plant. When he picked himself up one of the boys asked what he thought of the thoroughbred now. The question made the Englishman turn pale. "E's a good 'oss," he answered, "but 'e lopes too bloomin' 'igh." —*Canyon City, Or., News.*

PEOPLE who eat onions should immediately sit down and peruse some astonishing work of fiction that is calculated to take their breath away.—*Rochester Post Express.*

YOUNG FOLKS' COLUMN.

The Day After the Fourth.

We put him to bed in his little nightgown,
The worst battered youngster there was in the town;
Yet he said, as he opened his only well eye:
"'Rah, 'rah, for the jolly old Fourth of July!"

Two thumbs and eight fingers with lint were tied up;
On his head was a bump like an upside-down cup,
And his smile was distorted, his nose all awry,
From the joys of the glorious Fourth of July.

We were glad! He had started abroad with the sun,
And all day had lived in the powder and fun;
While the boom of the cannon roared up to the sky,
To salute young America's Fourth of July.

I said, we were glad all the pieces were there,
As we plastered and bound them with tenderest care,
But out of the wreck came the words, with a sigh:
"If to-morrow was only the Fourth of July!"

He will grow all together again, never fear,
And be ready to celebrate freedom next year;
Meanwhile all his friends are most thankful there lies
A crackerless twelve-month 'twixt Fourth of Julys.

We kissed him good-night on his powder-specked face,
We laid his bruised hands softly down in their place,
And he murmured, as sleep closed his one open eye:
"I wish every day was the Fourth of July!"

—*M. Phelps Dawson.*

Tangles.

Enigmatic Snarls, Both Hard and Easy, for Young People of all Ages to Untangle.

203.—A PROVERB

204.—ENIGMA.

A kind of wound that may be made
With a keen or sharp-pointed blade,
Or a "sly mischief" if you choose—
No matter which of these you use,
They both define a certain word
In kind of way that's not absurd,
Nor hard to guess; but now when we
Reverse the reading, what we see
Is mammals, such as cannot run,
And such as never see the sun.

NELSONIAN.

205.—ANAGRAMS OF CITIES.

1. Sam Dion. 2. All sad. 3 Gal on vest. 4. Lave the worn. 5. Lena N. swore. 6. Franc is Sanco. 7. N. V. Reed. 8. Labor time.

GAS BAG.

206.—DECAPITATION.

I'm used for strings and various things,
And proud to be of use;
And so I blame—it brings me shame—
Those who would me abuse.

And I must say, he who in play
Beheads me is a donkey;
He does traduce my honest use
To make of me a monkey.

BITTER SWEET.

207.—HALF-SQUARE.

1. A little nucleus. 2. Raised. 3. Formed out of nothing. 4. (Arch.) Ornaments of carved work introduced into festoons. 5. That which corrodes. 6. Metals. 7. Conducted. 8. Two letters; one a symbol in chemistry, the other a Roman numeral. 9. A sibilant.

ARTHUR KAINES.

208.—A CHARADE.

Some fine *one-two* I fain would do
To give the solvers worry;
Although I fear my *whole's* not clear,
For this I'm really sorry.
Such *two* as this comes not amiss
In way of recreation;
It seems like play, and I should say
Bears to it some relation.
But when one's *one* is bent upon
Some *two* to bring him glory,
The *two* may fail, or be as stale
As any thrice told story.

NELSONIAN.

201.—Revocation.
202.—Diary, dairy.

HONORS TO A DOG.—A big dog in Paris has been awarded a collar of honor by the Society for Prevention of Cruelty to Animals for his courage in stopping runaway horses in the streets of the French capital. His last achievement was to stop a runaway team attached to a hack full of passengers which was dashing through one of the principal thoroughfares. As soon as the dog caught up with the runaways he seized one of the horses' bridles, but was shaken off. He then made another leap, seized one of the runaways by the nostrils and held on until the team stopped. He has a record of stopping a hundred runaways in like manner.

The Lesson Bessie Taught.

Bessie must have wakened in the morning with a plan in her busy little head for teaching certain members of the Newton family a lesson. The first thing she did was to go into the library, and, finding on a chair a new magazine that Harry had left there, she pulled off a cover. "There!" thought she, "I'll teach Harry not to leave so valuable a thing as a book where it doesn't belong."

Then she went into the boys' room, and, finding a borrowed book out of place, she remarked to herself: "This will never do. A borrowed book should always be carefully put away; and, besides, I do not believe in borrowing, especially when a boy has as many books of his own as Willie has. I'll just destroy this one to teach Master Willie a lesson." So she soon defaced its pretty, bright cover badly.

Next she visited Marjory's room, and, finding more dust on the floor than should have been there, she evidently thought of the saying, "Dirt is misplaced matter," and gave Marjory a gentle hint by tipping the contents of the scrap-basket out upon the floor.

Then she went into the sitting-room, and, finding Alice's hat on a little workstand, she thought, "Another thing out of place, another lesson to be taught." So she pulled out the feather, leaving hat and trimmings on the floor.

When all was done, she cuddled up on the lounge, well satisfied with her morning's work. At the dinner-table, four members of the family looked as though each wished some one else would speak first. Finally mamma said:

"I see Bessie has been trying to teach us again."

Four voices answered faintly, "Yes."

"She certainly has taught us once more that there should be a place for everything, and everything should be in its place," said papa.

"Including Bessie herself," added mamma.

And Bessie? Well, Bessie was a six-months-old puppy with innocent, soft brown eyes.—*Lucy Southworth Hunt.*

DOMESTIC ECONOMY.

SALAD DRESSING.—Will some of the lady readers or correspondents of the RURAL PRESS give through its columns the best method of making salad dressing with olive oil?—*S., Santa Cruz.*

CREAM COOKIES.—One cup of maple sugar, one cup sour cream, one teaspoonful of soda, a little nutmeg, one teaspoonful caraway, and flour to make a stiff batter; roll thin and cut; bake in a quick oven.

POTATO SOUP.—Four large potatoes, one onion; boil in two quarts of water until soft. Press through a sieve, and add one pint of sweet milk, one tablespoonful of butter, a little salt and pepper. Let it boil up and serve.

CURRANT JELLY.—Stem ripe currants, scald them in a porcelain kettle, do not let boil. Strain through a coarse jelly-bag and then through a flannel bag. Allow three quarters of a pound of sugar to a pint of juice. When the juice has boiled ten minutes, add the sugar and let cook ten minutes longer. Take from the fire, let cool slightly, pour in glasses and set aside to form.

RICE PUDDING WITH BERRIES.—Cold boiled rice may be made into a very nice pudding with the addition of berries. Soften the cold boiled rice with milk, using two cupfuls of milk to one of rice, and stir until all the lumps are dissolved; add three well-beaten eggs, a teaspoonful of butter, a small cupful of sugar and two cupfuls of blackberries, raspberries, strawberries or stoned cherries. Bake slowly for one hour in a buttered pudding dish.

SNOW PUDDING.—One-half box gelatine, one pint boiling water, one coffee cup sugar, two eggs, peel of two lemons. Pour the boiling water over the gelatine; add the lemons and sugar, and strain; whip the whites to a stiff froth, and when the jelly is cool, but not cold enough to stiffen, pour it slowly over the whites, and beat half an hour, or till so stiff one can beat it no longer. Serve with it a boiled custard made of the yolks, and a pint of milk, one-half cup sugar, flavored with vanilla. Pour round the sides of the snow, not on the top.

FRUIT CUSTARD.—To one quart of milk that has been brought to a boiling point, but not boiled, add slowly four eggs, well beaten with three tablespoonfuls of sugar and a pinch of salt. To prevent burning, prepare this in a kettle or boiler set inside of another in which is boiling water. Stir the custard until it thickens, taking care it does not boil, and when done remove from the fire. Have ready custard cups into which thinly sliced peaches or bananas have been put, sprinkled with a little sugar and water, turn the custard over the fruit, filling the cups, and set away until wanted for use. This is a dainty and delicious dessert if properly made.

GOOD HEALTH.

OLD AND YOUNG SHOULD NOT SLEEP TOGETHER.—A prominent medical writer says that no intelligent person who loves his children will allow them to sleep with persons greatly older than themselves. The nervous vitality of a child should not be absorbed by any diseased or aged relative or friend. Children, compared with adults, are eclectrically in a positive condition. The rapid changes which are going on in their little bodies abundantly generate and as extensively work up vital nervo-electric fluids. But when, by contact for long nights with elder and negative persons, the vitalizing electricity of their tender organizations is absorbed, they soon pine, grow pale, languid and dull, while their bed companions feel a corresponding invigoration. It is undeniable that healthful influences are lost, and to a fatal extent sometimes by this ill-advised custom. A woman was prostrated with incurable consumption. Her infant occupied the same bed with her almost constantly day and night. The mother lingered for months on the verge of the grave, her demise being hourly expected. Still she lingered on, daily disproving the predictions of her medical attendants. The child, meanwhile, pined without any apparent disease. Its once fat little cheeks fell away with singular rapidity till every bone in its face was visible. Finally it had imparted to the mother its last spark of vitality and simultaneously both died.

MISTAKES.—It is a mistake to labor when you are not in a fit condition to do so; to think that the more a person eats the healthier and stronger he will become; to go to bed at midnight and rise at daybreak, and imagine that every hour taken from sleep is an hour gained; to imagine that, if a little work or exercise is good, a violent or prolonged exercise is better; to conclude that the smallest room in the house is large enough to sleep in; to eat as if you had only a minute to finish the meal in, or to eat without an appetite, or to continue after it has been satisfied, merely to please the taste; to believe that children can do as much work as grown people, and that the more hours they study the more they learn; to imagine that whatever remedy causes one to feel immediately better (as alcoholic stimulants) is good for the system, without regard to the after effects; to take off proper clothing out of season because you have become heated; to sleep exposed to a direct draft; to think any nostrum or patent medicine is a specific for all diseases.

SURGERY OF THE LUNGS.—In recent months surgeons have given astonishing proofs of the possibility of saving life and restoring health, in many cases, by removing portions of such vital organs as the brain and the liver. Prof. Tillmanns, of Leipsic, has found that surgical treatment may be extended even to the lungs, and to the arrest of consumption. In a case of tuberculosis of the left lung, an opening was made and the diseased part of the lung exposed, when that portion shriveled and was carefully removed. The patient recovered, and is now able to work. Prof. Tillmanns believes that this may prove a desirable treatment when the disease is localized, and states that two operations would doubtless be necessary—one to expose the affected part of the lung and bring about atrophy and shriveling, and a second to remove the parts after being functionally disabled.

THE OFFICE OF IRON IN THE BLOOD.—Iron exists in the blood in the red corpuscles, and gives them color and the power of absorbing gases. The fact that peroxide of iron is one of the readiest absorbents of gases, and parts with them as readily on exposure in thin layers to the air, so that it can be used over and over again for that work, gives a clew to its special function in the red corpuscles of the blood. It enables them readily to absorb oxygen as they pass along the minute blood-vessels of the lungs and to carry it to all parts of the body, where they part with it as it is demanded. It is supposed, also, to take up carbonic acid in exchange for the oxygen it yields up, and to convey to the lungs that portion of this substance which is expired.

COLORED SPECTACLES.—Dr. Konigstein, while giving directions in his class of the uses and prescribing of spectacles, said that green glass as a protection against strong rays was worse than useless, and did more harm to a sensitive eye than good, as they allowed the yellow rays to be transmitted and unnecessarily irritate the eye. As a protection against strong rays, the blue or smoked glasses were the only protection.

SOMETHING NEW IN SKIN-GRAFTING.—A schoolboy recently scalded his leg badly from knee to toe. As there were no signs of healing, the attending surgeon chloroformed a greyhound puppy to death, shaved its body, skinned it, and grafted the skin on the boy's leg. The healing was rapid, and the color of the grafted skin was uniform and very similar to that of the normal skin.

FOR TOOTHACHE.—A Russian practitioner recommends the use of hyoscyamus seeds for toothache. His plan is to burn the seeds, and to convey the smoke through a little paper tube to the hole in the tooth. He declares that in nearly all cases one application, or at most two, will suffice to cure the toothache.—*Lancet.*

The Week.

The fruit harvest is now the absorbing topic in all regions where trees and vines are in bearing, and the interest and confidence of the growers is giving strength and spirit to all other branches of industry and investment. Though we have watched the fruit interest of the State closely for a score of years, we never saw a better feeling pervading the whole industry than now prevails. It is true that some fruits are only bearing moderately this year, but the price compensates for much loss in weight and the eagerness of buyers and the unbroken accord which characterize Eastern views of the desirability and availability of the California fruit product for Eastern uses cannot but make the owner of fruit lands and fruit trees firm in his grasp upon a prosperous future. If we are not seriously mistaken, there will be a planting this winter which will call for all available nursery stock, and though there will be another great run on French prunes, there will be a wider demand for other fruits than has been experienced in recent years. We expect to see a much larger planting of pears for example, and it is gratifying to note that other varieties than the Bartlett are going well. We believe, too, that this year's selling of California fruit, which is now being better distributed than ever east of the Rocky mountains, will induce a large immigration seeking fruit lands this fall and winter.

Experiment Stations.

The Regents of the State University at their meeting on Tuesday of this week decided to locate the outlying station for Southern California at Pomona, situated on the eastern edge of Los Angeles county. As stated in our issue of June 21st, Riverside was also an applicant for the location of the station and made very generous offers of lands and buildings. After a careful re-examination of the field, Prof. Hilgard was but stronger in his belief that the Pomona situation was representative in soils and climate of a much larger area of Southern California than Riverside and because the choice of Pomona would allow of a wider range of cultures, and thus prove valuable to a much larger proportion of the people of California. Prof. Hilgard, in his report to the Regents, gave preference to the Pomona site, although he also recognized and commended the offer of the Riverside people. The decision, of course, rested with the Board of Regents, and Pomona was selected as stated above. The Pomona people will give a deed of a suitable tract of land, with water, and furnish $3000 for the erection of station buildings. It is proposed to select the land at once and proceed with the erection of buildings, so that actual operations will begin as soon as the planting season arrives.

There has just been issued from the State printing office a document of 200 pages, which will interest all who desire to keep informed of the progress of agricultural experimentation in this State. It is entitled: "Report on the Agricultural Experiment Stations of the University of California, with Descriptions of the Regions Represented," by E. W. Hilgard, Professor of Agriculture and Director of the Station, and is a part of the combined reports for 1888 and 1889. The document contains detailed statements of the facilities and accomplishments of the Central Station at Berkeley, with engravings of the station building and a diagram of the grounds employed. It contains also detailed descriptions and diagrams of the "outlying stations" as follows:

The Foothill Station, near Jackson, Amador county; the Southern Coast Range Station, near Paso de Robles, San Luis Obispo county, and San Joaquin Valley Station, near Tulare City, Tulare county. There are also three viticultural stations under private auspices, located at Cupertino, Santa Clara county; Mission San Jose, Alameda county, and Fresno, Fresno county, and, including the new station at Pomona, shows that there are now eight stations under the direction of Prof. Hilgard, seven being maintained out of the $15,000 fund from the U. S. Government and the Central Station in part from that fund and in part from the general funds of the University. The report just issued by Prof. Hilgard is a most important contribution to the descriptive literature of the State as well as a record of experimental work accomplished and in progress. It should be read by all and can be had free by application to Prof. Hilgard at Berkeley. At another time we expect to allude more specifically to the contents of the document.

HORSE THIEVES AT THE NORTH.—A dispatch from Spokane Falls says that horse thieves, working in unison in Eastern Washington and Idaho, rendezvoused near Spokane on the last Saturday and Sunday in June, and hastened away with 500 head of horses toward the British Columbia line, through the Flathead Indian reservation. A large number of ranchers was organized for the pursuit of the thieves, but with little hope of success, as they had a good start. This is the largest operation of the kind we ever heard of.

Fruit Notes From Vacaville.

A week's outing in the Vacaville district has enabled one of the PRESS staff to jot down a few notes of fruit affairs which came to his notice. The weather, with the exception of two or three days, has remained cool for the season and the fruit is coming on but not too rapidly for convenience in handling. Most of the growers who have not engaged their crops to the canneries are shipping East. So far, all the cars which have arrived in good condition have brought good prices, and almost invariably the apricots have led the peaches—something unusual.

Up to about a week ago there had been 40 cars shipped from Winters, yielding an income of about $60,000, which as the season has only just commenced, will insure the bringing in of quite a large amount of money for circulation in this part of the country after paying all expenses.

The new Goodell refrigerator car is proving quite a success. One hundred cars are building and will be put in use as soon as they can be delivered.

As a rule the apricot crop is fair and the peach crop rather short. All the smaller apricots are being dried, and some growers are drying all their crops, thinking that the dried fruit will bring more than than the equivalent of prices obtainable for fresh fruit.

Mr. John Dickson now has the largest and best appointed drying floor in operation in this locality. He dries his whole crop of fruit, with the exception of pears. The drying floor proper consists of a piece of ground floored over with redwood boards, laid on scantlings, and surrounded by a fence about eight feet high. Near the middle of this floor are two sulphuring houses, and at one end cutting sheds and a storehouse, the latter being a building 34x60 feet, sheathed up on the inside with matched boards. All the windows are covered with wire netting to keep out all moths and insects which might get into the fruit and injure it.

Running from the cutting sheds to a turntable located between the two sulphuring-houses is an iron railroad track over which are run cars for hauling the trays from the cutting sheds to the sulphuring-houses. The trays are packed on the cars with narrow strips of board between the ends of the trays so that they can be run into the sulphuring-houses car and all. The drying floor will hold 75 tons of green fruit when spread out for drying. We did not take accurate measurements, but think it is about 125x250 feet in area.

Mr. Dickson has no particular time for sulphuring his fruit, but leaves it in the house until the juice appears in the cup-like cavity of the fruit. In the sulphuring houses are two cast-iron pots, one at each end, and into these he drops pieces of red-hot iron and then throws the sulphur on top. This makes a much stronger vapor than by burning the sulphur gradually.

Mr. Dickson does not dry his fruit in the sun to a degree suitable for packing, but when it reaches the right point it is hauled into the storehouse and spread out upon the floor and shoveled over every three or four days until it is suitable for packing.

As has been previously stated in the RURAL, the losses of fruit trees resulting from the unusual winter were large. Nearly all the orders for replacing dead trees so far as given have been for French prunes.

THE CENSUS WORK.—The census enumerators have now about completed their farm-to-farm visit, and all the many figures concerning the farm, its live-stock and the products of its fields and orchards are being concentrated at central office in Washington, D. C. Now come the great sums in addition by which the product of each farm will be added to that of all the rest in the county, and then of the State, and finally of the entire nation. Then comparisons will be made with the figures on the same subject as taken ten years ago, and we shall know what progress has been made and how well this important industry has kept pace with others. The final count will be looked for with interest. The figures for each county and State will be accurate just in the proportion that farmers themselves have helped to make it.

"THE GRANGE WON."—W. M., H. E. Hayes considers that the late contest in Oregon for the office of Governor was capital against labor, and that the Grange won.

Peanut Oil in California.

Well, we declare! After all our warefare against peanut oil as a base substitute for olive oil, and after our persistent berating of European olive oil shippers, who fill their bottles with peanut juice, and Eastern grocers who do the same thing in their cellars, and cover the product with French labels; in spite, also, of our efforts to crush the falsifier with duties and laws against adulteration, the peanut oil man proposes to "carry the war into Africa," and install his peanut bogus right along side of our olive orchards; for we read in a dispatch sent out this very week from Chicago, as follows:

M. Morrez of France, is in this city on his way to Southern California to establish the peanut oil industry. "I am surprised," said Morrez, "so little importance is given to peanut growing in this country. Something like $6,000,000 worth of peanuts is imported into Marseilles annually, to be used in the manufacture of soap. It is valuable for burning, but is used mostly in the composition of soap. In the United States about 3,000,000 bushels of peanuts are raised yearly, which are used for food alone. That is but little part of the industry. Peanut oil is equal to olive or sweet oil, and may be employed wherever the latter can be. A bushel of peanuts subjected to hydraulic pressure will yield a gallon of oil equal to the best oil of olives. I learn peanut oil was used extensively in the South during your late war, in the machine shops, and that its lubricating qualities are as good as whale oil. If the conditions are favorable, I shall establish an industry in Southern California."

There is no doubt room for a great peanut industry in regions of California where soil and climate suits the groveling fruit, and it is possible, too, that peanut growing may yield handy money to those who are now doubtful how to get money from their lands or to others who are waiting for trees to reach bearing age. There is also a field, no doubt, for large quantities of peanut oil. It is a pure and wholesome article, and if people want to put it on their salad or in their frying-pans instead of lard, it is all right enough. There will be, of course, an issue however against putting up and selling peanut oil as olive oil, even if California produces them both. We are laboring toward supplying the whole country with a sure-enough pure olive oil, and trees enough are now being planted to do that. It will not be right nor politic to urge peanut oil as a substance to be sold for olive oil. Still it is quite possible that there may be plenty money in growing peanuts for oil, and if so California will be glad to gather it in.

Honey in Oil-Cans.

Some dealer who is aiming at depressing the price of California honey until he can load himself up with it is telegraphing from New York that California honey is suffering because it is reported that our beemen put up their product in old kerosene-cans. California has always put up the bulk of the product in five-gallon cans, two to the case, and it is an excellent package for wholesale shipment. There is no earthly objection which can be fairly urged against it. The cans are absolutely clear of taste or aroma, or the honey would quickly show it, for it is very quick to take on flavors. If some careless man has filled unclean cans and spoiled his honey, that should not count against the practice in general. Some producers are filthy and careless about everything they do, but there is less of such work among the beekeepers than among any other class of producers. They are by the very nature of their industry forced to be cleanly, and it is a slander for any one to make current rumors that oil cans are spoiling the market for California honey.

There are, however, good reasons perhaps why California producers should adopt different and more characteristic packages and have them contain less bulk. This State does not obtain a fraction of the credit she deserves for honey marketed at the East. Eastern retailers buy our honey in bulk and repack it in small receptacles of their own with some fancy Eastern label on it. If our honey should be better known as such to the consumer, and if Eastern frauds would stop putting up glucose and branding it California honey, our bee-keepers would secure far better returns for their labor.

A MARBLE MONUMENT to Padre Junipero Serra, the founder of the California Missions, is to be erected on the beach at Monterey, through the liberality of Mrs. Leland Stanford.

FLORIST AND GARDENER.

Coco-de-Mer.

[Written for the RURAL PRESS by LORENZO F. YATES, LL.B.]

A recent number of the Melbourne *Argus* gives an interesting account of "one of the world's wonders," as follows:

In a secluded ravine or glen, in a small island that lies in the Indian Ocean, away from the highway of commerce, of travel and of pleasure, and therefore rarely visited, there grows, and has grown these many ages, a wondrous palm tree that may be fittingly ranked among the few wonders of the world. It is difficult to fix the time when the fruit of the Coco-de-Mer palm first began to attract the attention of travelers. Mention appears to have been first made of it by the Portuguese voyagers round the Cape of Good Hope toward India.

At comparatively rare intervals the Coco-de-Mer nut was washed ashore upon the east coast of Madagascar, the east coast of Africa and occasionally as far north as the Maldive Islands. Rarer still, it was found floating at sea. All searches for the tree that bore the strange looking thing having proved unavailing, and as it had never been seen in any other part of the world, it is no wonder that in those ages some queer legends became attached to it and were believed in. The commonest and, perhaps, the most natural one, assigned the habitat of the Coco-de-Mer to the bottom of the sea. It was believed to be the product of a submarine plant, forests of which were thought to be growing at the bottom of the Indian Ocean.

HAULING A BIG REDWOOD LOG TO THE MILL.

somewhere in the region of the equator. The Coco-de-Mer had never been seen, growing on the land, it had always come from, or been met with at sea, and, therefore, it was quite natural to conclude that it was a native of some part of Father Neptune's dominions. It bore a curious resemblance to an overgrown hybrid cocoanut, hence it was called in French, Coco-de-Mer—Anglice, sea cocoanut.

The mystery of ages was solved, however, when Mahe de la Bourdonnais, the Governor of the French Possessions and those parts, discovered the Seychelles Archipelago; but the solution of that mystery only gave rise to another. Here was a group of upward of 20 islands, eleven of which bore a dense vegetation, and yet the Coco-de-Mer grew only upon two of these islands, and those not by any means the largest of the number. Other islands there were within a distance of a dozen miles and several more within 20 miles, and yet this strange plant had elected Isle Praslin and Isle Curense as its domicile and obstinately refused to budge therefrom, leaving out of the question those places beyond the seas in which attempts have been made to naturalize it.

The Coco de-Mer does not take kindly to the soil of any other island in its native archipelago except those of Praslin and Curense, and even respecting those two islands a word of explanation is necessary. They are merely divided by an arm of the sea about 500 yards wide, and the lay of the land and other indications go to prove that at one time the two islands were one. The French in de la Bourdonnais time are said to have found Praslin and Curense nearly covered with Coco-de Mer forests, but the trees now left standing would not cover one square mile; and even those, unique though they be, narrowly escaped falling victims to the ignorance and cupidity of the Goths and vandals who inhabit those parts. Happily, however, the Linnæan Society heard what was going on, and about 12 years ago moved the Secretary of State for the colonies to stay the hand of the destroyer. Fortunately, the greater portion of the ravine in Curieuse land and measures were taken to preserve the old trees and foster the growth of the young plants. The tree above referred to is commonly called the double cocoanut. Its botanical name is *Lodoicea Sechellarum*. It is the only species of its genus. The trunk is nearly cylindrical, scarcely one foot in diameter and attains a hight of nearly one hundred feet. It has a crown of leaves, which are fan-shaped, sometimes twenty feet long and six feet wide. The fruit, which averages 40 pounds in weight, is in the form of a double or sometimes treble nut. They are covered with hard and black shells. As they have a capacity of from six to eight pints, they are used as water vessels, and by slicing in different directions, they are converted into plates, dishes, drinking vessels, etc. The leaf bud is eaten like the cabbage of other palms, and the down from the young leaves is used for stuffing mattresses, pads, cushions, etc. The petioles are converted into baskets and brooms, and the young shoots are pickled to form nuts. It has been recently introduced into Ceylon and other localities, where a few plants may be met with as curiosities. Under garden cultivation the manner of growth from the seed is peculiar, rendering it difficult. A ripe nut falls or is laid upon the ground; in two or three months' time it will germinate and begin to throw root. At the end of a year or so it will throw out a spike, which grows to a hight of 40 to 60 inches and is about 1½ inches in diameter round and sharply pointed at the top. This is the first future leaf. At the end of another year a second spike sprouts and grows close by the side of the first one. This second spike does not sprout from the first one, but comes out of the ground close by the side of it. As the second grows, the first spike gradually and slowly unfolds and expands into a leaf—the shape of the leaf of a fan palm. During these stages they are very susceptible to injury from which they never recover. So at the best they will never become common or even plentiful.

Santa Barbara.

BOOTBLACK LOUIS.—The San Bernardino *Times-Index* of the 1st inst. says: We were shown, this morning, by D. Nelson Sumner, a very handsome Egyptian horse. It resembles the magnolia in shape, although the leaves are of a delicate pink, while its center is yellow. It was grown in the garden of Mr. Parks on the Lugonia Terrace, and is as handsome a specimen as we have ever seen, but is more noted for its beauty than for its fragrance.

PERSONAL.—We were pleased on Tuesday to greet our old friend Dr. E. B. Bowers, who, as is generally known, has been doing valuable public service, during the spring and early summer, as lecturer on California in connection with the "California on Wheels" excursion. Dr. Bowers returns in good health and spirits and more fully convinced that the Pacific Coast, and especially California, is the promised land of industry and prosperity. He returned by the Northern route, and was delighted with the development he saw there, and hopeful for a future market for a good deal of California fruit in that direction.

A CANADIAN RAILWAY TO ALASKA.—The project for a Canadian railway to Alaska is about taking definite shape. Application will be made to Parliament at the next session for the passage of an Act incorporating a company to build such a road. If the Government at Washington is not more careful of our national interests, the Canadians will get away with the bulk of our northern carrying trade.

THE LUMBERMAN.

The Tan-Bark Industry in Mendocino.

E. C. Thompson gives the Ukiah *Press* some interesting points on the tan-bark industry which calls third in the importance of the county lumber coming first and stock raising second. Tan-bark has been cut in the county for many years, but in this immediate section the industry has only begun to develop in the last two years. Last year 50 more than 250 cords were shipped, while this season at least 1,000 cords may be counted upon.

There are two grades of bark, the limb and the bark taken from trees of different age. The trunk bark brings the best price. It costs about $1 per cord to cut and prepare the bark and on an average $3 to haul it to the railroad cars. The present price in San Francisco is $18 per cord. The prices from San Francisco are paying $21 per cord delivered here.

Lands that contain tan bark are rapidly coming to the front in point of interest. In many instances they are in greater demand than redwood lands, because the latter cannot be sold unless near some mill. The difference is that the owner of the redwood forest must wait until a mill approaches him before there is a demand for his timber, while the proprietor of tan bark lands may cut his timber and take it to market. A road even is not necessary in the transportation of tan bark. Mules are employed to a great advantage in bringing the bark to the highways. The industry is found a great relief to the scarcity of hard labor because of its availability. Fully $20,000 will be distributed in this section this season from a source heretofore not utilized.

Redwood Timber.

In the forests of Sonoma, Mendocino and Humboldt counties, in this State, the trees run for lumber average much larger in size than any in the world. These redwoods are not the "big" big trees of California which are in Calaveras, Mariposa, Fresno and Santa Cruz counties, and are of a different variety. But the big redwoods of the northwest coast of the State are valued for lumber, being cut wherever met in the forest at such points as logging camps are located. Trees eight and ten feet in diameter are not at all uncommon, and many are found from 14 to 16 feet. The very largest, when felled, are sawed into logs and the logs split by powder before being hauled to the mill, such sections being too unwieldy to handle readily.

A photo facsimile on this page shows a log hauled on the cars for the Navarro mill, Mendocino county, and will give an idea of the size of some of the timber cut in the woods of that region. Some logs are floated down the river during the rainy season, but a railroad has been built 12 or 15 miles into the timber, and on this logs are brought to the mill, near the coast at a time. The engraving is made direct from a photographic negative, at that at considerable cost. The figures in the picture will give an opportunity for comparison of size of log and men.

A STRANGE SIGHT.—A Finland paper mentions a curious sight in the northern part of that country which serves the people instead of a barometer. The stone, which they call "Lemminki," turns pale, or whitish-gray, when fair weather is approaching; fine weather has the effect of turning it almost white.

TRACK AND FARM.

Match Races.

Charles Marvin has agreed to match his stallion Palo Alto, 2:08¼, against the gray pacing mare Lou, the race to be trotted on the 25th of the present month, probably at Belmont Park. This was one of the greatest champion green horses Charley had during the season, and made the record in a race. He is quite as well as speedy, and hopes to get some of the money that would be handy to have now. While Palo Alto is 15 he has never been driven a mile for a record, and it is claimed that he can beat Lou. The mare seems to pretend to be the best horse, but Palo Alto's admirers are confident they can get a fast mile but may not care to go a fast race. It is a fairly safe bet that Charley Marvin understands to the minute, and he has pocketed the best purse in the State to that agreement. If Palo Alto is in the humor to race as of course every Thoroughbred ought to be, then Palo Alto will undoubtedly the fast mate he is the best of them all.

Stamp is likely to get a match on her hands soon. The same idea prevails about her that was common here about Palo Alto. They don't think she is a race mare. Marvin says if they don't he will trot her against Azmoor, Lou, the champion stallion, and name their own terms as he game as the best of them. If the two meet, it will likely be for a series of races—three at least. The stallion believes these two horses and your wife very well. Each owner was determined that his horse should wind up the season with the purse-gathering record. After matched as to not the mark down from 2:18, and many more that he would not a new record would start and out to have. After many months in 2:11, but the advocates thought that neither the question of superiority, but stood ready to the front to win and put the horse's record at 2:09, where it should stay and is likely to stand for years to come. If the two meet in a match race, the name of the race will be the fastest ever trotted in the world, and if the day should win it would have the trotting horse honored in history as it has never been honored before.

Stable rivalry seems to be the ruling race. No sooner had Sunol, the Palo Alto mare, lowered the mile record that has stood for 14 years than prominent owners wanted a match with her. The Salvator-Tenny match was a great one, and now the owner of Tenny wants to meet Sunol at a mile. It has not been definitely decided, but if the two meet Tenny will get a worse beating at a mile than Salvator gave him at a mile and a quarter. Sunol is the opinion of the California horsemen, and beat any horse that lives for a mile.

Notes at Random.

Marcus Daly has turned the pacer, Mr. Dexter over to B. C. Childs for the season.

The Trotting-horse Breeders' Association offers a free-for-all pacing purse of $1,200.

The Occident Horse-mart has this week a half page out of Salinas, the California record breaker.

Some of the two-year-olds of the Marcus Daly stable, will run on the California tracks this fall.

T. H. Parke has sent the stallion Sam to the Bay District track, to be trained with a view to lowering his record.

The Trotting Horse Breeders' Association held a meeting Tuesday afternoon, and offered the following additional program: Friday, 2:27 class trotting, $1,000; two-in-a purse, $700; 2:20 class trotting, $1,000; 2:40 class trotting, $800; 2:30 class pacing, $800. All these are association purses, entries to close August 1st, and horses to be named ten days before the first advertised day of the meeting.

The first races of the year on the coast, of any importance, took place during the week at Santa Monica. In a special purse for $200, Sable, Williams and Gray Nell started. Sable won in the second, third and fourth heats in 2:30¼, 2:29¼ and 2:30¼. In a free-for-all purse for a purse of $600, Downey, Los Angeles and Brandon started. Downey won, the fastest heat in the race being 2:24¼.

On the Alameda, which arrived last Sunday, are more thoroughbred mares from Australia arrived for L. J. Rose of Los Angeles. This lot, with two stallions is as many head as the first lot. They are Sunstroke, brown mare, by Musket, dam Sylvania by Stockwell; Rose of California, bay filly by Australian, dam Sea Kale, Garland, brown filly by same, dam Flame by Kingfisher; Harmony, bay mare by The Commoner, dam Hurricane by Newminster; Rose and Shamrock, chestnut mare by Lord Bell, dam Annabelle the dam of Pine Needle, other mare was purchased, but died within three days of San Francisco. She was Thormanby Royal, a four-year-old mare by Thormanby, dam Queen's Head by Parmesan. She is one of the first consignment that died at sea. Captain Macey, who bought the mares for Mr. Rose, also purchased two for himself. They are The Pet, brown mare, two years old, by Trentham, dam imported Fleur d'Lys by Oxford, and Wanonga Kate, bay mare, eight years old, by Musket, dam Dundee Lass by Dundee. These mares will be up in the next Australian steamer.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte

LIGHT GRAIN.—Gridley *Herald*, July 3: Harvesting is fairly under way throughout this section. The yield is not what was expected, being from one-third to one-half less than the appearance of the grain justified ranchers in anticipating. The largest so far reported is only 6¼ sacks per acre, and it is being cut upon land that has never heretofore yielded less than 11 sacks when summer-fallowed, as it was this season.

Contra Costa.

GOOD WHEAT.—Martinez *Democrat*, July 2: We have on our table some heads of club wheat from the ranch of Mrs. Rice, near Walnut creek, which are fine samples of that grain. The heads average about 115 kernels each, and are large and well developed. Mr. C. Sharp, who brought them in and who owns the crop, feels highly gratified that the grain is doing so well.

El Dorado.

PANTHER POISONED.—Henry's Diggings cor. *Democrat:* Last Monday night, the 23d, a mountain lion came within 50 yards of Hank Robert's house, and killed and carried off two full grown goats. On his way to the mine next morning he found one of the goats partly eaten. Going home and getting some strychnine, he poisoned the carcass. Wednesday morning he found one of the largest mountain lions ever killed in this part of the county, lying within ten feet of the poisoned meat, cold and stiff.

GETTING A HORSE OUT OF A SHAFT.—I saw in the *Democrat*, in a letter from Diamond Springs, that the Larkin brothers lost a colt by its falling into a shaft, and not being able to get the horse out, they killed him. Never kill an animal for falling in a shaft, unless its bones are broken. Go down in the shaft with a rope and making a halter, fasten it around the head and nose, then go up and turn in a head of water and gradually fill the shaft, pulling on the rope so as to keep the head above water and the horse will come to the top O. K.

Fresno.

THE 76 CANAL.—Fresno, July 2.—The sale of the 76 Land and Water Co. to the Alta Irrigation district was consummated last night at Dinuba. The price paid was $410,000 in bonds of the district, which was recently organized under the Wright Irrigation law. All the water rights heretofore sold by the 76 Co. are to be paid back in full at $5 per acre.

GRAIN PROSPECTS.—To a Fresno *Republican* reporter, C. W. Callahan, Secretary of the Grangers' Business Association, lately said: The county's grain prospect was never better. The rains were late, the weather has kept cool and the result is that the grain is large and full. Fresno will probably harvest 150,000 tons of wheat alone. There is comparatively but little oats in the country, and there is little reason for it, for the soil is rich and the climate exceptionally fine. Of barley there will be about 20,000 tons raised, nearly all of which will be consumed at home. Fresno barley is perfection itself.....Mr. Callahan spoke of Egytian corn, saying that a larger acreage was being planted every year, and that it was rapidly becoming the favorite grain for poultry, although it was excellent for live-stock. There were from 5000 to 10,000 tons planted, and it brought from a few cents to $1.15 per 100 pounds.

Humboldt.

NOMADIC FLOCKS.—Eureka *Times*, June 25: Herbert Richardson, who has been to Oregon with W. T. Olmstead after a band of sheep for Olmstead's range, returned to the city last evening, having left the band at Big Lagoon in charge of Messrs. Olmstead, Ganyard and Bohall. He reports having started from Ellensburg, Oregon, on May 26th, with 2000 sheep, and arriving at Big Lagoon Wednesday with 1755. With the exception of 60 sheep, which can be recovered, the balance were lost. No accidents occurred on the trip, and all are enjoying good health.

Kern.

TURKEYS.—Delano *Courier:* H. A. Lubkin, one of the big ranchers living about 14 miles northeast of Delano, is not only a grain farmer, but in years past, when the wheat crop was short, he has always realized handsome profits from his bands of poultry. Last year he raised a band of several hundred turkeys, and aside from the care of herding them, there was but little expense attached to the business. In the winter he disposed of his stock, realizing on an average $1.35 per turkey. This was after all expenses were paid. This season Mr. L. has a band of 500 turkeys, now about half-grown, from which he expects to receive handsome profits this fall.

ALL FROM ARTESIAN WATER.—On the Morgan ranch, a few miles below the Miramonte postoffice, one of the most beautiful homes is to be seen. Last summer, after crossing several miles of unimproved lands, we were pleased to halt at this cosy home, surrounded by orchard, vineyard and beds of blooming flowers. The artesian well in the dooryard was bubbling over with crystal water, which flowed through the channels about the ranch. On every hand was to be found strong, healthy vegetable growth, and the trees laden with ripening fruit presented a contrast with the arid plains we had just crossed. Water was the whole secret, and a good flowing well can be obtained at 500 feet. This section is noted for its fine, early fruits and for a sample of the same we are indebted to John I. Morgan, who yesterday presented us with a basketful of peaches, pears, figs and apples. The fruit was all fully matured, especially the figs. They were in a good condition, and would bring a handsome price in a city market.

A MONGOLIAN SPUD-SHIPPER.—Bakersfield *Californian*, June 28: Last Saturday a Chinaman sent a carload of potatoes to S. F. The cost of the car was $55, making the freight about 25 cents per 100 lb. At that time potatoes were quoted in that market at $1.60 to $2.25. This is the first venture of the kind that has come under our notice, and how it resulted we have not learned, but the potatoes that grow here, if the right varieties are planted, are not excelled in quality and yield. Moreover, our first crop of potatoes is ready for the market months before that of the coast counties, and our second crop is ready to come into competition with it three months later. The Chinaman referred to will plant his second crop about the first of August. He stated that when he can realize three-fourths of a cent per pound he is satisfied.

Lake.

COUNTY ITEMS.—A number of places have been found in the neighborhood of Kelseyville where gas is flowing freely through the soil to the surface.....Blackberries are growing on red mesa land about two miles from here without irrigation and bearing good ripe fruit..... The Lake county climate is excessively dry in summer, but people think a little irrigation is all that is wanted to make everything grow well and produce large crops. Fruit trees do not suffer even on high mesa land, but small fruits could be greatly helped by the application of water to the soil. It seems now that by boring water for irrigating can be had anywhere in the county.—W. C. C., *Kelseyville.*

Lassen.

EDITORS PRESS:—On my way to Bieber I saw many fine meadows and some fine fields of wheat. I have 70 acres of wheat; 40 acres was sown from the 5th to the 7th of April and the balance later. It is of the White Sonora variety. It is now headed out, and I don't think it could be beat in any country with the same cultivation. All the country wants is men to take hold and cultivate the soil properly and there will be no trouble in raising grain here. There are a few small fields of summer-fallow, sown last fall, which look well. Mr. Bieber has over 500 acres of the best kind of land in this valley which he will sell at 30 per cent less than the value of the land to settlers. ....The town of Bieber was lively to-day and everybody enjoyed the Fourth of July. Any one would hardly think there could be so many people in Big Valley. The RURAL has many friends hereabout. All they lack is money to show their good-will.—H. KELLY, *Adin, July 4th*

ALFALFA.—Susanville *Advocate*, July 3: On the place of G. W. Wright, about seven miles below Susanville, may be seen a sample of what can be done on our sage-brush land with alfalfa. Mr. Wright has 2½ acres, which he put into alfalfa last year, as an experiment, and last week he took off his first crop for this year, amounting to 8½ tons—and two more crops this year to hear from. This land was lightly irrigated the first year, and this year received only the seepage from a ditch run through it. Hutchinson & Leavitt have 20,000 acres of land adjoining this piece, of the same character, under their irrigating system. Mr. Wright is not an expert on alfalfa; he is simply a clear-headed, hard-working farmer, and any man with the same attributes can produce like results.

Monterey.

VOLUNTEER BARLEY.—Suisun *Republican*, July 4: Reed & Frisbie are in the midst of harvesting their large grain crop in the Salinas valley. They will have about 40,000 sacks of barley, 30,000 of which had already been thrashed the middle of last week, and Mr. Frisbie estimates that at least 10,000 more sacks will be gathered. This is not so bad when one takes into consideration that the entire yield was volunteer. The combined harvester cut and thrashed in one day 658 bags of barley.

THE GRAIN HARVEST.—Salinas cor. *Bulletin*, July 4: While thrashing is in progress up the valley, it will be several weeks before we get through or begin around Salinas. The wheat and barley is late. The prospect of wheat sown as late as the 5th of April was never better; barley sown the 15th of April promises a fine yield. Cool weather has added to our yield immensely, and the prediction of your correspondent several weeks ago, as to there being three times the quantity of grain raised around Salinas as last year, is verified. The bean and potato crop, too, promises a yield ahead of former years. Added to this is the superior quality of our grain all over the county. I saw a grain field of 100 acres sown to wheat the 5th of April, that the farmer tells me will yield 20 sacks to the acre, or at least 40 bushels.

Nevada.

GRASSHOPPERS.—Grass Valley *Tidings*, July 4: Farmer Nettleship of Limekiln district mourns the loss of his early grapes, a cloud of grasshoppers having settled on the vineyard some days ago, destroying the buds and everything green as completely as a band of cattle would have done. The late wine grapes were not injured; the buds, stems and embryo grapes being too "tart" for the fastidious hoppers. Mr. Nettleship estimates his loss at $200. The high wind of Tuesday afternoon took along with it the majority of the pests. Down at Iron mountain it is reported that the grasshoppers mowed down all the green grass and stripped oaks and other trees of their leaves.

Orange.

A THRIVING NURSERYMAN.—L. A. *Herald*, July 5: Tim Carroll of Anaheim has sold 300,000 orange trees and 100,000 walnut trees this season. All these have been set in orchard near Anaheim. Tim is a rustler. He has now 360 acres of land, of which more than 100 acres are devoted to nursery. He has of orange and walnut stock 1,000,000 young trees. Of all sorts he has a multitude of young trees in nursery. Mr. Carroll has 10,000 orange and walnut trees set in orchard of his own. West of Anaheim he has 60 acres all set with trees. There is a fine artesian well on this tract.

San Bernardino.

PINK BEANS.—Chino *Champion*, July 4: Bettler & Dunlop are planting pink beans. They will plant 28 acres. Their experience last year was encouraging, in that they obtained two tons to the acre. This year they will be prepared for the early rains, and will not lose any thereby as they did last year. The farmers gain each year from the previous year's experience, both in growing and saving their crops.

CITRUS PLANTING.—The *Record* of July 2d publishes a carefully compiled list of the acreage set to citrus fruits in Ontario this year, footing up 629½ acres. The list includes ten acres in Section 16, Cucamonga, virtually a part of Ontario; 25 acres on the Mountain View tract, and 150 acres estimated under the Pomona water system, but in the Ontario voting precinct. About 45 acres replace grapes and apricots; the rest is newly broken ground. One gratifying feature is that the lots are mostly small; there is very little improvement for speculation. The varieties, in acres, stand about as follows in round numbers: Navels, 465; late varieties (Mediterraneans, Tardiffs, etc.), 100; lemons, 50.

San Diego.

TRACTION ENGINE.—San Jacinto *Register*, July 3: Charlie Chambers has lately purchased a traction engine to be used in connection with his threshing outfit. No horses are used with this machine, as the engine pulls separator, derrick-wagon, cook-house and water-wagon. We hope the engine can be used in hauling gang-plows for plowing purposes, for they are used extensively in the northern part of the State.

San Luis Obispo.

SAMPLE SHEAVES.—Santa Maria *Graphic*, July 3: Col. Ketchum, of Nipomo, showed us a bunch of wild oats measuring eight feet in its stocking feet—that is, it was cut. The colonel had a collection, among which are tame oats six feet three inches long, rye seven feet, and various other kinds of grain all of great length. This collection will be exhibited at the Santa Maria and San Luis Obispo Fairs this fall, also at the Mechanics' Fair in S. F.

Santa Clara.

PEACH, CHERRY AND PRUNE PRICES.—*Mercury*, July 3: Pres. Cushing of the Willows Fruit-Growers' Association, last evening stated that many of the fruit-growers would dry their fruit, in fact more than in any previous year. "The majority of them know that if the driers can pay 2½ cents for prunes there must be something in it. Every grower has to keep a force of men, and instead of laying them off for part of the week they can dry the fruit as fast as it falls from the tree. Taking the hauling into consideration, there is not much difference, and they think they may as well have the profits." "How did you succeed in the cherry shipments?" "We realized in the Chicago markets $2 where we would have got but $1 here. The lowest price was about $1.45 a box, and it ran as high as $2 55. The difference in the cost is only about 40 cents a box, and I guess the highest price in S F. was about 75 cents. This year's shipments of cherries were entirely satisfactory, but then we are fortunate in prices all around this year. Peaches have failed in other sections, and as a result we get two cents a pound. That is not bad, considering that the crop is very good throughout the valley."

A LONG BEET.—San Jose *Times*, July 2: S. Holmes of 356 South Tenth street is proud of "a beet that beats all other beets" heard from this season. It was grown in his garden in this city, was dug up top and all, and measured 11 feet and one inch from the nethermost root to the top of the seed-stalk. Mr. Holmes has it hanging in a shed, and will be pleased to exhibit it as a product of Santa Clara county's soil.

Santa Cruz.

FRUIT-PACKING CO. DISINCORPORATES.—*Pajaronian*, July 3: On Monday last, in the Superior Court of this county, the application of the stockholders of the Watsonville Fruit-packing Co. for disincorporation was heard, and as no objection thereto was made by any person, the application was granted. Pending this action the property had been sold to the Pajaro Valley R. R. Co. The money on hand and derived from the sale of the property has been divided among the stockholders, at the rate of $26.70 per share, the paid-up value of which was $50.

Shasta.

GOOD HAY CROP.—Anderson *Enterprise*, July 3: The hay crop is all harvested, the largest and best ever cut in this valley, and the balers are fast putting it in shape for shipment to points along the California and Oregon road. We have not to chronicle the loss of a single ton of hay in this neighborhood, from unpropitious harvesting weather, the season having been all that could be expected, with no thought of craving a better. The growing season opened up late in the spring, but proved excellent when it did come, with just enough light showers at exactly the right time to do the most good.

Sutter.

AT THE CANNERY.—Yuba City *Farmer*, July 4: The apricot crop in this locality is nearing the close of the season on most varieties except the Moorpark. The cannery here will receive large consignments of this variety from Rancho Chico this week and will run full handed. The roll-book now shows 145 names, which will be increased when the peach season begins. The pack in peaches will commence in about two weeks. Plums and pears will be ready for canning about the first of August and are reported to be plentiful. The new grader is giving entire satisfaction and is a great labor-saving machine. In the canning department, there have been erected three new capping machines which are filling a long-felt want. Each machine is supplied with 12 revolving plates on which the same number of cans are placed. A perpendicular rod is lowered on each can to hold the cap in position, and as the can revolves, the soldering iron quickly solders the cap firmly and smoothly to the can. Each machine is operated by two men, and has a capacity of over 6000 cans per day.

NEW FARMING-MACHINE.—Sutter City *Enterprise:* J. M. Hering has received his patent from Washington for an improved farming machine, which combines digging, subsoiling, pulverizing, planting and harrowing. The machine includes hampers and chests for carrying seed, tools, cooking utensils and provisions, with a suitable frame sustaining a canopy or cover by which it can be converted into a tent, or living house, in which are suspended hammocks for sleeping purposes, the object being to provide a complete farming-machine adapted to large farms where accomodations are distant from the ground to be worked.

Tulare.

MILK FOR THE CHEESE FACTORY.—Visalia *Times*, July 3: S. M. Gilliam, Sec'y of the Visalia Creamery Association, and Geo. A. Parker, a director, were visiting cattle owners last week in an endeavor to secure milk enough to warrant the opening of the creamery. It is estimated that it will require 4000 pounds of milk per day to warrant the commencement of operations. Three-fourths of this amount has been secured, and probably by Saturday next enough will have been pledged. The proposition of the association is to manufacture the milk into cheese at two cents per pound, those furnishing the milk to take the remainder of the money received for the cheese; that is, the association will manufacture the cheese and sell it, and for their labor and trouble will charge two cents per pound, the remainder going to those who furnish the milk. Those who have been manufacturing cheese in this vicinity on a small scale have been enabled to dispose of all they had at ten cents per pound, and it is reasonable to suppose the association can do as well. At this rate, those who supply the creamery with milk will receive about eight cents per gallon.

A RUNAWAY HARVESTER.—Tulare *Register:* The team of 24 horses attached to the combined harvester of Dabney & Henry ran away the other day, and damaged the machine quite seriously. The outfit was working in Mr. Dabney's field in the Artesia neighborhood, when a cog from the main pinion broke out, which caused others to be knocked off. The noise of the breaking cogs frightened the horses and they ran a quarter of a mile. The driver kept his seat, holding himself on with both feet and one hand, while with the other hand he kept the animals straight through the stubble until they were tired out, the wheels sinking into the soft ground and making the pull a hard one. Cogs were broken out of several of the wheels and some other parts of the machine were broken. A runaway team with a combined harvester fastened to them are in a position to do some bad work.

Yolo.

A HORDE OF HOPPERS.—Woodland *Mail*, July 5: Geo. J. Lucas informs us of the descent of a colony of grasshoppers on his alfalfa patch, about three miles west of this city. There are millions of them in the field, and on shaking a bunch of clover, a cloud of the insects rise, and after hopping around, settle down again and proceed to devour the leaves of the plant. From present indications, the grasshoppers will be more numerous than ever, and our farmers fear for the alfalfa-fields and vineyards.

A GREAT HAY BARN.—Chas. Coil has erected one of the largest barns in Yolo county, on his farm near town. Upward of 60,000 feet of lumber was used, and the roof alone cost $1400. The foundation is of brick, and the cost of the building will be about $4500. Mr. Coil will use the barn for the storage of his immense crop of hay.

NEVADA.

RYE.—Reno *Gazette and Stockman:* Uncle Geo. Crum has sent the Board of Trade a fine sample of rye raised on the plains about Battle Mountain without irrigation, which proves

that that cereal will flourish without water. It stands fully six feet high, and the heads are from four to six inches long and well filled with grain.

LOCUSTS, which old settlers believe to be the genuine 17-year kind, are said to have appeared in millions on the east side of Washoe Lake and on the sandy plains near Pyramid Lake.

AFTER THE SPRING ROUND-UP.—Salt Lake *Tribune:* John Tinnin of Wells, Nev., was in the city recently. Regarding the cattle interest in Eastern Nevada, he said that the spring round-up was just over, and they now are able to foot up their losses. These run all the way from 50 to 90 per cent, he not knowing of a single case of less than 50 per cent. Some of the cattlemen lost heavily outside of losing the cattle, through a vain attempt to save them by shipping in hay. He named one lot where the cattle had eaten from four to five dollars' worth each of such hay before dying. California hay cost, shipped into Eastern Nevada, about $15 per ton, making the cost of feeding very heavy. Regarding the cattle interest generally, Mr. Tinnin expressed the opinion that prices would remain low because the great grazing countries of Texas and some other States and Territories are being settled up and the lands fenced so as to deprive range cattle of grazing lands, and this is throwing cattle on the market in large quantities.

OREGON.

IMPROVING THEIR CATTLE.—Prineville *Review:* The cattle-raisers of Eastern Oregon say that the past winter killed off the greater portion of their poor stock—"scrubs"—and that they now have the best stock of their herds left to breed from, and with the introduction of well-bred males they expect to improve their stock and within a few years have a desirable class of stock on the range. Already several of them have bought grades of Herefords, Shorthorns and Angus, and will make further purchases as they are needed. This is certainly a move in the right direction, for it is more profitable to raise good than poor stock, and the cattlemen of the country have learned it is as advantageous to them to breed fine cattle as it is for the sheep or horse-raiser to improve his stock.

INTRODUCING THE COMBINED HARVESTER.—Ashland *Tidings*, June 27: Sylvester Patterson will soon introduce in this valley the latest improved harvester—one of the machines that cut the ripened grain and run it into sacks, all ready to haul to the granary or mill. This machine is in common use on the big ranches in California, but it is something new for Southern Oregon. It is made by Houser & Shippee, at Stockton, Cal., and its cost laid down here is about $1800. Mr. Patterson ordered the machine some months ago, and expects it to arrive in Ashland to-day or to-morrow.

HOPS.—Eugene City *Register:* In an interview with George W. Hubbard, the hop buyer, we learned that there is quite an increase in the acreage of hops in Oregon and Washington this year. He thinks Oregon will produce about 2000 bales more this year than last. The outlook for a good price is favorable at present. He says growers should take great pains in drying their hops if they want to get the highest price. Oregon now has the reputation of shipping to market the best cured hops of any State in the Union. Mr. Hubbard sent several samples to Europe last year, and they were reported the best from America. At the price offered now there is a good profit in hop-raising, and it will pay all to take good care of their yards.

UMATILLA COUNTY SHEEP.—*E. Oregonian:* It is learned from Stock Inspector E. Gilliam that the number of sheep in Umatilla county at present is about 114,000, not counting lambs, making 62,000 less than last fall. About 34,000 were sold, most of which have been taken out of the county. From this estimate it will be seen that the total loss of sheep in Umatilla county during the winter was in the neighborhood of 28,000.

A MARKET FOR OUR AGRICULTURAL IMPLEMENTS.—Spain presents an excellent market for the introduction of American farm implements, so says our Consul at Cadiz. Referring to the statistics of exports from the United States to Spain for the year ending June 30, 1889, we observe that the value of agricultural implements exported amounted to only $7316, of which about one-half applied to mowers and reapers. This was but a fraction of the total exports to all countries. This does not represent the extent to which American implements are used in Spain, for it appears that many of them are obtained through German, French and English sources, which present more favorable conditions of purchase, in which the system of long credits acts an important part in trade.

TREE-FELLING BY DYNAMITE.—Some interesting experiments were made the other day in the vicinity of Copenhagen, with tree-felling for military purposes, by dynamite. The object was to ascertain the saving in time and labor effected by this method and the results were exceedingly satisfactory, far more so than is understood to have been the case elsewhere. Trees of as much as three feet in diameter were brought down in some 20 to 25 minutes, whereas the time occupied by ordinary felling would have been 10 times as much.—*Engineering, London.*

THE STABLE.

The German Coach Horse.

EDITORS PRESS:—It is well known and understood that all the modern breeds of horses trace their origin to the same source, and that the horse was indigenous in not a few countries, and that his progenitor was the little prehistoric "Hippus" seems to be as generally understood.

Hence we must accept, in attempting to write up the German coach horse, that originally he was an evolution from the same common source, and that his present degree of excellence is largely due to natural and arbitrary selection.

This breed of horses, in their Faderland, is claimed to have been greatly improved by the insertion into his system of importations of the largest specimens of the English thoroughbred, the fleet-footed charger of the desert, the Arab, and the freer and more quality-like Yorkshire coachers.

Thus we find they have been founded and built upon a rock, and not upon the sand, and this foundation has given them speed for long distances, and, together with care at the hands of their owners and selection under the arbitrary rule of the Government, has established them with a before unprecedented amount of beauty, spirit, finish, action and size. And according to history we must admit that he has, since the sixteenth century, been a distinct and much-favored breed. Under the reign of Anton Guenther, 1620, the Hanoverian flourished and stood high as a coacher and war horse. In 1660 the Duke of Newcastle, in his work on "The Horse," mentions with much favor the German horse, and before and since this time they have stood in very high favor among the royalty, as from this time they have been much used as princely presents, etc.

All German coaching horses are, whether bred in Oldenburg, Hanover, or any other part of Germany, necessarily one and the same breed. No horse can serve mares in Germany unless he either belongs to the Government or has a certificate of breeding soundness and individual appearance, and this certificate is issued by a Government examining committee, and when a horse has such a certificate he may go anywhere in the Empire and serve. And not only is this so, but it is well known that the Government sends horses out of Oldenburg and Hanover into the Hamburg Marsh countries and other sections, and vice versa, all over the Empire at their will, and always with an object in view, sometimes to carry more bone and substance, and again more quality and spirit. Hence we must infer they are in breeding the same, although their individual appearance from different sections is often quite different, for the same reason that in our own country some climates and soils are adapted to raising coach and road horses, while in others they would be a feeble success, but rearing the draft horse would be their best forte. In some sections in Germany we find these coachers becoming so coarse and drafty as to be really undesirable as coachers in America, while in other sections they furnish as fine and blood-like, strong and active as does the Arab in his native desert, and reared in a land of plenty, and his master a bountiful and judicious feeder, as the Germans notoriously are, he always grows large enough.

The color is mostly bays, browns and blacks. Some few have white in face and white feet. They stand from 160 to 173 centimeters, or from 15⅔ to 16½ hands high, and weigh from 1250 to 1600 pounds at maturity. They mature at a young age, being fit for work at two years, and for breeding purposes when three years old. They trot fast with perfect angles, very regular with high action. They are very stylish and handsome, with sweet, pretty heads, long necks, short backs, with good quarters, the best of feet and finest of hocks.

They have been so carefully bred by the Government that an unsound one is seldom seen. In hardiness no breed can surpass them, and in fertility and prepotency we believe none can equal them.

They are the horse in general use throughout Germany. They are the great plow horse, and the same team goes to the commodious carriage and carries its owner safely and swiftly to market, or over the country, at a cheerful, easy, ten-miles-an-hour gait, and again he goes to the ponderous four-wheeled German sugar-beet wagon, and draws to the factories, going away in a slashing walk, with 5000 kilo—10,000 pounds—on paved roads.

While he is a great domestic, like his master, he is a prodigy in war. These are the cavalry horses of which history tells in the Franco-Prussian war. They were so intelligent, courageous and fleet of foot, that on meeting a French troop of horse, they could charge them, recharge and charge again before the French could turn to action.

The demand for these horses will be best understood when we know the great number of them that are sold every year to France, Italy, Switzerland, Belgium, England, Russia, Austria and South America, running far into the thousands. No horse stands so high in the opinion of the South American as a prepotent sire as the German coach horse, and their history justifies the assumption that in North America they will very soon rank with quite as much favor.

Some one may ask, why have we not known of this splendid breed of horses, here in our own country, before? In reply I can but say: Well, we have known of the German coacher, but heretofore there has been no stud-book for them, outside of the Government certificate, and when a horse belonged to the Government stud, he was so high priced that he could not safely be purchased with the thought of a profit to the importer, and we all know that the American people will accept no horse for breeding purposes unless he has a certificate of authority of breeding; hence they, like the Irish hunter, have heretofore been compelled to seek their market in other lands.

Greeley, Iowa A. B HOLBERT.

PUBLIC AFFAIRS.

A Nationalistic View of Anti-Trust Decisions.

EDITORS PRESS:—In your article headed "The Anti-Trust War," issue June 28th, you refer to the decisions of the New York Supreme Court as being almost a "ringing declaration" that the creature—the corporation or trust—is not greater than its creator, the State.

You also say that "the decision is diametrically opposed to the policy and aims of a trust." For myself I certainly cannot see what in the decision will prevent a new corporation being formed that will buy up all the sugar refineries in the U. S., resulting in a single huge corporation instead of several smaller corporations joined together in a trust controlling the sugar industry of the country.

The decision certainly may prevent monopoly assuming the peculiar form of a trust, but what difference does it make to the people whether a corporation or a trust constitutes the monopoly?

The sugar refineries of this country, if run to their fullest capacity, can make almost as much sugar in one week as can be consumed in two weeks, hence is it not perfectly evident that the owners of the sugar refineries must agree to restrict production—that they must form some sort of a combination to effect this result. If not, a trust, then some other combine. Laws to prevent them performing a simple act of self-preservation will always be futile, and it is most exasperating to see editors of a paper so widely read as yours urging farmers to pin their faith to absurd anti-trust laws which will have no more effect than the Pope's famous bull against the comet.

There is but one remedy for trusts and monopolies, and that is let the Government nationalize them—let Uncle Sam run the sugar business instead of Claus Spreckels.

Until we resolve on this course, we may rest assured that a sugar ring will always dictate to us how much sugar we shall consume and how much we shall pay for the privilege. The Russians will be under a political despotism as long as they give their political destinies into the hands of a political despot—the Czar. The Americans will remain under an industrial despotism as long as they leave their industries to be managed by the modern American Czars of Industry—the Armours, Spreckels, Rockefellers and Vanderbilts. We wonder at the Russians cringing under their political despot, yet we ourselves fawn at the feet of despots who are riveting a chain of industrial slavery more galling than history has yet recorded.

Our forefathers were most cautious in framing our constitution to balance political power so that no one branch of the Government should be able to preponderate. Little did they dream that a power outside of any that they were creating would arise that would dwarf all their political constitutions—the money power. The almighty dollar is king—who dare his power gainsay?

The creature is greater than the creator—decision or no decision.

Two corporations were formed in New York last week of fifty millions capital each. Certainly the decision does not prevent the formation of corporations of such immense capitals, and every Californian knows that a fifty-million dollar corporation can vote pretty often, law or no law. We have but one course open to us. We must nationalize industry. We must come to this decision sooner or later and all this fighting trusts is so much wasted time.

H. G. WILSHIRE,
Pres. Farmers' National Club of Anaheim.
Fullerton, Cal.

MINERAL MATTERS IN COTTON.—Dr. Bowman states that the mineral matters in cotton amount to from 1 to 1.5 per cent of the weight of the fiber. Carbonate of potassium is the chief constituent. There are other salts and phosphates of magnesia and lime, and an amount of peroxide of iron, varying from three to six per cent of the quantity of inorganic matter. The iron is highest in Egyptian cotton. Alumina is also reported as constituting 7.9 per cent in rough Peruvian cotton. This mineral matter is regarded as an integral part of the fiber. If, as Dr. Bowman says, "It is impossible by any means at our command to separate or remove these mineral constituents from the fiber," dyers and printers would be in difficulties; but surely they are nearly all removed in ordinary bleaching operations.—*Textile Recorder, Eng.*

FORESTRY.

The Redwood Forest.

In size of individual specimens, the redwood (*Sequoia sempervirens*) ranks next to its relative, the big tree of the Sierra Nevada (*Sequoia gigantea*) and the eucalyptus of Australia; but if we take the average size of the trees and the density and extent of the forest into consideration, the redwood is the grandest of the world's forest trees. It belongs to the Coast Range of Northern California. A few straggling groves only are to be found below Monterey bay, and it does not extend far into Oregon. The largest body commences at the mouth of Russian river and extends into Oregon. Another large forest lies south of San Francisco, in Santa Cruz county. The widest portion of the great or northern body of redwood timber lies in Mendocino county, between Ukiah and the ocean. Here it is by air-line 25 miles wide—a vast, unbroken forest with branches extending inward up the canyons. The peculiarity of the redwood is its love of moisture, which means here fog. The fog banks rise from the Pacific and flow inland like a great level sea of vapor. The lower mountains next the coast are enveloped, and farther on it fills the canyons, leaving the high mountains to rise like islands out of it. Still farther inland only the lower portions of the canyons are filled with fog. At times the sea of fog will rise so high that it engulfs nearly the whole section back to the high dividing range of mountains which is the watershed between the streams running directly into the ocean and those which flow into the Russian and Eel rivers, which extend for a long distance parallel to the coast line. Then the fog goes pouring through the passes in actual rivers of vapor, which run down the canyons toward the interior. Strangely enough, it always returns as it goes.

Now, with this sea of fog in mind one can locate the redwood belt most accurately. Near the coast on the lower mountains, and everywhere, the densest forest is almost exclusively of redwood. Farther inward sweeps the same dense forest on the lower mountains and in the canyons at the same hight. Redwood forest is still on all the mountains, but of smaller trees, and the greater the elevation the more largely it is mixed with Douglas spruce (Pseudotsuga taxifolia) and the tan bark oak (Quercus densiflora). Still farther inland near the watershed spoken of before, redwood only grows in canyons, and the mountains are either open grazing land, covered with oak and fir, or with that dense low growth known as chemisal (Adenostoma fasciclaris). Over the watershed, down those canyons where the fog pours over, there still are groves of redwood, well confined to the moist banks close to the courses of the streams; while up the broad canyons of Eel and Russian rivers the fogs roll and nourish the life of the grandest of all of the redwoods till they are held back by the heat of the interior.

The redwood is not only a lover of moisture, but, to an extent hardly to be believed unless seen, a condenser and conserver of moisture. The tops reach high into the sea of vapor, and a constant precipitation from them like rain takes place. Last summer I was on the coast during a foggy time, and I remember that while the roads were dry and dusty, in the clearings under the redwoods the water had been precipitated till it stood in puddles and formed mud holes. This abundance of moisture causes the densest of undergrowth, which only continual fires make passable. Hazels, huckleberries, various ceanothuses, ferns of large size in the greatest profusion, with large bushes of Rhododendrons and numerous other plants, make the forest floor a perfect tangle in the moister portions. The list of herbaceous plants here is not large, but they are delicate and beautiful. The glossy leaves of Vancouveria hexandra form dense masses; an Orchid, Goodyera Menzieger, is common, and in the spring Trillium ovatum and the Erythroniums are plentiful, and so is the lovely Clintonia.

Of small ferns, only the beautiful Adiantum pedatum, the Maiden-hair, is common; but there are several species of Aspidium and the Woodwardia, and Brake is everywhere, making in the cleared forest a solid mass four or five feet high. I have seen acres of the Brake seven or eight feet high, where a man could only crawl through the tunnel-like paths. Every year or two forest fires sweep through this forest tangle, but it springs up again with renewed vigor. The redwood, unless very young, is not injured by fire. Its thick bark protects it, and often trees will be seen which had every limb stripped by the fire, putting out a mass of foliage from top to bottom. No name could be more appropriate than sempervirens, for it possesses wonderful vitality. A tree cut throws up hundreds of strong sprouts, and a stump is only killed by repeated burning. Fallen trees will often grow along the whole length of the stems, and throw up sprouts from the upturned roots, and I have seen sprouts six or eight feet high from logs. The commonest care would ensure the perpetuity of these grandest of forests.—*Carl Purdy, Ukiah, Cal., in Garden and Forest.*

WELL WORTH READING.—An essay on the training of the young, by Sister Cook of McMinnville, may be found in our "Home Circle," and will repay you for perusal.

STATE AND COUNTY.

Feather River Fruit Lands.

[Written for the RURAL PRESS by J. C. H.]

A RURAL representative visited the new fruit belt lying adjacent to the Feather river, that has attracted more than ordinary interest during the last year, from the fact that a number of our leading orchardists and nurserymen had purchased large tracts of land in this section and planted extensive orchards and vineyards, among whom were A. T. Hatch, John Rock, C. W. Reed and Robt. Williamson of the W. R. Strong Co. of Sacramento. In company with C. W. Reed, the writer made an extended and thorough examination of this rich and productive portion of our State last week.

Arriving at Gridley at 6 o'clock P. M., a team was awaiting to convey the company to the Rio Bonito, three miles distant. The land in and about Gridley is very fertile, and has gained fame as a productive wheat district. It is rolling tableland dotted with large oaks from Gridley to the Rio Bonito, lying along the west side of the Feather river. During this short ride there were two combined harvesters manufactured by the Stockton Combined Harvester and Agricultural Works, seen at work in fields of wheat that were yielding a fair crop, as per our estimate equal to 12 sacks to the acre.

The Rio Bonito lands along the Feather river extend from one-half a mile to two miles wide, a distance of ten miles or more. For 30 years it has been devoted to raising grain principally, with small orchards and vineyards planted for family use. The first and original settlers had a full realization of the productiveness of this land, of the exuberant growth of fruits, cereals and vegetables, and also of the favorable climatic influences that made this locality so desirable as a place to live, and seemed contented in their Silurian existence.

During the years 1888 and 1889 a number of our sagacious and experienced fruit-growers had their attention called to this locality, and after a full and careful investigation came to the conclusion that this section was especially adapted for growing fruits of the best quality, and that the heavy precipitation of water and sheltered location would make this section one of the earliest in the State to ripen fruit and no need for irrigation. A succinct description of a few farms and colonies may enable our readers to form a just conception of a locality and section that will contain perhaps the largest body of continuous orchard and vineyard, in connection with citrus fruits, of any place on the Pacific Coast or in the world.

The Farm of C. W. Reed,

Of the well-known firm of Reed & Van Gelder, nurserymen, is located on the Rio Bonito, about one mile west of the Feather river, and contains 676 acres, 450 acres of which is a deep, black, sandy loam or river-bottom land and the balance a reddish clayey soil and upland with a gradual slope toward the river. This whole tract, except 50 acres, has been planted this year to orchard and vineyard in proportion as follows: 3000 apricots, 11,500 peaches, 3500 pears, 3000 almonds, 4000 French prunes, 1000 plum trees, two acres of orange trees, rows of Adriatic figs, 32,000 rooted grape vines of the table varieties, a few palms and ornamental trees. The growth in young trees has been far beyond the usual advancement, and a large number of these budded yearling trees are now over five feet high, with large dark leaves and a most vigorous appearance.

This tract was covered with great oak trees which have been dug out except one lone gigantic sentinel standing at the head of the main avenue and a few giants standing near the out buildings, one of which was measured two feet from the ground and found to be 27 feet in circumference. Three hundred acres of this orchard was planted with canteloupes this season and active preparations were being made to ship the first carload to New York on the 15th of July. Four acres of alfalfa sowed in March had yielded 14 loads of hay and was now over 30 inches in hight. A small patch of popcorn planted by Master Reed was well stocked with ears of corn and stalks eight feet high. The residence, out buildings and piles of grain-raising machinery are forcible reminders of a condemned system of agriculture for this section, while the disc harrows and implements for destroying foul vegetation are the chief factors in contending with the weeds which grow in immense proportions and prodigious height. Mr. Reed looks upon this locality as an especially favored section for growing fruit and has an ambition to make this farm a model fruit orchard.

The Hatch and Rock Orchards.

The county road, which is to be widened, is the dividing line between this farm and the great orchard belonging to A. T. Hatch, ex president of the State Board of Trade, and John Rock, the veteran nurseryman and manager of the California Nursery Co. at Niles. Feather river is its eastern boundary, and it extends along the valley about two miles, containing 2200 acres of land, 1800 of which are in orchard, the largest portion being planted in 1889. There are 40 acres of orange trees planted and the balance divided in about equal proportions in almond, peach, French prune, pear and apple trees. The trees that were planted in 1889 have made a remarkable growth, some that we measured being over eight feet high and a stretch across the top of over six feet. The trees that were planted this season in some portions of this rich bottom land look like young saplings. During the last two months Mr. Rock has had from one to two men going through this orchard heading it back, as the growth was so rapid that the woody fiber would hardly sustain the weight and consequently the end of the limbs become bent and unsymmetrical. This orchard is arranged in an artistic manner with palms and ornamental trees skirting the avenues, while the great oak trees along the bank of the Feather river make a contrast that is picturesque and attractive. We measured the stump of one of these giant oaks and found it to be over ten feet in diameter.

The character of this soil is such that it can be worked dry or soon after a heavy fall of rain. It certainly shows thorough cultivation, and these great enterprises from center to circumference have been commended as the result of skilled hands, sagacious management and superior resources.

Mr. Rock and Mr. Hatch are of the opinion that in soil, climate and rainfall, in a harmonious combination and environments, this is one of the most favored localities for growing fruit in quality and commercial value on the Pacific Coast.

W. R. Strong Co.'s Orchards.

Directly opposite, on the east side of the Feather river, is the well-known "Onyett ranch," four miles west from Palermo, containing 677 acres, which was purchased on the first day of February, 1890, by the W. R. Strong Co. of Sacramento. Mr. Robt. Williamson, the experienced nurseryman of this firm, is the present manager, and under whose direction it has been transformed from a grain-growing and stock ranch to what promises to be one of the great fruit orchards of California. In the character of land, it may be classed as follows, viz: 360 acres of sediment bottom land lying along the Feather river; 140 acres of table or slightly elevated bottom land, and 177 acres of reddish clay and adobe soil. Work of reclamation was commenced on the 5th day of March, and, owing to the heavy rains, the planting of trees was continued until the 12th day of May. A combination of circumstances, of which an unexpired lease was one, there have been only 140 acres set in deciduous fruits and 60 acres in table grapes. As showing the prolific character of the soil, one of the workmen was cultivating a fine patch of corn that had been planted after the lessee had cut a crop of hay, and adjacent thereto was a block of potatoes that yielded, so far as dug, over 100 sacks to the acre. The stupendous oaks that are standing are indisputable evidence of the quality of production of this locality. It was midday when we measured the shadow of one of these giants and found its approximate breadth 126 feet in diameter one way and 102 feet at right angles across. From Mr. Williamson we learned that three miles above there were cherry and peach trees 38 years old, in a healthy condition, apricot trees 2½ feet in diameter two feet from the ground and over 40 feet across the top of spreading branches. In the front yard of this farm, near the quaint dwelling, stand two large apricot trees from which ripe fruit was picked on the 12th day of June this season.

Other Improvements.

The promise of these embryo orchards has stimulated investments and turned the attention of capitalists to purchase land with a view to grow fruit for the Eastern market. Several dilapidated ranches have been bonded, and it is currently reported that Mr. H. W. Meek of Alameda has purchased 1000 acres adjacent to the orchard of Messrs. Rock & Hatch.

Palermo.

The citrus and deciduous fruit trees in and about Palermo are in a very flourishing condition. The irrigation system has been enlarged, mains and ditches extended, and an abundance of water for all purposes secured. Additional storage dams have been built on the adjacent hills, and a pressure obtained that makes it possible to throw water 150 feet high in the town of Palermo. We rode out among the orange groves and fruit orchards in the colony proper, and found by personal examination and learned from expert fruit growers that the orange trees had made an extraordinary growth and far beyond their expectations. This being a dry red soil, it was thought incapable of growing deciduous fruits without irrigation. In the immediate vicinity there are several peach, apricot and olive orchards two years old with large, fine, vigorous trees, some of which, by actual measurement, were over six feet high, and these trees have been raised without one drop of water by irrigation. The weather has been quite cool and pleasant in Palermo this season, caused no doubt by the snow on the mountains, which can be distinctly seen. The thermometer marked 92 degrees in the shade on the day we visited Palermo.

A fine Congregational church and one fine residence has just been completed, and it is expected that Hearst & Taylor's $12,000 house would be finished by August 1st of this year. The Pacific Improvement Co. has set out ornamental trees on a number of the main avenues (a large proportion of which are the Texas umbrella tree) presenting a very attractive appearance. Preparations are being made by residents and property holders to plant largely in citrus fruits the coming winter and spring.

Thermalito.

This thriving and pioneer colony is situated on the north side of Feather river, on the first bench of foothills opposite Oroville. It was selected for its beauty of location, its fertility of soil and its especial adaptation for citrus culture, as its name indicates it being in the thermal belt at an elevation that avoids several degrees of frost in comparison with the climate of Oroville and the bottom lands along the Feather river. Of the 8000 acres set apart for colony purposes, 2000 acres have been sold in tracts from 2 to 20 acres, 1000 acres of which has been planted chiefly in orange trees. Twelve miles of avennes and streets bordered with palms and ornamental trees have been laid out and mostly graded. Water mains and open ditches have been placed and a full supply of water from the Feather river and aqueducts is assured for 50 years. The Thermalito Colony Co. have granted a subsidy to the Butte County Street Railway Company to secure a street railway through this colony from Oroville.

The premiums secured by Thermalito fruit of the northern citrus fairs of the last two years show the adaptation of the locality to such growths, and it is established that the experimental stage has passed in growing citrus fruits in this section and the patient and persistent efforts of the promoters of this great enterprise will reap a rich reward.

Colmena Colony.

This thriving colony, a map of which with a full description was published in the RURAL in 1888, is advanced in material prosperity beyond the most sanguine expectation of the promoters. It is situated on the railroad, four miles below Marysville, and promises to become one of the favored citrus belts of this State. It has been demonstrated that the facilities for irrigation by raising water by pumping will not be a burdensome expense. Two pumps were in operation and the orange trees appeared to be in a very thriving and vigorous condition. We were informed by Mr. Abbott, one of the principal owners, that they expected a number of settlers from the East this season, who had purchased 20-acre tracts.

San Bernardino County.

[Written for the PRESS by JAMES H. CROSSMAN.]

San Bernardino is the banner county of our State in area, if not in population and taxable property. It has within its boundaries all the elements of prosperity in great abundance. Its mineral and agricultural resources are probably unsurpassed by any county in our State. The division line is boldly and distinctly defined by that mountain chain known as the San Bernardino range. That portion best adapted to agricultural pursuits lies to the south, which is not void of mineral wealth, but the mineral region proper that forms the metallic domain of this county lies to the north of this mountain range. The northerly boundary of San Bernardino county is Inyo county, with the State of Nevada on the northeast, while the Colorado river which divides the State from the Territory of Arizona, forms its Eastern boundary. It is bounded on the south by San Diego county, while Los Angeles and Kern lie to the west. It contains within these boundary lines 23,476 square miles. Much of the largest portion of this area lies north and east of the San Bernardino range, of which there are of mountains and agricultural lands 6000 square miles, and of the so called "desert land" we find 17,476 square miles, a large portion of which is susceptible of cultivation, providing storage reservoirs, and artesian water can be obtained.

The Valley of San Bernardino,

Upon which Dame Nature has with such a liberal hand bestowed her bounteous gifts and blandest smiles, is already noted far and wide for its fertility of soil and picturesque landscape. It is situated directly east of the city of Los Angeles and about 50 miles south of west from the nearest point to the Pacific seaboard. The valley proper has a length east and west of about 60 miles, with an average width of 15 miles. We find here a varied combination of both soil and climate. It is here that the orange attains a greater degree of perfection than in any other locality on the Pacific Coast, as can also be said of all the varieties of deciduous and citrus fruits that are adapted to a semi-tropical clime. Clover, alfalfa, barley, wheat, oats, as well as every vegetable known to man, yield abundant crops of a superior quality. Walnuts, almonds, chestnuts, filberts, peanuts and pecans are also products of this favored soil, while the raisins grown beneath the benificent rays of the semi-tropical sun have a national reputation. It is the home of the grape. The wine manufactured in this county is highly esteemed and commands a good price both at home and abroad.

Cities and Towns.

Outside of the city of San Bernardino are many beautiful and attractive suburban towns. The most prominent are Redlands, Lugonia, Riverside, Gladysta, Crafton, Banning, Mentone, Highland, Harlem, Old San Bernardino, Sunny Slope, Colton, Etiwanda, Rialto, Urbita, Cucamonga, Beaumont, Ontario, Terracina, Mound City, Chino, Rincon, South Riverside, East Riverside and Hermosa.

The climate in the valley is mild and equable, the thermometer seldom reaching the freezing point. About 17 inches of rain is the average.

Artesian Water

Can be obtained in many places both north and south of the San Bernardino range in both desert and valley. In the latter, 121 artesian wells alone furnish 13,000,000 gallons every 24 hours, while the combined annual flow is several billions. In San Bernardino and the adjoining valley over 400 of these streams are unceasingly contributing their quota of living water pure and crystalline. The pipes are from 2 to 12 inches in diameter; 300 wells are within the city limits. The principal source of supply to the Gage canal and irrigation system is drawn from this source. In addition to the supply from creeks and wells, reservoirs for the purpose of storing water have been built in the mountains. The lake formed by the Bear Valley dam makes the largest storing reservoir in State for irrigation purposes. We have taken the liberty of publishing the following description of this dam written by Elson D. Hall for the San Bernardino Board of Trade and published by that deserving institution illustrative of the resources of the county, at the same time acknowledging our obligations to Mr. J. C. Scott, secretary of that institution, for information and favors extended.

The Bear Valley Dam

Is located at the outlet of the Bear Valley into Bear creek, which empties into the Santa Ana about five miles below, and is one of the most favorable locations that could have been selected. The valley is surrounded by mountains, and has no other outlet but this, which here is very narrow with precipitous rocky sides. Into the solid rocks of this gorge the dam is abutted, and is built on a curve, arching inward, forming the arc of a circle, with a diameter of 345 feet. Its dimensions are: On top, 300 feet from abutments, 60 feet high from the bedrock of the creek in the highest point, and it conforms to the mountain slope on either side. Its base is 20 feet wide, and from this it slopes to three feet wide at the top. Its average co-efficient of safety is 25, and it would stand twenty times its present pressure. The whole is built of vast granite blocks which were quarried near the margin of the lake and floated to the wall on scows, while a derrick built on a floating raft took them and placed them in position. The rocks were laid in Portland cement and all the interstices were filled with beton. The cement had to be hauled in wagons from Colton by way of the Cajon Pass and Mojave Desert, and thence down the valley to the dam, a distance of 100 miles. A four-horse team hauled eight barrels and it took ten days to make a round trip. Sixteen hundred barrels of cement were put into the dam at a cost of $13 per barrel, including the freightage.

The engineer was F. E. Brown of Redlands. The State Engineer of California has pronounced the work not only efficient but a remarkable piece of engineering.

The lake formed by the dam extends back into Bear valley over five miles, with an average width of nearly a mile, and a depth of 12 feet, and contains the enormous amount of 8,000,000,000 gallons. To supply this the valley furnishes over 60 square miles of drainage area, on which falls three times the amount of water which the lower valleys receive. The dam stands 6400 feet above sea level. The quantity of water held in reserve now is sufficient to irrigate 50,000 acres of land, and to supply a population of 500,000 with water for domestic purposes. Much water still goes to waste in Bear valley and elsewhere in the mountains. The capacity of this reservoir will be enlarged. Other dams will be built. Nowhere else in Southern California does so much rain and snow fall as on the San Bernardino mountains. The unfailing creek and rivers, the large number of flowing artesian wells, and the limitless supply of water in the lofty mountain valleys, which may be had for the expense of storage reservoirs, unite to make San Bernardino the best watered county in Southern California, we might almost say in the State.

The waters from Bear valley and other supplies in the mountains find their way by natural channels to the plains. At the mouth of the canyons, stone-lined ditches, flumes, and cement pipes convey the supply to the cultivated tracts. The best method of irrigating is to have a distributing reservoir into which the stream can run continuously, and be drawn upon as needed. Fruit lands need irrigating only about once in four to six weeks. After the ground is thoroughly soaked, two or three days are allowed to elapse before it is gone over with a horse cultivator. The surface of the ground is thus prevented from baking, and the moisture is retained for several weeks.

Transportation Facilities.

Two transcontinental railroads pass through the county, which, with the advent of the extension of the Utah Southern (now in process of construction at least as far as Pioche in Nevada) through the heart of the desert mineral region to some point on the Atlantic & Pacific R. R. or to tide water, would make three roads. These, with the California Central and the San Bernardino Valley R. R. now building, will make San Bernardino a railroad center of great importance. At date, San Bernardino is also the banner railroad county of the State, at least so far as mileage and county assessments are concerned. There are 417 miles of standard-gauge road and 321 miles of motor and narrow-gauge, with 21 miles of electric roads

within its boundaries. These several companies pay assessments on $4,991,250, the value of the available railroad property in the State being $26,000,000.

Though the metallic domain proper lies to the north of the San Bernardino range, its valley region is not devoid of mineral wealth. The ores of tin of great value and immense quantity occur in the Temescal range of mountains, on the San Jacinto ranch; there are also mineral paint, gypsum, bituminous rock and coal measures. There has also been found a stone suitable for macadamizing streets. The manufacture of tiles and brick from a superior quality of fire-clay is an important and a growing industry.

Statistical.

For the following statistical data I am also indebted to I. C. Scott, Esq., Secretary of the Board of Trade of San Bernardino, and to Mr. Hale.

The tax levy for the year 1890 is $1 50 on the $100. The county is free from debt.

Acreage under cultivation for the year 1889, 64,410. The principal products were as follows:

	Value
310,000 boxes oranges	$744 000
4 50 boxes lemons and limes	17,000
325,000 boxes raisins	546,250
650 tons dried fruit	143,000
40,000 cases canned goods	16 ,000
90,000 lbs. English walnuts and almonds	6,750
345,000 lbs. comb and extracted honey	23,800
240,000 gallons wines and brandy	62,000
225,000 centals barley	146,750
Wheat, oats, hay, and other products	100,000
Total	$1,949.050
Minerals	1,350,000
Grand total	$3,299,050

Mr. Scott also states in his report to the Board of Trade for the fiscal year ending December, 1889, that the earnings of the county will average more than $100 to each man, woman and child in the county.

The above statistics, which can be relied upon as correct, show that San Bernardino county, taken from a financial standpoint, is now the leading county of the southern portion of the State. If she can do this with her paucity of inhabitants and undeveloped resources, what can she do with her plans for irrigation works completed, unimproved lands under cultivation and her desert regions pouring forth their treasures of mineral and metallic wealth.

Desirable New-Comers to Merced County.

WASHINGTON, July 7.—United States Consul Walter E. Gardner at Rotterdam, sends the following interesting report to the State Department on emigration to this Government. It is important in itself and significant as indicating the kind of people California will receive from Holland:

To-day there sailed from this port by the Netherlands Co.'s steamship Spaarndam a colony of 65 Hollanders who are to make for themselves new homes in California. These have been preceded by a smaller colony which sailed from Rotterdam in autumn last year. They will be followed by another colony, already partly made up, to sail in September next, and doubtless, also, by other future colonists. Quite unlike most emigrants from Continental ports to America, these people are comparatively wealthy. They sail for New York as first-class cabin passengers. They travel westward from New York by specially chartered Pullman cars. Each adult male and each of several adult females in the colony leaving to day has already made cash investments ranging from $3000 (the lowest) to $10,000 (the highest), in partial payment for lands, houses, barns, furniture, agriculture implements, horses and cattle, of which the buyers will assume immediate ownership upon arrival at their destination. Among the various household effects certified through this office are pianos, libraries, paintings, silverware and other certain evidences of moderate wealth.

The movement has its origin with the Holland-California Land Company, incorporated under the laws of the State of California. Included in the official Board of the company are some of the strong business men of Rotterdam, while its Vice-President and California Managing Director is W. A. Nygh of San Francisco. The company is the owner of an abundantly irrigated area of land in Merced county, Cal., which is divided into 20-acre tracts. Many are already under cultivation, the products being alfalfa, grape vines and fruit orchards. These cultivated lands are sold to the Dutch immigrants at $175 per acre and prior to arrival of new owners, each equipped, as above indicated and according to the plans previously agreed upon, with all the paraphernalia of a complete prosperous country home. The city and center of this New Holland of the New World is to be called "Rotterdam," and among other characteristic features is a representative Dutch dairy.

Teachers are employed by the company to instruct the colonists in such modifications of Holland agricultural methods as climate and other conditions in California render necessary, and a company hotel has been or is about to be opened for young men colonists without families.

The enterprise thus briefly outlined has attained among the ultra-conservative Dutch, considerable and widespread popularity. For example, the Netherlands cities and villages contributing members to the colony sailing to-day are Rotterdam, Dordrecht, Giesendam, Amsterdam, Delft, Bussum, The Hague, Nymegan, Araham, Oosterbook and Gouda.

Irrespective of the business merit or lack of it in this company's scheme there is no question whatever that these Dutch emigrants to Merced county, California, are physically, materially, mentally and morally a strikingly superior class.

Growing out of the movement above reported and related to it is to be noted also the recent organization of the Holland-California Trading Company, which now has a depot in this city exclusively for the sale in Holland of California fruit and wines.

ENTOMOLOGICAL.

Another Source of Danger to California Fruit-Growers.

EDITORS PRESS:—I procured from Sresovich & Co., 505 and 507 Sansome St., 13 barrels of Tahiti rotten oranges for seed, and on opening the barrels I found the fruit had been very badly infected with the purple scale, *Mytilaspis Citricola*. Is this not a danger which should be controlled or prohibited by the fruit-growers of this State? Are we to be ruled and ruined by the selfish greed of a few importers of fruit and fruit trees and stand by and take the disease without being able to administer a dose of medicine to alleviate our sufferings?

The Horticultural Commissioners of Los Angeles Co. have endeavored to prohibit the importation of Florida trees infected with purple and other scale pests, but claim they are powerless in the matter as by doing so they conflict with the Inter state Commerce law. That being the case, why not the fruit-growers combine and have a plank embodied in the platforms of the political parties that the members of Congress from this State shall use every means in their power to have that law repealed, or a clause inserted, giving the citizens of each State, through the proper officers the right to protect themselves against the importation of contagious diseases? Those rotten oranges for seed have been sent to different localities and no doubt the marketable fruit has been sent all over the Pacific Coast, which in my opinion is cause for alarm. True, the climate and locality may not be suitable for the reproduction of the pests in all cases, but I find where the citrus family of trees does well, the insect pests infesting that class of trees will also do well; consequently, I think some steps ought to be taken to prevent this wholesale importation of injurious pests, and not wait until the whole fruit industry is paralyzed. JOHN BURR,

Hort. Inspector for San Fernando Dist., Los Angeles Co.

Progress in Los Angeles County.

The Los Angeles County Board of Horticultural Commissioners recently presented the following report to the Board of Supervisors:

In the matter of imported orange stock from Florida, Mr. Mitchell, by instruction of this commission, has given his personal attention to every detail and enforced a strict quarantine against every car received, the contents in each instance being found infected with insect pests. The quarantine was only raised after the trees were thoroughly disinfected, remained intact for two weeks, again inspected, and found free from insect pests.

With the exception of one car, now presumably en route, there will be no further receipts of Florida stock until next fall.

With your kind approval, we requested Prof. Coquillette, United States entomologist, to make a special inspection of Florida trees that had been planted out one and two years in Pomona, Riverside and other localities, and report to us, if, in his opinion, Florida insect pests will flourish in this climate.

As the result of his observations and interviews with other parties, Prof. Coquillette gives it as his candid opinion that were any of the Florida scales to be introduced into a large, growing orange tree where they would be in a great measure protected from the direct rays of the sun, that they would then continue to live and multiply in any portion of Southern California where orange trees can be successfully grown, an opinion concurred in by Dr. Claflin of Riverside, who spent several months in Florida last winter investigating the scale insects there.

It is the sense of this commission that the insects being introduced into the county on Florida trees are dangerous and injurious to the fruit interests of the county, and we feel justified in the vigorous measures we have taken to prevent the spread of the pests; and we deem it of the utmost importance that in the future the greatest care should be exercised to prevent the introduction of the pests into the county.

We take great pleasure in rendering to you a report of our personal inspection of the orange orchards in Alhambra, San Gabriel, Lamanda Park and Duarte during the past month. The condition of the orchards in these localities, and all others in the San Gabriel valley during the last three or four years, has been lamentable and alarming on account of the presence of the red scale insect.

As the result of our inspection, we can report that throughout this valley the red scale has become almost annihilated, probably 95 per cent being destroyed by some agency the origin of which cannot as yet be determined. As the result of this blessing, orange-growing has taken a new impetus, and the growers are in a happy and hopeful mood.

We found the larvæ of the twice-stabbed lady-bird and the lace-wing fly in vast numbers—greater than ever before.

Both of these parasites are known to prey upon the red scale, although not confining themselves entirely to this means of sustenance; still, appearing in such numbers, we naturally conclude that they have very materially aided in reducing the red scale insect.

The months of July and August will determine as to the permanency of the disappearance of this pest, and until such time, on account of the danger of destroying existing parasites of the white and red scale, this commission deems it their duty not to order spraying of orchards in the San Gabriel valley.

Outside this district there are localities where disinfection can be pursued by the fruit-grower without detriment, as parasites of the prevailing pests are not present in sufficient numbers as yet to accomplish desirable results.

We, however, feel that grave mistakes have been made in spraying, and advise in all cases where it is possible that the gas treatment of infected trees be used. This treatment, when intelligently applied, will bring the best results with less expense to the orchardist.

We also desire to report that the *vedalia cardinalis* is present in sufficient numbers in the county to quiet all fears as to the reappearance of the white scale in quantities injurious to fruit trees.

The number of inspectors has been reduced to four, each one of whom at present is doing necessary and effective work. We have in contemplation a still further reduction of this force, with a view of giving more of our personal attention to inspections, that we may act more intelligently and promptly. Respectfully submitted,

A. F. KERCHEVAL, President,
GEORGE J. MITCHELL,
F. EDWARD GRAY.
County Horticultural Commission.

A New and Splendid Technical Treat

The Manufacture of

VINEGAR AND ACETATES,
CIDER & FRUIT-WINES;
Preservation of Fruits and Vegetables.

JUST READY.

A Practical Treatise on the Manufacture of Vinegar and Acetates, Cider and Fruit Wines; Preservation of Fruits and Vegetables by Canning and Evaporation; Preparation of Fruit Butters, Jellies, Marmalades, Catchups, Pickles, Mustards, etc. Edited from Various Sources by Wm. T. Brannt, one of the Editors of "The Techno Chemical Receipt Book" Illustrated by 79 engravings. In one volume, 8vo, 469 pages.

Price $5.00, by mail, free of postage to any address in the world.

CONTENTS.—PART I. The Manufacture of Vinegar. CHAPTER I. Introduction. II. Theory of the Formation of Vinegar. III. The Vinegar Ferment and its Conditions of Life. IV. Products of Acetous Fermentation. V. Methods of Fabrication of Vinegar. VI. Quick Process of Fabrication of Vinegar. VII. Arrangement of a Vinegar Factory. VIII. Artificial Ventilation of the Vinegar Generators. IX. Automatic Vinegar Apparatus. X. Operations in a Vinegar Factory. XI. Preparation of the Alcoholic Liquid. XII. Execution of the Work in a Vinegar Factory. XIII. Disturbing Influences in the Fabrication of Vinegar. XIV. Method of the Fabrication of Vinegar in Apparatus of Special Construction. XV. Further Treatment of Freshly Prepared Vinegar. XVI. Preparation of Vinegar from Various Materials. XVII. Preparation of Vinegar Specialties. XVIII. Fabrication of Wine Vinegar. XIX. Chemical Examination of the Raw Materials and Control of the Operation in a Vinegar Factory. XX. Examination of Vinegar as to the Presence of Foreign Acids and of Metals, as well as to its Derivation. XXI. Manufacture of Wood Vinegar. XXII. Preparation of Pure Concentrated Acetic Acid. XXIII. Acetates and their Manufacture.

PART II. Manufacture of Ciders, Fruit-Wines, etc. CHAPTER XXIV. Introduction. XXV. Fruits and their Composition. XXVI. Practice of the Preparation of Cider and Fruit-Wines. XXVII Cider from Apples and Pears. XXVIII. Fruit-Wines; *a*, from Small Fruits; *b*, from Stone Fruits.

PART III. Canning and Evaporating of Fruit, Manufacture of Catsups, Fruit-Butters, Marmalades, Jellies, Pickles, and Mustards. CHAPTER XXIX. Preservation of Fruit; XXX. Evaporation of Fruit. XXXI. Preparation of Pickles and Mustards. Appendix of XVI Tables. Index.

An illustrated circular, 6 pages, 4to, giving the full Table of Contents of this volume, will be sent free of postage to any one in any part of the world who will apply by letter.

Our new and Revised Descriptive Catalogue of Practical and Scientific Books, 86 pages 8vo. A List of Books on Distillation and Rectification of Liquors, Brewing and Fermentation, Wines, Sugar, Starch, etc., as well as a circular showing the full table of Contents of "The Techno-Chemical Receipt Book," sent free of postage to any one in any part of the world who will furnish his address.

DIVIDEND NOTICE.

The German Savings and Loan Society,
526 California Street.

For the half-year ending June 30, 1890, a dividend has been declared at the rate of five and forty-hundredths (5 40-100) per cent per annum on Term Deposits, and four and one-half (4½) per cent per annum on Ordinary Deposits. Payable on and after Tuesday, July 1, 1890.

GEO. TOURNY, Secretary.

SWINE YARD.

Condensed Statement on Hog-Raising.

Thos. Convey, in a Wisconsin Farmers' Institute, made the following instructive talk:

Give the pig a good start. Few feeders recognize the necessity of giving the young pig a good start. If through want of proper judgment, or want of care in changing it from the milk of the sow to other food, liquid or solid, it suffers from impaired digestion or defective nutrition, it may get a setback from which it will never fully recover.

Food of Support and Production—The principal part of our hog crop is marketed when they are about 18 months old. The average weight at that age could be easily attained by a pig nine months old, the amount of food consumed by the former being nearly twice as much as that eaten by the latter, the younger pig receiving more during the early and the older requiring more during the latter part of its existence. A certain amount of food is required to keep an animal in its present condition. This is termed the food of support. All food given in excess of the food of support is termed the food of production, and in feeding should go to increase the weight. The food of support constitutes about seven-tenths of a full ration, but the food of support for a restless, irritable hog may very nearly approach the food of production for a well-fed hog, the cravings of the appetite of the former causing him to take a needless amount of exercise, and all muscular exercise is at the expense of food. The poor hog also becomes the prey of internal parasites. When placed upon full feed, as he must be to prepare him for market, he overeats, there is over-distention of the stomach, causing comparative inaction of that organ, and he can only digest and assimilate a portion of the food he consumes.

Points in Favor of Early Maturity.—The younger hog is converted into a more edible product, commands a better price, is generally ready for a better market, gives quicker returns and requires less attendance. He can be fed when on pasture, the droppings are not wasted, and food is not expended in keeping up animal heat during the entire winter months.

About the only argument that can be made in favor of keeping the older hog is because our daddies did it. Profitable hog feeders for market is not possible after the first year. You not only have to provide for additional growth, but also for organic waste in the growth, already secured, as mutability is one of the inexorable laws of nature. This waste is preammably greater in a large animal than in a small one.

Feeding to Produce Gain.—Repeated experiments have demonstrated beyond a doubt that the most profitable feeding is during the early period of an animal's existence. This is especially true of the hog. The modern hog, with liberal feeding, will reach maturity in about two years.

Prof. Sanborn of Missouri, in more than 100 feeding tests, determined that to make a certain amount of gain, pigs weighing 220 pounds required 18 per cent more food, pigs weighing 270 pounds required 78 per cent more food than pigs weighing 70 pounds.

Prof. Hunt of Illinois determined, by actual experiment, "that the gain for the amount of food consumed decreased during fattening; also, that an insufficient food supply for two weeks caused a considerable loss in feeding thereafter."

Feed Young Animals: Chemistry informs us that the younger animal utilizes more of the elements contained in the food than the older animal does.

Prof. Henry says of feeding cattle: "You cannot be too careful about putting your feed and money into young cattle and avoiding old ones." This is more applicable to hogs than cattle, as the hog reaches maturity in about one-half the time cattle do.

Peas and Oats—Peas and oats sown together are a very valuable crop. They can be sown at the rate of one bushel of peas and one and one-half bushels of oats per acre. This crop can be cut with the binder and thrashed as readily as oats alone. Care should be taken not to sow on ground where oats lodge. They should be sown early. I raised last year 40 bushels per acre, weighing 44 pounds per bushel. When ground, they are a good substitute for bran and shorts, but may be fed whole to hogs. The object of improved agriculture is to obtain the largest amount of nutritious and life-sustaining substances from the smallest possible space. This, to a considerable extent, is secured by retaining and increasing the fertility of the soil, and by skillful feeding; but the customary way of hog feeding is as great a robber of fertility as the much condemned wheat raising. Grain and milk are largely fed to hogs in pens, without regard to saving manure, for it is leached out and washed away, and only a small portion of the least valuable part returned to the soil. Added to this is the loss occasioned by washing away of the surface soil in corn. A good clover pasture will produce more growth than three bushels when corn is fed exclusively. All foods consist of certain elements. All farm animals consist of about the same combination of food elements. The right combination of nutriments to promote the most successful growth of an animal is not found in a single article of food. The different articles of food are generally divided into two classes: First—Proteine foods, also termed flesh-formers. Second—Carbohydrates, also termed fat-formers. Clover, oats, peas, beans, bran, shorts, skim milk and buttermilk belong to the first class, as they are rich in bone and muscle forming elements. Corn, barley, whey, roots and acorns belong to the second class, as they are rich in heat and fat-producing elements.

What and How to Feed.—Corn should never be fed as an exclusive ration except at the close of the fattening period, and then only for a limited time. Whey should always be fed sweet, as the small amount of solids it contains consists mainly of sugar of milk. In souring the milk sugar is converted into an acid, and has little or no value as a food. Whey should always be supplemented by a nitrogenous food. It should be fed as fresh as possible, and can be very profitably fed with corn. Skim-milk should always be fed sweet. Sour feed of any kind is of questionable value; a slight degree of acidity may not be injurious in some kinds of food, but this does not apply to feeding skim-milk and whey.

Give a Proteine Ration.—Pigs usually receive a ration too rich in carbohydrates and deficient in proteine. The necessity of giving a nitrogenous or proteine food cannot be overestimated, especially to young pigs, as they require twice as much nitrogen as old hogs; feeding proteine foods alone, as they are constipating and, except clover, costly. An experiment has demonstrated that one bushel of corn will make as much pork as three bushels of oats; yet good oats are an excellent hog food, being rich in nitrogen and the ash that is necessary for the formation of bone.

Give a Balanced Ration.—The advantages of giving a properly balanced ration, suited to the age of the pig, are: You secure greater growth with a given amount of food, and you obtain also a better quality of meat. There is a more perfect growth of bone, and greater muscular development, both being promoted by a moderate amount of exercise. A high degree of muscularity indicates a condition of the system the least liable to disease, also the most perfect condition for breeding animals. Prof. Henry says that pigs should not be confined to close quarters for more than 60 days. This is certainly long enough.

Cooking food: While I am satisfied that the tests carried on by our experiment station prove that giving hogs cooked food exclusively does not pay, yet I believe for fall feeding, where hogs are taken off the pasture, it is very advantageous to feed once a day on cooked food. For this purpose roots, cooked about the same as for table use, should be mixed with ground oats, rye or other nitrogenous food. Sugar beets are very valuable for fall feeding, but turnips, raw or cooked, are better for winter feeding as they are better keepers.

The Right Kind of Food: Another essential of successful hog-breeding is to give the right kind of food. All the substances that enter into the make-up of an animal are derived from its food. No single article of food is capable of supporting a healthy hog, except for a limited period. Grass, especially clover, is one of the best of hog foods, but it is too bulky for the stomach of a hog to produce the best results. It should always be supplemented with grain. One bushel of corn fed to a hog when it has access to fields where the land is rolling, this being augmented by observing a suitable rotation with grass.

Oakland Classical and Military Academy.

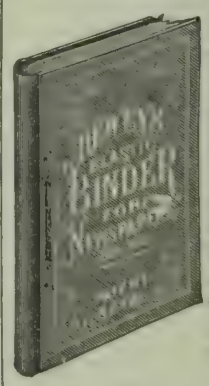
Col. W. H. O'Brien, long favorably known in Oakland educational circles, has opened a school under the above name, the object of which is the moral, mental, and physical training of boys and youths, receiving them as boarders and members of the family, and carrying them through systematic courses of study, preparatory for business, social life, or the university. Special attention is given to physical culture, and to such discipline as will develop "a sound mind in a sound body."

The academy is located at 1020 Oak St., between Tenth and Twelfth Sts. The grounds are extensive, embracing nearly five acres within 100 yards of Lake Merritt, and shade trees are plentiful.

The buildings are especially adapted to school work. The main house is of brick, with all modern conveniences. The study halls and recitation rooms are large, well lighted, and well ventilated. The bedrooms are large and well furnished. The schoolrooms and sleeping apartments are heated with steam. There are also two large buildings, 50x80, two stories high, which may be used for a gymnasium, drill hall, etc.

The local trains, broad guage, pass every half hour within three blocks of the Tenth St. entrance. The narrow gauge terminus is within a third of a mile of the grounds, and the horse-cars to East Oakland and Fruit Vale pass within a block of the academy.

For terms, tuition, board, etc., address W. H. O'Brien, 1020 Oak street, Oakland, Cal. Fall term begins July 16, 1890.



"THE IRMA" is a home school for girls, founded at Vallejo two and a half years ago by Rev. and Mrs. John M. Chase. It is named for their eldest daughter, who took a lively interest in the project, but suddenly died before the school was opened. The aim is "to assist in the development of the best types of home and school life and to prepare the pupils for lifelong usefulness." The number of boarders is necessarily limited to 20. From a visit to the fine building, which stands in handsome grounds on a commanding hill, and a somewhat intimate acquaintance with Mr. Chase, the principal, we feel justified in recommending the "Irma" very highly.

Our Agents.

To Subscribers and Readers.

A HANDY PAPER BINDER—A. T. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, and very cheapest of all economical and practical file binders. Newspapers are quickly placed in it (as received) and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price (size of this paper, Harper's Weekly, and Scientific American), 75 cents; postage 10 cents. Postpaid to purchasers of this paper, 50 cents. For sale at this office. Send for illustrated circular. Agents wanted.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Always Take a Receipt.

Subscribers to this paper are earnestly requested to take a receipt for every payment made on subscription, no matter how small the amount or to whom paid. We use printed receipts, with stubs attached, to prevent mistakes, through carelessness (or other reason), by agents or others. For our mutual interests *take a receipt*, whether you preserve it or not.

BUGGIES AND BUCKBOARDS.—A complete assortment of vehicles in every grade and style. For circulars write Frank Brothers, San Francisco.

OLIVE PRESS

The press is satisfactory in every way and every one who has seen it work thinks it ahead of any press yet in use.—KATE F. WARFIELD, Glen Ellen, Sonoma county.

It works most admirably.—J. H. DRUMMOND, Glen Ellen.

The vintage is over; have used your press, to press about 800 tons of grapes, with entire satisfaction. It works well and is easy to operate.—L. DE TURK, Santa Rosa.

The wine press was used during the vintage and gives satisfaction. GEO. WEST, El Vino Vineyard, Stockton.

The wine press has accomplished all you claimed for it and, in fact, more.—R. J. NORTHAM, President Golden Belt Wine Co., Anaheim.

I find it so entirely satisfactory that I take pleasure in commending it to the public.—ELI T. SHEPPARD, Glen Ellen.

A child can move it from one end of the winery to the other. Has given me perfect satisfaction.—J. B. J. PORTAL, San Jose, Cal.

Although I have at present only ten acres of vines, would not part with the press at any price.—WILLIAM PFEFFER, Gubserville, Cal.

Is the quickest, most powerful and easiest to handle of any wine press I ever saw, and undoubtedly the best press in the market.—JOSEPH WALKER, Windsor, Cal.

We regard the wine press as superior to any other press we know of; in point of simplicity, efficiency and economy of labor, in our opinion it has no equal.—P. & J. J. GOBBI, Healdsburg.

I am very well satisfied with the toggle lever and screw wine press. It has worked well during the season.—WM. ALLEN, Mountain View Wine Co., San Gabriel, Los Angeles Co., Cal.

The Wine Press gives satisfaction; it works well and is easy to operate.—W. METZGER, Santa Rosa.

Have much pleasure in stating that the press has given every satisfaction.—J. LAWRENCE WATSON, Glen Ellen, Sonoma county.

AGENTS WANTED EVERYWHERE Something new. The Smith Patent Improved Combined Kitchen Utensil consists of a can for baking powder, cream tartar, spices, etc.; a measure for sugar, flour, cornstarch, farina, rice, etc.; a grater for nutmegs, cheese, bread, potatoes, squash, lemon or orange rind; a dredge for spices, sugar, flour, pepper and salt; a biscuit, cake or cookey cutter; a doughnut cutter, a patty or tart cutter; also a nutmeg, stick cinnamon and mace holder. It is the handiest and most practical utensil that has ever been seen. Calculated to lessen the burden of the practical house wife. By mail, 50 cts. SMITH MFG. CO., Alameda, Cal. To any body sending us the correct solution to the following problem we will send a Utensil free: A liquor merchant has a barrel of whisky, but he only has a 5-gallon and a 3-gallon measure, and he wants to measure off 4 gallons. How is he going to do it? We, however, limit the amount of Utensils to 4 for each town for the correct solution. Those who are too late will not be answered.

SANTA CRUZ! SANTA CRUZ! SANTA CRUZ!

THE MOST DELIGHTFUL SEASIDE RESORT OF THE WORLD!

SURFSIDE!

Is the most beautiful tract of land in Santa Cruz. It commands charming views of the whole of Monterey bay, of the Pacific ocean and of the Santa Cruz mountains. It lies on a handsome, elevated plateau, fronts on the famous Cliff Drive, at the wildest and most picturesque part of the bay shore, and adjoins Garfield Park, where the Christian Church of California is now erecting a $15,000 tabernacle and where thousands of people will summer annually from this year on.

LOTS, 50x125, $200 TO $400,

Fronting wide and beautiful avenues, on easy terms.

Maps of Santa Cruz and Surfside, price lists and descriptive matter mailed free to any address.

MERY'S IMPROVED PIONEER BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

STILL AT THE FRONT.

VALUABLE IMPROVEMENTS HAVE BEEN ADDED THIS YEAR.

This Mill has been in Use on this Coast for 9 years.

TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 250 of them in use in California, Nevada and Oregon.

It is the most economical and durable Feed-Mill in use. I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

GRAINLAND, BUTTE CO., CAL., June 9, 1887.

Mr. M. L. Mery—DEAR SIR: We have used one No. 2 Roller Barley Crusher now for eight years and have used it steady during that time, have crushed 16 tons a day and the Crusher is as good to-day as when it came out of your shop. I am satisfied that it is the best mill made. You may reconstruct this testimonial to the best advantage for you and sign our names, for you cannot overrate the merits of your mill. F. E. REAM, JOHN P. SUTTON.

DURHAM, May 21, 1887.

Mr. M. L. Mery—DEAR SIR: In reply to yours of the 19th, would say that I crushed from two to two and a half tons per hour, but could crush three and a half tons if my elevators were large enough to carry the barley from the machine. The No. 1 machine I used at Gridley was run on a sack a minute, but if we got behind we could run through five tons an hour, and do good work. The machine I use here is a No. 2. Yours, WM. M. TAYLOR.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.

Books for Pleasure and Profit.

Cushing's Manual.—Revised Edition, with Additions and Corrections. No one who wishes to take part in the proceedings of any organized body can afford to do without the help of this little volume; knowledge of its contents alone is a valuable education, and the price is so moderate that no one need deprive himself of its teachings. Also containing the Constitution of the United States and Declaration of Independence. Containing 200 pages.

Cloth gilt. Price..... 50 cts.

Wilford's Original Dialogues and Speeches for Young Folks.—Being by far the most complete of its kind ever issued. This work supplies that palpable need, which has so long been evident in books of this class, that of *Dialogues* and *Speeches* adapted to the natures of children. This work contains **19 Original Dialogues** and 53 Speeches, especially adapted for children between the ages of 5 and 12 years. 160 pages.

Paper cover, Price..... .....25 cts.

Brudder Gardner's Stump Speeches and Comic Lectures. Containing the best hits of the leading Negro delineators of the present day, comprising the most amusing and side-splitting contribution of oratorical effusions which have ever been produced to the public. The newest and best book of Negro comicalities published. 160 pages. Bound in illuminated paper covers. Price.....25 cts.

Burdett's New Comic Recitations and Humorous Readings. A new volume of comic and humorous selections, compiled by the celebrated humorist, James S. Burdett many of which have never before been published in book form. In addition to the new and original pieces here contained, this book has the advantage of *bringing together into one volume* all of the very best selections of a comic nature which have hitherto attained a wide popularity through the public representations of the most renowned humorists of the day. It is the newest, handsomest and choicest book of its kind. Price.....25 cts.

The Candy Maker. A Practical Guide to the Manufacture of the various kinds of Plain and Fancy Candy. The fullest directions are given for getting up the most exquisitely beautiful looking candies, as well as the most alluring to the palate; while equal attention is given to all the plainer kinds, so universally liked by the "little ones." Every Direction, every Recipe, every Concoction of which Sugar, Spice and Essence are the ingredients, is given in such a plain way that a child can understand them. Large 12mo. Price..... 50 cts.

Wilson's Ball-Room Guide and Call-Book.—The most complete published, containing full and requisite information for the giving of Receptions, Parties, Balls, etc., with clear directions for calling out the figures of every dance together with thirty-eight pages of the latest and most fashionable copyright music, and containing nearly one hundred figures for the "German." Bound in illuminated board cover, with

Bound in illuminated paper cover, Price.....50 cts.

Dunbar's Complete Hand-Book of Etiquette.—This work presents, in a clear and intelligible manner, the whole art and philosophy of Etiquette. Among the contents are: Bodily Deportment, Speak Grammatically, Self-respect, Pedantry, Social Characters, Traveling, Useful Hints on Conversation, Forms of Invitation, Letters of Introduction, Bridal Etiquette, Ball-room Etiquette, etc., etc. Bound in Boards, cloth back. Price.....50 cts.

Carpenter's Manual.—Instructs in the use of tools and the various operations of the trade, including drawing for carpenters, forms of contracts, specifications, etc., with plain instructions for beginners, and full glossary of terms used in the trade. Also gives plans and specifications for building a number of frame houses. Illustrated. Price.....50 cts.

Jenny June's Practical Cook Book.—An established favorite in thousands of families. The recipes in it are all the result of practical experience, and there is beside a useful chapter of recipes for dishes of Hebrew families. Containing 1,200 choice and carefully tested receipts, embracing all the popular dishes and the best results of modern science reduced to a simple and practical form. Cloth, $1.00. Illustrated.

¡Habla V. Espanol?

Spanish at a Glance. A new system arranged for self-tuition, being the easiest method of acquiring a thorough knowledge of the Spanish language ever published.

Bound in paper cover, Price ..... 25 cts.

A portion of the above works will be sent from our office direct, while some will be ordered from other publishing houses, requiring some two weeks longer time. N. B. The above prices include the prepayment of postage by us.

Address. DEWEY & CO.,

220 Market St., San Francisco, Cal.

A New Early Yellow Freestone.

EDITORS PRESS:—I send you a new seedling peach, it having fruited this year for the first time, and as yet I have not given it a name. This peach is a seedling of the Foster. A clean, free stone, dry, yellow flesh, a beautiful red cheek on a yellow ground, and ripens two weeks ahead of Foster or Early Crawford, and in ripening follows close after Parsons' Early or Hind's Surprise. I consider this the most valuable acquisition to the peach family that we have had for years as its early ripening makes it valuable to ship East, and for drying it will come in ahead of Foster, thus prolonging the time of drying two weeks.

The prospect for fruit and raisins in Tulare and Fresno counties is fair, and the prices good. French prune orchards that have been planted around here are yielding far beyond the expectations of us all. Plenty of five and six year old trees this season will produce 500 lbs. of green fruit, and at the present prices two acres will net more money than 160 acres in wheat. The young vineyards and orchards are doing well, and no loss of trees on account of heavy rains last winter. J. H. THOMAS.

Visalia.

[This may prove what peach-growers have been so long waiting for—a good-sized yellow peach coming before Crawford's Early. Mr. Thomas's description of the fruit is borne out by the sample he sends. Judging by the single fruit sent us, we conclude the seedling is much inferior to Foster in quality and somewhat smaller—but for a yellow peach two weeks ahead of Foster, if it proves to be reliable for that, it certainly has a great future. —EDS. PRESS.

CATTLE FROM CALIFORNIA.—According to the *Oregonian*, Mr. E. May of the American Dressed Meat Company, who has been buying fat cattle in California for some weeks, returned yesterday, and says there will be no more cattle brought from California this season. The company now have 900 head of fine cattle running on their meadows at Troutdale, and will be able to secure future supplies from the ranges of Oregon and Idaho. Well on toward half a million of dollars has been sent from Oregon into California for beef cattle this spring. This, says the *Oregonian*, is too bad, and Oregon farmers should take steps to see that it does not occur again.

J. J. HARSHMAN & Co. are to start a creamery presently at Downey—so says the *Champion*.

Improving the Rivers.

Under an Act of the last Legislature C. E. Grunsky, J. J. Crawford and C. F. Reed were appointed a commission to examine the San Joaquin and Sacramento and the bay and report upon the present conditions. These gentlemen planned a trip along the river so that they could meet and hear statements from interested parties at different points. They started out northward from Sacramento on Tuesday of this week. The following itinerary may enable some of our river readers to meet the commission at the following points:

Friday, July 11th. Marysville to Chico, 5:10 P. M; Saturday, July 12th, Chico to Red Bluff, 3:15 A. M.; Sunday, July 13th, Red Bluff to Orland and to Sacramento river at Swift's Point, 9:30 A. M; Monday, July 14th, down Sacramento river; Tuesday, July 15th, to Stockton; Wednesday, July 16th, up San Joaquin river.

It would certainly be desirable for river-side residents and owners to meet the commission and give them the results of their long experience and observation.

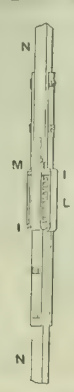

Fig. 4.

Fig. 2.

Cushion Springs for Windmills.

We illustrate herewith the I. X. L. cushion spring for windmill pump rods. By its use a uniform strain is produced on the mill and pump, both on the up and down strokes (as the spring is double acting) thus preventing sudden jar, and adding very materially to the life of both mill and pump. It will often prevent damage to mill and pump in case of pump becoming inoperative by freezing up or from any cause. Fig. 3 represents the covered and fig. 4 open pattern. Figs. 1 and 2 show the lower portion of a windmill tower and the application of the spring to the pumprod N. The spring can be adjusted to any tension desired, and the attachment made to the pumprod, by anyone in 30 minutes time. For full particulars address the U. S. Wind Engine & Pump Co., Batavia, Illinois, who also make the Halladay Standard pumping and geared windmills, U. S. Solid Wheel and Standard vaneless pumping windmills, pumps, tanks, tank heaters, corn shellers, feed grinders, stalk cutters, standard horse haying tools, etc.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING JULY 1, 1890.

431,303.—AUTOMATIC AIR BRAKE—G. B. Williams, Portland, Or.

431,304 —RELEASING ATTACHMENT FOR AIR BRAKE—G. B. Williams, Portland, Or.

The following brief list by telegraph, for July 8, will appear more complete on receipt of mail advices:

California—William Brooks, Oakland, broiler or toaster; Cornelius Butterbaugh, Los Angeles, car track; Frank M. Dreibelbis, Los Angeles, detractable horse-foot pad; Frank Koritick, S. F., combination tool; Florence E. Monteverde, S. F., pump distributor; Samuel S. Richardson, Happy Camp, damper; Charles T. Stanford, S. F., device for oper ting elevator hatchway gates; James M. Thorpe, Santa Rosa, adjustable axle nut; Frederick B. West, S. F., cable sheave.

Oregon—George B. Williams, Portland, automatic air-brake.

Washington—William J. Burke, Seattle, headlight fo locomotives.

Arizona—Thomas J. Thorp, assignor of one-half to D. J. Brennan, Flagstaff, horse-collar; Thomas J. Thorp, assignor of one-half to D. S. Brennan, Flagstaff, running gear for wagons.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

The Freeman Feed-Cutter.

The S. Freeman & Sons' Mfg. Co. of Racine, Wis., have just issued their catalogue for 1890, a large and fine publication. It will be mailed free of charge to any address.

The No. 16 Freeman feed-cutter is claimed to be adapted to the use of stock-raisers feeding 80 or more head of stock, and is especially adapted for cutting ensilage. The Freeman power cutter is also made in two larger and four smaller sizes than this one, besides a full line of all sizes of hand cutters.

The catalogue referred to is made all the more valuable by having added to it an ensilage treatise, containing many very useful suggestions as to the location and building of silos and the handling and care of ensilage. Send for it.

1890—THE STATE FAIR—1890

OF 1890 AT

SACRAMENTO,

SEPTEMBER 8th TO 20th INCLUSIVE.

CALIFORNIA'S ANNUAL EVENT!

Showing Progress Made in Agricultural, Mechanical and Industrial Arts.

LIBERATI'S FAMOUS MILITARY BAND OF FIFTY SELECTED ARTISTS AND DISTINGUISHED VOCALISTS

Will give a Grand Musical Concert at the Pavillion each evening from September 15th to 20th.

THE COUNTY EXHIBITS made at these exhibitions have attracted more attention to localities represented than any other form of advertising advanced.

EVERY COUNTY IN THIS STATE should have an exhibit. Begin with harvest and secure samples of your products. The money premiums will almost pay the entire cost of your exhibit.

NEW-COMERS ARE AWAITING to view the products of the State before locating. Hence it behooves every county to be up and stirring.

IT IS AT THESE EXHIBITIONS the Manufacturer meets the Merchants of the interior.

IT IS AT THESE EXHIBITIONS the Merchant views progression made in all mechanical and industrial callings. Hence it behooves the Manufacturer to be up and stirring.

AT THESE ANNUAL EXHIBITIONS the visitor may combine business with pleasure, as the Board of Dirrctors provides for all kinds of recreative amusement in the varied program of events.

THE CONTESTS OF SPEED showing advancement made in the breeding o high-class horses, will be a feature.

THE GRAND PARADES OF LIVE-STOCK will embrace the various classes of horses, and all the improved breeds of cattle.

OPEN-AIR AMUSEMENTS FOR THE DAY and MUSICAL CONCERTS FOR THE EVENING will afford ample entertainment for all who visit the State Fair.

Every attention will be rendered exhibitors by the Board of Directors.

Premium lists are now ready, and will be furnished upon application to the Secretary, who will also furnish other necessary information that may be desired. Apply at once for space.

Remember, the Southern Pacific Company TRANSPORTS ALL EXHIBITS FREE OF CHARGE to and from the Fair, and gives EXCURSION RATES TO ALL THAT ATTEND.

CHRISTOPHER GREEN, President.

EDWIN F. SMITH, Secretary.

BACK FILES of the PACIFIC RURAL PRESS (unbound) can be had for $2.50 per volume of six months. Per year two volumes) $4. Inserted in Dewey's patent binder, 50 cents additional per volume.

Dairyman's Account Book FREE.

The Dairyman's Account Book is the most practical thing of the kind ever seen. It gives ruled pages for daily record of milk yield, butter made, and sales, for 12 months; convenient size, nicely printed and bound. Wells, Richardson & Co., Burlington, Vt., manufacturers of the celebrated Improved Butter Color, the purest, strongest, and brightest color made, will send a copy free to any butter maker who writes enclosing stamp. Also sample of their Butter Color to those who have never used it, and a pretty birthday card for the baby, if you ask.

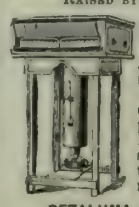
POULTRY, ETC.

OAKLAND POULTRY YARDS,

Cor. 17th & Castro Sts., Oakland, Cal.

Manufactory of the PACIFIC INCUBATOR and BROODER. Agency of the celebrated silver finish galvanized wire netting for Rabbit and Poultry-proof fences, the Wilson Bone and Shell Mill, the Pacific Egg Food, and Poultry appliances in great variety. Also every variety of land and water Fowl, which have won first prizes wherever exhibited. Eggs for hatching. The Pacific Coast Poulterers' Hand-Book and Guide, price, 40c. Send 2c. stamp for 60-page illustrated circular to the PACIFIC INCUBATOR CO., 1317 Castro St., Oakland, Cal.

Are you using Wellington's Improved Egg Food for Poultry! If Not, Why Not?



If not, your poultry is sickly, and you are getting very few eggs. Two substantial reasons for getting it at once: This has been the Standard Poultry Preparation for more than eleven years. It will positively CURE and prevent every disease of poultry. And all who use it will tell you they have plenty of eggs to sell now that the price is high, and the price is going still higher. Use it as soon as possible. Every merchant keeps it.

Send for circular and prices.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, July 9, 1890.

Now that the midsummer holidays have passed, trade in farm products is expected to be resumed with increased vigor. Already there is an appreciation in some kinds of fruits and also in wheat and barley. The higher prices ruling abroad for wheat have favorably affected our market for the cereal. The following is to-day's cablegram:

LIVERPOOL, July 9.—Wheat—Firmer. California spot lots, 7s to 7s 2½d; off coast, 37s 6d; just shipped, 37s; nearly due, 37s 6d; cargoes off coast, quiet but firm; on passage, demand for cargoes near at hand, while there is no inquiry for more distant periods of delivery; English and French country markets, dearer; wheat and flour in Paris, quiet; weather in England, showery.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	July.	Aug.	Sept.	Oct	Nov.	Dec.
Thursday	7s 1d	7s 0½d	7s 0½d	7s 0d	7s 0d	7s 0d
Friday	....	....	....	....	....	....
Saturday	7s 1½d	7s 0½d	7s 0d	7s 0½d	7s 0d	7s 0½d
Monday	7s 2d	7s 0d	7s 0½d	7s 1d	7s 1d	7s 1½d
Tuesday	7s 1d	7s 1d	7s 0½d	7s 0d	7s 1½d	7s 1½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N D.	Market.
Thursday	38s 6d	38s 0d	38s 6d	quiet.
Friday	....	....	....	....
Saturday	38s 6d	38s 0d	38s 6d	Advancing
Monday	38s 6d	38s 0d	38s 6d	Stronger.
Tuesday	38s 6d	38s 0d	37s 6d	Firmer.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
Thursday	93½	92½	90½	91	91½	94½
Friday	....	....	....	....	....	....
Saturday	....	....	....	....	....	....
Monday	92½	92½	91½	....	....	95½
Tuesday	92½	92½	92½	92½	92½	96½

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	July.	Aug.	Sept.	Oct.
Thursday	....	87½	88½	....
Friday	....	....	....	....
Saturday	....	....	....	....
Monday	....	90½	90½	....
Tuesday	....	89½	90½	....

NEW YORK, July 9.—Wheat—98⅜c for cash, 95c for July, 94¾c for August, 94⅝c for September, 95c for October, and 96¼c for December.

CHICAGO, July 9.—Wheat—89⅛c for August and 90c for September.

Foreign Grain Review.

LONDON, July 7.—The *Mark Lane Express* says: Downpours of rains and cold weather have seriously lessened the prospects and caused a hardening of rates. Foreign wheat is firm. The news from India causes depression on the Exchange. A deficiency is expected of 2,000,000 quarters. Official estimates place the deficiency at 500,000 quarters. Oats 6d. dearer, especially American. Round maize slightly improved and was in request. At to-day's market Russian wheat was 3d. dearer. English, California, Australian and Chilean were 1d. dearer and Indian, Argentine and American Red 6d. dearer. Flour was 6d. dearer and maize 3d. cheaper.

The European Crop Outlook.

ST. PETERSBURG, July 8.—An official report says: At the beginning of June the winter and summer crops in Western and Southern European Russia were very good in some districts, good in others, but in the Eastern provinces the crops were less satisfactory. It is expected a large quantity will be available for export. An increased demand is expected in view of the bad Indian harvest and unfavorable outlook for American winter wheat.

Steamer communication has been opened via Aral sea between Charojui, on the Amu Daria, and Kasanlik, on the Sir-Daria.

PARIS, July 8.—At a meeting of the Cabinet, the Minister of Agriculture stated that storms had seriously damaged crops around Paris. In the other parts of France the crop prospects were favorable.

The Kansas Wheat Crop.

KANSAS CITY, July 3.—The new wheat crop of Kansas is rapidly coming into the local market. Dealers pronounce the grain first-class. The weather has never been more favorable for harvesting and thrashing.

Eastern Wool Markets.

NEW YORK, July 3.—*Bradstreet's* says: Business is very dull in all the wool markets. Stocks on seaboard are small and prices would advance if the demand were at all active. Few manufacturers, if any, however, are buying except for their present wants.

PHILADELPHIA, July 3.—Wool is nominal and unchanged.

Southern Dakota Crops.

HURON, S. D., July 6.—The crops throughout South Dakota have made more rapid growth during the past week than ever before known in the State. Reports from all parts of the State, received at the United States Signal office last evening, indicate a splendid outlook.

The Russian Harvest.

ST. PETERSBURG, July 7.—The prospects for the harvest throughout Russia are good. In the Baltic provinces it is exceptionally good.

Hops East.

NEW YORK, July 2.—Some interesting facts have been obtained from various sources concerning the outlook of the hop crop. The acreage of this State is largely reduced, but the crop is in good condition, the early varieties especially. Occasional contracts have been made at 16 cents. One grower in Madison county is reported as still holding his entire crop of 1889 at 25 cents. A few others have unsold crops. Cable reports are to the effect that there is wet and cold weather in England, with an increase of vermin and mold in some sections. The California crop of 1889 is quoted at 18 to 20 cents, the crop of 1888 at 12 to 15 cents, and the crop of Washington about the same.

NEW YORK, July 7.—Hops sparingly offered. Good to choice State and Pacific Coast, 18@20c, with 21c for strictly fancy; other grades as before.

Los Angeles Fruit Market.

LOS ANGELES, July 4.—There seems to be a general boom in Southern California products at present. A San Francisco firm has ordered 2000 cases of figs of 24 boxes to the case. There is also a great demand for California honey at present, owing to the failure of the Eastern crop. It is now bringing 1¼c more a pound than Eastern honey.

There is a representative of a New York firm in this city at present to estimate on what the crop of French prunes will be. His firm stands ready to take the entire crop. The raisin crop in this section will be immense this year. While the raisin crop has by no means yet matured, plenty of buyers have already offered themselves.

Growers of soft-shell walnuts in Santa Ana valley have made a combination to dispose of the crop. It is expected that by the formation of this agricultural trust the producers will realize a better figure for their stuff than they would as individuals. In fact, it is said that they have already been offered 1¾c a pound more for nuts than was paid last year. Growers in the combination are jubilant over the results that have thus far been attained.

The entire Lima bean crop has already been sold.

Local Markets.

BARLEY

	Buyer Season. H.	L.	*Buyer 1890. H.	L.	Buyer 1890. H	L

BAGS—The market shows signs of easing off, owing to the bulk of the demand being met. Standard-sized grain bags are quoted in lots to suit at 7c.

BARLEY—For sample parcels there has been quite an appreciation. In options, trading has been light, owing to sellers fearing to short at present prices. The following are to-day's reported sales on Call:

Morning Session: Buyer 1890—200 tons, $1.13⅞; 100, $1.13¾. Buyer 1890, after August 1st—100, tons, $1.13½; 100, $1.13⅜; 700, $1.13¾. Seller 1890, new—100 tons, $1.06¾ ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.14½ ₩ ctl. Buyer season—100 tons, $1.18½; 200, $1.18¾ ₩ ctl. Buyer 1890, after August 1st—200 tons, $1.14½; 300, $1.14¾ ₩ ctl. Seller 1890, new—100 tons, $1.08 ₩ ctl.

BUTTER—The market has exhibited a stronger tone for gilt-edged. Receipts continue free. Western creamery continues to flood the northern coast markets.

CHEESE—The improved tone noted in last week's RURAL PRESS is more pronounced this week. Choice to extra choice mild is wanted.

EGGS—Strictly selected fresh-laid eggs are slightly higher. Heavy receipts by overland railroad are against the market for other kinds.

FLOUR—The market is strong and fairly active at a slight advance.

WHEAT—Sample wheat fetches more money. Holders are somewhat excited, and, as a rule, ask quite an advance over buyers' bids. In options, trading has been more free. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890—500 tons, $1.43⅞; 100, $1.43¾ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.43⅝; 100, $1.43¾; 100, $1.43⅜ ₩ ctl. Buyer season—200 tons, $1.49⅜ ₩ ctl.

Cereals.

The wheat market made a substantial advance the past week under review, fully justifying the strong bull position taken by the RURAL PRESS in its last week's issue. The advance has element of stability with every encouragement of still higher ranges being reached within the near future. It now looks as if the world's shortage will be larger than heretofore claimed, while there are indications that a speculative bull campaign will be inaugurated soon. The many reverses met by the bulls within the past eight years made them cowards, but now with everything seemingly in their favor, they are justified in believing that a successful upward move can be made.

The wheat crop in the United States promises to be short from 75,000,000 to 85,000,000 bushels in comparison with last year's crop, while the consumption will be larger. In this State there are conflicting views regarding the total yield, but the general opinion is that it will be from 150,000 to 200,000 tons short of last year's. While the crop will be short the grade will be better, consequently the price should be proportionately more. It is to be regretted that leading farmers do not help the writer in securing crop advices. If they would furnish us with such information it will prove of inestimable advantage. Address all letters regarding crop and prices to J. R. Farish, Produce Editor RURAL PRESS. No names will be used unless by permission.

From Oregon and Washington our advices indicate a good crop. The acreage is reported to be more, while the yield to the acre will be a full average. Taking the carry-over into consideration and this coast will have a surplus this year of fully 1,400,000 tons and it may go as high as 1,500,000 tons.

The large surplus of wheat on this coast is attracting more vessels to this port, as well as to Portland and Puget Sound ports. The only danger now feared by leading exporters of not having a large wheat fleet and reasonable charters, is that of high tariff (provided there is an increase) driving ships from us, for when vessels can bring inward cargoes they can take outward cargoes for less money, but if they are unable to get the former but have to come in ballast then they have to get high charters for the latter, and the higher wheat charters are outward, the worse it is for farmers.

The barley market has gained in strength at steadily advancing prices. The demand is both consumptive and speculative. The short crop on this coast and light carry-over from the season of 1889–90 are the chief factors in promoting the improvement. The grade this year is better, both in plumpness and in color than for several years past. Samples of brewing which were sent to the Chicago, Milwaukee and New York markets provoked favorable comments, and will doubtless lead to liberal orders from those points.

Oats have not shown any material advance, notwithstanding continued light receipts. Consumers or feeders evidently think that prices are unduly inflated and that with liberal receipts of new the market will shade off. Time alone will prove whether or not their opinion is well grounded. The crop on this coast does not show any increase over last year's, while the stock of old is light.

Corn has held to steady prices throughout the week. With higher markets at the East, under a more active European demand, it is reasonable to look for still better prices on this coast.

Rye is steadier, but no higher.

Feedstuffs.

In ground feed there is a very strong market for bran, middlings and ground barley, with a slight advance in the latter. The demand is fairly active.

New hay is coming in quite freely, but the market cleans up well under an enlarged demand. The shipments out of the State are quite heavy. Nevada advices report the crop largely in excess of last year's but from Oregon and Washington our advices do not appear favorable to much if any increase over that of 1889.

Fruits.

Cherries and currants are about out of market, consequently we drop the quotations from out of our list of prices.

There continues strong competitive buying for for peaches, Bartlett pears, prunes and apricots. Prices have been forced to still higher figures. The excited condition of the market makes it difficult to give correct quotations; all that can be said is that holders of choice to extra choice fruits can about name their own prices. The present condition of the market was foreshadowed by the RURAL PRESS early in the season, and its fulfillment is a source of gratification to all in interest.

In berries there are no material changes to note outside of a shading off in blackberries under freer receipts. Canners are putting up a large increased quantity of them, which will keep the market from going too low, as it went in 1889. The quality this year is good.

For raisins in the sweat better contracts can be made now than it was possible to have made in last month. The scarcity and consequently high prices ruling for other fruits have a favorable influence, as has the cholera scare abroad. Eastern importers will hardly dare to import many Spanish raisins with cholera in that country.

Dried fruits are higher under an active competitive buying in sympathy with higher markets at the East. Sun-bleached apricots are selling at 12@14c in sacks and 13@15½c in boxes. Nectarines are readily sold at 11@12½c and prunes at 7@9½c according to size. Peaches are quoted at an advance on last week's prices. It now looks as if apples, plums and pears will command better prices than they did in last year.

Vegetables.

In garden truck there is a small decline in string beans, summer squash, garlic, peas, tomatoes, etc. Cabbages and root vegetables hold steady. Rhubarb and asparagus are about out of market.

Onions under light receipts and a good demand are higher, closing fairly firm at the advance under a good local and shipping demand.

Potatoes have strengthened under moderate receipts and a good demand. The quality this year shows an improvement over that of 1889.

Live-stock.

Bullocks continue depressed. The depression is said to be due to free offerings and light buying owing to a lessened consumption. Mutton sheep hold strong, as do lambs. Hogs are essentially unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4@4¼c ₩ lb; dressed, 6@7c ₩ lb.; heavy, 3¾@4c ₩ lb.; dressed, 5½@6c ₩ lb. Stock hogs, 4¼@4½c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¾@—c ₩ lb.; second quality 5@5½c ₩ lb.; third quality, 4½c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₩ lb.; ewes, 7@7½c ₩ lb.; lamb, spring, 7½@8½c.

Miscellaneous.

Poultry is moving off fairly well. Large well-conditioned young hens are wanted, as are large well-conditioned young roosters and ducks.

Beans are moving slowly. Judging from all obtainable information the crop at the East will probably be light, which if true, should cause our market to hold strong.

Honey is steadier at last quoted prices. The demand is improving.

Hops for future delivery continue in good demand, with as high as 19c reported to have been paid for extra choice.

Wool is barely steady for fine fleeces, but for wools suitable for luster goods the market is firm.

Exports by sea the past week aggregate as follows: Flour bbls, Honolulu, 520; Japan, 1045; Vladivostock, 125; Manila, 1250. Barley ctls, Honolulu, 1075; Japan, 1045. Hay bls, Honolulu, 781. Beans lbs, Butavitavi, 850; Victoria, 7974; China, 18,124. Hops lbs, Victoria, 150; Japan, 666. Wine gals, Japan, 250.

From the *Commercial News* of July 9th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	236,481	250,623
On the way to neighboring ports	21,711	27,726
In port, disengaged	13,521	9,876
In port, engaged for wheat	44,587	50,636
Totals	316,300	338,861

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1889, to July 1, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	13,702,191	13,385,095
Flour, bbls	1,189,629	909,032
Barley	952,248	1,298,153

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

California Fruits East.

NEW YORK, July 3.—California canned fruits are now held at from 5 to 15c per doz advance on the opening prices in this market.

Southern Pacific car 10,583, containing California fruit consigned to agents of the California Fruit Union, arrived 40 hours late, and passed through very warm weather, consequently the condition of the fruit was poor. Two hundred and eighty boxes of plums sold from $1.95 to $1.40; 183 boxes Alexander peaches at $3.05 to $1.50; 430 half crates Royal apricots at $1.55 to $1.35.

CHICAGO, July 3.—The Earl Fruit Co. sold a carload of California fruit to-day as follows: Apricots, $1.85 per half-crate; peaches, $2.20 per half-crate; Royal Hative plums, $2.10 per half-crate.

The California Fruit Union sold two carloads at the following prices: Plums, $1.75 to $3.55; Bartlett pears, $5; peaches, $2 to $2 55; apricots, in poor order, $1.55 to $2, and some at $1.40.

NEW YORK, July 3.—The sale of California fruits, which has now fairly begun for the year, promises to be greater than ever before, and the price obtained for apricots and early peaches augurs well for other fruits. This morning 1000 crates and boxes were sold for over $2000.

CHICAGO, July 6.—The Earl Fruit Co. sold two carloads of fruit yesterday. Peach plums brought $4.25 per half-crate, $3.05 per box; Royal Hative plums, $2.90 for fancy to $1.75 for choice per half-crate; peaches, $2 to $2.85 per box; apricots, $2 to $2.15; figs, $1.60 to $1.75. The fruit is in fine order, and prices the highest realized this season.

NEW YORK, July 6.—The first California peaches of the season were sold at auction Saturday for upward of 5c each.

NEW YORK, July 7.—Market here in good shape for liberal supplies of prime fruit. Since the withdrawal of Coast offerings, new canned fruits are stiffer; buyers, however, have considerable start in orders. Dried fruit firm, but not promptly responding to the excited feeling of shippers.

CHICAGO, July 7.—The Earl Fruit Co. sold one carload of peach plums at $2.80 to $2.90 per half-crate; peaches, at $2.35 to $2.70 per box; Royal Hative plums at $1.85 to $2.10 per half-crate; apricots, in over-ripe condition, $1.05 to $2 per half-crate.

Porter Bros. sold five carloads of apricots at $1.25 to $3.10, except stock by slow freight, which is in very bad order, and which went at 80c to $1.25. St. Catherine plums fetched $1.25; Bartlett pears, $2.55 to $5.35; Clapp's Favorite pears, $3.50; Dearborn seedlings, $2. 65; German prunes, $3; cherry plums, $1.30; peaches, $2.65 to $3.05; Royal Hative plums, $1.50 to $2.45.

NEW YORK, July 7.—The sales of evaporated California apricots are reported at 15½c, delivered here, August and September shipment. Sales are also noted of prunes, 40s and 50s, at 11c here; 12c is now asked.

NEW YORK, July 8.—The local papers are paying an unusual amount of attention to California products, owing to the conditions now obtaining. The trade papers have daily accounts of prices at which peaches, apricots and canned goods are held in the California markets. These papers reach just the class where the publication is the most effective—the dealers in such goods. The prominence of California products is increased by daily comparisons with foreign goods. Statements are reiterated persistently that, in the matter of prunes especially, foreign growers have been forced by the growing popularity of California goods in all the Eastern markets, to imitate California's way of packing, the purpose evidently being to persuade purchasers they are getting the California goods. Florida is not getting one-tenth the advertising here in the trade papers that California is. The flattering feature of all this is that it is unsolicited, and that the facts are printed as mere items of news. Even the daily metropolitan press, which falls to make a speciality of such trade matters, is noticing California fruit in the regular news column. There is not a possibility for doubt, according to the best authorities interviewed, and who call attention to these facts as significant, that California goods will be introduced to twice as many new people this year as during any season preceding. The latest pointers are that Turkish prunes are now selling at from 5¾c to 7½c, with a strong staple market. French prunes hold their own, with small sales at 8¾c to 9c.

CHICAGO, July 8.—The Earl Fruit Co. sold California fruit to-day as follows: Bartlett pears, $4.10 ₱ box; German prunes, half crate, $2.95; Purple Duane plums, small box, $2.40; Royal Hative, half crate, $2.35; peach plums, half crate, $2.35@2.75; peaches, half box, $2.55@2.80.

Porter Bros. sold one carload as follows: Plums, $1.50@3.50; peaches, $2.70@2.75, except one line in bad order, which went at $1.85; prunes, $2.60@3.75; Bartlett pears, $4.05@4.35.

CHICAGO, July 9.—California green fruits are quoted as rather quiet, at the same time steady to firm; quotable as below: Apricots, 20-lb boxes, according to quality, $1.50@2.25; peaches, 20-lb boxes, $3@3.50; prunes, 20-lb crates, Black Tragedy $3@3.50; plums, 20-lb crates, Cherry, $2@2.25; do, 10-lb, $1@$1.25; plums, 20-lb crates, Royal Hative, $2@2.50. California oranges are about all gone. A few Rodi remain and they are of moderate sale. Rodi, small sizes, $6.50@7 ₱ box; do, large sizes, $5@6.50. In beans no improvement is apparent; the demand is light and the weather too warm to expect anything different; offerings are only moderate but the feeling is easy. California Lima beans, choice, 5¼@ 5½c ₱ lb; do, common, 2@4c.

CHICAGO, July 9.—The Earl Fruit Co. sold one carload of California fruits as follows: Peaches, $2 40@2.50; Purple Duane plums, $2 40; Tragedy prunes, half crate, $2.75@2.95; Royal Hative plums, $1.85@2.05; apricots in poor order, $1.25@1.80.

Porter Brothers sold five carloads as follows: Peaches $1.75@3.15; plums, $1.50@3.55; prunes, $2.15@3.70; Bartlett pears, $3.30@3.70; apricots, $1.25@1.75; figs, 85@90c.

SACRAMENTO, July 9.—The first special fruit train of the season was sent East to-day by the Earl Fruit Co., the W. R. Strong Co., the Gregory Bros. and C. W. Reed. The train was made up with shipments for Chicago, New York and Boston.

The World's Fair Big-Tree.

The Porterville *Tidings* gives further particulars as to Mr. Van D ornum's plan for exhibiting at Chicago in 1893, the section of a big redwood from the Mammoth Forest in Tulare county, which was mentioned at some length in the RURAL of June 14th.

For convenience in handling, the section has been divided into 16 parts. First, there is a base section one foot thick, sawed into semicircles. This is surmounted by another section seven feet high, which is hollow, consisting of little more than the bark of the tree. As a roof for this cylinder there are two more semicircles similar to those of the base, thus making a huge pill-box nine feet in hight an 20 in diameter. When exhibited the whole will stand on a circular platform, supported by nine finely-carved legs, eight near the edge and one in the center.

One of the 12 parts of the middle section will be on hinges to serve as a door. One stairway will allow ascent to this circular room, and another to the top. At the fair it is proposed to light up the exhibit, inside and out, with 250 incandescent lights. The chamber will be large enough for 50 persons to move about in.

This curiosity may be placed on exhibition at the Mechanics' Fair in this city, before it is sent to Chicago.

The Fortieth Volume.

The following unsolicited testimonial to the value of the RURAL comes from the pen of an intelligent and conscientious reader—one of the most faithful and respected veteran Patrons:

EDITORS PRESS:—By persistent will, by energy of brain and muscle to battling all obstacles and bearing goodwill to all men and hatred to none, the RURAL PRESS has won the esteem of the thousands who read its columns.

Having been a regular subscriber from its first issue, I can bear witness to the above points, which are to the credit of the publishers and editors of this journal, which is the friend of the farmer and Granger on the Pacific Coast. Its weekly visits reach not only the tillers of the soil, but find their way to the commercial and other branches of trade and traffic. Its Grange columns, headed by our esteemed editor, including the W. M.'s "Desk," also departments for California, Oregon and Washington, bear good news to all and show beautifully the application of Grange principles which makes all true members happier and better in life. I hope the 40th volume will open with many bright auspices. May its future issues be held in high esteem by the intelligent and wide awake readers, thus cheering both publishers and editors in their ambitious endeavor to bring out still a more excellent paper. GEO. T. R.

FATAL COLLISION ON A RACE-TRACK.—A singular fatality is reported from the San Luis Obispo race-track. A filly owned by E. W. Sneele and the stallion Enterprise owned by John Price were being driven in opposite directions, and were so reined that they came in collision, and both horses were killed outright.

THE commission to examine the San Joaquin and Sacramento rivers, appointed by the last Legislature, have started from Sacramento on their work, and invite people who wish to confer with them to meet them at the river towns.

THE thermometer registered 101 degrees in New York on Tuesday, which is its greatest heat experienced since July, 1876. Many of the Eastern States have been visited by extreme heat during the past week.

FISH BROS. WAGONS of pioneer merit and sold by the trade everywhere. Ask for them or write Frank Brothers, San Francisco.

HEMP SILK.—Mr. Nayemura Sakusaburo, a druggist of Hikone, in Omi, Japan, has succeeded in converting wild hemp (yachyo) into a substance possessing all the essential qualities of silk. Nothing is said about the process, but it is asserted that trial of the thread has been made at the first silk-weaving establishment in Kioto and other factories, with excellent results in every case. The plant in question grows on moors and hillsides. Its fiber is said to be strong and glossy, in no wise inferior to silk when properly prepared. Cultivation on an extended scale would present no difficulties.

THE boiler of a thrashing machine, near Los Banos, exploded last Wednesday week and injured two men. Fielding A. Hodges had a leg broken and one or both eyes destroyed.

Consumption Surely Cured.

To the Editor:—

Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption if they will send me their Express and P. O. address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl St., New York.

No. 410 MARKET STREET,

Between Sansome and Battery, SAN FRANCISCO.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

DRAFT AND LAND GAGE FOR PLOWS.—Owen T. Owens, assignor to the Benicia Agricultural Works. No. 429,220. Dated June 3, 1890. This draft and land gage for plows consists of a draft bar having its rear end swiveled to a depending yoke beneath the beams to which the plows are attached, a guide through which the front end of the draft-bar passes and within which it is allowed a vertical movement, horizontal transverse guide-bars upon which this guiding yoke travels from side to side, a lever by which it is adjusted, and a holding rack and the means for altering the points of attachment of the rear end of the draft-bar. By means of these adjustments and the free vertical movement allowed to the draft-bar within the yoke, the work is very much improved and the draft upon the horses is made very much lighter.

AXLE-SET.—Willard F. Nightingale, Latrobe, El Dorado county. No. 429 245. Dated June 3, 1890. The object of this invention is to provide a simple and readily operated tool or implement of this class which will accurately determine the set and gather of the axle-spindle.

APPARATUS FOR AGING WINES.—Luther Wagoner, S. F. No. 429,826. Dated June 10, 1890. This invention relates to the artificial aging of wines and distilled alcoholic liquors; and it consists in a means for gradually supplying a small quantity of air, which is caused to flow continuously and steadily into the liquor to be treated, and in a means for filtering said air before it is introduced into the liquor Wines are at present aged by slow absorption of the oxygen of the air through the pores of the wood of which the cask is made, about 15 to 20 per cent, by volume, of air being required to age the wine in from four to five years. Should the air be introduced into the liquor too rapidly or directly, the process may be endangered by giving the wine an undesirable flavor, and also by exciting a new fermentation either by the introduction of germs to the wine, or if the germs are already in the wine, in supplying oxygen in sufficient quantities to produce their growth. The object of this invention is to introduce purified air nto the cask in a slow and regular manner, and so gradually that the oxygen may only react upon the acids in the wine, and not be present in sufficient quantity to unduly permit the said reaction or to excite the latent germs if they be present.

PIPES.—John P. Culver, Los Angeles. No. 429,844. Dated June 10, 1890. This invention relates to the class of pipes which are specially adapted for water, gas and drain pipes, and also for use as conduits for laying electric wires underground, and it especially relates to that class of pipes which are formed of a volute of sheet metal covered with and rolled up in asphaltum. The improved pipe consists of a volute of sheet metal covered with and rolled up in asphaltum, and its exterior bound with wire wrapped side by side several laps around at places desired, said laps being soldered together.

FRUIT PITTING MACHINE.—Chas. W. Elkins, Palermo, and Wm. C. Foreman and Stanton Foreman, Bidwell's Bar, Butte county. No. 429,209. Dated June 3, 1890. This is one of that class of fruit-pitting machines in which the fruit is caught between and cut by opposing reciprocating knives, the cut fruit being discharged automatically by a swinging or tilting bed. The object is to provide a simple and effective machine for stoning fruit which does not require any manipulation of the fruit, the latter being fed to the knives automatically, cut in halves and the pit and halved fruit discharged separately and automatically, the whole operation being performed by a single crank movement.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or should the time for which your paper is ordered run out and fail to write us about it, a postal card (costing one cent only) will suffice. We will not knowingly send this paper to any one who does not wish it, but if it is continued through the neglect of the subscriber to notify us to discontinue it, or some irresponsible party promises to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE DATE ON YOUR PAPER.

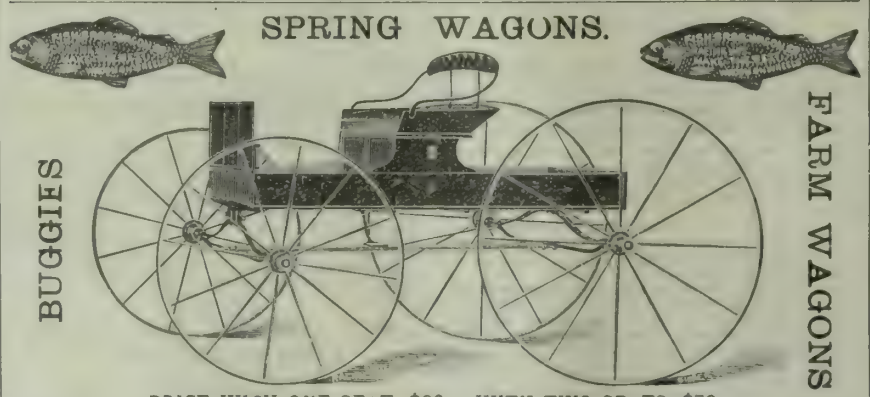
THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.

These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.

The cost, considering capacity and efficiency, is fully 50 per cent less.



Circular, giving full information, sent on application.

Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. H. G. ROOT, M. C., 183 Pearl St. New York.

The Cylinder Grader

Has proved the most rapid working machine for GRADING PRUNES, BOTH GREEN AND DRIED, that has ever been introduced. Wherever it was used last season it gave perfect satisfaction, both in the quantity of fruit graded and the way it did the work. The capacity is practically unlimited, as it will grade the fruit perfectly as fast as it can be shoveled into the machine.

I make all sizes of this Grader, from the large 30-inch cylinder down to a small hand machine for the use of growers whose crops are small. I furnish the Grader mounted complete, or the Cylinder alone if, as is often the case, the purchaser prefers to mount it to suit himself.

Send for circulars and prices.

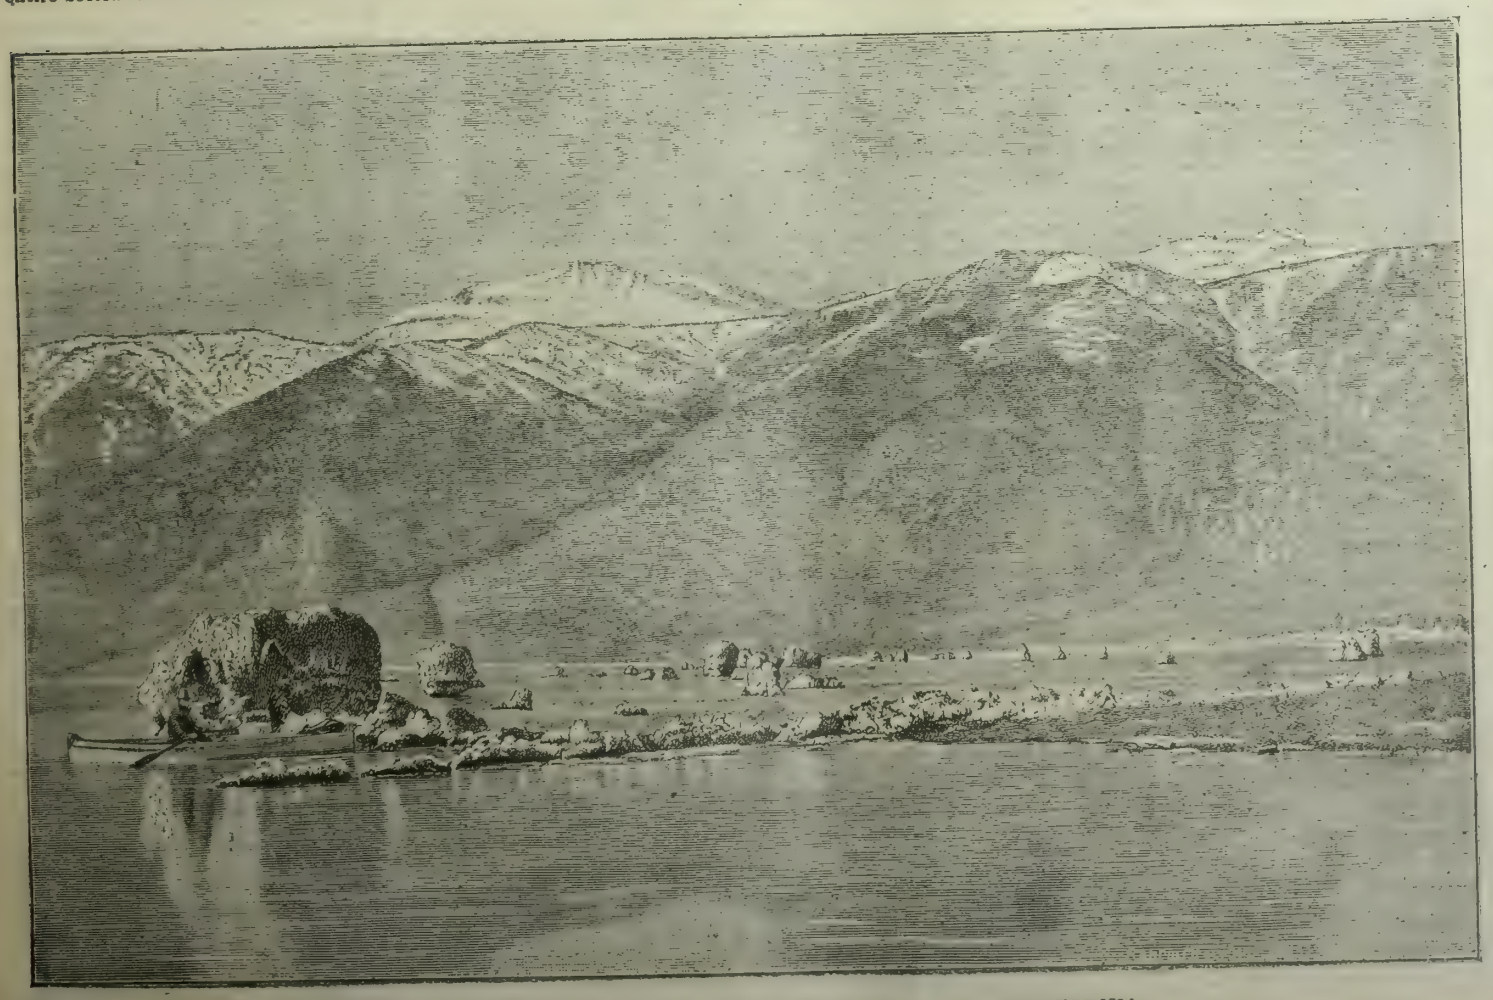
Mono Lake.

Lake Mono is situated in east-central California, within a few miles of the California-Nevada border. The lake is 6380 feet above sea level. The Mono basin is remarkable for its diversity of topography, its varied and striking contrasts of scenery, its wide range of climate and corresponding variations of flora. Besides these more obvious characteristics, the basin has a varied geological history, the later chapters of which are of fascinating interest and can be read with unusual facility.

The highest peaks that overshadow the lake rise more than 6000 feet above its level. Over the entire area of the basin no running water can be found during the greater part of the year, and the region is consequently silent and lifeless. Near the shore of the lake are low hills with castellated summits which at once attract the attention of the geologist by the peculiarities of their forms. These are tufa crags, mainly composed of calcium carbonate which was deposited from the waters of the lake when it stood much higher than now. There are three varieties of this tufa, tubular masses being sometimes formed, that appear to have been precipitated from springs.



The lake is rudely circular in outline, and, including its islands, has an area of 87 miles. The average depth is about 62 feet, and the greatest 152 feet of water. The entire bottom is of soft black mud. The most remarkable features of the lake are the absence of an outlet and the strongly alkaline condition of its water. The lake derives the principal portion of its water supply from the creeks that descend the slope of the Sierra, and supplementing this surface drainage are a number of springs, many of them warm ones.

At the western extremity of the lake are several sublacustral springs. Two of special interest rise at the base of tufa crags 20 or 30 yards from the lake shore. At the present time they are not depositing mineral matter though the tufa about them was evidently deposited by them. The positions of the springs rising in the lake near Black Point are indicated in calm weather by the eddies on the lake surface. On rowing over these submerged springs it is seen that some of them rise from the tops of tufa crags which are covered by 10 or 12 feet of water. These crags are of the same character as those on the shore and were formed by the deposition of calcium carbonate from the incoming waters. The submerged towers from which these springs issue are in some

TUFA TOWERS NEAR BLACK POINT, IN MONO LAKE, CALIFORNIA.

POULTRY YARD.

General Topics.

The value of whitewash as applied to poultry fences, roots, etc., is greatly overestimated. It is true that it beautifies the poultry yards when well put on, which is of some value, but is overbalanced by the harm it does by reflecting the sun's rays to the injury of the fowl's eyes. This is particularly the case in California, where the summer months are one continuous procession of cloudless days. As a disinfectant whitewash has some value, but the fences do not require a disinfectant. It is only the roosts, and a little gas-lime scattered about and dusted into corners that become damp and foul, is ten times more effective than lime-wash. Leave the fences and buildings the natural color, or mix some dark color with the wash or paint.

What to do with broody hens puzzles not only the beginner, but nearly all fanciers and poultry-raisers. Probably as good a method as any to relieve them of their desire to incubate is to remove them to a large coop or yard where they may have room to move about, scratch, dust themselves, etc., but with no place that resembles a nest. Liberal feed and pure water should not be withheld. As broody hens are generally more or less lousy, it is a safe rule to always give them a good dusting with some insect powder when "breaking up" the fever; and while they are "in hand," give their shanks and feet a good brushing with sweet oil and carbolic acid as a precaution for possible scale leg.

From experiments I conclude that eggs from vigorous stock, *fertile* and properly packed, can be brought from the East, and a fair hatch obtained; that better results are obtained from eggs packed in baskets than cases, owing, I suppose, to cases being handled more roughly; that the best way to pack is to wrap each egg in paper or excelsior, place in egg fillers in a basket (the Eliot egg-basket being the best of any I received) with a good layer of excelsior under and over them. If shipping from a cold climate, I would prefer newspaper to wrap eggs in, as it would help to keep them from getting too cold. Bran or sawdust is bad packing for long distances; it settles down and packs too tightly around the eggs. If Eastern breeders would be more careful to send *fertile* eggs, they would get more trade; all they care for, with some exceptions, is to fill the order. In addition to my own experience, an acquaintance sent for 75 White Leghorn eggs, which, after reposing under hens 21 or 22 days, produced 4 chicks, the only ones fertile. As the expressage was $4 25, when added to the first cost of eggs, the chicks were a trifle dear, to say the least, and there is no danger of that man sending East for any more eggs.

John D. Mercer of Los Angeles, writes: I believe the following to be the best, most practical and cheapest poultry fence: No. 20 wire netting, two-inch mesh, four feet high, board of any width at bottom; no top piece; posts six feet, two by three resawed, making one end come almost to a point; set large end 1½ feet in the ground, small end come to a point so that the fowls have nothing to alight on. By resawing post and bottom board you get twice the amount for your money, excepting $2 or $3 a thousand for resawing. The above is for acres. For small pens or yards, posts 8½ feet, two by three resawed, set two feet in the ground; 14-inch board resawed, one above another, making 28 inches high; four feet, two-inch mesh, No. 20 netting over bottom boards, making fence six feet four inches high; no top piece, and posts sharp at top; posts eight feet apart. Small stake driven in the ground between each post, and board nailed to them will keep them from warping. That kind of a fence looks well, is cheap and practical, and I will guarantee it to hold any breed of fowls.

Geo. B. Badger writes of color of fowls' legs, etc. as follows: Speaking of strong light and wind as causing paleness of plumage in poultry, Mr. Harker has expressed his views on that subject quite in agreement with the conclusions arrived at by ornithologists in regard to birds in general. The subject has been under consideration by scientific men for many years. Extensive and systematic collections of birds have been made in all parts of our vast domain. From Maine to Oregon, and from Mexico to Alaska, large series of specimens have been obtained; in fact, but little doubt now exists, not as to actual color, but rather as to the expression of the color. Heat accompanied with moisture and shade, tends to bring out and intensify all colors, whatever those colors may be and *vice versa*. As to yellow legs on the Plymouth Rock, I don't see but what breeders on the Atlantic Coast experience very much the same difficulty that Californian breeders do, perhaps not quite to the same extent, though the difference is not so great as many suppose. There, as here, the trouble is mostly with the hens. It seems to come almost as natural for the cock to possess yellow legs as it is for him to carry a lighter plumage throughout; though the pullets will have the bright yellow legs, the matured hen frequently loses this desirable characteristic. The trouble has always been to prevent the hens from running too dark, even to blackness. There is a law of nature known among naturalists as the law of correlation, whereby a change of one part of any organism is followed by a change of some other part; of course exceptions occur, but the rule is a substantial one. It is quite reasonable to suppose that a plot of grass should assist fowl in maintaining the bright color of their legs, as grass and moisture are natural concomitants. Add the shade so easily obtained in this, the most magnificent of all the States of our Union, and California can do as well as Massachusetts. If grass does not naturally grow here during the dry season, there is one thing certain, the Californian Yankee knows how to make it grow: and as to shade, so essential to the comfort and well being of fowl, where can it be grown more favorably than in this land of plenty?—*California Cackler.*

Vermin on Fowls.

During the past week I have received no less than nine letters from parties inquiring what to do in order to rid their hen-houses of the vermin that have taken possession.

Lice on fowls is one of the most annoying features connected with the poultry business, and although it seems to some almost impossible to guard against their becoming firmly fixed in the fowl house, it is to others no trouble to keep clear of them. If you will commence in time and pay close attention to your roosts, nests, etc., you can by diligence greatly reduce the probability of having these minute parasites take possession of your buildings. Use kerosene on your roosts at least once a week freely. A good idea is to take the roosts out of the house once a month, cover them with kerosene and set them afire; the oil burns off, killing the lice and germs, but does not injure the wood. After seeing all the fire is out replace the roosts and again cover with kerosene. Aside from keeping lice from the roosts, the evaporation during the night, when the fowls are roosting, and the fumes rising and entering their feathers serve to destroy all vermin on them. Sprinkle sulphur in the nests twice a week. The heat of the fowls while on the nests aids the propagation of vermin to a great extent, but it also causes the sulphur to pass up in fumes, thus destroying all that hatch out. A wash made of lime with carbolic acid, in the proportion of two ounces of crude acid to the gallon of whitewash, is not surpassed for cleansing the inside of the poultry-house. Whitewash your house with this every two or three months. By following the above you will have few, if any, lice about your fowls.

Should your fowl-house be affected with parasites, shut it up close, take an iron kettle with a quantity of live coals in it, place in the center of the house and throw on the coals a quantity of sulphur. The fumes rising and filling the house will eradicate all vermin.

There are a great many breeds of lice—more than enough to correspond with the breeds of fowls—but of the whole the greatest mischief is done by three or four kinds, which are persistent and not easily driven off. The worst of the lot on this coast is the red spider louse, which is a very small parasite. Unless very close examination is made, this little fellow will escape observation. Many persons suppose that the birds are free from his depredations because he is so diminutive as to escape notice, but give him a few days grace and he and his mate will multiply so rapidly that countless millions will be present, and in every crack and crevice. It will only be necessary to touch any part of the wall with the hand to find out if they are there. We have known of several instances of their getting on horses, where the fowl-house was located next to the stable, and if not speedily attended to they will kill a horse in a short time. They do more damage at night than during the day, and as their small size enables them to hide most anywhere, the best way to destroy them is to make a thin, hot whitewash, add a tablespoonful of strong liquid carbolic acid to each gallon of wash, and, with a watering-can, sprinkle (or pour if necessary) it into every portion of the poultry-house, then follow with a brush. Let no part of the house escape—roosts, walls, nests, floor and even the roof must be deluged

The tick louse is a large fellow, nearly one-eighth of an inch in length, dark in color, with legs near the head. He prefers the head of chicks, and sticks close to his victim. A good dusting with insect powder is more than his constitution will endure, and he quickly succumbs or leaves.

The flesh louse—so-called because it is nearly the color of the flesh of the fowls—is very active, long in shape, and feeds close to the roots of the feathers. A good dusting with insect powder renders his location very unhealthy, and once he is out of the way the dust-bath will prevent his return.

The flat louse is buff in color and eats portions of the feathers, often stripping the quills clean, giving the birds the appearance of having lost their feathers. Dust the fowls freely with insect powder and repeat three times a week.

It is of the utmost importance to keep the quarters clean, as filthy houses will be inhabited by lice. The whitewash solution should be applied every week till there is no sign of vermin left. Many persons advocate using grease on young chicks, but I am thoroughly opposed to its use, having known many valuable chickens to be killed thereby. Insect powder is much safer to use, and if applied with a "powder-gun" takes very little. If your soil is sandy you do not need to provide a special dust-bath, but if not, take some dry dirt and add a little sulphur for the fowls to dust in. Keep the house clean and the fowls will free themselves of lice with the dust-bath.

If strict cleanliness be observed about the house, using kerosene on the roosts and sulphur in the nests, as recommended above, you will never be troubled to any extent with the pest of the chicken-raiser—lice.—*Los Angeles Tribune.*

THE FIELD.

The Washington and Oregon Hop Crop.

Ezra Meeker's Hop circular dated Puyallup, June 26th, says: It has been 26 years since the first hops were planted in the Puyallup valley—the first in Washington—and never before, with but one exception, has there been so much rainfall and consequent heavy growth of vine in all these years, before the bloom; that exception—the year of 1888, we grew fully 50,000 bales although we were not able to save but 42 000

Unless all the usual signs fail we will grow as large a crop as that of 1888, and neighbors of Oregon will turn out 20,000 bales or more, so that with no unforeseen event the two States will grow fully 70,000 bales of hops the present yeare.

Are we ready to take care of that quantity properly? This is a question that each individual grower must canvass for himself, and if not, then go to work at once to set his house in order. To make the best quality of hops, a house 24 feet square, will probably cure an average of not over 1000 pounds per day. It is better that not more than 800 pounds should constitute an average day's run; with this as a starting point, and take 20 days as the season's run, it is an easy matter to estimate whether the drying capacity is ample for the probable crop; if not, then it is the poorest kind of economy not to proceed at once and prepare to properly care for the crop that all or nearly all the expenses of raising has accrued.

It is well to remember, that were it not for our export trade, that some of our hop yards would need to be plowed up; that without the extra care of some of our growers, this trade would be impossible; that to the reduction in the temperature in curing much is due to the good name our hops have acquired abroad; that it is our well-matured hops that are wanted for export — thoroughly cured but not high dried, baled whole and while hot, or at least soon after curing and before time elapses to toughen — absorb moisture — and in not too heavy bales.

On this last point, as to heavy or light bales, we have abundant experience and say that we know the light bales are the best—make better summer-use hops, nicer, brighter, springy samples which give that "polish" on the "boards" in the borough so highly prized by the English consumers.

We hope for a good market, as well as for a large crop. This last is almost an assured fact; we can only wish the former was as certain. The experience of the last year only again impresses us as to the impossibility of even guessing what the future of the hop market will be. It is fresh in our memories, how we all thought, producers, dealers and consumers alike, that there had been a large surplus of hops produced the world over in the crop year of 1889; how growers became eager sellers, even at unremunerative prices, while consumers were reluctant buyers, believing prices would go lower, still no surplus existed and instead an actual shortage was manifest; how prices here rose from 7 to 14 cents per pound, and even to 18, and finally how the market was never more bare of hops in June than now.

The lack of accumulated stock ought to assure a steady market, but whether it will or not, no man can tell. A marked feature of the trade—if dealing in futures can be called a trade—is the unusual number of contracts for the incoming crop. Up to the present writing, fully 8000 bales have been contracted, almost all at 15 cents per pound. Most of these have been upon "American" account, so termed in contradistinction to those bought upon export orders, and have gone into the hands of a number of dealers, instead of but a very few as heretofore.

A cheerful feature as to the outlook for the future of hop-growing in Washington and Oregon is the fact that orders for the English market can be placed at all before the hops are grown. These contracts are all based upon the quality of the best growth, and the moment we lower the standard of our qualities, that moment we drive the English buyer from our fields. No market is more exacting than the English, and none more discriminating as to the quality; if we will produce what they want, they will buy, if not, then they will let us severely alone. Then let us strive, all of us, to produce only the best, for thereby we create a market that would otherwise be lost to us, and likewise enhance the price of the whole crop.

WATER WORKS.—It is said that water-works in the United States and Canada have about trebled in the last ten years, growing from 660 in 1881 to 1900 to day. The capital invested is $500,000,000, their annual revenue is $50,000,000, their mains are 30,000 miles long, and they have 2,000,000 taps.

SHEEP AND WOOL.

Wool and Mutton.

I. J. Williams writes for the *Sheep Breeder* on a question which every sheep owner has thought more or less about, as follows:

The question whether sheep can be profitably bred for mutton alone has been one upon which considerable thought has been given, and yet we find a diversity of opinion among men whom it would seem are fairly able to judge. To the question I will venture the answer, No; and try to give reasons afterward. Now if we raise sheep just for the mutton, why not abandon them and raise cattle?

In my experience I have arrived at the conclusion that in the raising of sheep the wool will pay for the keeping, and we have that much more profit; and when we breed for the mutton alone we materially decrease the wool product and proportionately decrease the profits arising therefrom, and therefore we must not breed for one thing alone.

If the enormous herds of this country were bred for mutton alone, it would be but a short time until the entire wool trade would be turned over to our Australian friends, who would supply the demand, which would have a tendency to increase the price of wool, which in turn of necessity would increase the price of common wearing apparel, or turn the whole wool business over to our merino friends to supply us with fine wool, and we all cannot afford to wear such fine clothing.

The merino breeders don't raise very much mutton, as their sheep is nearly all wool, and after the fleece is clipped there is nothing left but a very small carcass. In order to gain a requisite amount of profit we must raise a sheep that will combine a growth of wool with a growth of mutton—one that will make the most pounds of mutton and a good grade of wool. Enough pounds with the least feed—that is where we get our profit. When we drop the wool interest we are losing that which we should have, for if the wool pays for the keeping then all we make on the lambs pays us a good interest on our money. For illustration we will take $100 in the fall and start out and buy 20 good common ewes for $75 and pay the $25 remaining for a ram. We then breed them and take fairly good care of them through the winter. When spring comes look after them closely and we should have 20 lambs, which at the end of the year from where we started, we can sell to the butcher at $3 75 or $4 per head. We will accept the lower price and will be safe in saying that we can sell the 20 lambs for $75, which brings us a return of 75 per cent on the money originally invested, and the flock is left.

Now we will fall back on the wool, and with anything like good care the wool will bring $30, which pays all expenses for the keeping of the sheep. Now it is easy to be seen that if the sheep had been raised alone for the mutton we should have to deduct the $30 from the sale of lambs, which would leave $45, or only 45 per cent on our money. From this deduction it is plain to be seen that we must keep the mutton and the wool together to make the raising of sheep profitable.

This is the reason that sheep breeders can raise sheep and sell the mutton at the same price as that of cattle and make more money, for the wool pays for the feed, and the wool from the cattle don't sell very well.

There is another thing in favor of the sheep; they don't tramp the ground so much as the heavy cattle and the manure is far superior to that of any other stock.

Now on the other hand, we must not breed too much for wool, for when we do we weaken the constitution; we always notice that sheep of any breed which are the best covered on head and legs are the weakest in constitution. Therefore we must guard against that part and try to raise a sheep with a good constitution, with plenty of mutton and all the wool we can get, the more the better.

Australian Scab Cures.

The following letter with instructions was sent to the *Breeders' Gazette* by P. R. Gordon, Inspector of Stock, Brisbane, Queensland, Australia:

As Australia is the only sheep country which has effectually stamped out scab in sheep, it will be permitted me to offer advice on the subject to other countries. I inclose copy of instructions issued by me to my staff of inspectors for the dressing of sheep. These are insisted on by the Governments of each of the Australian colonies and have never been known to fail.

The tobacco and sulphur cure is equally efficacious with that of the sulphur and lime cure; but the latter is preferred for the reason that it is much the cheaper and more easily prepared.

You will notice that we insist on using the dip at a high temperature. The reason for this is that we find by actual experiment that whereas the scab acarus will live for some minutes in the mixture when cold, it succumbs in about 40 seconds when the temperature is 110 degrees Fahr.

It is essentially necessary to a perfect cure that the sheep swim or float in the bath, so that every part of the body will be in contact with

the mixture. The head should be pressed under just prior to the sheep leaving the bath.

Many hundreds or thousands of sheep have been cured in the Australian colonies by means of the above dips without the loss by death of a single sheep. I have not known a single dressing to fail, but our legislature compels three dressings in the case of all sheep imported from other countries whether diseased or not.

The instructions referred to in the above letter are as follows:

Either one or the other of the following preparations must be used in dressing imported or infected sheep:

Tobacco and Sulphur.

One pound of sound leaf or manufactured tobacco and one pound of flowers of sulphur to five gallons of water.

Mode of preparation.—Infuse the tobacco the night previous to dipping by boiling the water and adding the tobacco in a proportion not exceeding one gallon of water to one pound of tobacco. Allow the infusion to stand all night in the boiler well covered over. Mix the bath with hot water to the desired heat and strength in the morning. Thoroughly mix the sulphur with the hand in a bucket or other vessel with water to the consistency of gruel before putting it in the bath and keep it well stirred before immersing the sheep, so as to keep all the particles of sulphur afloat.

Lime and Sulphur (Hydro-Sulphuret of Lime.)

Take in the proportion of ten pounds of flour of sulphur to five pounds of quicklime (a large proportion partially slacked); boil in ten gallons water; keep mixed by constantly stirring for about ten minutes or until a clear, dark brown orange color supervenes. Then make up the dip or bath to the required quantity by mixing one gallon of this solution with three gallons of hot water. If rock or unslacked lime cannot be procured, use double the quantity—that is, equal proportions of lime and sulphur.

Directions for Using the Bath.

Temperature.—Never allow the temperature to fall below 110 degrees nor to exceed 120 degrees Fahr.

Duration of bath.—Never less than 50 seconds for the second and not less than 80 seconds for the first and third dressings. The whole body, with the exception of the head, to be kept completely immersed during that time, the head to be immersed on the sheep being placed in and taken out of the bath. Never allow the sheep to be exposed to rain for at least one day after dressing.

THE DAIRY.

Feed to Preserve the Milk Flow.

The secretion of milk has a tendency to diminish the volume of blood by drawing both upon its liquid and solid elements. To keep up a flow of milk, this draft must be supplied by furnishing enough to restore the steady waste. A failure to do this for any considerable time, is not only to decrease the yield of milk during the lack of food, but to invite a hurried contraction of the blood vessels connected with the udder. These once reduced, there is no enlarging them again till the occasion of another birth, and the supply of blood for making milk will be diminished to their reduced capacity, keeping down the flow permanently and shortening the time of its final cessation.

Immense losses are sustained every year by dairymen from not comprehending this fact with sufficient clearness. A lack of feed in the midsummer drought where shrinking has already begun, hurried the shrinking along; lasting several weeks, the reduction becomes permanent, and must remain the rest of the season. No former activity of the glands will be resumed, for the vessels supplying them have become reduced. The great value of soiling, when grass fails, lies in keeping up and prolonging the action of the mammary glands The dairyman who appreciates this will never let his milch cows lack for food or drink.

An instance will illustrate the effect of a defective supply of food upon the milk secreting vessels. In visiting the farm of the Hon. Harris Lewis, in the fall of 1873, I found his cows, after the severe drought of that summer, giving an average of 22 pounds of milk a day; his heifers and farrow cows giving 13 pounds a day, and the other cows 24 pounds each. Though the rains had come and the grass had revived, the average at the factories around him, where soiling had not been adopted, was 13 pounds the cow—just equal to Mr. Lewis' heifer's and farrow cows. The soiling more than paid for the cost in the dry season, and in the fall the large yield gave larger profits. But many dairymen complained that year that their cows did not pay for their keeping. The reader may possibly see why.—*Arnold's American Dairying.*

We had personal knowledge of the spoiling, for profit, for the season, of 16 very fine cows of one of our patrons, in Ozaukee county, by pursuing the above deprecated course. He was the most active and enterprising patron we had for a small branch factory we were operating. He had planned to have ample pasture, about half of it on well seeded upland, and the rest on a swampy, quite level piece of land. Long continued rains, late in June, flooded the marsh, and drove his cows to the upland. This they soon gnawed to the roots, and semi-starvation commenced, and consequent shrinking of the milk, first in quantity then in quality. We remonstrated with the owner that he was spoiling his cows, and that as he had no other place to feed them he should do it in the barn, with hay of which he had plenty, and bran, which he would have to buy, or cut grass from his meadow, and soil them. But no; that was an innovation he then saw no money in, neither did he believe what we told him—that his cows would be half dry ere he got the second growth from his meadows. He believed as thousands do yet, that all that is fed a cow in summer that she does not nip from a pasture, whether it be long or short, tender or woody, is a dead loss, and the half dried-off cows will regain their flow when fresh pasture comes again. But that man learned a lesson that fastened conviction on him that went down to his pocket-book. In the fall he had 16 noble cows up to their eyes in pasture, all getting fat enough for beef, and not giving more than a half mess of milk per day, as compared with the cows of his neighbors. Two tons of bran fed to his cows, at the opportune time, would have saved his cows for profit that season, and the fertilizers left on the soil would have been worth two-thirds the investment.

Not to feed cows, no matter what the price of milk, at a time when they will dry off otherwise, is just as silly as to not throw a few pails of water on a fire when a little water will prevent a conflagration.—*Hoard's Dairyman.*

THE STABLE.

Feeding Horses.

The following from Prof J. W. Sanborn will interest all who are entering upon the business of breeding and raising fine horse stock, although written from Eastern experiment and observation and does not take account of many feedstuffs available in California. He says:

The sole purpose for which horses are kept is for the production of force and work. This sets the horse apart from other domestic animals in special features of feeding and care. His ratio of stomach to body and intestines is also unique, and calls again for special consideration. His stomach holds only some three and one-half gallons, while his intestines are very large. The horse, however, seems to be specialized for the peculiar purpose of speed.

The horse sells for some fifteen cents a pound, while the steer sells for but two or three cents. Is the difference one of food cost, that is, does the horse require in food for 1000 pounds in growth an amount in ratio to the difference in cost more than does the steer? He certainly does not, although he costs some more, and unless there is a great difference in other directions, is a much more valuable market for food than the steer.

German experiments have shown that of very coarse foods the horse digests somewhat less than the steer, but this difference seems to be confined to coarse foods. E. W. Stewart gives us an account of feeding three colts whose gain was in round numbers two pounds daily, which was as economically made as that of steers.

Boussingault, of France, fed several colts on weighed rations. Three, weighing 1106 pounds, ate 19.8 pounds of hay and seven pounds of oats. This was in the equivalent of hay 2.6 per cent of live weight daily, and gave a growth of 1.2 pounds daily, as good as an equal amount of hay would make on steers. I made some trials with four horses and mules last winter, which led me to believe that maintenance for a horse is slightly more than that for a steer of equal weight. But cattle and sheep are ruminants, or chew the cud.

They have four stomachs, while the horse has one little one. The ruminants were designed by nature to handle coarse foods to best advantage. I believe that we are fairly taught by the makeup of the horse that when at work, if not at other times, he should be fed on more concentrated food. The attempt to make hay the chief ration of horses imposes a severe tax upon them, and the result is seen in their distended stomachs and the spiritless and clumsy horses of many farmers.

All intelligent students of the horse give little hay, or a moderate amount of hay, and feed grain more liberally than to the ruminants, for the double reason that the horse will make poorer use of the hay than the steer or the sheep will, and will be less easy of motion. Good horse feeders give but ten to twelve pounds of hay a day, and feed once or twice daily. In feeding the colt we have to bear in mind that mare's milk is richer in proteine than cow's milk in ratio to its sugar and fat. This means that a colt's diet should be rich in proteine.

While latitude in the ratio of proteine to carbohydrates is permissible in the fattening animal, or in any animal being kept for animal products, it is not so with the colt. He is kept for his muscle; hence a fattening diet, or a very carbonaceous one, is out of place on the colt until matured and set at work. When his muscles are grown and work begun, then feeding foods that are most productive of force is permissible. I do not, therefore, join the outcry against the use of cornmeal for working horses. It is now known that the carbohydrates are a source of force.

Formerly, proteine was held to be the only source of force by many. Corn is a good, cheap heat or force producer, hence will answer for a work horse. This does not mean that it should be the only food given. In large mass it does not digest perfectly. I have shown, if not, I will now assert, from my trials, that a pound of cob meal (corn and cob ground together) will make as much pig growth as a pound of clear corn meal. The cob acts as a divisor in part of the doughy meal, and digestion is probably more perfect. For the horse, bran mixed with cornmeal will serve this purpose, while incidentally it will make a more valuable manure and furnish proteine. One half a pound of linseed meal, where carrots or some other roots or ensilage are not fed, will tend to keep the bowels open and secretion good. Where clover is at command the use of straw cheapens the ration, and may be used as one of two feeds of coarse food daily.

For traveling horses there seems to be but little doubt that oats are the best, although usually the most costly food. A French investigator claims to have found that there is a principle in oats called avenine, which develops nervous force in the horse. This he asserts on the basis of a trial by an electric machine. Horsemen agree that for road horses oats have no substitute. I should say that a trial of corn on a great commercial scale in Paris found it a cheap and valuable food for work horses. Great transportation companies using horses make rather free use of corn. Most of them use some oats. I should desire to give one feed a day of them and the rest of corn, with a little bran mixed with it on the score of economy.

Where bran is used I do not recognize the absolute necessity of oats, and hence would not use them for work horses where the disparity of price is very wide. The horse's stomach is so small that he often drinks in hot weather as much or more than his stomach will hold. In such an event the grain fed is subject to being pushed out into the intestines when it is fed before the horse drinks. A trial of feeding grain before and after watering resulted in an advantage of importance to the practice of watering before feeding. This matter I went over with some care, and believe it invites a change of practice on the part of those who feed grain before watering horses.

The relation of mixing grain with hay for the horse to the economy of the ration, may not necessarily have the same result as that found for the cow, because of the difference in the stomach relations of the two classes of animals. The single small stomach of the horse did not, in a trial of mixed grain and hay, give the same result as with the cow, and was therefore more effective for the horse than when fed alone. That is, grain mixed with hay for the horse was more effective than when either was fed alone.

I began with contrasting the horse with the steer as a food economizer, but did not quite complete the thought. The horse will not make as effective use of coarse foods as will the steer by, probably, from four to 11 per cent. It will make, probably, as good use of grain and very digestible foods as the steer. These foods cost something more per pound of digestible matter than does hay, so that it is probable that horseflesh costs slightly more than steerflesh, yet not enough more to cut any figure when the relative values of the growths are considered.

THE IRRIGATOR.

A Meeting of Irrigation District Directors.

EDITORS PRESS:—In the interests of irrigation will you have the kindness to call attention to the inclosed circular of invitation now being sent out, and its objects in your paper. The favor will be duly appreciated.

E. OAKFORD,
Sec'y Tulare Irrigation District.

Tulare, July 10th.

The Circular.

It has been suggested that the officers of the various irrigation districts of California formed under the Wright Irrigation law, should meet in convention for the purpose of forming a State Association of district officers.

It is thought that such an association would enable each district to benefit by the experience of all other districts in the solution of problems of mutual interest, and that an arrangement might be made whereby all districts should contribute to the adjustment of such difficulties as beset the paths of all alike.

It is not unlikely that further legislation will be required from time to time, and that concerted action upon the part of the districts would greatly facilitate the passage of such laws as are needed.

It is possible also that concerted action may be needed to prevent the enactment of legislation adverse to the district system.

Subjects important for associated consideration will doubtless suggest themselves to the minds of directors of all districts, the discussion of which would be productive of good.

In view of the foregoing and other considerations the undersigned, directors of Tulare Irrigation district, hereby extend their cordial and earnest invitation to the directors and officers of your district to meet delegates from the several irrigation districts of California in convention at Tulare, California, Sept. 12, 1890.

Delegates are requested to invite friends of the district system to attend and assist in the deliberations of the convention.

Arrangements have been made whereby persons paying one full fare to Tulare will be given a return ticket for one-third fare, provided they bring with them a receipt from their agent showing purchase of a ticket to attend said convention.—J. W. MACKIE, W. B CARTMILL, E. DE WITT, A. P. MERRITT, J. F. GIBSON, Directors Tulare Irrigation Dist. E OAKFORD, Sec'y.

Comments by the Tulare Register.

About a year ago the *Register* suggested the propriety of forming a State association of irrigation district officers, so that each district may have the advantage of the experience of all other districts, and that all may pull together for whatever is necessary for the advancement of the district movement. From time to time since then we have repeated the suggestion, and, no other district having taken it up, our own district officers in Tulare have issued a call for a convention to be held in Tulare September 12th next.

There are many important subjects for a district association to consider, a number of which are suggested in the official call which appears in another column. But there are others of even greater importance which a free discussion among delegates would certainly bring out. Among other subjects for consideration, we would suggest the following:

First, whether California might not with propriety follow after the Australian idea, by aiding in placing district bonds. District bonds are not taken as readily as the State's necessities require, and something should be done to further their placement. Suppose, for instance, the State of California were to issue bonds of its own of a like nature as district bonds, but bearing 4 or 4½ per cent interest, and, with the proceeds, take up irrigation district bonds bearing one cent higher rate. This would furnish a revenue for repaying the State all expenses entailed, and more, and would give an impetus to internal development that nothing else could. Of course the State's engineering and legal departments would have to sanction all such purchases of bonds to insure against wildcat enterprises.

There is another point of great importance. It is a correct principle that "the land that gets the water should bear the expense of the getting." Towns should, by right, no more help the farmer to build his ditches than his barn or fences. Considerations of public policy may sanction a departure from this principle, still it is nevertheless a sound one to follow generally, just as it is sometimes advisable to subsidize railroads and other public enterprises.

But the land that gets the water can well afford to pay for it, and districts can easily be made self-supporting. No more should be required of unirrigated property than that it should lend its credit for the common good. When once the canals are built, the banks settled and the system in working order, a reasonable charge per foot for the use of water would create a much larger revenue than would be required to discharge the operating expenses of the canal, and whatever sum should be found to remain after discharging such expenses should be applied upon the interest charges. If the law were so modified as to permit this, the land that gets the water, the actual use of water, could, without feeling it, pay off the entire indebtedness, and it should do it, for the plant is for its benefit. Whatever other and public benefits are enjoyed will be shared in common by town and country, whatever helps the one helping the other also. We respectfully commend this subject to the consideration of delegates to the State Association of Irrigation District Officers, to be held at Tulare September 12th.

Let there be a big convention, the fullest discussion, a permanent organization and concerted action in furthering the irrigation district movement throughout this State.

ANTISEPTIC VALUE OF EUCALYPTUS.—A late correspondent of the Selma *Irrigator* says: In soaking up old wine or vinegar casks, we throw a few blue-gum boughs with their leaves into the water, and it never becomes putrid, while without the blue-gum we would have to change the water daily to prevent putridity and spoiling of the flavor of anything afterward kept in the cask. We have kept fresh beer eight days in the hottest weather, by keeping around it a plentiful supply of green blue-gum leaves, and changing them daily. A decoction of green leaves is a stronger and more lasting stimulant than tea or coffee, and more salutary in its effects, as it does not cause wakefulness. It seems to have the stimulating effect of quinine, without any of its injurious qualities. In addition to the above it may be remarked that no worm or insect is ever found upon the eucalyptus tree, or in the earth where its roots permeate. A row of trees planted through an orchard or vineyard will cause insects, worms and caterpillars to vacate that region. The branches of the eucalyptus used in the rooms or windows, or as decorations in dwelling rooms, will cause mosquitoes, moths, fleas and flies to leave the premises, and when the leaves are placed beneath a carpet around the border of the room, when the carpet is laid, is an insurance against the moth, and branches placed beneath the bed pillows a protection against fleas.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Patriotic Grange Meeting.

EDITORS PRESS:—Watsonville Grange held another of those delightful meetings, for which it has become so noted, at its hall, July 5th. This meeting varied from all others as it was purely patriotic. The hall was tastefully decorated with flags, banners and emblems, the artistic work of W. O. Judd and his energetic committee, while the rostrum, the position occupied by Ceres, Flora and Pomona, were beautiful to behold. A pleasing and appreciated feature was the Master's chair, made into a bower of beauty by garlands of red, white and blue flowers, in honor of her first visit, after a protracted illness.

After routine business the gates were thrown open under "Good of the Order," and all interested in the elevation of humanity invited to listen to a select and patriotic program gotten up by our energetic Lecturer, Sister A. Bowman. The hall was soon filled to its utmost capacity. Among those present were noticed visitors from Stockton, San Jose, Hollister and Salinas. Patriotic speeches, gay, grotesque, profound, convincing, converting and declamatory, were heard on all sides, while the "Star Spangled Banner," "Hail Columbia," and "America" lost none of their old thrilling sweetness and power. That peerless matron, Sister Merrill of Stockton Grange, gave one of her inimitable recitations, "The Dandy Fifth." She was promptly encored and replied in a manner which proved her an elocutionist of pathos and genius. Her little daughter also added to the pleasure of the occasion. Bro. Brown, W. A S., of Hollister Grange, evidently sees the way out of the difficulties besetting farmers; significantly pointing to Bro. Nash, Master of Hollister Grange, he said: "We don't talk politics in our Grange, but we do outside. Brothers and sisters, there is our next Assemblyman," to which we add, and a better man can't be found in San Benito county.

Remarks were also made by Bro. Debart, for years efficient Steward of Watsonville Grange, now of Hollister. Bro. Feeley of San Jose Grange gave some thoughtful hints as to the duties of Grangers, the practical carrying out of which would be of inestimable benefit.

Thus ended another gathering of great benefit to all, and should be a convincing proof (if any is needed) that no Patron can afford to miss even one Grange meeting; for if they do, a link in the great chain of events is lost, never to be recovered; a gap is left open through which attack and defeat are made possible; indifference is engendered; lukewarmness often follows, while time swings great opportunities out of reach. Rush of work as an excuse at all times to keep Patrons out of Grange meetings sounds like a rush of bullets to keep soldiers out of a battle when their camp is attacked—an act of cowardice for which they would be court-martialed and shot. Surely, Patrons, the interest and honor of one should be as great as the other. If so, we sincerely hope that no Patron will desert the banner of the Grange in these stirring times unless actual necessity compels, and let not that necessity be the delusive hope that a dollar is gained by staying away to get in an extra day's work, when the truth is, very much more has been lost by the absence. Make attending Grange a regular business. Everything will soon give way to it, and you would as lief think of going to bed with your boots on as to miss even one meeting.

Watsonville. A. P. R.

Grimes Grange.

EDITORS PRESS:—It has been some time since you have heard from Grimes Grange, but the busy season of haying and harvesting has made Grange matters, for the time, a little quiet. However, you will see by our quarterly report we have not been altogether dead, and have added a few names to our roll-book.

We conferred the third and fourth degrees on a sister at our last meeting, July 12th, and have several applications for membership in now. As soon as the busy season is over we will have all we can do in the way of conferring degrees, as there are quite a number anxious to join.

The farmers here are busy harvesting now, but crops are far below the average. The extremely wet winter greatly interfered with farming pursuits.

You will hear from us oftener after this, as the harvest will be over in a few weeks and we will have better attendance at Grange meetings. We feel sure of increasing our membership to 50 within the next three months, and with one or two harvest feasts the Grange will boom.

Grimes, July 14. P.

BRO. H. H. REHSE writes that Orland Grange of which he is W. M., has appointed a special committee to urge the claims and advantages of the Grange upon eligible members of the community, and that when the busy season is over, some effective work is expected. The RURAL is also winning new friends in the Grange circle.

Sacramento Grange.

EDITORS PRESS:—W. M., La Rue being sick, the W. O., E. Greer presided. A good attendance was present, considering the harvest.

A number of communications from sister Granges were read and acted on. There was a discussion of the "Bar and Grange," as Friend Easton puts it, and Bro. Krull expressed his views. The Grange condemned the act by voting unanimously to allow no more privileges in that line.

The circular letter from Pomona Grange of San Joaquin county, on the "Australian plan of voting" was received and placed on file for future action. To rest the brothers, the W. L., Sister Hattie Sims, announced a short program, when the W. L. called on Sister Ella Merwin for a song. Sister Gussie Wilcox followed with a fine instrumental piece, and Sister Flora Duden closed with a song.

The sisters are tuning themselves up for the coming State Grange (for all must exert themselves to do their part with what talent they have), so look out for fine speeches, essays, poems and music, as well as a social high time. If each does his or her part, no time will be wasted, but all will be happier and better.

The committee on "Woman's Work" came together and arranged their work for future action. I believe they intend to appoint a committee for next year, on "Children's Day." We must not forget the young folks. Bring them in the way they should go.

P. M., Daniel Flint gave us some good points on county exhibits. He came back full of enthusiasm from his visit at Sebastopol and "Children's Day." W. S., W. W. Greer gave his reasons for not being there. Work in the harvest demanded his attention.

Sacramento can beat Watsonville six to one in initiating "native" born Granges. We don't have time to "resolute" for it would keep too many "committees" at work, but we at once book their names on the roll list with dates, as fast as they enter the Grangers' realm.

The Committee on Annual Exhibit at the State Fair met and appointed Bros. Geo. McMullen, Chairman, E. Greer, Sec'y and A. Krull, Manager; also appointed sub-committees for various departments. Public-spirited Grangers think a fair showing can be made from the products of the soil, although the outlook is not very promising, still they feel the chances in this county are as good as the surrounding ones. Bro. Krull has been busy passing through the county selecting parcels of grasses, grain and whatever he thought would make up a good variety for display. They intend to put up fruits of different kinds by cold storage to preserve for public exhibit.

Lemon Hill. G. T. R.

A Token From Oregon.

Many Patrons will remember the presentation scene when Treasurer Cressey, on behalf of the brothers and sisters of the Oregon State Grange, presented a gold-headed cane to Bro. John Simpson, Past Lecturer. Also the prompt and magnanimous words with which Bro. Simpson delegated Bro. Cressey and the other California visitors to present Bro. A. D. Logan, President of the Grangers' Bank, with a rare old keepsake in the shape of an unique walking-cane having a queer but conveniently shaped young buck horn for a handle.

Bro. Simpson's words of commendation of Bro. Logan, whom he had casually met while at the National Grange, were both excellent and well deserved.

Recently, in the RURAL PRESS office, there met by chance Bros. Logan, Steele, Cressey and Dawey, when the aforesaid cane was suddenly drawn upon Bro. Logan and presented in that lively and common-sense language that Bro. Cressey is so much noted for. He mentioned the kindly feeling existing between the brethren of Oregon and California, and the noble words of fraternal regard that Bro. Simpson had sent with the cane to Bro. Logan, with thanks for his personal kindness, and also the good-will felt toward him and all the brothers and sisters of California.

Bro. Logan looked thanks, and modestly spoke with gratitude for the unexpected compliment and present thus brought 700 miles to him. Now, Patrons, when Bro. Logan puts in an appearance at Grange it will be in perfect order to ask him to make the little speech which the sudden caning and unqualified pleasure prevented our hearing in the RURAL PRESS sanctum.

WALNUT CREEK GRANGE.—The old Grange veteran of Walnut Creek, Brother Nathaniel Jones, called in on Tuesday looking as happy and vigorous as ever, bringing us information that Walnut Creek Grange expects to confer the first and second degrees on a class of four on Saturdry, July 26th, at 2 o'clock P. M. We are glad of this evidence of progress on the part of Walnut Creek and hope that, as the Grange has had some difficulties in its way, there will be a liberal visitation present from other Granges. Walnut Creek is a promising town and should have a thrifty, growing Grange. Brother Jones bears marks of a late accident which came near leaving us one less Master in our Grange circle. May he always make as fortunate an escape.

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Charters have been signed for Anderson, Grimes, Hanford, Orland and Waterloo Granges during the past week. The delay in receiving these charters from the National Grange has been patiently borne by each of the Granges above-named, and we most cheerfully commend their patience to the Fraternity everywhere. Patience is a cardinal virtue, and the Grange *teaches* and *practices* it on all occasions. Truly, the Order or Patrons of Husbandry is composed of a patient and forgiving people, or, long since, the politician would have been routed from his station, high and low. Be ye patient, then, brothers and sisters, and persevere to the end.

It is the duty of every good citizen, and especially of every Patron, to denounce and oppose the sale of lottery tickets. The Louisiana Lottery is robbing *this State* and *this Nation* of untold millions annually. We object to the lottery plan of selling our wheat, corn, live stock and other farm products, yet we silently countenance the sale of lottery tickets. We know it is against the law to *buy, sell* or *have* a lottery ticket. Our newspapers, even (I am sorry to write it) some of our Grange papers advertise the "Lottery Robbery." These things ought not to be. Let us elect men to office who will enforce the law and stop this "Louisiana" and "Mexicana" lottery business in California.

Contra Costa county Granges propose a reunion of farmers some time in the month of August. Several "Big Guns" are to "fire away" then and there. No doubt Mt. Diablo will echo and re-echo the good things said and done for many years to come. Bro Geo. P. Loucks of the Executive Committee is to arrange the forces, and as he is an executive man, all may expect a well-prepared entertainment.

I have been told to write something of a practical kind. Wish I might do it. For me it is easier to *preach* than to *practice*. But here are a few things a farmer ought to remember Though old, the facts are useful. A bushel of wheat, beans, potatoes or clover seed weighs 60 pounds; corn, rye, flaxseed or onions, per bushel, 56 pounds; castor beans, per bushel, 46 pounds. There are 2150.4 cubic inches in a bushel; 43 560 square feet in an acre. A strip of land 220 feet long by 198 wide is an acre. If you walk one mile you pass over just 5280 feet, or make 1760 steps of three feet each. Minds, like mold-boards on our plows, hardly ever *wear* out. Most of them *rust* out. This is a sober fact.

Folded arms bring saddened hearts.

Sunshine, activity and smiles will make your life more than ordinarily successful.

Love your neighbor as yourself, and be sure you love yourself only for what there is in you worthy of love.

Steel is only valuable when well tempered. So we are only companionable when our tempers are under proper control. Remember that speech is silver, but silence is golden, and thus you can largely govern your temper.

The minimum fee for membership in a subordinate Grange is for a man $3, and for a woman, $1. All persons over 14 years of age and interested in agricultural pursuits are eligible to membership.

The Grange is a success in spite of its enemies and of all opposition.

Scatter seeds of friendship and you will gather friends for your harvest. And "a friend in need is a friend indeed."

If Lincoln, Wheatland, Roseville and Eureka Granges will hold a joint meeting, we are sure the farmers of Placer county will be benefited. The State Grange will be pleased to send some of its best speakers and will do all it can do to foster the cause of agriculture, to promote the welfare of the Order of Patrons of Husbandry and to make all who attend feel it is well they were present. Won't Bros. D. A. Ostrom, Hollis Newton, John C Burns, E. L. Hawk and John Gould take hold of the work? Bro. B. F. Frisbie will lend a helping hand, and he is a whole team in Grange work. A long pull and a strong pull! All together now, and let's hear of the reunion and the revival of Grange work in that flourishing section of the State and among those progressive farmers.

Never put off till to-morrow what can be better done to-day. Join the Grange now. Next day may be too late. At any rate you lose one day's time.

WORTHY MASTER DAVIS speaks correctly of lotteries. Do our readers ever think of the hundreds of dollars it costs us every year to exclude lottery advertisements and other questionable advertisements and injurious puffs out of the RURAL, or of the thousands of dollars saved thereby to the community, besides that which is better than gold?

Unpleasant Truths Ably Stated.

The historian, John C. Ridpath, of Indiana, recently gave the following address at the commencement exercises at De Pauw. Thoughtful Americans know his assertions are lamentably true, and the question, "What shall we do about it?" has long been on the minds of true Patrons and patriots:

What, then, is the modern political party? Practically it is an organization of a few men in a great State, constituting a sort of close corporation, having one single ulterior end in view, and that is their own advantage. In order that such a body of men may get power, it is necessary that they profess something. What their profession is depends exclusively upon what they think is best calculated to take the country in. There are always lying about the surface of human society certain questions in which the people at large, from patriotic or other considerations, are likely to take an interest. The party maker searches diligently among these questions to find one or more which he thinks are likely, if fanned with a little fallacious oratory and factitious discussion, to break into a flame. So the question is taken up, and all the elaborate machinery which a century of self-interest has invented is immediately put into operation to create or penetrate an issue. People are actually made to believe that the interests of the country depend upon the decision of this question or that question by their votes. They are made to believe that that sublime product of reason and eternity called history is created by drum majors and central committees. They are taught that they should leave their cornfields and workshops in the village and rally at once to the call of some peripatetic demagogue who is hired out of a corrupt fund, collected from the beneficiaries, to go about the country explaining and perorating about the "burning issues which now divide the American people." Sometimes a man of sense and reflection attends one of these meetings and stands like Anacharsis on the edge of the crowd to hear the oration or perhaps to contribute feebly by his presence to the proposed salvation of the country. What must be the real impression made on the mind of such a man under such circumstances? He listens for awhile at the oratory. He sees his country's flag at the back of the platform. He watches the drummer as he pounds his booming war-tub, and then considers the antics of the orator as he goes up and down the platform roaring and cavorting like a wild ass of the Assyrian desert filling his belly with the east wind, and then turns on his heel toward the seclusion of his own home, the quiet of his own study, saying as he walks along and communes with himself: "How long, O Lord! how long?"

And yet this performance in the public square is at present, and has been for more than half a century, the dominant fact in American society! Of course orators and teachers go about telling you something else. They say that our public schools, our churches, or our railroad enterprises, or our great cities, or our marvelous industries, or our expansion as a people from east to west, from north to south, are the dominant facts in American society. But it is not so; that is, it is not so as things go. The dominant fact in American society is that political meeting which the thoughtful man attended and went away from with bitterness in his heart. That is the thing to which every other element of power and influence in the public and the private life of the United States bends a humble, and I am sorry to say a patient, knee. That is the thing after which the great Protestant church marches at the tail of the procession. That is the thing which, beginning far back in the history of our republic, under the modest name of *convention*, at length achieved autonomy, gained an independent life of its own, grew and expanded until its jaws were full of dragon's teeth and its throat sufficiently enlarged to swallow at a gulp every form of opposition that appears in its pathway. That is the thing that has gone wallowing and sprawling and roaring through the United States, crushing and devouring and devastating the land, living on the fruits of industry, gathering the reward due to enterprise, and blasting not only the blossoms and fruits, but the very branches and stem of American culture and American manhood.

Let all honest citizens take counsel, plan and act against the giant evils!

Letter Notes.

From Worthy Master Davis.

I send duly signed, under separate covers, charters for Anderson, Grimes, Hanford, Orland and Waterloo Granges. You will please sign, affix seal and forward as soon as possible. These good people have been very patient.

Bro. Coulter in the Field.

Bro. S. T. Coulter, P. M. of S G., will represent W. M., Davis at the anniversary celebration of Kibesillah Grange, about Aug. 10th. Bro. Coulter, we are glad to announce, will soon begin a little Grange campaign in his own district of Sonoma county, which we are sure will be productive of many good results.

Juvenile Granges.

"I received a letter from Mr. F. B. Mills, Woodbridge, Cal., stating his Grange was in receipt of a fraternal letter from me, in which

I spoke of Juvenile Granges. He wrote for information, and said they had appointed a committee to see what could be done. I referred him to Bro. A. J. Rose, Salado, Tex., and to Sister Hawkins for information. So, you see, the seed sown may take root in one field. Let us work and hope."

Will Sister Lander of Alhambra, lend Bro. Mills a copy of the California Juvenile Grange ritual.

A Farmers' Meeting.

Bro. James R. Hebbron, Secretary, sends the following from the Salinas *Index:*

Salinas Grange held an open meeting at Grangers' hall in this city Saturday afternoon, June 28th, W. J. Hill, Master, presiding. Quite a large number of farmers and others not members of the Order were present. The first speaker introduced was Mr. C. J. Cressey, Treasurer of the State Grange, who made one of his characteristic and spirited speeches to the tillers of the soil, giving good reasons why every one of them should join the Grange for self-protection and mutual improvement.

Hon. I. C. Steele of Pescadero, P. G. M. and present D. D. G. M. of the California State Grange, was the next speaker. He took for his text an article printed elsewhere in to-day's *Index*, entitled "The Farmers' Lot," and delivered an eloquent and convincing address, which ought to have been heard by every farmer in the Salinas valley. At the conclusion of Mr. Steele's address, the meeting adjourned.

Result, several applications for membership in Salinas Grange.

[We hope the class mentioned will be followed by one of 20 candidates or more; that a rousing good number of the intelligent, progressive farmers, matrons, sons and daughters of Salinas and vicinity may attend the State Grange at Watsonville in October next and enjoy one of the best social and educational seasons it will ever be their lot to so conveniently fall in with. It will no doubt be a rare privilege offered to every Patron in the State. Don't forget that boys and girls of 14 are now eligible to membership, and that every one of them on the farm will be benefited by stepping forward into the line of good experience.—EDS.]

March Grange

Having received the date and time of meeting, March Grange will hereafter appear in our directory. We have to thank its live Master for the following:

March Grange has its regular meeting on the second Saturday of each month, with a fair attendance. Despite the busy times, I think it will prosper in the end. I want to say that our Lecturer has not visited this Grange since it moved to Pennington. We would like to have the Master of the C. S. G. visit us some time in the near future, or any of the other State officers. Our regular day of meeting is on the second Saturday of each month at 2 P. M., though we have been meeting regularly twice a month since moving to Pennington. Harvesting is getting along pretty well, and the yield is very light—say one-third of an average crop. Fraternally yours,

W. T. LAM,
Master of March Grange.

The Farmers' Movement.

The farmers' movement is on. There is no mistaking it; the movement is started and can not be stopped by the sneers and misrepresentations of those who are interested in having it stopped. Of course there is opposition developing; but it would be folly to suppose there would be no opposite influences. Everything that moves must have opposition—there must be a resisting medium in everything. All nature is thus constituted. Society always tends toward centralization. The relations between men and classes are becoming every day more complex. The only remedy is organization. The farmers have found it out, and they are organizing. The movement is as broad and long as the continent. It has scared the corporations, and the politicians in Congress. Its influence has already penetrated the frigid recesses of the United States Senate chamber. The Congressmen are hustling and the United States Senators are hustling. Yet there is nothing strange about it; the farmers are all-powerful if they determine they will be; and nobody appreciates this fact more thoroughly than the politicians. The strangest feature of the movement is that there are still some persons who don't know that the movement exists. These fellows are destined to a rude awakening in the future; but what good will it do them? Some people only get information too late to do them any good.—*Highland (Pa.) Farmer.*

WATSONVILLE GRANGE has a large and increasing class to take the first and second degrees on Aug. 21. The third and fourth degrees will be conferred on Aug. 16th, when the Worthy Master, E. W. Davis, is expected to be present. An open meeting will be held Aug. 23d.

Pescadero Grange.

EDITORS PRESS:—Pescadero Grange received three members by card and conferred the first and second degrees on a class of six on the 12th instant. The third and fourth degrees will be conferred on the first Saturday in August. The Grange will be called to order promptly at 11 A. M., at Good Templars Hall in the village of Pescadero.

A Harvest Feast, music by our band and a good time will follow the degree work, within the gates.

All Patrons in good standing are cordially invited. Few Granges are so isolated as Pescadero. The presence of visiting members is much appreciated and inspires our members with fresh courage.

Our dormant members are returning and the prospect is good for another class soon.

Pescadero. I. C. STEELE.

AT the last meeting of Temescal Grange the report of the committee showed that the picnic finances were coming out even or thereabouts. Sister Kerr of Elk Grove gave some cheering remarks. That Grange is improving and has quite a number of able and good working Patrons, including a member of the Executive Committee and Lady Assistant Steward of the State Grange. It is hoped that sojourning Patrons in S. F., Oakland and vicinity will follow Sister Kerr's good example in visiting Temescal.

HORTICULTURE.

A Few Hints on Fruit-Drying.

If your trees were neglected and not thinned or overbearing, the fruit will be very small, averaging from 14 to 18 to the pound, and when dried weighing 800 pounds to the 10 tons green. If you had an easy time while your neighbors thinned theirs, you will have a light job hauling it off when dried, and your pocket-book will be very light too when you get home and settle up for cutting the fruit. The cutting of large fruit will cost 18 cents per hundred, while it will cost 40 cents per hundred to cut small fruit, and when the first-class fruit is dried it will bring from 10 to 15 cents a pound, while the others will sell at from 4 to 6 cents per pound, and hard to sell at that. If your fruit has been thus neglected, it will pay you to get a lot of pigs and turn them upon it in the orchard.

If you have as much as 10 tons of fruit it will require 500 trays. I use redwood and pine shakes for the trays, preferring the pine, although they cost about one-third more than the others. I use four shakes to the tray, making them two feet wide and three feet long. For a scaffold you want 52 pieces 1x4, 16-foot lumber, which will make enough scaffolding to hold your 500 trays. Make the supporting stakes of any kind of lumber, 2½ feet high, allowing one foot or more for driving, with one end cut square. Drive three stakes in a straight line seven feet apart. Now drive three more the same way, three feet one and one-half inches apart, making 25 rows, then take the 16-foot pieces, lay them on the stakes and drive a six-penny nail in each stake, making 25 rows with a three-foot gangway between. You will save enough in convenience of handling to pay for the scaffolds. A great many put their trays on the ground. I do not like this plan, as the dirt sticks to the bottom of the trays when you want to stack them of damp nights, falling off and soiling the fruit. If the trays are not stacked, the dogs and rabbits will be racing over them or perhaps a stray cow will run over them and ruin the trays and fruit. If your dried fruit has to be washed it will hardly be fit to cook.

You will want a sulphur box for bleaching, and it must be very tight. Make it 2½ by 3½ and 6 feet high. It will then hold 25 trays. It needs no bottom, but dirt should be banked around to make it tight. A little trench is necessary for the sulphur pan. One-half pound of French sulphur burning two hours will bleach 25 trays of fruit. Some people think sulphur is injurious to the system, but it is healthy for man and beast. It is true, a great deal of the fruit is spoiled by using too much of it; so is butter often spoiled by using too much salt.

The most important part in the drying of fruit is to let it get entirely ripe. Then it will be better, brighter and weigh heavier. The first two or three pickings should be very carefully made. If you pick green fruit you will beat yourself and every one who has anything to do with it. Apricots will dry in four days if the sun shines brightly. Sack the fruit in good sacks and before the sun is down. Then there will be no worms in the fruit. The moth comes soon after the sun goes down, depositing its eggs on the fruit, but the hot sun of the next day spoils them. Your sacked fruit should be placed so the wind will not strike it, which prevents the fruit from drying out too much. The best way to grade the fruit is to do so before it is cut, making three grades, carefully removing dust or dirt.

Do not take apricots to the cannery that will run more than 11 to the pound, and in gathering don't use a pole to knock off the fruit. Last year much was brought to our drier gathered in this way, and we don't want thus to discourage or break up the driers, but rather encourage them by bringing good fruit. The man that dries poor fruit will stay poor, and the poor man that eats it will not get fat. I think the man who markets this trifling fruit should be compelled to put a pound of sugar with each pound of fruit, and a bottle of "pain killer" along with it, and I think growers would take a little more pains, and consumers a little less, with it. We cannot expect a cannery to locate with us unless we generally improve the fruit, and the very men who produce poor fruit are the ones who will cry "hard times" the loudest as they demand the second mortgage on their farms.—*H. D. E. in The Pomotropic.*

The above article has many good suggestions in it, and the writer makes many good points, which, if carried out, will prove both beneficial and remunerative to the producer, besides being satisfactory to the purchaser. But right here let us offer a few words, by way of suggestion, regarding plans that have come under our observation.

1st. We find the most satisfactory method of paying cutters is by the pound. Weigh out a sweat box of fruit and give to each cutter, keeping track of the number of pounds each person cuts during the day, and if your sweat boxes are of uniform size the number of pounds net that each has cut can be easily computed; if the sweat boxes are not of uniform size they can be weighed and the tare deducted at the close of the day, or when most convenient. This saves the unnecessary provocation arising from half-filled trays, as some persons, while cutting by the tray, will put on one-third less than others. You not only pay more for cutting the fruit than is necessary, but do an injustice by paying more to one for cutting than to another. More than this, a great deal of time is lost by the handling of half-filled trays from the cutting table to the dried fruit bin. Where the cutting is done by the pound this difficulty is easily overcome. We believe the average price paid for cutting is 20 cents per 100; some are paying 25 cents.

2d. The drying on scaffolds in sections away from the coast as in San Bernardino county, is very essential, as the sun's rays are so hot that fruit placed on the ground would burn to a crisp; but in Orange county fruit on scaffolds would be so long in drying that the fogs would blacken the fruit. The best way to sun-dry fruit here is to lay the trays on nice clean stubble land, far enough from the road to be free from all dust. The stubble serves to draw the heat and it keeps the trays clean.

3d. The best French sulphur should be used for bleaching. When this is used no forced heat is necessary for burning the sulphur. A scrap of paper and a match will light the sulphur and it will continue to burn as long as there is oxygen to support oxidation, or until the bleacher is filled with the gas, when the sulphur will cease to burn and there is no danger of over-bleaching. If the bleacher is tight and the fruit allowed to remain exposed to the action of the gas for two hours or more, it will come out of the bleacher in a perfect condition, and cannot help but make fine fruit. On the other hand, if the sulphur is forced to burn, a little too much sulphur or a little too long exposure will ruin the fruit for market, and if you dispose of it at all it will be through the ignorance of the buyer, and your gain will be somebody's loss.

4th. There are tricks in all trades, and so there is in forcing the producer into grading his fruit. The buyer comes to look at your dried fruit, he offers you a first-class price for your best grade, which constitutes perhaps one-half of your dried fruit; for the second grade he makes an offer of a little more than cost of picking, hauling, cutting and drying, and on the third grade you will probably lose money. We believe a better way is to throw out the small fruit before cutting, and a still better way, see that the trees are well taken care of and the fruit properly thinned while young. This may look like a waste of fruit, but it can be given to those who have no fruit, and even though it be thrown away there can be no waste if it costs more to harvest it than it will bring in the market. The only true way of gathering fruit to dry is to pick it by hand, and even then you will need to look well to your pickers.

5th. We cannot place too much stress on the importance of handling the fruit carefully and when perfectly ripe. It is one of the impossibilities to make a nice dried fruit out of an unripe apricot or peach. It is not until the fruit is thoroughly ripe that the sugar is formed, and when you undertake to dry fruit in the watery state the water is evaporated and there remains a dry, tasteless chip, containing no nourishment whatever. A little of this inferior fruit mixed with the good, will knock off a half cent on the whole lot.—*Orange Post.*

Notes on Fruit-Drying.

EDITORS PRESS:—I have never written to you before, but I take great pleasure in reading the PRESS and I do not think you will object to my saying a few words in regard to the drying of fruit.

Not long since, I saw an article in a Southern California paper that treated on that subject, and must say my views are very different. To show you the difference I must give you some of the contributor's views, viz: The trays were best made of redwood shakes, dimensions 3x8 feet. He also stated that the poorest quality of sulphur was the best for bleaching purposes.

I think that the trays should be made of the purest white lumber that can be obtained; the whiter the tray, the whiter the fruit. This may be proved by drying a few peaches on a earthen or china plate, and comparing them with those dried on a tray. A great deal depends, too, on how ripe the fruit may be, for the riper the fruit, the darker the dried fruit. I do not think the trays should be so large, for the simple reason that they are hard to handle. The common raisin tray is a good size, and even that may be improved by tacking lath on the sides, so that in handling the fruit will not be wasted. There can be more fruit put on one of these trays, too, if the lath is on.

As to sulphur, I think the best sulphur is the best, because the cheapest grade of sulphur is not all sulphur, and consequently may spoil the flavor of the fruit.

One more difference, and that is, I do not think it is well to leave the fruit in the bleacher too long. In doing so it absorbs the sulphur flavor and loses its own. Sugar barrels are very nice to put the fruit in when it is taken off the drying-yard. The fruit crop is very good in this county and drying begins with us next week. MINNIE D. PERDEW.

Grapeland, Cal..

California Fruit in New York.

EDITORS PRESS:—I call your attention to the prices California fruits brought at my sales of July 7th and 8th. Three cars in all were sold with the following results, which go to show New York is rapidly making a record for being the market to obtain the best results for your deciduous fruits:

The highest sales as you see were $2.90 for cherries (8 lbs. each); boxes Early May peaches, $3 15 (18 lbs. each); boxes Hale's Early peaches $3 30 (18 lbs. each); boxes Alexandria peaches, $5 00 (18 lbs. each); crates apricots, $4 80 (20 lbs. each); boxes Peach plums, $2 65 (18 lbs. each); crates Tragedy prunes, $4.40 (20 lbs. each).

The market continues good with a demand that will maintain equal prices on no heavier receipts. The prospects are for a consumption double last year's shipments, at profitable prices, if the best quality is shipped and the fruit is in good condition on arrival.

New York, July 9th. E. L. GOODSELL.

Hop-Growers' Meeting.

The annual meeting of the California State Association of Hop-Growers was held in Grangers' Hall, Sacramento, July 14th.

The following officers were elected for the term of one year: Daniel Flint of Sacramento, President; A. E. Camp of Sacramento, Vice-President; Henry Whittenbrock of Sacramento, Treasurer.

The new Directors are from each of the five hop-growing districts, as follows: M. B. Tuttle, Watsonville, Santa Cruz county; A. Menke, Sacramento, Sacramento county; J. F. Long, Largo, Mendocino county; Joseph Pennington, Santa Rosa, Sonoma county; Dr. Durst, Wheatland, Yuba county. The Directors-at-large were: H. Rodden, Yuba county; L. Ross, Sonoma county; Judge R. McGarvey, Mendocino county; T. B. Lovdal, Sacramento county.

The following resolutions were unanimously adopted:

We, the hop-growers of California, in body assembled, do hereby condemn the universal practice of consigning hops to be sold on commission as detrimental to the best interests of hop-growers, as it brings into competition the dealer with the commission-man. As the latter has nothing to lose, but everything to make by the greater sales that he makes, he naturally infringes on the grounds of the dealer by offering to place the same hop or one of equal quality at a lower rate. Thus he paralyzes the interest of the dealer and grower, inasmuch as no one knows what length he may go in order to sell more hops. This naturally forces dealers and buyers to handle hops on commission. The present state of our market proves the injury to which growers were subjected in last year's crop.

Owing to the fact set forth above, we, the hop-growers of California, do firmly resolve and agree among ourselves not to consign under any consideration, hops to be sold on commission; and be it

Resolved, That we demand and will require to be allowed a tare of 3½ pounds to the bale, a tare equal to that on New York hop bales.

A Victory for an American Machine.

Farming and implement men will be interested in news by cable despatch July 4th, from Bucharest, that the reaper manufacturer, Walter A. Wood, has captured for our country on its national holiday the first prize, the gold medal in the important Roumanian sheaf-binding harvester field trial. Bucharest, with a population of a quarter of a million, is the capital of Roumania and beautifully situated in the heart of a great grain producing part of Europe. Wood's ingenious machine is doing credit to this country by gaining the high prizes, and also aiding in improving the conditions of farming everywhere.

A Notable Stock Sale.

The announcement that J. H. White of Petaluma, will sell his fine horses and Holstein cattle, must attract wide attention. Mr. White is one of our best known and respected farmers, and he has given much care and capital to the improvement of his live stock. His sale should draw buyers from all parts of the coast. An advertisement in this issue gives particulars of the sale which will be conducted in Killip & Co.'s best style, on Sept. 4th and 5th prox.

Our Daily Bread.

Give us our daily bread, we say,
And look no farther than to-day;
And be to-morrow gray or gold,
Or plentiful, or pinched with cold:
Thine be to-morrow as to day!

Even as the small bird shall receive
The food its mother gives, nor grieve
Lest that to-morrow fail; so we,
Lifting our lips and hearts to Thee,
Trust Thee for all the days we live.

Keep us within Thy heart that's wide;
Thy love our nest in which we hide;
Thy thought, the wing to fold us in
All night till the new day begin—
The day for which Thou wilt provide.

Katherine Tynan in "Ave Maria."

Miss Dorothy's Romance.

Dorothy Field looked very sweet and demure as, with her father, old Squire Field, and her tall, rather loosely hung brother Andrew, she walked to church one Sunday morning forty years ago. The little village of Framleigh was always quiet, yet on Sunday mornings it seemed even more peaceful than usual. Dorothy was sometimes a little oppressed by the calm, and wished it would not make itself so obtrusive. But on this May morning no such rebellious thoughts were in her mind, for she entered into the gently beguiling mood of Nature, and her heart was full of sunshine.

As they neared the rather stately looking brick church, little groups were seen coming from all directions, for every one in Framleigh went to church. Although the congregation was not large, it was on the whole a well-to-do one, for the inhabitants of this little village, most of whom were descended from a few aristocratic old families, prided themselves on this fact and kept up their good old names.

As Dorothy, from her place in the choir, looked over the familiar faces which showed themselves over the high, straight pews, her attention was caught by an unfamiliar face in Deacon Gray's pew. Surely never before had she seen this tall, elegant young man, with the pleasant eyes and sunny hair. And as she looked from him to her good-natured, awkward brother, it seemed to her that Andrew's coat had never fitted so badly.

Occasionally, during the service, she glanced demurely over her hymn-book at the new face beside the staid old deacon, and as she was singing, in her sweet soprano voice, "Sweet Fields Beyond the Swelling Flood," she looked over toward the deacon's pew to see if the new occupant was singing, and finding his dark eyes fixed on her with a calm, interested gaze, this simple country girl blushed and nearly lost her place.

At the various dinner-tables in Framleigh that day, this young man was spoken of with more or less interest. It became generally known that he was a cousin of the deacon's wife, and had been studying at the medical school in Cambridge, but was now obliged to give his eyes a rest.

The blooming damsels of Framleigh, who outnumber the young men of the village, were especially interested in the stranger. Rebecca Thompson, a good-natured, red-cheeked girl, who was hospitably inclined, was much grieved that it was too late in the season to have a sugar party, that she might ask Mr. Deane; but finally decided to content herself with a "gathering," which meant a social meeting of the swains and maidens of Framleigh in the large old parlor, where they played "fox and geese," or "around the chimney," and ate apples and cake or popped corn. The "gathering" would break up at ten o'clock, when those of the youths who were not too bashful to ask their favorite Mehitables or Abigails if they might see them home.

This kind of gaiety was quite new to the young Harvard student, and although he went in a rather superior mood, thinking to be mildly amused by the harmless gambols of these country people, yet he felt a thrill of interest as he wondered if he should see the sweet-faced girl who had sung in the choir on Sunday.

Rebecca, the hostess, ushered him in and introduced him to every one in the room. Then Robert did something which quite shocked the feelings of Framleigh society. On one side of the room all the maidens were sitting, while on the opposite side were all the young men, looking awkward enough in the straight-back chairs and dressed in their best clothes, for this was the way in which the guests always were arranged at the "gatherings" until the games began. But Robert, with an easy, graceful manner, took a seat on the girls' side of the room, between Dorothy and little Ruth Hawks, and began talking to them as if very much at ease, a proceeding which caused a surprised flutter on one side of the room and struck consternation to the other.

But when they began to play games, the chilly air of reserve which seemed to encircle the company was changed to one of merry good humor. From the moment when Dorothy's clear, shy eyes looked into his, as she took the cat's-cradle off his hands, Robert had a feeling of exhilaration, and he knew that he should enjoy himself. And when he left Dorothy at her own door, he felt very joyful as he walked home to the deacon's, and it seemed to him that there was nothing more charming than a country village in May.

Dorothy came down to breakfast next morning, looking very trim and domestic in a light print gown, and when Andrew spoke in a joking manner about her new city beau, she blushed up to the little curls on her forehead, and looked rather conscious.

That afternoon she thought she would go into the woods to see if she could find some late arbutus. When she reached the top of the hill she found a bed of May flowers, which had come out late, as they were under a pine tree which had kept off the sun. As she was bending over the flowers, pulling off the dead leaves which covered them, she heard a deep voice humming:

Oh, do you remember sweet Alice, Ben Bolt?
Sweet Alice, with hair so brown?

Looking up, she saw Robert Deane not very far from her. Just at that moment he saw her and came towards her. So together they gathered the arbutus, and when Robert said that picking May flowers seemed to be the most appropriate thing in the world for her to do, she was so like them, she turned pinker than the pinkest of flowers in her hand; and then he added, "I never knew how beautiful the arbutus was before." After they had gathered all the blossoms under the pine tree, Robert wanted to go up higher on the mountain to see if there were not some flowers there. So they did not get home till supper time, and Dorothy, who was usually very capable about the house, seemed rather abstracted that evening.

As the days went on Robert Deane still stayed in Framleigh. The simple old deacon, in speaking to the minister's wife about him, said: "It does seem mighty queer about Cousin Robert's eyes. The doctor told him he wouldn't need to rest them for more than a week or so, and here he isn't able to get back to Cambridge yet; but he does seem mighty content here."

May changed to June, and still he stayed. He acquired a great interest in walking, and he and Dorothy used to take long rambles on the mountains, or by the quiet little river.

One morning when she was working in the kitchen, the old knocker went in such a vigorous way that she hurried to the door with her apron on. She found Robert Deane there, looking pale and anxious. She had hardly time to say "Good morning" before he began: "I have just received a letter saying that my mother is very sick. I must go home. Cousin Nathaniel is going to drive me to Dayton and I am going right on. He is out here waiting; but I couldn't go without seeing you. May I write to you, Dorothy?" Dorothy very softly and blushingly told him how sorry she was that his mother was sick, and that he might write to her if he wanted to; then, with an earnest, lingering look and a gentle pressure of her hand, he was gone, leaving Dorothy in a very bewildered state of mind.

She stayed in the house for several days, and then she began to go to the postoffice. At first she asked the good old postmaster if there was any mail, demurely, with a happy, conscious little blush. Then, as the days went on and no letter came, she would ask with an anxious, nervous manner. Poor little Dorothy! Although she was faithful in her visits to the postoffice, she received no letter, and after a time all the pretty pink went out of her face, and it grew pale and had a pathetic expression. She always cherished a faint hope that she should hear from Robert, and although one of the most well-to-do young men of Framleigh was urgent in his proposals of marriage, and the squire would gladly have welcomed him as a son-in-law, she told him it could not be.

* * * * *

It was a bright June morning. Miss Dorothy, now a nice old lady of sixty, was picking roses off the large old cinnamon rosebush at her back door. Although her face was not so youthful looking as it was that afternoon when she gathered May flowers with Robert Deane, forty years before, yet it was still very attractive, with its clear, kind eyes, its sweet mouth and just a trace of the roses that used to bloom in her cheeks. Perhaps it was partly her kindly face that made all the children of Farmleigh love Miss Dorothy—Aunt Dorothy, as they called her—and no real aunt ever had more regard and love than she did. Her life was not an unhappy or lonely one, for it was so full of kindness and blessing to others that she was content.

A few years after Robert Deane had gone from Farmleigh, she had heard that he had married a rich Boston girl. Only about a year after she had heard of his death. While practicing at the hospital he had taken some contagious disease. That was all she knew about him. She had never received a word from him. Although at first her heart had been very bitter toward Robert, yet as time went on her feelings had softened, and now she thought of him in a fond, tender way as of one she had loved.

This morning as she was picking the roses, little Tommy Chapin, one of her most devoted cavaliers, came out of the back door and said: "I left a letter on the table in the sitting-room for you, Aunt Dorothy."

"Thank you, Tommy. Don't you think your mother would like these roses? They are about the last there'll be, I guess, and if you'll come in I'll give you one of my ginger cookies."

So Tommy followed Miss Dorothy in, and she gave him a large, round cooky out of a stone jar which she always kept full, so that she might have something to give the children when they came to see her.

When he had gone, with a large bunch of roses in one hand and a cooky done up in brown paper in the other, Miss Dorothy went into the sitting-room and opened her rather official-looking letter. There was a letter and note enclosed in the envelope. She unfolded the note and read:

SALEM, June, 188—.

Miss Dorothy Field:—In refitting the boxes of this postoffice it was necessary to take down the high base-boards behind the receiving box. There we found this old letter directed to you. On ascertaining that you still live in Framleigh we at once forward it. Respectfully yours, POSTMASTER.

Then there was an envelope yellow with age and with a postmark of 40 years before. Miss Dorothy opened it with trembling fingers and read:

SALEM, June, 1840—.

My Dear Dorothy:—I have thought about you a great deal since I left Framleigh and now that my mother is better I must write to you. I could not bear to come away without telling you that I loved you, although I think you must know it. I never supposed that I could care for any one as I care for you. Now, dear Dorothy, if you return my love at all let me know and I will come at once to Framleigh. If you do not and cannot care for me, do not pain yourself and me by saying so, but don't write at all. Hopefully yours, ROBERT DEANE.

As poor Miss Dorothy read this a mist came over her eyes. This was the hardest moment of her life, harder than those weary weeks of suspense. As she thought of Robert's weary, restless waiting, of his heartache and sorrow, and of the sadness which had come into her own life, it seemed to her that a very cruel fate had guided the course of that letter.

But Miss Dorothy's trusting heart could not be bitter long. She believed that somehow all things must be best as they were, and after a few quiet hours spent alone she came out of her room with her usual sunshiny manner. Then she went out into the garden to pull some of her nice radishes to send to unattractive old Miss Dunn, whom she pitied very much, for she firmly believed that she had never had a lover.—*Springfield Republican.*

Why Woman is Man's Best Friend.

First and foremost, woman is man's best friend:

Because she is his mother.

Second, because she is his wife.

Because she is patient with him in illness, endures his fretfulness and "mothers" him.

Because she will stick to him through good and evil report, and always believe him if she loves him.

Because without her he would be rude, rough and ungodly.

Because she teaches him the value of gentle words, of kindly thought and of consideration.

Because she can, with him, endure pain quietly and meet joy gladly.

Because, when he is behaving like a fretful boy—and we all do, you know, at times—with no reason in the world for it, woman's soft word, touch or glance will make him ashamed of himself, as he ought to be.

Because, without her as an incentive, he would grow lazy; there would be no good work done; there would be no noble books written; there would be no beautiful pictures painted, there would be no divine strains of melody.

Because she has made for us a most beautiful world in which we should be proud to live and contented to die.

Because—and this is the best reason of all—when the world had reached an unenviable state of wickedness, the blessed task of bringing it a Savior for all mankind was given to a woman, which was God's way of setting his seal of approval on her who is mother, wife, daughter and sweetheart, and, therefore, man's best friend.—*E. W. Bok, in Ladies' Home Journal.*

Too Many for the Bear.

Dispatches from Vanceborough, Me., tell how Mrs. Roderick McDonald and her sister, who live near Molus river, were busy with their house work the other evening, when they noticed a frightful bellowing of the cattle in the barnyard. Going out to see what was the trouble, they were confronted by a huge old black bear. On either side of him lay a fallen ox, while the rest of the cattle were huddled closely in one corner of the yard bellowing piteously in their terror.

On seeing the dead animals, Mrs. McDonald rushed at the bear with a pitchfork and thrust it into his neck. A roar of rage and pain, and, with a sweep of his paw he knocked her down. The other woman then struck him with an ax, disabling one of his forward legs. Mrs. McDonald arose, recovered her pitchfork, and attacked Bruin in front, while her companion plied the ax. In a few minutes the bear was dead. The women had their clothes torn, but suffered no injury beyond the fright and a few scratches.

A Few More Hints.

[Written for the RURAL PRESS by LUPA.]

From a child, I have persistently followed the suggestion, almost command, in my verse of Proverbs (the one whose number corresponds with the date of birth), which is:

"Open thy mouth, judge righteously, and plead the cause of the poor and needy." In other words, defend the weak against the strong, the yielding against the overbearing. So, on reading in an exchange the self-accusing confession of a mother, who had been studying over some remarks addressed to her conscience by a writer for the RURAL PRESS, besides "Domestic Hints" in a later number, I was compelled to protest in the name of humanity (it might be "huwomanity" if there were such a word), for we have had reproachful exhortations flung at us till we began to think we must deserve them all or they would not have been given so often.

This mother says, when referring to the children: "I have sometimes been petulant with them when weary with a hard day's work." I presume she has, so have most of us, and suffered hours of sorrow for it afterward; but did we carry out the resolutions formed in those remorseful times? If we did not, why? There was some season, physical or spiritual, for our desire to do so was sincere and strong. There may have been a cause farther back than the momentary feebleness of the will power, for petulance is not more likely to come from a serene spirit in a comfortable body than a whirlwind from harmonious atmospheric elements.

If a mother is exhausted by the hard work which has taxed every muscle and nerve to their utmost, perhaps it is her fault and perhaps it is not. It *may* not have been necessary for her to do so much, and, on the other hand, blame may belong with others who have made previous demands on her vitality.

Why must the mother alone be the one who shall personify the charity that "suffereth long and is kind; * * * that endureth all things," etc.? Why do we hear so few hints to the father and the boys of a household about making home attractive? They are quite as much responsible for the family miseries as the mother, and have a better chance to bring peace where is now discord, for they come to their meals (I am now referring to farmers) fresh from the out-door air, with their minds full of the satisfaction which comes of doing constructive work which will remain long enough to show that something has been done; while the mother has been laboring for hours to prepare what in a few minutes will be reduced to repulsive fragments and, perhaps, taken with such haste, in such quantities, divided into such enormous mouthfuls, that at the sight, the heated, tired woman loses what little appetite she had, especially after some sarcastic remark about the foolishness of being affected by such little matters, and the boastful "Now *I* never let such small things move me." If a child should make a demand just then, could the greatest of saints prevent the petulant answer?, And if that great "I" happens to have a little toothache, or the babies, or even the fleas, keep him awake half an hour, is *he* never cross? Watch him and see.

Now as to setting the table attractively: What good does it do to cultivate artistic taste till everything uncouth brings distress when there is no escape from repulsive combinations? You may arrange your table exactly according to your ideal, and nine times out of ten the men and boys will take their places before the dinner is half there, because the hay or the grain is waiting and they must get back as soon as possible, and in their hungry eagerness, commence on whatever they find, shoving things this way and that in order to reach better, till the whole effect is destroyed. In this way they get ready for pie or pudding before the mother has scarcely taken two mouthfuls, if indeed she could swallow past the big lump brought by weariness and disappointment.

In both these cases, and they are not by any means the only ones which could be described, the body is not nourished, the nerves suffer on account of the poverty of the blood, the energy oozes out in helpless tears, and home is not "made attractive." If it is not, whose fault is it? Is it *always* "the woman whom Thou gavest to be with me"—she that should be held accountable for everything?

Of course "circumstances alter cases;" we have been told that times enough to know it, and of course it is our duty to do our best, but no more than it is the father's duty to make the same effort. I am sick of preaching from men who never have been and never can be in woman's position, and tired also of seeing women meekly appropriate all the blame to themselves when, just as often, at least half belongs somewhere else. We do enough that is unwise or wrong under the best of circumstances, so let us not quite destroy our hope and prevent the growth of self-respect by taking the discredit of more sins than we actually commit.

But of course the PRESS and its patrons are generally right. There were lately some gloriously strong sentences against the lottery business, and S. R. Easton brings a needed rebuke concerning saloons.

Not long ago I had occasion to ride down the San Leandro road, near Oakland, and because my turning-point was at a certain saloon, I

commenced counting and found eight in a distance of two miles. Here is a chance to do some thinking as to who does most toward supporting them and how much of the increase of this business in the outskirts is due to increasing stringency of town laws and all the other questions that come into the mind of one who hopes the world is getting better.

Kindness in Speech.

An illness of long duration once kept me secluded for weeks at a time. A few close friends penetrated as far as the room to which I was confined, but they were not of the sort who enjoy scandal and I grew unused to the criticisms which people hurl at each other when the person criticized is not present. Recovery permitted a close contact with the outer world and it seemed as if the very spirit of caustic speech was vented upon my unaccustomed ears. They were what are termed "good-hearted people," but I felt ready to cry out on the utter badness of the hearts which could prompt such unkind remarks. Every speck of dust in a neighbor's kitchen was enlarged into a mountain of untidiness. The least slip in the behavior of her children showed mismanagement and unfitness for motherhood. A cold supper served at the close of a hot, busy day was construed as neglect of husband and home. And the girls and boys who had arrived at the dignity of being "out in company," but who had not learned to lay aside all their kittenish pranks and nonsense, were denounced without mercy; there were even hints which touched upon the purity of the lives of fair young girls, who had never harbored even a thought of evil. I looked at these spiteful detractors in perfect horror, and when one of them addressed me, prefacing his or her remark with "have you heard" or "I don't know how true it is, but they say," I felt like asking them to pause and reflect as to the wisdom of soiling their tongues with such gossip.

There is another class, whose work is just as dangerous, if not more so. Their charges do not come in frank speech, which can be met with equal frankness, but they respond to your word of praise for an absent one with "Oh! well!" and a toss of the head or an elevation of the eyebrows which may mean much or little, but when voiced by the person who carries the story onward, is sure to mean the very worst.

There is no guarding against these enemies to the peace of a community. A vigorously prosecuted slander suit might perhaps quiet them for a time, but they would soon forget the lesson.

The only way to get at the root of the matter is to fill the minds of the rising generation so full of good, useful thoughts that a love of gossip will find no lodgement there.....To know the great men and women of our own and former times through the records of their lives and work is knowledge which must advance all ages and classes. Nothing could be devised which would be more likely to check idle gossip. A lady who is deeply interested in the work of the Chautauqua Literary and Scientific circle, once said to me: "I have no time to talk about my neighbors since I began the C. L. S. C. reading and study." Let us hope that the rising generation will be unable to find either time or inclination for any "work or recreation" which lower them mentally or physically. "Jennie" gave us a good thought in her letter in the *Husbandman*, for June 4th, when she said: "If we would always look for the good qualities and meanings of our friends, in lieu of mistrusting their words and acts, how much unhappiness would be avoided!" Let us cultivate kindly feeling and kindly speaking. Our glass houses are so very frail that we cannot safely throw stones. —*Alice Carrington, in The Husbandman.*

Chaff.

A YOUNG man at Louisville, Ky., who smoked 40 cigarettes a day, has just been declared an idiot by the courts. Hardly necessary to bother the courts. Any body could have decided such a case.—*Ex.*

MANY a man has made a goose of himself with a single quill.—*Philadelphia Inquirer.*

"YES," said the old hen as she prinked her feathers a little, "everything is changing." "What's the trouble?" asked the pea-fowl. "These incubators. Seventy-five chicks came walking out last night, and I can't tell which are mine and which are the incubator's. Maternity is truly an awful responsibility."—*Merchant Traveler.*

AN obituary notice in one of the religious papers, says of the departed brother: "For two years preceding his death he was a constant reader of the ———. He was a great sufferer, but grace sustained him." The *Congregationalist* exclaims: "How sad that he did not take to the reading of some other newspaper in time!"

MAMMA: Now, Lilly, tell me what Mrs. Roundabout was saying to you. Obedient Lilly: Must I, mamma? Mamma—Certainly. Obedient Lilly: Well, she said it was strange such a pretty little girl should have such a homely mother.

NATURE'S tendency is to restore the balance; as a man gets "short" his face gets long.—*Hotel Gazette.*

YOUNG FOLKS' COLUMN

The Prime Minister Becomes the Executioner of Whisker Mousetop.

[Written for the RURAL PRESS by E. STONE LEWIS.]

"I swear," said the groceryman, as he stuck his head into the cheese-room and withdrew it quickly, shutting the door with a fierce slam that shook the pickles in all the bottles and ran behind the counter. "Oh, this is a little too much," he continued, running his fingers through his hair until it stuck up straight as if he was really quite wild. "How did that mouse get out after he was drowned dead? Come, now, tell me that!" he demanded savagely as he put the pepper where the clove belonged and the preserved blackberries among the pickles, emptying a bag of salt into the sugar barrel. There was no one to answer him, so he put a dozen bad eggs into the box of good ones. Really there was no end to the things that man did, he was so mad.

The clerk was down cellar patiently holding eggs in regular procession between his left eye and a candle to determine which box they should go in when they walked upstairs, so he couldn't hear and knew nothing of the whirlwind the little dead mouse was creating in the grocer's breast. The reason the clerk held the eggs between his left eye and the candle to determine whether they were clear and good, or clouded and bad, was because the right eye had a squint, and being of a philosophical turn of mind he was troubled with fears lest the right one should grow worse, and he decided that of the two evils he preferred to have them match, so he worked away on the eggs with his well-favored eye while his master flew around upstairs. Now the woman who got the pepper instead of clove and the man who carried home sugar with salt in it, were both very angry with the groceryman and left him in great wrath as a man who did not understand his business, and traded with the grocer in the next block. When his wife heard of it she was furious and rated her husband soundly because he had so stupid a clerk. He never spoke one word in reply but got up and walked into the cheese-room where Bungler still lay by the side of the tin can. Certainly the cheese was nibbled shockingly.

"It is no use to get angry with a mouse. One can't reason with the horrid little things, but I must fix the creatures in some way," he muttered to himself as he chewed his lip. The harum-scarum young Mousetops who lived in the tall chimney and blasted holes which filled up with soot, and so became quite downy, comfortable places of abode, were certainly made quite comfortable places of abode, were certainly making considerable commotion and havoc in the grocery store, and the grocer went out and cut up some slices of bread. Then he mounted the step-ladder and came down with a little tin box in hand, spreading the contents evenly and carefully on these slices. He carried them into the cheese-room, throwing the pieces about in a careless way, and then Bungler hit the board fence out in the back yard with a dull thud, but the poor thing could not feel it, which was a mercy.

Whisker heard the door when it slammed, so he rushed down to see what the groceryman had been doing, as he was quite gorged and tired to death of cheese. He rushed through the hole in a hurry, or rather he tried to get through, but unfortunately he had grown so stout on his new diet that he stuck fast. Scurry Mousetop senior was slim and slender, for really he had never taken the time to eat, which a well-regulated mouse considers necessary, and the hole was made to fit him. If the Mousetops had only been there to see they must have split their sides laughing, Whisker looked so funny. His eyes were like two big glass beads, they stuck out so, and his ears seemed quite too large for his mouth, as he held it wide open. He looked as if he wanted to speak and could not on account of the pain.

"This comes of eating too much cheese!" he finally groaned. "I guess I don't want to go in here. That grocer may want to poison me. He's full of tricks. I'll back out of this." It was not one single bit of use; he was caught and all he could do was to lash his tail.

When the Mousetops came down one after another to take a secret nibble of cheese and saw his big tail lashing they were frightened, for he had ruled by the strength of that, so it fell out that they raced up-stairs and kept the secret of Whisker down in the hole to themselves. Broomsticks and all sorts of unpleasant occurences would be forthcoming if it was known that they had been in the forbidden chamber, so they just scampered about in a most delightfully innocent way.

That very night the prime minister went down for a morsel of cheese as he felt quite faint. He had been searching all day for some secret and had determined to keep it to himself when he found another, and he sat down and washed his face very coolly indeed on finding Whisker stuck fast. He could easily have pulled him out, for Dot was not at all afraid, but he did not do it and went away full as softly as he had appeared.

"I don't care," he said as he rushed back to bed. "I won't pull him out. He is a greedy, selfish thing. He took all those Mousetops in there just to show how smart he was. The groceryman never would have set that trap in there for me, as I only nibble a little. It is lucky they are all so busy on that tunnel, and are all tired of cheese, or he would be found out and saved. I'll be glad when they get through into the next building; it'll be prime fun, for now I shall rule the Mousetops," declared Dot sleepily, and he went off into dreamland, as if he was a saint instead of an executioner. Thus Whisker's grand scheme to appoint Dot his prime minister, flattering him so as to worm his secret out of his little breast, caused Dot to commit a crime and sealed his own doom.

The groceryman walked in, to see the effect of his bread and tin box trap, when his eye fell on Whisker and he just laughed till his wife and the little grocers all rushed in, to see the fun, and then father and mother kissed each other and made up their quarrel then and there.

All the customers were invited in to see the new trap, and everybody laughed heartily and loudly; so the grocer became popular and famous, so much so that he had to lay in a new stock immediately. Whisker died of fright, although the grocer tried to keep him alive with bread and cheese and all the dainties he could think of, which were at hand. It was no use; Whisker expired, and he had to haul him out and send him after Bungler; but he grew rich on the trade the funny trap had brought him, for people were never tired of joking about it; so the grocer became very fat and jolly. When the Mousetops had nothing to fear, as Whisker had disappeared no one knew where, they ate up all the grocer's bread, and were all caught in the tin box trap and went off suddenly. Grandpa Mousetop died of the great shock, and those left to mourn moved into the next block through the tunnel, but closed it carefully behind them, leaving the grocer to solitude and trade.

GOOD HEALTH.

How to Live.

There are two things we chiefly wish for while we live—health, to make life enjoyable, and length of days to make it lasting. To obtain both mainly depends on ourselves.

We do not simply die; we usually kill ourselves. Our habits, our passions, our anxieties of body and mind, shorten our lives.

The key to health and long life is sobriety in living. It is the fashion to restrict the term sobriety in the use of intoxicating liquors.

We say with truth that the drunkard is killing himself, but we rarely speak of overeating as a shortener of life.

A sober life implies moderation in all things. "It consists," says Cornaro, "in moderate eating, in moderate drinking and in a moderate enjoyment of all the pleasures of life; in keeping the mind moderately but constantly employed, in cultivating the affections moderately, in avoiding extremes of heat and cold and in shunning excessive excitement either of body or mind. A sober life is a life of order, of rule, of temperance—that divine sobriety which is grateful to God, friendly to nature, the daughter of reason, the sister of virtue, the companion of temperate living—modest, gentle, content with little, guided by rule and line in all its operations."

It is an important rule to observe and practice for health, comfort and our peace within and without, to attack every ailment and malady at its beginning, to arrest the premonitory symptoms before they take root in our vitals, and gradually or quickly interrupt the normal action of the organs. A loss of strength, a weakened memory, a tottering walk, all bespeak a mental or physical disorder, which, if not arrested in the early stage, will lead to disease and fatal consequences.

"One can hardly believe," says Reveille, "how far a little health, well treated, will carry us."

"And the rule of the sage," says Cicero, "is to make use of what one has, and to act in everything according to one's strength."—*Ex.*

Leprosy of the Middle Ages.

According to Dr. Morell Mackenzie, leprosy, the scourge of the middle ages, has not become practically extinct among Europeans, but is in reality spreading. It has between 1000 and 1200 victims in Norway, is also found in Portugal, Greece and Italy, and is rapidly spreading in Sicily, in the Baltic provinces of Russia, and in France, while the British Islands are not exempt from it.

In the United States cases have been found in California, in some of the States of the Northwest, in Utah and in Louisiana. Many cases exist in New Brunswick. In the Sandwich Islands the disease first broke out in 1853, and there are now 1100 lepers in the Molokai settlement alone. The disease is extending in the West Indies.

The Treatment of Leprosy.

Kate Marsden, whose investigation of leprosy in Russia has been mentioned frequently, had interviews with M. Pasteur with the view of ascertaining whether inoculation could be resorted to. M. Pasteur, however, could hold out no hope of leprosy being dealt with in that way. Miss Marsden is anxious that this negative result should be promptly known in New Zealand, where hopes have been entertained of the applicability of the Pasteur treatment to Maori lepers. Miss Marsden is about to return to Russia to continue her investigation.

DANGER IN STALE MEAT.—A man was found dead some two years ago in a lodging-house in this city. An analysis of the contents of his stomach was made, and the following report handed in to the coroner: "I have made a chemical and microscopical examination of the stomach and contents of John Dwyer, which shows that his death was probably caused from eating mince pie containing tainted or partially decomposed meat. The chemical analysis demonstrated the presence of a poisonous cadaver alkaloid."

DOMESTIC ECONOMY

STRAWBERRY JELLY.—Crush ripe strawberries, strain the juice, put in a kettle, let boil, add a pound of sugar to a pint of juice, let cook 15 or 20 minutes longer.

SPONGE CAKE.—Six eggs and three cups of sugar, beaten together five minutes, one cup of cold water, four cups of flour, two teaspoonfuls of baking powder, lemon or almond flavoring; bake in a dripping pan.

POTATO PUFF.—Two cups of mashed potato (that has been put through a sieve); season with salt and pepper; stir in two tablespoonfuls of butter, beat to a cream, add two well-beaten eggs and one cup of cream. Pour into a baking dish and bake in a hot oven.

MILK PORRIDGE.—Two cups best oatmeal, two cups water, two cups milk. Soak the oatmeal over night in the water; strain in the morning, and boil the water half an hour. Put in the milk with a little salt, boil up well and serve. Eat warm, with or without powdered sugar.

SPONGE CAKE. — This inexpensive recipe makes very satisfactory sponge cake: One cupful sugar, two eggs, one-half cupful cold water, one pint flour, one teaspoonful baking-powder. Beat the yolks of eggs and sugar to a cream, add the flour in which is the baking-powder and water, lastly the whites of the eggs.

RICE SNOWBALLS.—Boil one pint of rice until done soft, put in small cups, and when perfectly cold place on a dish, make a boiled custard of one pint of milk, three eggs, half-cup of sugar, one teaspoonful of cornstarch, flavor with either lemon or vanilla. When cold pour over the rice balls. This is a simple but nice dessert.

TO COOK RICE OR GRITS.—Take a clean can or other suitable vessel, put the rice in this with water sufficient to moisten it and allow for swelling, place the can in a kettle of boiling water, cover the latter closely and let boil without stirring until the rice is tender. There is no danger of scorching. Grits are nice cooked in the same manner. Salt to taste when putting on to cook.

INDIAN MEAL GRUEL.—One tablespoonful of fine Indian or oatmeal, mixed smooth with cold water and a saltspoon of salt; pour upon this a pint of boiling water, and turn into a saucepan to boil gently for half an hour; thin it with boiling water if it thickens too much, and stir frequently; when it is done, a tablespoonful of cream or a little new milk may be put in to cool it after straining, but if the patient's stomach is weak it is best without either. Some persons like it sweetened and a little nutmeg added, but to many it is more palatable plain.

WAFFLES.—First be sure the irons are smooth. In the first place, if your irons are rusty or rough, make a batter simply of flour and water; grease irons thoroughly and heat well. Put this batter in and cook till done; take out, and if it does not come out easily have patience, and get all the flour out by scraping with a sharp-pointed knife. Repeat this process, and you will be surprised how smooth your irons will become. Then to one pint of buttermilk or sweet milk use two eggs and soda or baking-powder as you would for pancakes.

GOOD WAYS TO USE COLD BISCUITS.—1. Cut into slices about a half-inch thick, put in the oven and toast brown on both sides, put in a dish and pour over enough boiled sweet milk to nearly cover them, let stand a few moments, then take out of the milk and serve with sauce. They make a really nice dessert. 2. Break the biscuits into crumbs, put in a saucepan, pour over them enough warm water to soften them, set the saucepan on the fire until the crumbs are thoroughly soaked, sweeten to your taste, flavor with nutmeg or essence of any kind preferred, add a little salt, a small piece of butter and an egg, beaten light; when the egg is done, take up, put in dessert plates and serve with sauce. A good way to use stale light bread is to slice it, beat four eggs, a little salt and two tablespoonfuls of sugar together, dip the bread in this and fry in hot fat. A good way to use cold rice is to mix just enough warm water with it to separate every grain, add pepper and salt to taste, break in a few eggs, and fry in a little hot fat. Tomatoes are very nice if boiling water is poured over them, the skins removed, the tomatoes sliced and placed in a saucepan, with a little water and enough molasses or sugar added to make them sweet, letting them cook until the syrup gets quite thick.

The Week.

The death of the Pathfinder is the week's event which awakens the keenest interest and sympathy of the California people. He had nearly attained the outer scriptural limit to man's life and yet his unceasing activity led all to hope that he might yet be spared many years to enjoy the progress and prosperity of the great commonwealth which he did so much to bring into existence.

The engraving upon another page of this issue is doubtless one of the finest portraits of Fremont ever produced, and the fact that it represents him in the prime of his manhood, rather than after age had preyed upon the beauty of his countenance, will make it the more acceptable to his California friends. In connection with the portrait we give a brief sketch of his life, so full of effort and accomplishment, and so intimately interwoven into the history of the Great West.

Californians will sincerely mourn the death of John C. Fremont; their hearts will go out in tender sympathy for his noble wife, who is now on California soil, and was unable either to minister to him in his illness or attend his burial. Let the nation deal generously with her, and let California afford her a home among those who delight to honor her. It would be singularly proper, too, that the ashes of California's first hero should mingle with California soil.

Silver and Wheat.

The week has brought as full a realization of the ennobling of silver as can be expected from the present Congress, for the President has signed a compromise measure passed by both houses, the chief provisions of which will be noted presently. Intimately affected by the condition of silver, as has been repeatedly shown in the RURAL, is the market value of wheat. It is held by experts that because of the advance in silver which has thus far taken place, the cost of Russian and Indian wheat has already been increased, and as soon as accumulated stocks, which have been laid in with depreciated silver, are exhausted, the increased cost of such wheat will reach about 20 per cent of its old value. Of course this depends on the future of silver, and will be governed by the realization of additional silver legislation, which will be striven for by the friends of silver. Thus, though the full advantage to be gained by making a metal which purchases this competing wheat the equal of gold is not to be immediately secured, the tide seems to be clearly setting toward its realization, and this must encourage American wheat-growers, so long as they are dependent upon sale in European markets.

It is of special importance then to our farming interest to understand just how far the ennobling of silver is accomplished by the law passed last week. It provides that the Secretary of the Treasury shall purchase from time to time silver bullion to the aggregate amount of 4,500 000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 371 25 100 grains of pure silver. Treasury notes issued in payment will be redeemable in coin, and will be legal tender in payment of all debts, public and private, except where otherwise expressly stipulated in contract, and will be receivable for customs, taxes and all public dues. Upon demand of the holder of the Treasury notes the Secretary shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such rates as may be provided by law. The Secretary of the Treasury shall each month coin 2,000,000 ounces of silver bullion purchased into standard silver dollars until the first day of July, 1891, and after that time he shall coin out of the silver bullion purchased as much as may be necessary to provide for the redemption of the Treasury notes. The present law is repealed. The last section provides for covering into the Treasury the fund held for the redemption of the National bank circulation.

As this enactment has been secured as party a measure there is naturally sharp disagreement as to its value and probable accomplishment. It does not satisfy the silver men because it does not actually remonetize silver, but it may be regarded as a step toward that end if the great western half of the country sends to the next Congress men who can be trusted to complete the ennobling of the white metal. Had provision been made for free coinage after the price of silver advanced to par, then no serious objection could be urged against the bill, but as it is, silver is still treated as a commodity, and as such it will be subjected to speculative influences. This, of course, is what Wall Street and the "gold bugs" in general at the East wish, for they can get higher rates of interest, besides speculate to a much better advantage, but to the country at large it is ruinous, for there are too many industries whose prosperity is dependent upon silver—the higher it advances in price, the greater the benefit that will be secured.

A broad effort is to be made to firmly fix silver money in the policies of the American nations. Last week Senator Teller introduced a joint resolution declaring it to be the determined policy of the United States to use both gold and silver as full legal tender money, and instructing the President to invite the Governments of the Latin Union countries and such other nations as he may deem advisable to join the United States in a conference to adopt a common ratio between gold and silver for the purpose of establishing the international use of bimetallic money and securing a fixity of the relative value between those metals, the conference to be held at such place as may mutually be agreed upon by the executives of the Governments joining it.

The legislation thus far had upon silver comes just in time to help wheat prices for the current harvest. The general shortness of the world's supply to which we have frequently alluded, the lessened production in this country, which according to the July report of the Department of Agriculture is about 20 per cent less than an average crop, and the reduced output of this State, all combine to bring firmness to values and to warrant the expectation of a considerable advance which is now generally indulged in.

Prison Bags.

There seems to have been a quick demand for prison-made grain bags. Warden McComb, in his report to the directors last week, said:

The extraordinary demand for prison-made grain bags this season exhausted our stock early in June, and at the end of the month we had orders for 269,000 bags, to be delivered as fast as manufactured. There were 3 295,500 bags sold during the fiscal year, figuring up $217,753 after paying for raw jute, and filling up the Jute Revolving Fund to $100.000. The surplus was put in the State Prison Fund, which now contains $151,754 59. We have raw jute on hand, including 2500 bales in bonded warehouse at San Francisco, valued at $57,087 84.

In accordance with the resolution adopted by your honorable board, I have arranged with C. D. Bunker, customs broker, to make the necessary entries for securing a drawback for duty paid on the raw jute used in the manufacture of grain bags at the prison. Mr. Bunker is to give his personal attention to the exportation of wheat in prison bags from Port Costa and other shipping points, and is to receive for his services as broker 20 per cent of the net amount of the drawback that may be returned to us by the Custom House authorities. New wheat will be shipped this month, and we can soon ascertain if our claims will be allowed or rejected; if our claims are allowed and our estimates are correct as to the number of bags that will be discovered at the shipping points, we will realize about $4000 through the drawback demands.

The question which will arise in the mind of the farmer, on reading this statement, is the same which was brought forward on a previous occasion, viz.: Does it mean that the State is making a large profit on the bags and thus using labor, which the farmer is taxed to support, to make bags to sell to him at a profit? It would look that way when the account shows $217,753 on hand after paying for the jute.

Again, if the State recovers $4000 as rebate for bags shipped out of the State, does not that belong to the farmers who bought the bags?

The Paine Break.

A dispatch from Sacramento announces that the closing of the great crevasse below the city is nearly completed. It states:

The dam is now some two feet or more above the water in the river. It is intended to raise it until it will confine the river up to the 24-foot mark. The water on the inner side is some two feet lower than in the river. Very little water gets through the dam. The tremendous current that swept through the break during the winter for several months cut up the land over which it roamed so badly that much of the territory has been rendered unfit for use for purposes of agriculture. About all the water now runs in its proper channel, and the scouring process below the break is going on.

We trust this is a true statement. The residents adjacent to the break have been very apprehensive of the unsatisfactory outcome of the work which has been in progress during the last few weeks, and have expressed serious doubts of its success and permanence. We trust these misgivings will be removed, for the menace of renewed losses will certainly have a bad effect upon enterprises in the immediate region and all along the path of the flood. Public work of this character should be a model of stability and efficiency, though unfortunately it is too often otherwise.

IT is now an assured fact that Phil Armour of Chicago will establish stockyards on the Pacific Coast. Work was begun this week at Baden, on the Coast Division of the Southern Pacific. The Armour Company has purchased 1920 acres adjacent to the station from the Lux estate, paying therefore $460,000 in cash. The Armour syndicate has advertised for 6,000,000 bricks for use in the new slaughter-houses, and a large supply of lumber has been engaged for the stockyards and corrals.

Mono Lake.

(*Concluded from page 49.*)

instances eight and ten feet in diameter and 20 or 30 feet high. They are clustered in groups in the same manner as the tufa towers and castle-like masses which have been left exposed by the receding waters of the lake.

Unlike the masses that have been exposed to the atmosphere, their forms are unbroken. The upward rush of fresh water from the orifices in the summits of these sublacustral towers is often strong enough to deflect a boat when allowed to float over them.

Other tufa domes rise above the surface of the lake near the shore and add an interesting and rural feature to the scenery. A group of these domes seen from the shore near Black Point, looking toward Mt. Warren, is shown in the accompanying engraving which we reproduce from "The Quarternary History of Mono Valley," by Israel C. Russel, published in the U. S. Geological Survey Report. These domes rise in water that is 10 or 12 feet deep to a hight about 12 feet above the surface. Many of them are vase-shaped, as shown in the illustration, being smallest at the water's surface, and nearly circular in outline. The more symmetrical ones appear not unlike huge specimens of the sponge, known as "Neptune's Cup." The tops of several are hollowed out so as to form basins, and in a few instances these depressions are filled with clear, fresh water that rises through the porous and tubular tufa comprising the submerged shaft of the structure. These are typical specimens of sublacustral spring deposits which have been left particularly exposed to a recession of the lake waters, but are still points of discharge for the springs that built them. The water of one of these natural fountains rising in a lake whose water is utterly undrinkable is of exceptional purity. The only other instance where fresh-water springs have built up islands in a saline lake is in Lake Tezasco, Mexico.

Sketching.

One of the engravings on our first page presents a scene familiar to those living near our larger towns. Any adjacent embodiment of the picturesque is quite likely to be invaded during the summer by a band of aspirants to art honors who come armed with camp stools, easels, drawing boards and sunshades, to test the skill of their eyes and fingers in catching nature in her varied forms. The scene in the engraving lies near Sacramento and the unsuspecting sketchers which the camera has attacked in the rear are members of the Sacramento School of Design. This school, as most of our readers know, has its headquarters in the Crocker Art Gallery, and is conducted in an enterprising manner to advance art and art studies. It has the fullest arrangement for indoor work with models and masterpieces and in the beauties in and about the capital city finds grand opportunities for field work. The institution is one which those seeking art culture should visit.

New Viticultural Headquarters.

The demolition of the Platt's hall structure to make way for a grand new building has made it necessary for the Viticultural Commission to select a new location for its headquarters, and this has been done by leasing the store 315–17 Pine street, between Sansome and Montgomery. This location is superior in some respects to the old one, and is cheaper by $100 per month. The removal will take place about September 1st.

At the meeting at which this action was taken, Commissioner George West of Stockton was present, and it may be of interest to other wine-makers to know that he considers prospects good for the present year. He said: "I think everything looks now as though our wine men were going to make some money this year."

The Commission proposes to prepare a revised directory of the viticulturists of the State. The names of all the growers and the variety of grapes which they grow, whether table, wine or raisin grapes, with the acreage of each, are to be obtained. The total number of acres of vines in bearing is likewise to be given. No doubt the commission will welcome reports from all growers covering these facts.

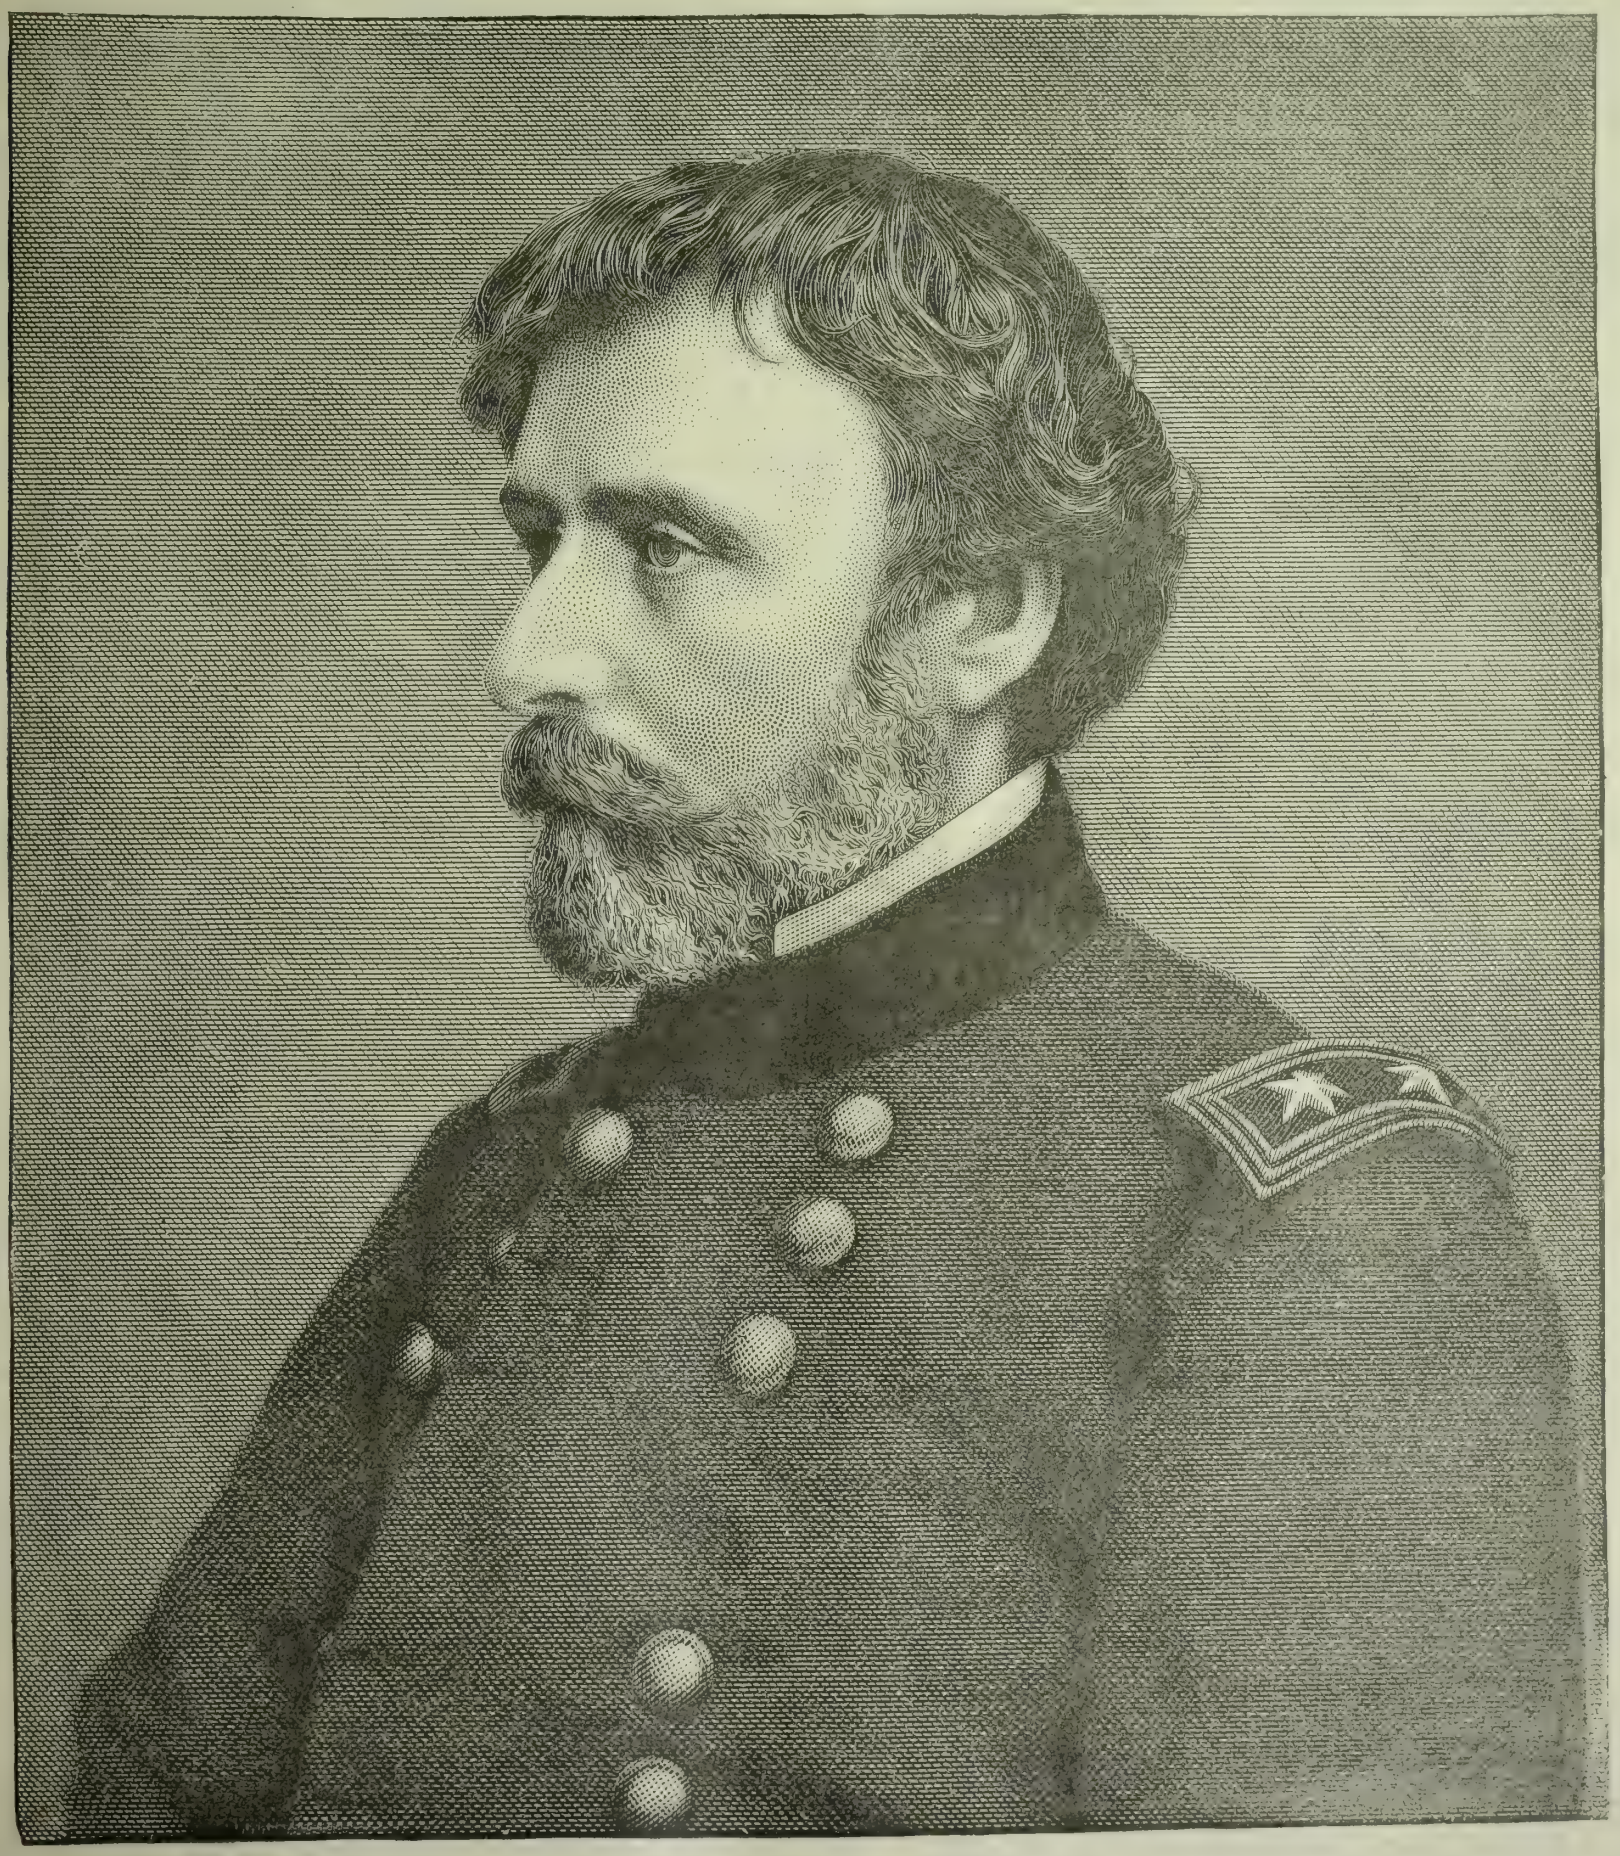
JOHN BIDWELL had 248,000 pounds of cherries this year on his Chico ranch.

Death of General Fremont.

Major-General John C. Fremont died in New York on Sunday afternoon, after a sickness of brief duration. He was 77 years and six months old at the time of his death.

General Fremont's name is closely identified with the early history of California, he having been one of the most prominent figures in the events which led to its cession to the United States.

He was born in Savannah, Ga., in 1813. In 1833, he obtained a position as teacher of mathematics in the U. S. Navy, which he kept a few years, and then went into surveying and civil engineering. In 1838–39, he accompanied M. Nicollet, a Frenchman and a distinguished man of science, in explorations of the country between the Missouri and the British line. These explorations were made under the authority of the Government, and while engaged in them in 1838, Fremont received from President Van Buren, under date of July 7th, a commission as second lieutenant in the corps of topographical engineers.



In 1842, Fremont projected a geographical survey of the territory of the United States from the Missouri river to the Pacific Ocean, the feasibility of an overland communication between the two sides of the continent being a leading idea in the scheme of explorations. He applied to the War Department for employment in this service, and having received, at his own suggestion, instructions to explore the Rocky mountains, and particularly to examine the South Pass, he left Washington, May 2, 1842, and on June 10th began his expedition from a point near the mouth of the Kansas river, a few miles beyond the Missouri border, whence he proceeded up the Platte river, through bands of hostile Indians, to the South Pass, which he carefully examined.

He next explored the Wind River mountains, the loftiest peak of which, 13,750 feet above the sea, he ascended August 15th, accompanied by four men. This mountain is now called Fremont's Peak. From the Wind River mountains, which he left August 18th, Fremont returned to his starting place by nearly the same route that he had followed going out. He reached the mouth of the Kansas October 10, 1842, afthr an absence of four months. He had encountered much hardship and many perils, and had successfully accomplished a ll the objects of the expedition. Over the whole course of his extended route, he had made barometrical observations to ascertain the elevations both of the plains and of the mountains, and astronomical observations for latitudes and longitudes.

Immediately after the publication of the report of this expedition, he planned another of a more comprehensive character. He determined to extend his explorations across the continent, and to survey the then unknown region lying between the Rocky mountains and the Pacific ocean. In May, 1843, he commenced his journey with 39 men and proceeded up the Kansas river far enough to ascertain its character, and then crossed over to the Platte, which he ascended to its source in the mountains, where the Sweetwater, one of its tributaries, springs from the neighborhood of the South Pass. He reached the pass August 8th, went through it, and saw the head waters of the Colorado flowing toward the Gulf of California. On September 6th, after traveling over 1700 miles, he came in sight of the Great Salt Lake, of which no accurate account had ever yet been given, and of which very vague and erroneous notions were entertained.

His investigations effected important rectifications in our geographical knowledge of this portion of the continent, and had subsequently a powerful influence in promoting the settlement of Utah and the Pacific States. From the Salt Lake he proceeded to the upper tributaries of the Columbia river, whose valley he descended, until on November 4th he reached Fort Vancouver, near the mouth of the Columbia. On November 10th he set out on his

J. C. Fremont

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

FIGHTING FIRE.—Livermore *Herald*, July 10: A fire was started on the Pallareno place, on the south side of the Crane ridge, last Saturday, by a couple of hunters. They decamped upon seeing what they had done, and the fire attained considerable headway before the neighbors could get together to fight. Low B. Clark and Aurelius Ladd finally got a small party together and began work near the top of the ridge, while Julian Romo fought single-handed on his range, near the Mocho. The fire started early in the morning, and burned all day, the last spark being finally stamped out at five o'clock in the evening. Mr. Romo worked alone all day, while the party followed up their line to the end. The fire ran to the Crane ridge road on the ridge, and burned a large portion of the feed and about a dozen cords of wood on Horace Overacker's range. Mr. Romo lost a large area of feed, the fire going to the Mocho creek. A deep canyon checked its course toward the southeast.

Butte.

THE WHEAT HARVEST. Oroville *Register*, July 10: The big combined harvesters are now at work throughout the eastern part of the county. In many sections the crop is turning out better than was at first expected, though on much of the black land it will probably be only one-third as heavy as usual, or even less. The county, as a whole, is undoubtedly fully up to the average of the State in its wheat yield, and is far ahead of many less favored localities, where the proportion of low land is greater. There are many fields of heavy growth somewhat beaten down by the late rains, though by the present methods of harvesting nearly all the grain will be saved.

Colusa.

WHY THE CROP IS POOR.—Colusa *Sun*, July 12: The crops are not turning out as well generally as was expected. It seems that the wheat sown before the first rains in October, and which has been looking best, is turning out poorest. It is found after the harvesting has been begun that there are many heads without wheat. Captain Ash thinks a frost came at the wrong time for the first sowing. Taking all things together, this has been a poor season for wheat.

Contra Costa.

CROP NOTES.—Martinez *Gazette*, July 12: The harvest is in full bloom in the eastern portion of the county, and the yield is in pleasing contrast to the rest of the county. The excessive and continued rains prevented the proper sowing in the large wheat growing sections elsewhere, but the season was well suited to the system of summer-fallowing generally followed at Byron, Brentwood, and that vicinity. We learn that Mr. E. D. Grisby threshed 810 sacks from 40 acres at Brentwood, and that Mr. Geo. A. Miller's wheat yielded 2800 pounds to the acre. Others are presumed to do as well, but these are the only ones from which we have definite returns.

El Dorado.

MORE GRASSHOPPERS.—*Record Union*, July 9: A resident of White Rock, writing to the *Record Union* of the ravages by grasshoppers in that section, says: Having read the account in Monday's *Record-Union* of grasshoppers being so numerous in this vicinity, I write to tell you something of the damage already done by them here. They have stripped a great many fruit trees and grapevines of every leaf, and peeled the bark from all tender shoots. Vegetable gardens are ruined, and, where two weeks ago were lovely flower gardens, nothing but stalks remain. The pests undoubtedly hatched here as when they were first noticed they were about the size of common house flies.

Fresno.

GOOD YIELD OF WHEAT.—Selma *Irrigator*, July 10: E. F. Hammers, who has a half-section of fine land one mile south of Selma, reports the largest yield of wheat yet given this year. He thrashed this week from 80 acres of land 869 sacks of excellent wheat. This is almost 11 sacks to the acre.

GRAIN IN THE HURON COUNTRY.—Hanford *Sentinel*, July 10: Ransom Jones, whose grain ranch is one mile north of Huron, has harvested 2360 sacks off 150 acres—nearly 16 sacks to the acre. J. Schwinn, a resident of the same locality, harvested 2119 sacks off 140 acres—more than 15 sacks to the acre. Frank McClellan got 2008 sacks from a quarter section of volunteer, near Jones ranch, and the Huron country has done nobly this year.

MORE IRRIGATION.—Fresno *Republican*, July 11: The surveys, plans and details for the proposed lumber and water flume from Stevenson creek to Toll House, and ultimately to this city, have been completed and the work of constructing the flume will be begun at once. The flume will carry 300 feet of water to the head of Big Dry creek, four and a half miles above Toll House, this water to flow along Big Dry creek and to be used for irrigating purposes. The remainder of the water will be used in the flume for the transportation of lumber from that point down to Toll House and Fresno. The irrigating water will be taken out at a point near Academy and will irrigate the whole of the Big Dry creek country lying between the San Joaquin and the Kings rivers, a fertile region of rich, red loam that cannot be irrigated from any other source. This section includes the thermal orange, lemon, fig and olive belt lying along the foothills, and it will become valuable property as soon as the water gets upon it.

A RUNAWAY HARVESTER.—Traver *Advocate*, July 11: A combined harvester running near Huron, on the West Side, one day last week was run away with by the horses attached thereto, who carried the machine over the railroad track. Perry Clough of this vicinity, who was attending a lever on the top of the machine, was thrown off and had his right ear torn nearly off. The driver was pitched back on to the place where Clough had been and thus escaped serious injury. Mr. Clough came home and is under Dr. Williams' care, and his ear is now growing back to its usual place at a rapid rate.

Humboldt.

WOOL.—Eureka *Times*, July 10: Frank H. McKee, who lives in the southern part of the county, a few miles inland from Shelter Cove, was in Eureka yesterday and paid a visit to the *Times* office. Mr. McKee reports general prosperity in that section, with hopeful prospects. He says the wool crop is for some reason better quality than heretofore, and that good prices are being realized.

Inyo.

CROPS ON THE STEVENS CANAL.—*Inyo Independent*, July 11: This is the first season when crops have been irrigated from the Stevens canal. Mr. H. J. Robinson has wheat growing which promises to make a very heavy crop. He says part of it now looks as if it would yield one and a half tons to the acre and it is ripening fast. Corn is making very rapid growth and will be a heavy crop. His first cutting of alfalfa produced three tons to the acre. Mr. W. Jenkins also has fine crops of alfalfa and wheat growing. The canal is now in fine condition and carries a large volume of water.

Lassen.

FAIR DATE CHANGED.—Susanville *Advocate*, July 10: The Board of Lassen County Fair Directors met last Monday. President A. L. Tunison and Directors Lawson, Wemple and Leavitt were present. C. E. Emerson was elected assistant secretary, and immediately entered upon the discharge of the duties of that office. A speed program was adopted and a premium-list was arranged. The date of commencement of the fair was changed from Oct. 7th to Oct. 6th.

Los Angeles.

FRUIT CANNING.—Pomona *Progress*, July 10: Work at the cannery this week has been rushing, to say the least. From 50 to 60 tons of apricots per day are being delivered. A force of over 200 cutters are at work and nearly 400 men, women and children are employed about the works. The dried fruit is already being shipped to the East and several carloads have been forwarded. The variety mostly being brought in is the Royal, but some of the earlier Moorpark orchards are beginning to be picked and are yielding some of the most magnificent fruit we have ever seen. We should judge some specimens would go at least three to the pound. From 20 to 40 teams can be found at all hours waiting to unload. The cannery is running day and night.

San Bernardino.

EDITORS PRESS:—Harvesting is nearly over and the time is at hand when the speculator tells of the enormous crops, and runs the price down until he gets possession of the farmer's produce, when lo! we find the crop was not so large as estimated. Wheat is advertised for sale in Riverside at $1 15 per cental, and rolled barley is selling at $1.20 per cental. Why is this? Is it because the Perris and San Jacinto farmers have raised more wheat than usual, and buyers can afford to sell small quantities cheap, in order to be able to buy large quantities still cheaper? Thrashing has been going on for some time; still there seems to be no decline in the price of barley. There has been no thrashing done in the north end of our valley yet, but the hay is baled and the whole amount put up for sale is about 80 tons, where the crop, two years ago, amounted to between 1000 and 2000 tons. Many of the farmers have barely enough hay to carry them through the season. Mr. Kehl's wheat-field is being headed, and on the best of it the stacks are few and far between. The hot weather has ruined the corn and beans in our neighborhood, but we only raise small quantities for home use. We have a school district here now and have kept school one month. Our census marshal's report shows 21 census school children and 34 children all told in the district. The average attendance was 15½.—L. S. LYMAN, *Alessandro, July 10th*.

FRUIT DRIERS BUSY.—Redlands *Citrograph*, July 12: Cook & Langley, fruit driers, now employ 360 hands, and have a weekly pay roll of $2500. They handle from 60 to 80 tons of apricots a week, an amount which has never before been equalled in this section.

San Diego.

THE HEMET DAM.—San Jacinto *Register*, July 10: Hancock Johnston informed us Monday evening that he had received a letter from W. F. Whittier of Los Angeles, one of the directors of the Hemet Land & Water Co., stating that a ship load of cement had arrived at San Diego to be used in the construction of the great Hemet dam. 2,000 barrels of cement will be shipped immediately from San Diego. He also states that they will have to begin work on their warehouse and side tracks at once, and as soon as Engineer Schuyler returns from Denver, where he will be compelled to remain 10 or 12 days, work will be commenced on the dam.

NEW GRAIN WAREHOUSE.—*San Diegan*, July 11: The Spreckels Brothers' Commercial Company set men to work this morning to build an important addition to the west end of their coal bunkers. The addition will be 300 feet long and 40 feet wide, and is intended as a warehouse and elevator for the storage and shipment of grain. Its capacity will be 3000 tons. The warehouse will be located, as stated, at the west end of the bunkers, and will fill the vacant space in the wharf now seen between the bunkers and the engine-house. A big gang of men were put to work, and the officers of the company say the house will be ready to receive grain in 15 days. The intention is to supply it with all the modern appliances for handling grain which the coal bunkers have for handling coal, and ships will be loaded with the quickest possible dispatch.

THE PRODUCERS' UNION DRYING FRUIT.—*San Diegan*, July 11: The big drier ordered by the Union some time ago is to-day being set up at the Union's headquarters down on Fifth street and will be put in trial operation to-morrow. Half a ton of apricots will be put in as the first batch, but Manager Webber stated to a *San Diegan* reporter this morning that he expected by the middle of next week to be turning out two tons of apricots per day, and he would maintain the operation as long as the fruit lasted and the price warranted.

San Joaquin.

WATERMELONS.—Lodi *Sentinel*, July 12: On account of the exceedingly wet weather melons are late this year. The first shipment this season was made yesterday, Wm. Tecklenberg having consigned half a car load to San Francisco. Next week four or five car-loads will be shipped, but the business will not be booming until after the 25th instant.

San Luis Obispo.

ANNUAL FAIR.—Arroyo Grande *Herald*, July 5: The regular meeting of the Arroyo Grande Agricultural Association was held at Phillips' hall, on Tuesday afternoon, July 31. President Leedham being absent, Vice-President J. V. N. Young presided. It was moved and carried that the society hold its fifth annual fair on October 8th, 9th and 10th. The president appointed a committee consisting of A. Philips, W. N. Short and N. J. Downer to revise the premium list and bring the same before the board at a called meeting to be held Saturday, July 12th, at 3 P M.

Santa Clara.

THE EGG RECORD BROKEN.—Los Gatos *News*, July 11: Mrs. Caroline Gray, proprietor of the Hillside Cottage, in the Santa Cruz mountains, at Wrights, sent to this office on Monday some eggs which beat anything we ever saw in the line of hen's eggs. They weighed a quarter of a pound each and were laid by a light Brahma only one year old. This hen lays one of these eggs every other day.

Shasta.

ALFALFA.—Anderson *Enterprise*, July 10: Weaver & Campbell have 50 acres of alfalfa from which they will cut three crops this year, grown entirely without irrigation. Two crops were cut last year, the first year from the seed.

Sonoma.

NEW FRUIT-DRIER.—Healdsburg *Enterprise*, July 12: L. Jaffe, whose fine farm lies seven miles northeast of town, is having erected a good-sized fruit-dryer, and will hereafter dry his own fruit. Mr. Jaffe is at present in Oregon, but writes that he will return to California in time to handle this season's grape crop on his place. It is probable that he may also buy a considerable tonnage of grapes.

Stanislaus.

THRASHING OUTFIT BURNED.—Modesto *Herald*, July 10: On Monday afternoon the thrashing outfit of T. J. Young was burned while thrashing a stack of rye on the ranch of W. B. Harp, several miles south of Modesto. The fire caught from the engine, and the remainder of the outfit was burned together with the rye thrashed and the stack. Young's loss will be about $2000 and Harp's $6000, both uninsured. After burning a few acres of stubble, the fire was put out.

IT MIGHT HAVE BEEN WORSE.—Modesto *News*, July 11: On Saturday evening last, about 7 o'clock, a stack-bottom on the old Red Thatcher place on Dry creek, owned by M. A. Wheeler, was discovered to be on fire by J. A. Rydberg. Twenty acres of stubble and grass land were burned over before Mr. Rydberg and others succeeded in stopping it. The grain, which had been put in sacks eight hours before, and which was still piled up near the stack bottom, was not injured, though the stubble all around it was burned. Owing to the heavy rainfall last winter, Mr. Rydberg was unable to put in any grain, and when the fire reached his land, it was easily put out. Had a crop of growing grain been standing on the latter's ranch, nothing could possibly have prevented the fire extending to the Tuolumne river, a distance of over four miles, entailing great loss of property. The fire was probably started by the steam thrasher which had left the stack-bottom eight hours before.

Sutter.

GLANDERS.—Marysville *Appeal*, July 11: J. A. Peter of Nicolaus township, Sutter county, one of the gentlemen who appeared before the Sutter county Board of Supervisors yesterday in relation to stock running at large in his township, was seen by an *Appeal* reporter and questioned in regard to the report that a number of horses suffering from glanders had been killed near Nicolaus. Mr. Peter informed the reporter that the report was true, and that there were undoubtedly more of them that should be killed. One of the horses killed he had noticed on the road eight days previous in a most sickening condition. The spread of this disease so far has been very slow in the vicinity, but residents there are beginning to get very anxious, and want to see something done to prevent these afflicted animals from running at large.

THE GRAPE CROP.—*Sutter Farmer*, July 11: From present indications the grape crop this season will be unusually large. All varieties are well set on the vines and the clusters are full and numerous. R. C. Kells, one of the principal grape-growers, informs us that the early varieties will soon be ripe. The season is late, but is no detriment to the yield. Last year Mr. Kells had grapes in the market on the 4th of July.

Tulare.

CENTRAL CANAL COMPANY.—Visalia *Delta*, July 11: The Central Canal Company, organized to dispose of water for irrigating purposes in Kern and Tulare counties, has filed articles of incorporation in the Secretary of State's office at Sacramento. Principal place of business, San Francisco. Capital stock, $3 000 000. Directors—Robert McMurray, H. F. Cutler, George Easton, George H. Maxwell and George K. Wells.

CULTURE STATION NOTES.—Tulare *Register*, July 11: The foreman of the culture station, Mr. Forror, has nearly completed his task of harvesting. All the grain was cut by hand with the knife and shelled out with sticks, so that not a kernel was lost or damaged, and the varieties were kept separate. There is something of a contrast in expense between this mode of harvesting and harvesting with a steam combined harvester. The hand method costs about ten cents per pound, while the other costs about ten cents per 100 pounds. Varieties have been grown upon the station this year which have yielded as high as 85 bushels per acre. In a short time small parcels of the best varieties of grain will be given out to those who will stipulate to give them a fair trial another year.

Yolo.

DEATH TO THISTLES.—Woodland *Democrat*, July 10: The Board of Trustees passed an ordinance Tuesday, compelling all owners of property inside the city limits to keep their property cleared of what is known as "Bull Thistle." The Marshal has been instructed to notify all those on whose property there is a growth of this thistle, and if the owner will not cut them down and burn them, the Marshal will do so himself at the expense of the owner of the property.

PROFITABLE POTATOES.—Woodland *Mail*, July 12: In his ramblings about the county looking up the fruit interests, a *Mail* reporter visited a vegetable garden consisting of 25 acres on the I. P. Diggs ranch, north of Cache creek, and the property of Johnson & May. In an interview with Mr. Johnson he learned facts which seemed almost incredible. Thirteen acres of the garden were planted in potatoes about January 1st and the total expense including labor, seed and everything, did not exceed $400; 1600 sacks of potatoes were marketed from this patch and were sold at $1 60 per 100, bringing in $2000. Six hundred sacks of the potatoes were shipped to various points on the Pacific Coast, and the remaining 1000 sacks found a market at home.

MELONS IN BULK.—FRUIT SHIPMENTS.—Winters *Express*, July 12: We are informed that our enterprising fruit-growers are inaugurating a new plan for shipping their watermelons and cantaloupes to Oregon. By using false bulkheads in one end of a car, they are enabled to ship the melons in bulk, thus avoiding the expensive package they were obliged to use; which, taken with the heavy freight on same, shows a saving to our shippers of about six cents per melon. Should this plan prove successful, it will tend to largely increase the shipments in this line to Portland.... One hundred and twelve carloads of fruit were shipped from Winters during the month of June. The weight averaged over 11 tons per car. This is a large increase over any former year.

ARIZONA.

ALFALFA ON ALKALI LANDS.—Phœnix *Herald* July 10: Mr. C. L. Phippeny is up from the Buckeye country to-day and informs the *Herald* that that portion of the country is prosperous with good crops of alfalfa and grain. An important piece of information from Mr. Phippeny is that he has made a splendid success of alfalfa on alkali lands. He had some trouble in getting the seed to set well at first, but when it was once set, the crops are more luxuriant on alkali lands than elsewhere, all of which goes to show that the "salt lands" found here and there in the valley are as valuable as any land, if properly handled, in certain crops.

CATTLE SHIPMENTS.—Wilcox *Stockman*, July 12: Five cars of steers—125 head—were shipped from here Thursday to Hutchinson, Kansas. The cattle belonged to Henry Fitch and J. C. Stone, and were purchased from J. M. Richardson, Charles Gottgens, C. R. Purcell, H. C. Severin, W. M. Attenborough and J. P. Johnston. Mr. Fitch accompanied the shipment. A shipment of 247 steers, purchased in the Tonto country by George Frisk for V. B. Wright, was made from here Monday.

FLORIST AND GARDENER.

Rockeries and Vases.

[Read by JOHN GABLER, before the State Floral Society, at the meeting of July 11th.]

Rockeries belong to the unusual sights of nature, therefore they are contrasts, and help to relieve the stiffness of a level plain. In landscape gardens we are imitating nature, and the rockeries which claim such an important place are introduced into parks and gardens to render them more picturesque. Wherever nature has been so kind as to provide a rockery, where a garden is to be created, it should be made use of to the greatest advantage. The reputation of many landscape gardens is due to the natural rockeries which they had only to beautify. Many large rockeries would lose much of their beauty could their foundation be clearly seen, others appear imposing and elegant only from certain points, and the walks leading to those should be laid out with regard to the best view obtainable. For small rockeries the trees and shrubs used in planting about them should be of correspondingly small growth, so that when grown up they will not obstruct the view by hiding the rocks; neither should there be very large trees in the vicinity as the rockery will appear to disadvantage by comparison. The harmony in sizes should be preserved. Should there be an accumulation of loose rock around, it should be removed, thereby making the rockery appear larger and to better advantage.

In the gardens and parks of California there are many large rockeries. There is a fine one at Mr. W. Dingee's place in Oakland. A walk ought to be made up it, and a small temple with five or six pillars would be a nice ornament at the end of the walk. It is for many a great pleasure to climb over the rocks. It is man's peculiarity rather to climb up to take in a particular view than to go down for the same purpose. To perfectly imitate the rockeries of nature is very difficult. Those in the parks of Paris, the palm gardens of Frankfurth and in the Duke of Devonshire's place at Chatsworth in England are admirable imitations of nature. Rockeries should always, if possible, be built on elevated ground, and look well as adornment for knoll or hillsides. In building only large and carefully-selected stones should be used, with a view to bringing out the different formations and veins, leaving room here and there for shrubs, vines, etc., and also places for Alpine plants, for only by the most careful planting can it become a good imitation of the natural. It will also be improved by having large stones scattered around; those can be made any size and shape with small stones cemented together. Rockeries in flower gardens are generally small, and for such, lava and other stones of volcanic origin are the best adapted; if not obtainable, then any rough rock can be used. In the construction of bridges, circular and terrace walls, and other ornamental work in park or garden, rough stone produces the best effects and is much preferable to wood or other material. I have seen a garden on the Rhine built of terraces of rough rock in an irregular manner to the height of 50 feet, so that the house on the top had all the appearance of being built on a natural rock or hill. In all such constructions, regularity must be avoided, but care must be taken to have the grain of the stones uniform, either perpendicular or horizontal. To build a rockery skillfully requires a close study of rocks and a great taste for natural beauty.

Plants for Rockeries.

The most suitable plants for rockeries are those which thrive naturally among rocks or rocky ground, such as Fuchsias, dielytra spectabilis, clianthus puniceus, pentstemons; and all plants with hanging flowers look better to be up slightly from the ground. Plants for rockeries are of the shade and sun-loving kinds, the shade-loving being the most numerous, such as are commonly called Alpine plants, though but few of them have originated in the Alps; these include nearly all evergreen and perennial shrubs, and many bulbous plants. True, rock-plants which naturally grow among rocks and which we may call sun-plants are all semper vivum varieties, many Saxifragas, Erica carnea, Sedums, Aubrietias, Arabis, Erinus, Linaria, Mesembryanthemums, etc. If a rockery is located in an open sunny exposure, a collection of cacti and succulents set out tastefully is a pleasing object. I would strongly recommend the different varieties of Mesembryanthemum, as these make a very fine show. If a rockery is shaded by trees or is so large that the north side has sufficient shade, then ferns may be planted. A Dicksonia antartica, perhaps, on the foot; and smaller ferns, as Adiantum capillus veneris, Polypodiums, Pteris, Lomarias, Nephrodiums, etc., can be arranged so as to give the best effect.

On the sunny side, some of the small growing Cupressus, Retinosporas, Thujas, Juniperus, or some other evergreen shrubs, can be planted. A skillful gardener knows exactly what plants to use to make a pleasing picture, and should he be fortunate enough to have at hand a small stream of water dropping down the rockery, a pond could be made below which could be filled with Nelumbiums and Nymphæas, on the margin of the pond could be placed such moisture-loving plants as Cyperus papyrus, or C. alternifolius, Tritoma uvaria, etc. The shore being filled out with irregular patches of Callas, Farfugium, Dicularias, Caladium esculentum, Arundo Donax and some bamboo; then, let us imagine a tree near the lake, the branches of which are entwined with a Passiflora with its scarlet flowers drooping into the water. That would certainly make a picture to satisfy any lover of nature. The following are good climbing plants for rockeries: Ampelopsis Veitchii, Clematis, Hardenbergias, Plumbagos, Rhynchospermum, Smilax, Spergula rubra, Myrsiphyllum auriculata, Ficus repens, ivies, etc. Finca major variegata is also a fine plant for rockeries, but it should be planted in a place where it cannot spread; a large pot or box will do; if planted in the rockery, they will spread all over it and injure other more valuable plants. Grottoes, formerly so much esteemed, are out of fashion and are only made occasionally, where the proprietor possesses peculiar tastes. In large conservatories, however, a half grotto, half rockery and a pond for water plants is in good taste and ought to be more frequently constructed than it is. A conservatory on a private place ought not to be modeled exactly as the greenhouse of a nurseryman, with so many benches of uniform width. In a conservatory we ought to see more decorations and everything ought to look more natural.

Vases.

Vases are a greatly desired ornament for gardens, and particularly for terrace gardens. The use of vases is very old. In former times the Romans and Greeks chiseled vases out of stone to grow flowers in. At present we find more vases in the gardens of Italy than in any other country. Their gardens are laid out very symmetrically and the vases on both sides of the straight walk look very well. In a picturesque landscape garden, we have no use for them unless it be on some corner where a road makes a sharp bend, at the entrance of the garden or at the entrance of the house on each side of the steps. A terrace garden is the right place for vases. Small vases ought to be put on high pillars three feet high, and larger ones on pillars five to six feet high, as they never look well when standing too low. Plants for vases are either ornamental or flowering. Among the first we have those which have a regularity in their habit of growth, as palms, Dracænas, Yuccas, Agaves, Dasylirions, Dorianthus, Cycas, Panicum, etc. For flowering plants, Hortensias, fuchsias, verbenas, nasturtiums, geraniums, especially ivy geraniums, cannot be surpassed by anything as a vase plant, except it be Clianthus Dampieri. Unfortunately, the Clianthus does not succeed in San Francisco, but in the interior country, where the climate is warmer, it does well. Myrsiphyllum asparagoides is also a vase plant which has no equal; its small foliage is very graceful.

Fine decorative vases can be obtained by planting them with Amaranthus tricolor, or A. salicifolia, Zea Japonica var, Coleus, Achyranthes, Lobelias, etc. When Clematis or Convolvulus are planted on the pillars and twined round they will greatly help the effect. Ampelopsis Veitchii or ficus repens are also very suitable climbers with which to entwine the pillars. Twin vases at the entrance of gardens or at the entrance of a house should be planted alike. The plants chosen should be of like varieties and size. Before planting a vase, broken crockery or charcoal should be put into the bottom. The plants are supposed to remain in them for a long time, and if not sufficiently drained, the soil will become sour. Should the soil be exhausted, liquid manure can be mixed with the water once or twice a week.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Wanted, Situation

As foreman of a large fruit ranch. Have had 25 years' practical experience in growing, packing and shipping fruit. Was with John Bidwell, Chico, Butte county, Cal., two years. Would refer anyone wishing a practical nurseryman and fruit grower to Gen. Bidwell. Can give good Eastern references. J. LUTHER BOWERS, Herndon, Fairfax Co., Virginia.

RAILROAD ACCIDENTS.—A Cincinnati man, who has preserved a record of 320 railroad accidents, happening in this country in the past year, finds that only 13 out of the lot occurred from causes beyond human control. The others was due to drunkenness or carelessness.

Death of General Fremont.

(*Concluded from page 57.*)

return to the States. He selected a southeast route leading from the lower part of the Columbia to the upper Colorado, through an almost unknown region crossed by high and rugged mountain chains. He soon encountered deep snows which impeded his progress and forced him to descend into the great basin, and presently he found himself in the depth of winter in a desert, with the prospect before him of death to his whole party from cold and hunger. By astronomical observation he found that he was in the latitude of the bay of San Francisco, but between him and the valley of California was a range of mountains covered with snows which the Indians declared no man could cross and over which no reward could induce them to guide him.

Fremont boldly undertook the passage without a guide, and accomplished it in forty days, reaching Sutter's Fort, on the Sacramento, early in March, with his men reduced almost to skeletons, and with only 33 out of 67 horses and mules remaining, and those that survived so weak and thin that they could barely walk while led along. He resumed his journey on March 28th and got back to Kansas after an absence of 14 months.

Fremont was breveted Captain in January, 1845, and in the spring of that year he set out on a third expedition to explore the great basin and the maritime region of California and Oregon. The summer and until October was spent in examining the head-waters of the rivers, whose source was the dividing ridge between the Pacific and the Mississippi Valley. Leaving the shores of Salt Lake in October he proceeded to explore the Sierra Nevada, and in the dead of winter again crossed the range into California for supplies. He made his way into San Joaquin valley, where, leaving his men to recruit, he went himself to Monterey to obtain from the Mexican authorities permission to proceed with his exploration. Permission was first granted and then revoked, and he was ordered to leave the country without delay. This he refused to do, as his men were in no condition to move at the time. The Mexican Governor Castro prepared to attack the 62 Americans of the party, but Fremont took up a position 30 miles from Monterey and built a rude fort, where he hoisted the American flag. No active steps were taken by either party and shortly after Fremont started up Sacramento valley for Oregon, but he was recalled by advices from Washington directing him to watch over the interests of the United States in California, there being fears that it would be turned over to England. Fremont promptly returned and the settlers flocked to his camp, and in less than a month Northern California was freed from Mexican authority. He joined the naval forces at Monterey and organized the California Battallion, a mounted force of which he was appointed Major. He was also appointed by Commodore Stockton Military Commandant and civil Governor of the Territory. War having broken out between the United States and Mexico, he was engaged in suppressing insurrections by the Mexican inhabitants and preventing a war with the Walla Walla Indians. January 13, 1847, he concluded with the Mexicans articles of capitulation, which terminated the war in California.

He left for "the States" in June, 1847, and arrived in Washington in September. October 14, 1848, Fremont, at his own expense, organized an expedition to cross the continent. He had 33 men and 120 mules, and with these he made his way along the upper waters of the Rio Grande, through the country of the Utes, Apaches, Comanches and other tribes then at war with the United States. He had resigned his position as Lieutenant-Colonel, and was no longer an officer of the Government. His object was to find a practicable passage by this route to California. In crossing the Sierras his guide lost his way and terrible suffering ensued. All of his animals and one-third of his men perished. Cannibalism was resorted to. Finally, he succeeded in retracing his steps to Santa Fe, N. M. Gathering together 30 men he made another start for California, and succeeded in reaching Sacramento in the spring of 1849.

Fremont now determined to settle down in California. He had bought the Mariposa estate in 1847, and on this large tract were a number of valuable gold mines. His title to the property was contested and he was kept in litigation until 1855, when the suit was decided in his favor by the Supreme Court of the United States. In 1849, he received from President Taylor the appointment of Commissioner to run the boundary line between the United States and Mexico. In December, 1849, the Legislature of California elected him on the first ballot as one of the two Senators to represent the State in the United States Senate. He resigned his Commissionership and went to Washington by way of the Isthmus. He took his seat in the Senate September 10, 1850, the day after the admision of California as a State, and in drawing lots for the terms he drew the short term, which expired March 31, 1853.

Fremont returned to California on the first steamer that sailed after Congress had adjourned. For two years he devoted himself to his private affairs, visiting Europe in 1852. In 1852, while in the Senate, Baron Humboldt sent him "the great golden medal for progress in the sciences." A few months earlier the London Royal Geographical Society sent him the "Founders' Medal." While in Europe he learned that Congress had made an appropriation for the survey of three routes from the Mississippi valley to the Pacific, and he returned to the States immediately for the purpose of fitting out his fifth expedition on his own account. He left Paris in June, 1853, and in September was already marching across the continent. He found the pass on the line of latitude 38 and 39 degrees, reaching California in safety. For 50 days his party lived on horseflesh, and for 48 hours at a time were without food.

With such a record of travel in these unknown regions, he fairly earned the title of "The Pathfinder," which he has held so long. He was in 1856 a candidate for the Presidency of the United States, but was defeated by Buchanan. In 1858 General Fremont returned to California. When the civil war broke out General Fremont went to the front and did good service. He resigned his commission in 1862. In 1877, he was appointed Governor of Arizona by President Hayes. Since the expiration of his term of office he has lived in retirement and engaged himself in civil pursuits.

At the last session of Congress, General Fremont was placed on the retired list of the army, and then for the first time in several years began to enjoy a comfortable income. He was the author of several books detailing his work of exploration west of the Mississippi.

General Fremont was singularly fortunate in his domestic relations. In October, 1841, he married Jessie Benton, a daughter of the well-known Senator "Tom" Benton, and in her he found a true helpmeet, who ably forwarded his various plans. She is a lady of varied attainments, literary and other, and is well known in social circles in New York and Washington. She is at present in Los Angeles, in this State, with her unmarried daughter Elizabeth. Mrs. Fremont's friends will at once urge that a pension be given her, as the little she makes by her literary labors is entirely inadequate for their support. A movement is talked of by the Native Sons of the Golden West looking to the erection of a monument and the eventual burial of Fremont's body in Golden Gate Park, San Francisco.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING JULY 8, 1890.

431,550.—BROILER—Wm. Brooks, Oakland, Cal.

431,790.—AIR BRAKE—G. B. Williams, Portland, Oregon.

The following brief list by telegraph for July 15, will appear more complete on receipt of mail advices:

California—Henry Casebolt, San Francisco, excavating apparatus; George E. Crocker, Oakland, window-case hinge; William Davis, Los Angeles, cultivator; Willis S. Gilstrap Pixley, washing machine; Robert C. Grimes, Santa Monica, attachment for lawn mower; Hiram H. Hanmore, Santa Cruz, covering for pipes; Alden D Kilborn, Oakland, safety relief valve; John B. Masters, Stockton, cotton harvester; Bartlett McIntyre, San Francisco, loading mechanism for wire rope transmission; Walter McQuille, Los Angeles, grass catching attachment for lawn mowers; Nathan W. Moody, Fresno city, fuse cap fastener; Orrin W. Parker, Oakland, windmill; Seggey D. Smolianinoff, San Francisco, assignor to the Americanite Manufacturing Company of Virginia, explosive compound; George A. Stom, Golden Gate, vehicle running gear; James Van Curen, Ferndale, sandband.

Oregon—Alice M. Miller, Ashland, fruit boiler.

Washington—Joseph M. Clark, Colfax, double-acting pump.

Arizona—Louise J. Depuy, Phœnix, device for supplying gases and liquids to moving vehicles.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,
No. 220 Market St., S. F.

SOME sheep men tried to pasture a large band on the Fort Ellis Reservation, Montana, recently, but the grass was doctored with saltpeter one night and 400 dead sheep were found the next morning.

The Regan Vapor Engine Company.

Attention is called to the advertisement of this company on another page. The Regan engine has passed the experimental stage, and the large number sold (over 150) within a year, and now in successful operation on this coast, is as good evidence of its practical usefulness as need be offered.

Where the original purpose of this company was to supply a small power, cheap and conveninent for light requirements, it has enlarged its scope by careful steps, until now engines are being built up to as high as 60 h. p., with a prospect of being able to furnish a still greater capacity. The great economy and safety of these engines, and the almost endless use to which they are adapted, make them deserving the careful attention of all who require a motive power for any purpose. While many testimonials of satisfaction from those who have their engine in daily use are in the hands of the manufacturers, a still greater evidence of the Regan Vapor engine's merits is the fact that it has been adopted by Thos. Kane & Co. of Chicago and Racine, the largest launch builders in the United States, after having experimented for years to secure a perfect motor for their launches. A large number of engines ranging in sizes from ¾ to 60 h. p. are now in course of construction. Send for illustrated catalogue. Regan Vapor Engine Co., 221–223 First Street, San Francisco, Cal.

Fruit Grading.

Fruit assorting, we are glad to see, is being recognized by most of our leading orchard men and driers and packers, as adding to the reputation of our fruit, also resulting in larger financial gain to them.

It is only within the last few years that much attention has been given to this important subject, principally from the lack of a practical grading machine adaptable to the great variety of our fruits, and one that will handle without bruising a large quantity in a short time; but the John A. Jones patent of June 10th, 1890, (Messrs. G. G. Wickson & Co. of this city inform us) has been found to be entirely satisfactory; and judging from the number of orders and testimonials they are receiving, we think they are right.

Among their sales made this week were five to San Jose Pkg. Co., making six now purchased by that firm. Among a few prominent fruit-growers who have purchased the Jones grader are John Bidwell, N. P. Chipman, G. W. Hinclay, R. W. Wing, W. J. Dobbins, J. W. Gates, Page & Morton and Warren Dutton.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none out worthy men.

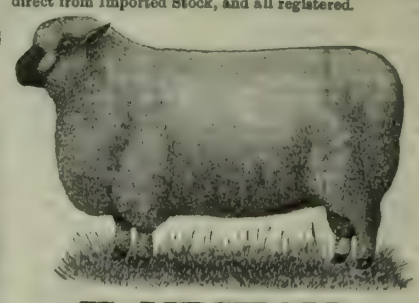
Red Polled Cattle.

We have 19 head of Imported Stock.

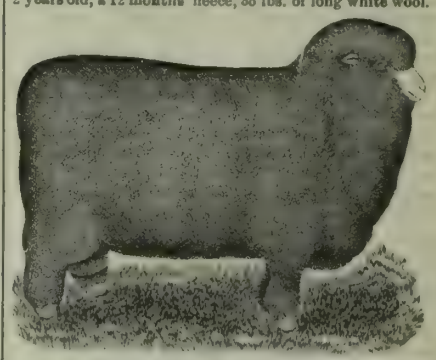


Young Bulls and Crossbreds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

They were all imported from England in '88, or bred direct from Imported Stock, and all registered.



H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 36 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. **P. O. Address:**

MERY'S IMPROVED PIONEER

BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

STILL AT THE FRONT.

VALUABLE IMPROVEMENTS HAVE BEEN ADDED THIS YEAR.

This Mill has been in Use on this Coast for 9 years,

TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 250 of them in use in California, Nevada and Oregon.

It is the most economical and durable Feed-Mill in use. I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

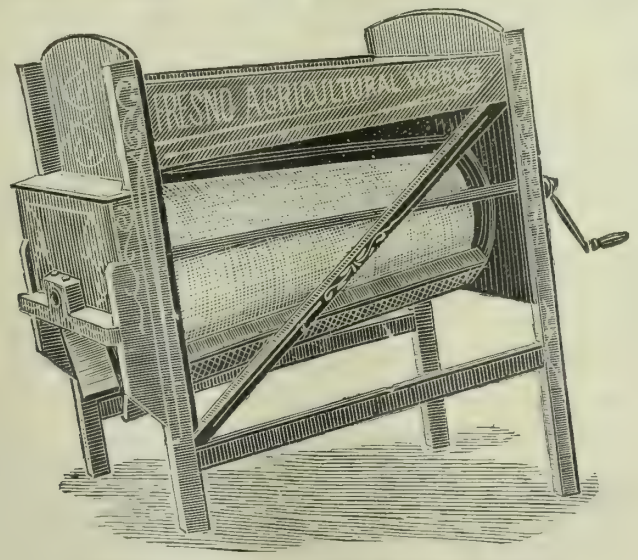
CHICO, CAL., Feb. 1, 1887.

Mr. M. L. Mery, Esq —DEAR SIR: The 9x14 Barley Crusher bought of you and used in the California Mills, gave entire satisfaction; have crushed 8000 pounds an hour. I have also crushed as much or more on set 10x20 when working for General Bidwell, which set he is using in his mill to-day. Yours truly,

GEORGE SHAND.

TRAVER, May 3, 1887.

Having used one of the Barley Crushers manufactured by M. L. Mery, of Chico, Butte County, I can say it will do all that is claimed for it, and to those wishing an A No. 1 machine, I would recommend it as the very best. I have crushed 35 tons in 11 hours' work.



J. D. GOLDEN.

M. L. MERY, Manufacturer, Chico, Cal.

I thank the public for their kind pratronage received thus far, and hope for a continuance of the same.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC

SAN FRANCISCO, July 16, 1890.

Cool but clear weather still favors harvest work, which is well advanced in the different parts of the State. The cereal crops are still a matter of conjecture owing to the diversified yield, and also to the acreage seeded not being known. Even without the latter information it is safe to place the yield of wheat, barley and oats in this State at less than last year's, with the two first falling considerably short.

Money promises to be fairly easy which is an important consideration in moving the crops.

Trade in general produce has been fairly active, particularly in cereals. Wheat after advancing abroad began to set back, closing to-day as follows as reported by telegraph:

LIVERPOOL, July 16.—Wheat—Fair inquiry. California spot lots 7s to 7s 2½d; off coast, 23s 3d; just shipped, 37s 6d; nearly due, 38s; cargoes off coast, quiet but steady; on passage, rather easy; Mark Lane wheat, steady; Mark Lane maize, quiet; weather in England and France, very fine.

Foreign Grain Review.

LONDON, July 14.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: Continued rain renders the outlook less favorable. Ripening is backward and quite four weeks distant. English wheat is high r. Trade in foreign wheat is brisk. Californian wheat is 1s. higher. Large stocks of flour prevent an advance in that staple. Barley is 3d higher. Maize was also higher. To-day grain was hard to move at the advances. Foreign White was 9d. and Red 6d. dearer. The market closed 6d. dearer for Russian and 9d. dearer for heavy oats.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	July.	Aug	Sept.	Oct	Nov.	Dec
Thursday....	7s2¼d	7s3½d	7s3d	7s4½d	7s4½d	7s4½d
Friday	7s2¼d	7s3½d	7s4½d	7s4½d	7s4½d	7s4½d
Saturday	7s3d	7s3½d	7s4½d	7s5d	7s5½d	7s5½d
Monday	7s3d	7s3½d	7s4d	7s4½d	7s4½d	7s4½d
Tuesday	7s2½d	7s2½d	7s3d	7s3½d	7s4d	7s4d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	37s6d	37s0d	37s6d	Strong.
Friday.....	37s0d	37s0d	37s6d	Advancing
Saturday.....	37s0d	37s6d	37s9d	Improving.
Monday.....	38s0d	37 6d	38 0d	Quieter.
Tuesday	38s0d	37s6d	38s0d	Firm.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
Thursday	95½	94½	94½	94½	95¾	96½
Friday.....	94½	94	93⅝	...	...	95¾
Saturday.....	95¼	94⅝	94½	94¾	95⅞	96⅝
Monday	95¼	94⅝	94½	95	95⅞	98¼
Tuesday.....	94½	93½	93⅛	93⅜	94½	94⅝

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	July.	Aug	Sept	Oct
Thursday.....	...	89¼	90	...
Friday.....	88½	88⅞	89⅝	...
Saturday	...	88⅜	89¼	...
Monday.....	...	85⅝	89⅜	...
Tuesday.....	...	87⅛	88⅜	...

NEW YORK, July 16.—Wheat—90c for cash, 93c for August, 92⅝c for September, 94½c for December, and 98c for May.

CHICAGO, July 16.—Wheat—86⅜c for August and 88c for September.

India Wheat Crop.

NEW YORK, July 14.—Figures received here from the report of the Revenue and Agricultural Department of India give the details of the wheat crop of the Bombay Presidency for the season of 1889-90. The figures are up to May 5th last. The area sown to wheat was 2,874,000 acres or 4 per cent below that of last year or 2 per cent below the average. The crop as estimated will, however, show an increase of 12.35 per cent, owing to the better condition of the grain. There are large increases in the wheat acreage in the Scinde district. It is estimated at 56 per cent over last year and 73 over the average area. In Spikarpur the average has risen from 162,000 to 279.000. Of a total area of 691,891 acres, 24 per cent are returned under irrigated and 2,182,119 acres, or 76 per cent, under dry wheat. A report is also received concerning the central provinces dated May 29th, which places the wheat product of that section at 832,632 tons.

Condition of Crops.

WASHINGTON, July 10.—The winter wheat report of the Department of Agriculture for July represents the crop, as harvested, in all but its more northern latitudes. It shows some advance in the condition where it was lowest in June. In Michigan, Indiana, Illinois and Missouri there is a slight decline. In Ohio, Kentucky and the Pacific Coast and in the Southern States the general average is 76.2 against 78.1 last month. The spring wheat average is advanced from 91.2 to 94.4. The averages of the principal States are: Wisconsin, 93; Minnesota, 94; Iowa, 94; Nebraska, 98; the Dakotas, 93; Colorado, 90; Washington, 93. Taken together, winter and spring wheat makes an average of 82.1. A small increase in the area of corn is reported of about six-tenths of 1 per cent. There is a proportionate extension in the Northwest, and there will be nearly 1 per cent increase in the South. The condition of corn averages 93.1 per cent. There has been a severe decline in the condition of oats, which have fallen from 89.8 to 81.6. The condition of rye is 92, nearly the same as the last report. Barley advanced from 86.4 to 86.8. The acreage of potatoes has not appreciably increased. The average condition is 91.7. The condition of pasturage is high, averaging 96.

Chicago Market.

CHICAGO, June 13.—For beans there is a little better demand. Dealers have been holding off for some time. As their stocks have become reduced this in turn brings them on the market again. Holders, in view of this and the dry weather evince more firmness, and asking prices have been somewhat advanced. Buyers have consented to pay a shade over former figures, but are not in the mood to meet the full views of some holders. Beans are quoted as salable at the following prices: California Lima beans, choice, 5¼@5⅝c per lb; do, common, 2@4c. Hops are quiet for the offerings are small. Choice hops are reported firm and in fair demand and very scarce. There are ordinary and common grades, also some slightly damaged lots on the market and these rule dull. Prices are quoted as follows: Washington, choice, 22@23c per lb; prime, 20@21c; fair, 16@18c; California, choice, 20@22; fair to good, 17@19c; Oregon, choice, 18c.

Delaware Peach Crop.

DOVER (Del.), July 9.—This season not a single carload of peaches will be shipped from the entire Delaware peninsula. Few growers will save even a basket for their own use, and many not a single peach. In former times it was no extraordinary thing for 300 carloads to be shipped daily, and some stations sent off as many as 35 cars in a single day. The failure of the fruit crop is not confined to peaches, but apples, pears, plums, grapes and cherries are all short and scarce, so that a general dearth is inevitable.

New York Fruit Crop.

NEW YORK, July 13.—A *Tribune's* Kingston dispatch says: As the season advances the comparative failure of the fruit crop along the Hudson river becomes more apparent. The effect of the severe winter upon some of the orchards is now supplemented by dry weather. Cherries are a failure; early pears and apples are turning out badly; raspberries will fall below the average yield; plums are almost a failure; Bartlett pears, always so reliable in this region, are now far less promising than usual without any perceptible cause. Canners are already trying to secure crops, but they find a disposition to decline advance contracts. The apple outlook is a little better. Late varieties are dropping badly, and the fall and winter supply in the river region will be small. The general farmer is not dependent upon the fruit crop, though he is now hoping for rain to push along his late potatoes, corn and buckwheat. The crops of grain and hay are heavy and good.

Eastern Wool Markets.

PHILADELPHIA, July 11.—Wool is quiet. Montana, 17@25; Territorial, 16@22c.

BOSTON, July 11.—Territory wool is quiet with sales on a scoured basis of 60c for fine, 56@58c for fine medium, and 53@55c for medium. California and Oregon wools are dull and no sales of importance are reported.

NEW YORK, July 11.—*Bradstreet's* says: The feature of the wool market is its dullness, having nearly reached the stagnation point. The shutting down of many mills in New England, together with the disturbing influence of proposed tariff legislation has been effective in lowering the amount of sales to 1,231,000 lbs domestic and 321,000 lbs foreign wool. Michigan, Territory and pulled wools partake of the general dullness and inactivity, but Texas supplies have arrived in liberal amounts though sales have been small. Ohio manufacturers are said to have been operating a little more freely, mostly at 30c for fine grades. American competition at the London wool sales is very strong, maintaining about the same prices as at the last auction sales.

NEW YORK, July 14.—Heavy dealings in Texas wool prevent the market from looking as slim as it otherwise would in the present halting style of buying. The East stocks are enlarged, with decidedly more access to Western, but there is no large investing or speculative feeling. Prices hold about their own: 20,000 lbs of California scoured, 25,000 spring, and 150,000 do Texas, private terms: 357.000 lbs do, 18@22c; 93,000 lbs do, 21@23; 10,000 lbs Wisconsin delaine, 33½c; 10,000 lbs scoured Nevada, 57c; 10,000 lbs fine washed fleece, 29@30c; 20,000 lbs fine unwashed and unmerchantable, 22½@25½c; 10,000 lbs No. 1 pulled, 15c; 50,000 lbs German do, 18c; 71,000 lbs domestic, 408,000 lbs foreign at private terms. The Boston market has not recovered from the holidays. Few buyers of light grades; 2,119 000 lbs foreign and domestic, including 75 000 lbs spring California, 17@24c. Philadelphia reports limited business with a cautious feeling.

Miscellaneous.

NEW YORK, July 13.—Lima beans jobbed at $3.45. Dry hides firm and in fair demand. Full prices; 1000 California sold.

Ship honey in new cans only. There is a complaint about impure packages.

Hops continue strong. Four or five hundred bales changed hands, mostly stale, at 21c. The foreign crops are not encouraging. There have been London bids equal to 24½c. Washington contracts, new, named at 17½c The brewing demand is steady. State range from 18@22c; Pacific, 18@21c; 1888's, 12@15c; old, 4@6c.

Raisins—Dealers regard the policy of packers making delivery rates for December lower than September as a derangement to confidence.

The future of canned and dried fruits is as bright as ever, and it is generally conceded that the country cannot get along without all of the Pacific's surplus if the prices are not inordinately overstrained. Of the old crop, only apricots remain here, now worth $1.75.

BAGS—The market is weak at a decline. The firmness reported in last week's issue was based principally on a demand from up north which, when met, gave way. Standard-size grain bags are quoted at 6½@6⅝c.

BARLEY—The sample market has shown more activity at steadily advancing prices. This advance was generally looked for by careful operators, and of which the RURAL PRESS patrons were duly informed. In futures, the market has been very active, the higher prices having drawn in more operators. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—100 tons, $1.17¾; 200, $1.17½; 100, $1.17⅞ ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.18¾ ₩ ctl. Buyer 1890, after August 1st—200 tons, $1.18 ₩ ctl. May—100 tons, $1.18 ₩ ctl.

BUTTER—The market shows more strength with gilt-edged marked up one cent a pound. The cooler weather and gradually lessening local supplies at distributing points combined with free consumption are in sellers' favor.

CHEESE—The market is firm at a slight advance. The demand continues to improve while the supply is decreasing.

EGGS—The market is very strong for selected fresh laid but for other kinds it is easy. The stock in cold storage is being added to by daily overland receipts.

FLOUR—The market is firm at full quotations.

WHEAT—The market has held very strong, although at the close buyers are asking for concessions, which holders, unless pressed for money or else to save expenses, are not willing to concede. The advance in silver will tell still more in favor of wheat, for the higher silver advances the more it will cost to lay Indian and Russian wheat down in the European importing countries. On Call futures were quite active up to Monday when an easing off set in, which caused a dull market. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—400 tons, $1.41⅝; 200, $1.41¾ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.42 ₩ ctl. Buyer season—100 tons $1.48⅝ ₩ ctl.

COMMUNICATED

Cereals.

The local wheat market has ruled quite active at slightly higher prices. In the interior, buyers have paid an advance on the bids made in this city. The higher prices are largely due to bad crop weather in England, which is evidently exaggerated; yet it is sufficiently bad to do a large amount of damage to the growing crops. Unless there is soon a change for the better in the weather in that country, then the gloomiest reports will be realized. The higher price of silver is in favor of wheat, for it will make Indian and Russian wheat cost more laid down in England and also on the continent. Among the better informed operators the opinion prevails that Congress made a serious mistake in not remonetizing silver by passing a free coinage bill; yet this can be remedied by farmers at the next election voting only for Congressmen favorable to the free coinage of silver. The bill which has become a law will still keep silver below par. With silver at par, which can only be secured by free coinage, wheat and other cereals will be largely advanced in price and the advance placed upon a more staple footing.

In this State, harvest returns are still conflicting from the Sacramento valley, but more uniform from the San Joaquin valley and the southern part of the State. From Oregon and Washington our advices are uniformly good.

Regarding tonnage for wheat, it is stated that there will be a sufficient supply for this State provided the usual number of vessels are added before January 1st to the fleet on the way. The tonnage on the way to Oregon and Washington shows a very large increase—fully double that on the way at this time in 1889. This will tend to keep charters up north to fairly low figures.

The barley market has ruled quite active at advancing figures. The well-informed hold to the opinion that this year's crop will not be enough to meet the demand, which, if the case, will of necessity bring about, later on, a still higher range of values. The grade this season is better than for years. It is said that there is quiet buying of the best grades of brewing for Eastern account.

Oats have exhibited a fair degree of strength, with trading light. The crop in Oregon will, it is reported, be above an average, but in this State it will be short.

Corn is strong at a slight advance. The demand is good. Crop advices are uniformly good.

Rye is strong at an advance. The crop is short when compared with last year's.

There has been some buying of corn, in the market, for Central America, and rye for Japan.

Feedstuffs.

For ground feed there is a continued free demand, but free receipts of bran keep that article from advancing. Ground barley is strong at an advance. The higher prices are calculated to lessen the demand.

Hay is reported unchanged. Receipts of new are fair. There is a growing impression among dealers that unless the coming winter is very severe the supply of hay will be large, and this, too, in the face of old hay being about all fed out. The crop in Nevada and up north is said to be large.

Fruits.

The receipts of fruits continue unusually light. It is claimed that they are lighter than for many years. This, as heretofore stated, is due to heavy shipments, larger than ever before, to the East, free canning and freer drying.

Crawford peaches are coming to hand more freely. Plums of the various varieties are in fair receipt. Pears and apples show an improvement in quality. Green gages are in better supply. Apricots continue fairly scarce. Currants and cherries come in semi-occasionally. Blackberries are in better supply, but the demand is free. Strawberries are in light receipt. Raspberries come in fairly free. Huckleberries sell high. Apples are in freer receipt with the quality showing an improvement. After selling at very low prices figs are now scarce and fetch more money. Watermelons and canteloupes show increasing receipts, causing prices to shade off.

Receipts of grapes are still light, with quality generally poor. The crop promises to be large, quality good, also the demand. Wine-makers will use increased quantities and pay good prices too.

The dried fruit market is strong, with slightly better prices obtainable. Light crops of green fruits at the East and also in this State are the primary cause for the high prices ruling for dried fruits. Peaches, apricots and prunes are in active demand with high prices paid. For bleached apricots, in bags, 14c is paid for the more choice by the more choice by the carload. Bleached peaches have been contracted for at as high as 16c for the more choice. Sun-dried and peeled peaches are slow of sale. Nectarines are coming into more general favor. Contract sales have been made at from 11½@13c. Prunes are selling at from 7@10c a pound.

A private circular reports that the supplies of raisins are very small at present, and it takes still two months before new raisins are ready for shipment. The coming crop will probably be larger, but prices will most likely rule as last year, or even higher, in consequence of the heavy demand and the high prices to be paid to the growers. Grapes will be higher this season, because last year's prices were to low to make the drying pay for the packers as well as the growers. This year larger quantities of green grapes will be sold to the wine-makers, and while last year there were a good many old dried grapes unsold in the different markets, at present there are no grapes unsold to speak of. The demand for them is therefore already now quite active, although they will not be ready for shipment before September.

Vegetables.

In garden truck, summer squash, cucumbers and tomatoes are lower. Beans are unchanged as is garlic. Okra continues to rule high. The green corn this year is mostly wormy, but notwithstanding this prices hold up well. The first consignment of this year's marrowfat squash came to hand the past week and sold at $20 to $22 a ton. Green peppers are weaker as are egg plants. Cabbages and root vegetables are unchanged.

Receipts of onions are only fair, which tend to keep a steady market. For shipping there is a fair inquiry for good keepers.

Potatoes have shaded off under free receipts. Buyers do not anticipate their wants, which causes a lower tendency. As the keeping quality improves, the demand for shipping increases.

Live-stock.

The market for bullocks continues in buyer's favor. Mutton sheep are firmly held under a good demand. With cooler weather the demand will again set toward bullocks. Hogs are essentially unchanged for packing, but for the block small-sized hogs fetch an advance. Milch cows are fairly steady. For fair-sized work horses there is a good demand, but small move slowly. There is a good demand for general utility animals, single-footers, matched teams and driving animals.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4⅝c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 3⅞@4½c ₩ lb.; dressed, 5¾@6½c ₩ lb. Stock hogs, 4½@4⅝c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¾@—c ₩ lb.; second quality 5@5½c ₩ lb.; third quality, 4½c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₩ lb.; ewes, 7@7½c ₩ lb.; lamb, spring, 7½@8½c.

Miscellaneous.

Exports by sea the past week aggregate as follows: Wheat, ctls, Dunkirk, 55,760; Rio de Janeiro, 46,848. Flour, bbls, Central America, 2912; Mexico, 507; Panama, 375; Tuamaco, 172; South America, 790; Petropaulovski, 1100. Dried fruits, lbs, Victoria, 650; Winnipeg, 2500; Mexico, 500. Brandy, gals, 2327. Wine, gals. New York, 60,866; Central America, 639; Mexico, 2870; France, 300. Hops, lbs, 3000. Canned fruits, cs, Sydney, 1550.

Poultry has held fairly steady throughout the past week.

Beans are shading off under a lessened inquiry, with buyers bidding down. This is usually the case when the new crop begins to come in.

Hops continue to rule strong under an active demand. The supply of old is about exhausted. For new, contracts are being made at from 15@20c a pound.

Wool is reported in buyer's favor, although no lower quotations are given. Private advices are still of a discouraging character, owing to the depressed condition of the flannel and goods trade.

From the *Commercial News* of July 16th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	237.775	258,523
On the way to neighboring ports	21,269	28,781
In port, disengaged.....	14 249	21,349
In port, engaged for wheat....	40.330	51.751
Totals.....	313 623	360,404

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to July 10, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls.....	241 913	289.124
Flour, bbls.....	21 348	45 624
Barley.....	2,044	4.500

California Fruits East.

CHICAGO, July 11.—The Earl Fruit Co. sold two carloads of California fruit as follows: Bartlett pears, $3.10@3.55; peaches, small, $1.95@2.65; apricots, $1.65@1.85 for choice; Royal Native plums, $1 80@1.90; figs, 10-lb boxes, 65c@$1.15.

Porter Bros. sold one carload as follows: Apricots, $1.10@1.60; plums, $2; figs, $1.15.

CHICAGO, July 12.—California green fruits are quoted as steady and a fair demand exists. Apricots, 20-lb box, according to quality, $1.50@$2; Black Tragedy plums, 20-lb crt, $1.75; peach plums, $3.25@3 50; Bartlett pears, 40-lb box, $3@4; Red apples, $2@2.25.

CHICAGO, July 12.—The Earl Fruit Co. sold California fruit to-day as follows: Peaches, $2 25@2.60; peach plums, $2.60 ₱ box; Royal Native plums, $1.85@2.20; apricots, hf crts, $1.30@1.90; small box, $1.45; small prunes, 20-lb box, $2.50; figs, 10-lb box, $1@1.25.

Porter Bros. sold four carloads as follows: Pears, $2.50@3.30; peaches, $1.75, average, $2.60; plums, $1.80@3.30; prunes, $2.65@3 90; apricots, $1.30@2, average, $1.75.

NEW YORK, July 12.—At the auction rooms of E. L. Goodsell, one car of California fruit was sold this morning and brought the following prices: Apricots, $2 65@2.70; peaches, $3 30; peach plums, $3 45@3.55. One carload sold this afternoon as follows: Apricots, $1.75@2.60; peaches, $2.40@$2.70; figs, $2.50@2.80; Royal Native plums, $2.10@2.45.

NEW YORK, July 13.—Fresh Pacific fruit buoyant and active. Sales at auction: Six hundred boxes peaches and apricots, $1.25@$1.35; 77 crates, $1.70@4.80; 148 of cherries and plums, 65c@$1.40; 292 10-lb boxes of Royal Anne cherries, $2.10@2.9; 1365 boxes of peaches and plums, $2@2 80; fancy, $3.45@3 55; 545 boxes Gifford pears, $2.25@2.30; 208 boxes P. D. plums, $2.30@2.50; 240 boxes Tragedy prunes, $3.15@3.75; German, $2.65; Royal H. Plums, $1.70@2 40; green figs, $2.50@2.80; Astrachan apples, $2.10. A. T. Hatch's 800 boxes of apricots, the finest ever seen here, sold promptly at $2.65@2.70; others down to $2.40.

CHICAGO, July 14.—The Earl Fruit Co. sold four carloads of Bartlett pears at $2 90@3.50; peaches, $2@3.25; apricots, $1.40@1.70; plums, $2.15@2.50, Bradshaw, $2.15@2.60; German prunes, $2@2.50. The fruit in poor condition sold for less.

CHICAGO, July 15.—The Earl Fruit Co. realized the following prices to-day: Bartlett pears, $2.90@3.30; apricots, over-ripe, $1.05@1.50; figs, small boxes, 45c@$1.05.

CHICAGO, July 15.—Porter Bros. sold six carloads of Bartlett pears at $3@3.50, with the exception of some very small stock at $2.10@2 70; Crawford peaches at $2 40@3.60; Hale's at $1.75@2.75; plums at $1.55@3.25; prunes, $2 50@3.25; apricots (poor order), boxes, 80c@$1.30; half-crates, 65c@$1.20; grapes, half-crates, $3.

CHICAGO, July 16.—California green fruits are in fair request and steady, quotable as follows: Apricots, 20-lb boxes, $1.50@2; peaches, $2@3; German prunes, $2.75@3; purple Duane plums, $2.75@3; Royal Native, $2.50@2 75; Bartlett pears, $3.25@3.50; Sweetwater grapes, $3.50; Nectarines, $2; Red apples, ₱ bushel, $2@2.25. Old hops are in much reduced supply and those left, vary from fair to common. None of really choice grade are on sale. There is a fair demand for anything at all good, but poor grades are slow. The range of prices is as follows: Washington, choice, 22@23c; prime, 20@21c; fair, 16@18c; California, choice, 20@22c; fair to good, 17@19c; Oregon, choice, 18c ₱ lb. The demand for beans is very moderate. Usual buyers are taking beans merely to keep supplied for current wants. There is no buying in advance of requirements. The supply is fair but not heavy. Holders are inclined to be firm but the quotations given below are about all that can be realized: California Lima beans, choice, 5¼@5½c ₱ lb; do, common, 2@4c.

CHICAGO, July 16.—The Earl Fruit Co. sold California fruit to-day as follows: Fontainebleau grapes, half-crates, $3.70; peaches and plums, $2 95; Hative, $1.80@2.30; Hale's Early peaches, $1.75@2.35; apricots, $1.40@1.65; figs, 65c.

Porter Bros. sold five carloads as follows: Bartlett pears, $2.70@2 45; fancy French prunes, $3.34; Tragedy prunes, $3.10@3.25; Washington plums, half-crates, $2.75@3; Purple Duane, boxes, $2.20@2 75; Golden Drop, $3.05; German prunes, $2.40@2.65; Crawford peaches, $2.70@3.70; Hale's Early, $1.75@2.35; Foster, $2.20@2.85; grapes, $2.20@2.85, part of them in bad order; Magnum Bonum plums, $2.60@3.05; apples, $2.95; St. John's peaches, small, $1.65@2.10.

NEW YORK, July 16.—The agents of the California Fruit Union auctioned to-day one car of fruit as follows: Bartlett pears, $3.80@3.85; Peach plums, $3.55; Purple Duane, $2.40@3.15; Quackenbush, $1.80; German prunes, $2.35; Crawford and Hale's Early peaches, $1.15@2.20; Royal apricots, $1.25@1.50. Most of the fruit was in poor order, especially peaches and apricots.

Fruits and Vegetables.

Choice selected, in good packages, fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

TO SUFFERERS.—Attention is called to the advertisement of Dr. J. A. Miller of 236 Taylor street, in this city. Dr. Miller is a graduate of the Medical Department of the University, and has recently taken courses in Europe. His specialty is diseases of the abdominal and pelvic regions.

Important Auction Sale
— OF —
Standard and High-Bred Trotting Horses
— AND —
THOROUGHBRED HOLSTEIN CATTLE
Property of J. H. WHITE, Esq., Lakeville, Sonoma County, Cal.
On Thursday and Friday, September 4th & 5th, 1890.
At RAILROAD STABLES, Cor. Turk and Steiner Sts., San Francisco.

On account of a contemplated change in business, we are authorized by Mr. White to dispose of all the high-bred stock upon his noted breeding farm at Lakeville, Sonoma County. This comprises over forty head of high-bred Trotting Stallions, Brood Mares, Colts and Fillies, most of them standard and all exceptionally fine individuals. They consist of the get of Stallions by Electioneer, Director, Antevolo and other noted horses. Most of the brood mares are with foal by Hernani, one of Electioneer's most prominent sons. Several have been bred to Director. Taken collectively they are, in size and form, the finest looking lot of trotters yet off red in California, and their breeding is upon the most approved speed lines

The Cattle comprise over one hundred head of thoroughbred registered Holstein Cattle. The progenitors of this herd were selected of the choicest strains upon the famous breeding establishments East, and have been judiciously crossed with a view to develop to the fullest extent the milking strains. Mr. White has expended a large sum of money and great care in perfecting this band of cattle, and can justly claim it as one of the superior herds of the United States.

Catalogues are being prepared and will be sent on application only. Horses and cattle may be seen at ranch, six miles from Petaluma.

KILLIP & CO., Auctioneers, 22 Montgomery St., San Francisco.

SANTA CRUZ! SANTA CRUZ! SANTA CRUZ!
THE MOST DELIGHTFUL SEASIDE RESORT OF THE WORLD!
SURFSIDE!
Is the most beautiful tract of land in Santa Cruz. It commands charming views of the whole of Monterey bay, of the Pacific ocean and of the Santa Cruz mountains. It lies on a handsome, elevated plateau, fronts on the famous Cliff Drive, at the wildest and most picturesque part of the bay shore, and adjoins Garfield Park, where the Christian Church of California is now erecting a $15,000 tabernacle and where thousands of people will summer annually from this year on.
LOTS, 50x125, $200 TO $400,
Fronting wide and beautiful avenues, on easy terms.
Maps of Santa Cruz and Surfside, price lists and descriptive matter mailed free to any address.
CARNALL-FITZHUGH-HOPKINS CO.,
E. A. ORENNAN, Resident Manager, 624 MARKET ST., San Francisco.
127 Pacific Avenue, Santa Cruz.

Holds a Broom either end up; is never out of order. After scrubbing hang your broom with brush down, and it will dry out immediately and not mold or rot, and always keep its shape. Sample mailed and perfect satisfaction guaranteed on receipt of 15c. Boys and girls can more than double their money selling them. Send 2c. stamp for terms. 1 doz. postpaid on receipt of 90 cts. Address ENCLE SPRING CUN CO., Manufacturers of Patented Specialties, Hazleton, Pa.

HARNESS.
Take care of your HORSE. Civilized Man advances rapidly and the Horse will "Keep up with the Band" if well cared for. Horse Boots, Robes, Blankets, etc Saddles, $5 to $75 each. Harness, $8 to $250 per set. American and English Saddlery Goods.
W. Davis & Son,
No. 410 MARKET STREET,
Between Sansome and Battery, SAN FRANCISCO.

Send 3c stamp for Catalogue of
GUNS AND FISHING TACKLE!
Including list of SECOND-HAND GUNS and other articles that have accumulated.
GEO. W. SHREVE,
525 Kearny Street. San Francisco, Cal.

DIVIDEND NOTICE.

The German Savings and Loan Society,
526 California Street.

For the half-year ending June 30, 1890, a dividend has been declared at the rate of five and forty-hundredths (5 40-100) per cent per annum on Term Deposits, and four and one-half (4½) per cent per annum on Ordinary Deposits. Payable on and after Tuesday, July 1, 1890.
GEO. TOURNY, Secretary.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

FRUIT-GRADER.—Geo. W. Thissell, Pleasant Valley, Solano county. No. 431,176. Dated July 1, 1890. This grader has grading-bars, which may be adjusted laterally. Bars or levers are also arranged so as to be turned upward between the inclined bars, and lift and move the fruit and prevent its sticking in the spaces between the grading-bars.

CAN-PRINTING DEVICE.—Chas. R. Hay, S. F. Assignor of one-half to R. H. Marchant. No. 431,165. Dated July 1, 1890. This is a novel device for printing upon the exterior surface of cans, and it is especially applicable to take the place of labels upon cans containing fruit, fish, or other substances, which are usually packed in hermetically sealed cans and afterward labeled by pasting paper labels upon them. By means of this device the inventor is enabled to print in colors upon cans with great rapidity, and the expense and time for putting on paper labels is avoided.

VEHICLE-AXLE.—Jacob G. Kenyon, Port Kenyon, Humboldt county, Cal. No. 430,317. Dated June 17, 1890. This is an improvement in that class of vehicles to which a patent has already been granted to the same inventor, and in which each wheel is provided with its own separate or independent axle, to which it is made fast so that wheel and axle rotate together, said axles passing one above the other and journaled in separate boxes on each side of the vehicle frame. The object of this invention is to avoid the necessity of making the wheel on one side of greater diameter than the wheel on the other side, to enable its axle or spindle to pass above the axle or spindle of the smaller wheel, and also to provide bearings for said axle or spindle of a simple and durable character.

TREAD FOR WHEELS.—Thos. Williamson, Collegeville, San Joaquin county. No. 430,309. Dated June 17, 1890. This is a device which the inventor calls a "tread for wheels." It is especially intended to give a broad support for wheels on soft ground, said support being made flexible and yielding, so that the sections of it will take successively the position of a horizontal or flat platform beneath the convex portion of the wheel and the surface of the ground, as the successive portions of the wheel-rim are brought to that point. It consists of a series of short platforms hinged to the wheel-rim having the adjacent ends beveled so that they will fit together when brought into bearing position and having the rear ends curved upwardly to prevent digging into the earth when the wheel is moved backwardly.

GATE.—John Mason, Petaluma. No. 430,605. Dated June 17, 1890. This invention relates to that class of gates which are adapted to be opened and closed by means of ropes and cords extending along the roadway, thereby avoiding the necessity of the traveler alighting from his conveyance. The object of the invention is to provide a simple and effective gate of this "self-operating" class.

HARNESS.—Joseph C. Simpson, S. F. No. 430,303. Dated June 17, 1890. This is an improvement in light harness such as is specially adapted for road-driving or for use on trotting-tracks. The object is to do away with the traces and breeching ordinarily used upon harness, and substitute therefor a harness that will permit free use of the shoulders and quarters, and thus increase the speed. It consists of a peculiarly constructed saddle, with two independent girths, either with or without the other parts of the harness, elastic connections for the girths, means for securing the shafts, and certain other peculiarities of construction.

Complimentary Samples.

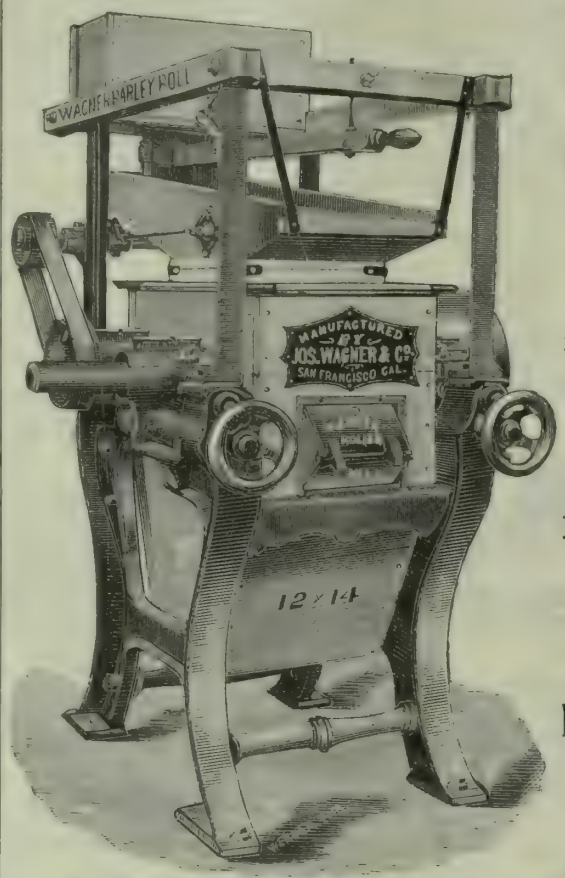
Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

OCEAN SPEED.—An ocean steamer has been projected which, it is claimed, will cross the Atlantic between Queenstown and Sandy Hook in about three days and 13 hours, averaging a speed of 21 to 24 knots an hour.

Consumption Surely Cured.



To the Editor:—

Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption if they will send me their Express and P. O. address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl St., New York.

THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.

These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.

The cost, considering capacity and efficiency, is fully 50 per cent less.

Circular, giving full information, sent on application.

Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

Combined Screw and Toggle Lever

WINE, CIDER

— AND —

OLIVE PRESS

Have discarded the second pressing, as I only got one-half gallon of wine. Every person who has seen the press working is satisfied that it is the best wine press for work, strength and durability.—WALTER PHILLIPS, Bennett Valley.

The wine press has given entire satisfaction.—E. E. MEYER, Wright's P. O., Santa Clara county.

We think your press is one of the most powerful presses ever made, and very simple to operate. A boy of ten years can run the press and do better work than a man on any other press we have ever seen.—J. & F. MULLER, Windsor, Cal.

Can press two tanks—2000 gallons capacity each—a day, and have plenty of time before 5:30 o'clock to clean everything, with one of your small size wine presses.—R. C. STILLER, Guberville, Cal.

Every wine maker should have one, especially when he does not distill his pomace.—VACHE FRERES, Old San Bernardino, Cal.

The working of your press has been fully up to your representations.—J. F. CRANK, Sierra Madra Vintage Co., San Gabriel, Los Angeles county.

The wine press worked quite satisfactory.—JAMES FINLAYSON, Healdsburg, Cal.

The wine press bought of you gave entire satisfaction. WM. HILL, Petaluma, Cal.

We take great pleasure in attesting the true merits of your wine press. The one in our winery gives the utmost satisfaction. We cheerfully recommend it as good as the best.—DOWNEY FRUIT AND WINE CO., Downey, Los Angeles county, Cal.

Can cheerfully recommend your press as being the most powerful and durable press I have ever seen, and can warrant its giving satisfaction.—WILLIAM PALMTAG, Hollister.

The small wine press bought of you gave entire satisfaction. Would recommend it for small cellars of 25,000 to 35,000 gallons capacity.—A. BURNHAM & SONS, Bennett Valley, Santa Rosa P. O.

W. H. WORTH.

Seeds, Plants, Etc.

The Yokohama Gardeners' Association,

Nos. 21 to 28 Nakamura, Yokohama, Japan,

Offer for sale all varieties of

PLANTS, TREES, SHRUBS, SEEDS, BULBS, ETC.,

Of Japanese growth, in lots to suit purchasers, at lower rates than ever before offered to the public. Catalogue prices include packing, boxing and transportation to the ship.

Most careful attention paid to packing and boxing.

Orders must be accompanied with cash, which can be sent by bank draft, postal money order or registered letter.

Trees, etc., delivered in San Francisco, if customers prefer, at a small advance over catalogue prices and freight.

For catalogues and full particulars, apply at the

Japanese Garden and Nursery,

GLEN AVENUE, OAKLAND, CAL.,

Or to P. O. Box 2170, San Francisco, Cal.

TAHITI ORANGE SEED.—The "Tropic Bird," which just arrived for us with choice cargo of Tahiti Oranges, is the last cargo of the season from which reliable Seed can be procured. Seed from later arrivals now on, as all experienced nurserymen know, is too late in the season to cure properly for planting and will not produce a strong stock. One cargo is due in the latter part of July, but too late. Those who desire Seed from this cargo are requested to send their orders immediately. L. G. SRESOVICH & CO., Nos. 505 & 507 Sansome St., San Francisco, Cal.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. **H. G. ROOT, M. C., 183 Pearl St. New York.**

The Cylinder Grader

Has proved the most rapid working machine for GRADING PRUNES, BOTH GREEN AND DRIED, that has ever been introduced. Wherever it was used last season it gave perfect satisfaction, both in the quantity of fruit graded and the way it did the work. The capacity is practically unlimited, as it will grade the fruit perfectly as fast as it can be shoveled into the machine.

I make all sizes of this Grader, from the large 30-inch cylinder down to a small hand machine for the use of growers whose crops are small. I furnish the Grader mounted complete, or the Cylinder alone if, as is often the case, the purchaser prefers to mount it to suit himself.

Send for circulars and prices.

1890—THE STATE FAIR—1890

OF 1890 AT

66291
Cal State Library JI '90

SACRAMENTO,

SEPTEMBER 8th TO 20th INCLUSIVE.

CALIFORNIA'S ANNUAL EVENT!

Showing Progress Made in Agricultural, Mechanical and Industrial Arts.

LIBERATI'S FAMOUS MILITARY BAND OF FIFTY SELECTED ARTISTS AND DISTINGUISHED VOCALISTS

Will give a Grand Musical Concert at the Pavillion each evening from September 15th to 20th.

THE COUNTY EXHIBITS made at these exhibitions have attracted more attention to localities represented than any other form of advertising advanced.

EVERY COUNTY IN THIS STATE should have an exhibit. Begin with harvest and secure samples of your products. The money premiums will almost pay the entire cost of your exhibit.

NEW-COMERS ARE AWAITING to view the products of the State before locating. Hence it behooves every county to be up and stirring.

IT IS AT THESE EXHIBITIONS the Manufacturer meets the Merchants of the interior.

IT IS AT THESE EXHIBITIONS the Merchant views progression made in all mechanical and industrial callings. Hence it behooves the Manufacturer to be up and stirring.

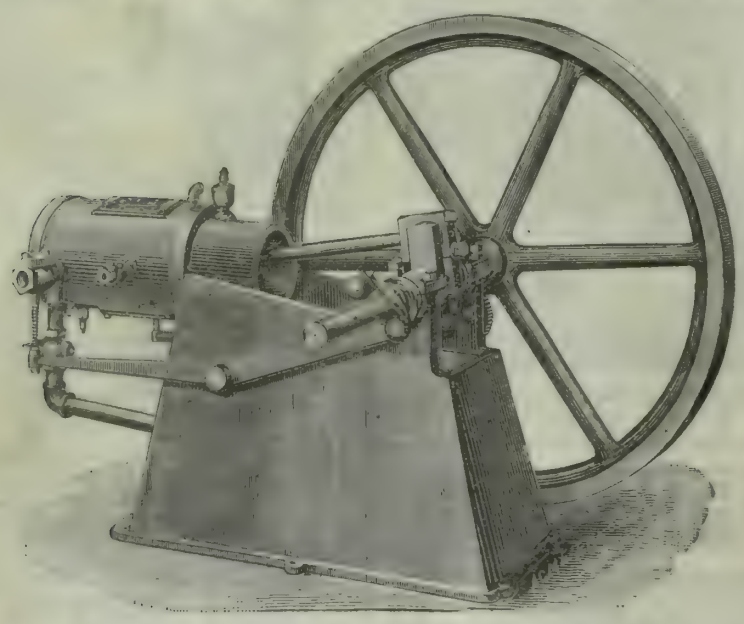
AT THESE ANNUAL EXHIBITIONS the visitor may combine business with pleasure, as the Board of Dirrctors provides for all kinds of recreative amusement in the varied program of events.

THE CONTESTS OF SPEED showing advancement made in the breeding of high-class horses, will be a feature.

THE GRAND PARADES OF LIVE-STOCK will embrace the various classes of horses, and all the improved breeds of cattle.

OPEN-AIR AMUSEMENTS FOR THE DAY and MUSICAL CONCERTS FOR THE EVENING will afford ample entertainment for all who visit the State Fair.

Every attention will be rendered exhibitors by the Board of Directors.



Premium lists are now ready, and will be furnished upon application to the Secretary, who will also furnish other necessary information that may be desired. Apply at once for space.

Remember, the Southern Pacific Company TRANSPORTS ALL EXHIBITS FREE OF CHARGE to and from the Fair, and gives EXCURSION RATES TO ALL THAT ATTEND.

TWENTY-PAGE EDITION.

Vol. XL.—No. 4. SAN FRANCISCO, SATURDAY, JULY 26, 1890. { DEWEY & CO., Publishers, Office, 220 Market St.

A Bird's-eye View of the Yosemite.

The Yosemite season is at its hight and the valley is receiving its annual throng of visitors from all quarters of tho world. To those who have visited the valley and to those who contemplate pilgrimages thither the relief map which we present on this page will be welcome. So far as we know it is the first presentation in a newspaper of this unrivaled method of portraying this grandest feature of California to-

RELIEF MAP OF THE YOSEMITE VALLEY AND ADJACENT COUNTRY.

pography. We reproduce the engraving from original sources by the photo-facsimile process of the Dewey Engraving Co. To one who studies closely the picture new excellencies continually appear. Like all relief maps it gives impressions and knowledge of conditions which are, by the nature of the case, wholly lost in a flat map, and it conveys a knowledge of the collocation of the features of the country which cannot be learned by series of isolated views no matter how excellent they may be. In fact it supplements admirably the impressions gained by personal inspection of the valley, for no one can obtain a point of view which will yield a knowledge of the topography such as the topographers have patiently created by their methods of almost countless measurements. The sources of information employed in the representation and the persons engaged in the honorable work are stated in the upper left hand corner of the picture.

The student of the valley will gain from this map both actual knowledge of facts and impressions of the grandeur of nature's handiwork. It discloses the general trend of the main valleys and its tributary gorges. It shows the water-courses, the trails to reach notable points, and the manner in which the visitor gains giddy hights by practicable routes. It gives also the elevation of the most noted points, and by implication as well as by the shadows the depth of the depressions below them. It will prove of permanent value to all acquainted with the valley as a skeleton around which they can place the firm flesh of their experiences and adorn with the garments of their imagination.

GRADING OF GRAIN.—Representative Comstock of Texas has introduced a bill authorizing the Secretary of Agriculture to establish uniform grades of all kinds of grains transported from one State to another or to any foreign country, which shall be known as American grades.

A HUNDRED carloads of wheat go East to the Lakes from Eastern Washington by rail, instead of going to Puget sound to be shipped on the Pacific.

The Southern California Experiment Station.

We stated in our issue of July 19th that the Regents at their last meeting decided to locate the experimental station for Southern California near Pomona. In pursuance of this decision and to save time as much as possible, Prof. Hilgard visited Southern California to determine definitely the site of the station and complete arrangements for the erection of the buildings, so as to render it possible to occupy the station in time for the coming season's operations. After careful examination, he has recommended to the Regents' committee in charge of the matter the acceptance of one of the three alternate offers of land made by Richard Gird, the proprietor of the Chino Ranch. The 40 acres will be divided into two bodies, viz.: 30 acres of dry land, representing the reddish mesa soil, with a few acres of gray, gravelly land or "wash;" and a 10-acre tract of naturally moist land, a dark loam extensively represented both in the interior valleys and along the coast line, and especially adapted to forage and other field crops. The buildings will, of course, be erected on the main tract of 30 acres, which lies about two miles distant from the town of Pomona on the northern line of the Chino ranch, and to which water will be conducted from the reservoir of Mr. Gird at the rate of one inch to 10 acres, the water being included in the donation.

It is understood that the Pomona people will proceed at once to collect the funds subscribed, and let a contract for the erection of the buildings so as to permit of the occupation of the station by October 15th.

After his return from the South Prof. Hilgard and family left Berkeley for their farm in Southern Alameda county. Here a change of scene and climate will be secured, though hardly a rest, for the Professor took his writing materials along and expects to prepare reports upon recent field and laboratory work for publication. As is usually our advice at this time of the year, we suggest that the sending of matters requiring Prof. Hilgard's attention be deferred until the opening of the University in September although subjects of immediate concern should not be withheld. Arrangements have been made for their reception and treatment by assistants as far as possible, also for transmittal to Prof. Hilgard, if necessary.

STUBBLE FIRES were raging Tuesday night on the lands of the Crocker-Huffman Water Company, west of Merced.

NEVADA'S POTATO CROP is reported to be uncommonly large this year.

CORRESPONDENCE

Correspondents are alone responsible for their opinions.

San Diego County Notes.

EDS. PRESS:—Leaving the business portion of the city of San Diego, a short drive north brings us upon the mesa in the upper part of the city's limits, whence can be seen the bay, Point Loma, Old Town, Coronado and National City, and far out at sea the Coronado Islands resting as shadows upon the bosom of the ocean, while at our very feet lies the famous city of "Bay'-n'-Climate." Here are many of the finest residences of the city. To the north and east, tier upon tier the rugged mountains rise thousands of feet above the sea, seemingly a stony waste. Leaving this scene of beauty and continuing northward, we soon descend to the Mission valley where, nestling close to the foot of the grade, stands the County Home, a comfortable looking place of refuge for the unfortunate. Having thus come over the hill to the poor house, we cross the valley and a mile further are ascending the grade on the opposite side. From the top of this grade a backward glance shows some of San Diego's mesa homes, while ahead, mile after mile, thousands and tens of thousands of acres of mesa lands unfold to the eye. Upon this great expanse, within an hour's drive of San Diego, there is not a single house visible.

The mesa is simply waiting for water, the king of Southern California. Two water companies have an eye to this land, and the prospect for it being supplied is good.

Some 15 miles on our way we enter the Linda Vista. This, a small valley, has some improvements, but is evidently, for the most part, newly settled. Crossing a narrow, ridgelike divide, we descend to the Poway, one of the best known valleys of the county. Of the several grades passed over, special mention should be made. Although Nature did but little here for the road-maker, yet around these precipitous mountain-sides roads have been graded that would be a credit to any community. The secret of these splendid grades is found in the matter of never losing an inch by running levels while making the ascent. Many of our county roads on which thousands of dollars have been squandered are, when finished, a disgrace to the engineers who surveyed them, and in their careless, slipshod building, a disgrace to the supervisors who accepted them. Some of these roads were apparently surveyed by moonlight, if we judge by results attained.

But to return to the valley. Poway contains several thousand acres, but owing to its peculiar form, a full view cannot be obtained from any place. Near the center of the valley are situated the Poway Nurseries, owned by Messrs. Chapin & Meeker, who have a choice lot of trees, both citrus and deciduous. Mr. O S. Chapin, who is an old-time reader of the PRESS, in addition to his nursery business, is owner of the only hotel in the valley. Although 12 to 15 miles from rail, the valley has made considerable progress in fruit-growing. Over 14,000 trees are in the orchards of the valley, of which the following lead in the order named: Peach, apple, olive, apricot and pear. Of grapes a showing is made of about 88,500 vines, mostly raisin grapes. The fruit crops, as a rule, are very good. For the above fruit items I am indebted to Dr. L. N. Hilleary, who is one of the largest fruit-growers of the valley. Good land (unimproved) ranges in price from $50@$150 per acre. J. B. H.

Poway, Cal

Lake County.

EDITORS PRESS:—As Benjamin among the tribes, so is Lake very small among the counties. Territory is not her boast, although many square miles are piled up in the form of mountains, embracing broad and fertile valleys, vales, uplands, foothills and wide mesas. The beautiful lakes that adorn her greatly diversified surface, are fed by numerous mountain stream that wind through the valleys, and their many wooded glades.

These high ranges have secluded from the outside world the rich and charming country they surround, but we trust a quick and ready way of ingress and egress will soon be provided for us. The air is rife with railroad rumors. Commercially we deem ourselves of too much importance to the outside world to be much longer left to waste our sweetness on the desert air. Routes are being surveyed which we hope herald the building of the long-wished for road.

Clear lake, a noble body of water 30 miles long, is 1300 feet above the sea level. This elevation with the protection of the long, high ranges at the west which screen us from the ocean winds and fogs make a climate most favorable to health and vigorous vegetable growth.

Climate, the famed boast of California, is here so nearly adapted to our wants, that most of the year we exist in it as unconscious of it as one in perfect health exists unconscious of the body.

The rapid and vigorous growth of the fruit trees and grape-vines prove their complete satisfaction with climatic conditions.

Until within a few years, sheep and cattle raising, the growing of wheat and other cereals has been the chief pursuit of the settlers, but more recently vineyards and orchards have been planted and many acres of small fruits cultivated. All the fruits of Northern California succeed as well here as elsewhere. The growing of the orange and lemon is not a specialty, although near the lakes are trees loaded with a very fine quality of these fruits.

Almonds are a pronounced success on the mesa and foothill lands and also in the valleys where the attempt has been made to raise them. They require no hulling, as the hills open and drop their nuts, and no bleaching, being of a uniform color, and so far as can be learned, the trees have no off years. A similar good report might be given of all the other kinds of fruit trees, the fruits of which grow of an unsurpassed size and quality. The olive trees, although but recently planted, have surpassed expectation in their rapid growth. The same is true of fig trees. The Adriatic and other more recent and superior varieties seem especially to rejoice in the soil and climate of the foothills and mesas.

The fruits and other productions of the soil are not the only attractions of Lake county.

Many are the springs that gush and bubble among the hills, the waters deliciously infused with those minerals which restore the invalid to health and make buoyant those who have no ailments. These many springs are famed far beyond our borders, and are visited by many thousand persons yearly.

Much of the land on the foothills and mesas of Lake county is still waiting the home-seeker. There is but little land available for cultivation that is not appropriated.

Those who have taken the more desirable tracts of government land are in many cases wishing to sell a portion of their farms, and offer land at very reasonable prices.

There is much chapparal on what was once Government land, but when cleared and cultivated, it proves the best land for fruit-growing.

Much might be said of the scenery here which is of the kind to inspire the most poetic sentiments in those poetically inclined. The artist is charmed with the great variety of form and color in the landscape. The many lakes here and their wooded shores are the sylvan retreat of beauty and her ethereal sisterhood of graces, which so often seek the wildwood and the limpid wave for their enchanted home.

MRS. H. MILLARD COFFIN.

Kelseyville.

THE APIARY.

A Transaction in Bees.

EDITORS PRESS:—I have just arrived home and find your letter awaiting my arrival. I will first quote the letter you send me and then give my answer to it. Following is the letter:

Mr. S. L. Watkins, DEAR SIR:—We desire your judgment as an unprejudiced expert on the following statement: One of our readers living in Nevada, sent the money early last spring for two swarms of bees to a California bee-keeper. He writes that up to July 3d, he has received nothing but a letter explaining the delay, as follows: "Dear Sir—It is to your advantage that we are keeping the two swarms. We could have sent them sooner, but if we had we could not have guaranteed that the queens were purely fertilized so early in the season. Very few dealers can guarantee this before May, and most of them not until June, and then not until their progeny hatch out. We send out young queens guaranteed purely fertilized with all young colonies, and the only way to test them is to wait until their progeny hatch out. We will forward them to you as soon as possible."

The party who ordered the bees received this explanation of their non-shipment and wishes to know whether he is fairly dealt with—in other words, whether the explanation is a reasonable one or not.

You may answer this question for publication or give us the information, which we can send to the enquirer in a personal letter, whichever you choose. EDITORS RURAL PRESS.

Now for my answer: No, the Nevada man has not been fairly dealt with. Queens in this climate can be raised and fertilized by February 1st, and now it is July, long after all swarming has ceased. There is something wrong about that "California bee dealer," and I advise the Nevada man to try and get his money back.

The explanation given is not a reasonable one by any means—far from it. No queen breeder in California would tell you that he could not tell whether queens were purely fertilized until June; because two-thirds of the natural queen rearing is over by that time, and most of the very latest raised queens are mated and their progeny hatched out; artificial queen rearing though can be kept up the entire season.

Such a thing might be that the "California bee dealer" spoken of was out of queens, and was just starting to raise some, and probably their progeny had not hatched out yet; but saying that very few dealers could guarantee this before June is not so, as any queen breeder will tell you.

In about 25 days after the young queen commences to lay, by opening the hive and examining the young bees, you can tell if she has been purely fertilized; no matter whether it is June, July, August, September, or any other month. When I raise queens for sale, I generally have them ready to send out by the 1st of April, and can continue the whole season until winter comes on. It may not be out of place here to state that I have no bees or queens for sale this season.

The RURAL PRESS must have an immense circulation among people interested in bees, for I generally receive a half-dozen letters every mail, making inquiries in regard to bee culture, and they all mention seeing my name and address in the RURAL PRESS. To all who inclose a stamp I give an answer; to those who do not, of course, I cannot answer by letter, but will give an answer in a future article to the RURAL PRESS. S. L. WATKINS.

Grizzly Flats, Cal.

[The above relates to the affair of one of our subscribers living in Nevada, who sent money for bees to a California beekeeper, as described above. We stated the facts (as our letter quoted above shows) without giving Mr. Watkins the name of either of the parties and his answer is therefore wholly without prejudice. We described the same facts to W. A. Webster, the Kern county beekeeper who happened to call upon us. We did not give him names but merely the facts. His answer was like that of Mr. Watkins, that the California bee-dealer did not give a valid reason for his delay in shipment. We give the matter without thought of persons, but merely for the facts involved.—EDS. PRESS.]

Bee Buzzings.

EDITORS PRESS:—I will give you a description of "Anti-Smoker:" Fill your smoker with excelsior, shaving tow, rags, or any loose porous material, sprinkle a solution of carbolic acid on the material, filling your smoker and "proceed to business." This carbolized air is to be preferred because there is no fire to make and no danger from fire. It is always ready and does not "go out." There is no smoke in your eyes and throat, no singed bees and discolored or melted comb, and no ashes or cinders falling out of the smoker when you wish to blow directly down between the frames. It is not patented and as I am the only one using the idea, not likely to be. See to it that the solution of carbolic acid used is fresh, and has a decided carbolic smell. "Calverts's Solution" can be relied upon. Keep the acid where the children cannot reach it, as like all other acids it is a corroding poison.

This season has convinced me that every hive should have a space for storing honey equal to, or in excess of, the room in the brood chamber. In those hives that have but one tier of two-pound sections, the bees, for want of storing room, filled the frames in the brood chamber almost solid with honey. In consequence the queen was cramped and for want of egg cells the bees soon decreased in numbers. Where the hive had an abundance of storage room the bees went to work overhead and left the brood chamber to the queen for egg-laying. As fast as the bees matured they found a surplus of space overhead and so kept out of the queen's way and she continued uninterruptedly to lay eggs and keep the hive in almost a swarming condition. No robber-bees cared to call upon those "hives of industry," and the result in pounds of honey has been double that of the hives, with moderate space overhead for storing.

I put the zinc "queen excluders" on all of my hives this season, and after a month's trial removed them. I found that the bees were very reluctant about going to work; in fact, almost all of the bees refused to. Once the excluders were removed, all of the bees went at it with a rush. The only hive that has proven a success with the queen excluder was Root's "Dovetailed hive." The bees filled in the space between the frames and excluder with burr-comb, and with this for a ladder have worked continuously, turning out 25 one-pound sections a week to the hive.

My spring flow of honey is about over, and I have the choice of moving my bees up the mountains or leaving them in their present locality until the fall flow begins. I have experimented with a number of robber traps of my own and other beemen's inventing, and so far the result has been the same. I melted down the comb and lost my bees. In consequence I content myself by closing the entrance, so that but one bee can enter at a time, and cover that entrance with a handful of loose grass, taking care that the hive is shaded and ventilated. I have bored an inch-and-a-quarter hole through every hive, just below the rabbit that the frames rest on and in the back of the hive. This ventilator I cover with wire netting. In the Dovetailed hive I bored two holes. I find that this ventilation keeps my bees at work on very hot days, when otherwise the heat would drive them out and cause them to bunch in idleness on the outside. Then, again, in our long wet spells, the hives that are not ventilated become damp, and if not opened, moldy. I put 30 ventilated hives on the stands last fall and three that were not ventilated. The 30 all came out strong this spring; the three unventilated hives were dripping with moisture and effected with mold. In cold locations the ventilators could be covered in dry, cold weather. A smaller opening than one inch the bees close up, but I have not had one of the inch-and a quarter ventilators closed by the bees.

In many of the mountain apiaries the "honey-boxes" are put on in the spring and taken off in the fall. The bees fill the boxes within a a month after they are put on, and during the balance of the season are in idleness, and their owner shakes his head and declares that he "don't see how you get so much honey when he gets only moths." A stand of good bees, properly cared for, will put up an average of 200 pounds of comb honey in this section. Of course there will be "off years" when they will have to be fed. While the bee is always demonstrative and never affectionate in disposition, yet she always repays us with her excess of sweets. E. H. SCHAEFFLE.

Murphys, Cal

THE DAIRY.

Forage Plants in India.

[Written for the RURAL PRESS by DR. LORENZO G. YATES, F. L. S.]

In the third volume of "The Dictionary of Economic Products of India," Mr. John F. Duthie, F. L S., Director of the Botanical Department of Northern India, and the author of several valuable works on Indian botany, under the head of "Food and Fodder for Cattle," has tabulated an interesting list of trees, shrubs, herbs and grasses known to afford food or fodder for cattle in various parts of India.

In the present sparsely populated condition of California, our people can perhaps afford to be wasteful and unthrifty in the matter of the fodder question, but the time is coming when, with an increased population and corresponding increase in the demand for food for domestic animals, the people will be forced to practice economy, and include among their food plants a great many products of the vegetable kingdom which are now regarded as absolutely useless in the economy of animal life.

Mr. Duthie divides his list according to the climatic conditions of the country under consideration. Thus he notes under the head of "Fodder Plants of the Plains," the tropical portion of the region, 313 species of plants, exclusive of the grasses; under "Himalayan Fodder plants," exclusive of grasses, 129 species.

As showing the thrift of the inhabitants of the densely populated plains, it may be noted that such trees as Tectona grandis (teak), sterculias, poplars, Persian lilacs and elms are lopped and the twigs and leaves fed to the cattle; and in the temperate regions of the Himalayas, the twigs and leaves of the walnut tree, *Juglans regia*, and some of the conifers are mixed with hay and stored in the boughs of trees for winter use. The *Ipomœa aquatica* is dried and smoked in Bengal, and in this condition is considered lactiferous. The rinds and stones of the mango (*Mangifera indica*) are also used. The stones of the fruit are swallowed entire, and after becoming soft in the stomach they are brought up as a cud; the kernels are then pressed out and eaten and the refuse rejected.

It seems somewhat strange to us to read that some of our choicest conservatory plants are classed as fodder. The "Fodder Grasses of the Plains," foot up 119 species. Those of the Himalayas are divided into "sub-tropical" and "temperate." Of the first there are 63, and of the latter 130 species enumerated; the entire list under the various divisions amounting to 754 species being used as food for the various domestic herbivorous animals.

Forage Plants in Oregon.

EDITORS PRESS:—In making note of the progress of different varieties of grasses and clovers this season, there are none more promising than orchard grass (*Dactylis glomerata*), fall oat grass (*Avena elatior*), and medium red clover. While others have done well and are worthy of recommendation and extended trial, those mentioned seem to take the lead, especially for hay. Good crops of hay were cut from these plats early in the season and a second crop has gotten a good start. All of the early grasses did the best this season. Timothy is below the average. Red top did fairly well.

Observations this season have led me to believe that those grasses which grow rapidly, maturing in May or the first of June, will prove the most successful in this valley. The clovers and grasses mentioned came to maturity without the aid of any rain. They simply drew upon the supply which was held in the soil from last winter's rainfall. The later varieties, such as timothy, requiring more time to mature, were cut short of their needed moisture. The supply was exhausted before they were ready to need it most.

Clover sown on College farm with winter wheat, during February, is all right so far, and promises to hold through the dry season. That sown the last of March stands a much poorer show; in fact, much of it has given up the ghost already. We shall try seeding in the fall this season. A single failure should only teach us to try the harder, for we must have clover and grass. H. T. FRENCH.

Agricultural College, Corvallis, Or.

THE longest railroad bridge span in the United States is the cantilever span in the Poughkeepsie bridge over the Hudson river, 548 feet.

HORTICULTURE.

Fruit Notes.

EDITORS PRESS:—The success of shipping in other than refrigerator cars seems to depend on securing the most ventilation and the least jarring possible. To effect this, openings in bottom and top of each end of the car are protected by screens, and posts are used to keep the piles of fruit about a foot away from the ends of the car. Then four crates or five boxes are laid side by side against the posts leaving a few inches space between them and a little wider space on the outside. Strips about 1x$\frac{3}{4}$ and nearly as long as the car is wide, are nailed on top of each end of the row of boxes, at least one nail striking each box. The first row of cleats will have the ends touching one side of the car and the next the other. So they keep on loading from each end as long as there is room for a man to pass between the ends of the piles. Then they put up posts at the ends and wedge between them until no jarring of the cars can move a single box any more than if each was a part of the car.

A few of these cars are being constantly loaded and growers are expressing the opinion that the question is nearly solved. The trouble has been in the keeping quality of the fruit after its removal from the ice. It is hoped that this can be remedied by gradually raising the temperature, say at midnight, before arrival, begin to open the car doors and open them a little wider every time the train stops.

Suggestions in Shipping Fruit.

I have been hunting around among our old Vacaville friends, who are now leading shippers of California fruit, for suggestions that might prove of value to those of less experience.

From E. R. Thurber we gained the advice: Don't ship unless you mean to keep at it through the season. One car may encounter hot weather *en route*, may be delayed, may reach a glutted market, or may not have been in condition to carry well. If you lose your fruit and are drawn upon for expenses, don't wince, but take your medicine like a little man. The next car may bring you out all right. It is important to have a succession of shipping fruits, so as to keep expert packers employed for as long a season as possible; also to keep the teams and wagons busy. If your four-horse fruit wagon and team costs $1000, it makes quite a difference whether you have 20 or 100 days work in a year.

From M. R. Miller we gained the idea that little was to be made, in the long run, by running after the fruit or the market that happens to be best to-day. The fruit that may not be wanted this year may be in great demand the next. The chances are that a market that is glutted may soon be bare, and *vice versa*. There are always so many ready to jump from one thing to another in hope of striking the best, that they make rather more than a balance-wheel. That man has the advantage whose goods are best known in market to be choice and reliable. Few produce in so great a quantity as to be able to have their brand well known in more than one market.

Upon asking Mrs. W. W. Smith to tell us all about shipping fruit she said: "I've been at it long enough to find that I know nothing about it." In other words, she had learned that success with fruit depends on careful attention to so many details and involves so many elements, both within and beyond our control, that it seemed to her as though she knew nothing about it after all. Still, her bright eye was watching every movement in the packing shed and quietly correcting many a mistake. Very few in the valley are looked upon by their neighbors as better authority on fruit.

It seems that apricots that are packed without wrapping require just a little pressure from the cover to keep them in place; this will cause the top and bottom to bulge just a little. Peaches must be wrapped and the cover must touch very lightly if at all. To know just exactly in what stage to pick fruit for shipping, it is a good thing to lay away a sample of each shipment and then examine it when the lot reaches market. In the peach, a good sign is the beginning of ripening at the pit and the clearing of the skin preceding the coloring; in apricots, the white shade that follows the green and precedes the yellow.

Fruit grown on the hills or on a comparatively poor soil, ships better than such as is grown on rich bottom land. This year, contrary to expectation, fruit ships remarkably well. This is accounted for by absence of rain during the time that the fruit was forming and ripening. The usual rain that comes to spoil the hay may do quite as many dollars damage to the fruit.

At Frank Buck's place we noticed that they were putting up the fruit in 50 box lots. It seems that they are sold at auction in that way in Chicago. They were making two grades of ripeness as they packed, one greenish white and the other just turning yellow. You see, the agent of a New York or Philadelphia dealer comes into the auction room and wants something that will be in good shape for a week yet. The Chicago or Milwaukee dealer wants something to put on the stand to-morrow or next day. Nobody can pick fruit so as to have it exactly alike, and by thus packing both customers are better suited. Folks pay for that.

It is astonishing how they move these loads of fruit. Mr. Buck's packing-house is four miles from the depot, and the regular load for the big wagon is 7000 pounds; yet the driver says that he has, when hurried, made the drive in 30 minutes. We heard some very large figures named, on pretty good authority, as to what Mr. Buck was likely to realize for his present fruit crop, but hesitate to repeat them, as such figures, even when correct, are so likely to mislead.

The way many people go into the fruit business reminds us of Sambo's plan of investing his pension money. He had decided upon building in town and concluded that groceries, barber-shops, etc., were attended with too much work and risk, but he would use his building for a law office as the business was so clean and brought in so much money. So in fruit many start in to experiment on soils, varieties, cultivation, marketing, etc., and display far more confidence in their infallibility than these veterans of fruit culture. One friend told us that for the first few years he planted two or three trees of every variety he heard of. As the gentleman is quite deaf, he accepted the consolation that it was lucky he could hear no better.

The Jones Grader.

We found our old friend, Dr. Dobbins of Vacaville, busy grading his apricots for the Benicia cannery with his new Jones grader. He was so delighted with its speed and accuracy that he named a very large sum of money that it would take to buy it, if the machine could not be replaced. The man who carried the 60-pound boxes of fruit to the machine had to hurry, and so did the one who carried the boxes of fruit away, but the girl who fed and propelled the grader was just having fun. It is thought that eggs could be safely graded and they did have some down at the warehouse that they run through the machine to show how it worked.

The doctor says that if he had his orchard to plant over again, every tree would be a prune. A few years since, when four or five leading growers contracted with the Benicia cannery for apricots, peaches, plums and pears, at an average of a little better than two cents a pound for a term of five years, it was thought that they had made a great bargain. Mr. J. A. Webster, president and manager of the California Fruit Association, tells us that he don't think one of those contracts could be renewed at the same figure. It was thought that it would break up any cannery. But it seems that the cannery has done well.

Iron for Trees.

In a pleasant hour passed with J. M. Bassford, Sr., of Vacaville, we learned some points that seem too good to keep. Near the house, in hard ground, he showed us a Bartlett pear tree, about ten inches in diameter, from which which he picked two boxes last year and then weighed 1340 pounds of the balance of the crop, making 1420 pounds from that one tree. It is now well set with another crop of pears, and is remarkably luxuriant in foliage. Mr. Bassford says the secret of this and other remarkable yields is in fertilizing with iron filings or copperas. This tree had a pint cupful of iron filings about it; nothing else unusual. Mr. B. had known for a long time that driving nails or spikes into trees would induce fruit-bearing, and afterward noticed that where a sink had been disinfected with copperas its drainage had produced wonderful fruitage. Last winter he contracted for copperas by the ton to apply to his trees, but the wet weather and bad roads interfered with his plans. At his son's place in Napa county, he experimented with a few trees, without letting them know. Now they are wondering why these few trees bear so much more than the others.

An Opinion on Pruning.

Mr. Bassford seems to think some of his neighbors have carried system in pruning too far. He says that when you cut the end of a limb, Nature seeks to repair the damage, and will send out two to four shoots. Thus you turn the strength of the tree to producing wood and foliage, and it cannot go, at the same time, to the fruit. While it is all very well to so prune as to develop a healthy, strong tree near the ground for the first two or three years, there are many mistakes made in cutting back after the tree has reached bearing age. If you have a peach or apricot to deal with that is sure to set more fruit than it can mature, it may be well to cut back severely. But the case is different with the pear, prune or cherry. With such trees his idea would be, cut back while forming your top; thin out when you are ready to produce fruit.

In Berryessa Valley.

A ride of 16 miles from Winters over a fine mountain grade through the canyon of Putah creek, brings one to a beautiful valley, 3 by 13 miles. The soil is very rich, as shown by the great oaks and the wheat and corn crops. There at J. W. Quittle's place we saw a prune and pear orchard of six years that would be considered a good growth even in Vacaville for eight years. Last year the rain caught him out but he has a fine crop again this year. He greatly prefers the French to the silver prune. The holdings are growing larger in this valley and the town going down the same as at Butte City. It is pretty hard when you find one crowd complaining that they can't do anything without a railroad and another grumbling because the railroad takes all they make. Here in Berryessa they are waiting for a railroad, and in Capay the railroad is waiting for something to do. Nobody has any better shipping facilities than A. T. Hatch at Suisun, yet it is supposed that his almonds have paid him better than any of his fruit for a term of years. Dr. Dobbins is about the nearest of anybody to the leading fruit-shipping station on the coast, and yet he says if he had to plant again every tree would be a prune. Now, it costs no more to haul almonds or prunes from Berryessa to Winters than to haul wheat. They can get their fruit to market within one day as soon, and if Dobbin's or Hatch's land pays big interest on $500 or $600 per acre the Berryessa land ought certainly to be worth more for some kind of fruit or nuts than for wheat. In some places it may be too frosty but testimony of inhabitants and appearance of land indicate that in only a few such favorable places as Pleasant valley would there be less trouble. F. S. C.

TRACK AND FARM.

Notes at Random.

It is likely that several of the stables now running in the East will be at home in time to race at the State Fair.

The Australian mares that came by the last steamer for Mr. L. J. Rose, have arrived at the Rosemeade ranch in good condition.

The horses on the Napa track are going well. Among the well-known flyers are Nona Y, 2:25, Oakville Maid, gold medal, and Josie S.

The track at Petaluma is full of horses, and from the class of events offered by the Association, the fair will be one of the best of the year.

J. P. Sargent of Sargent's station has sold the stallion Little Brown Jug to M. Love for $2500. Little Brown Jug is by Nutwood, dam by Budd Doble.

Two Elector youngsters have been added by James Dustin to the string that he is training at the Bay District track. They are the property of William Funck.

The gelding Homestake, by Gibraltar, dam Kate by Volunteer, went into the 2:30 list at Helena, Montana, the other day, winning the first heat of a race in 2:28$\frac{3}{4}$. Ed Lafferty, the man who had Hugh Kirkendall's stable here during the winter, drove him.

The Electioneer mare Wamba, was driven in a race at the Bay District track Saturday to get a record in the 2:30 list, but she failed to do it. She was suffering from a strained hip and was not at herself by any means. She will have another try for a mark before long.

From the way the La Siesta filly Mariquita trotted in the special race at the Bay District track last week, she should be a dangerous one in her class this year. She is not ready for fast work yet, but when she is she will cut out some hard work for the youngster that beats her.

The running horses are entered quite well at Los Angeles, but the trotting horse owners have not been so liberal, and there is not a single entry from the northern part of the State. The fair will be a success anyway, for there are enough trotters at Los Angeles and on the surrounding ranches to make a fast meeting.

Maggie E showed a mile in 2:25 and Wanda a mile in 2:26 at the Bay District, Friday. Both of them were in fifth heats. Maggie stands up to her fast work in good shape, and she will be a race mare by the time that her first engagement comes on. Wanda will be there too, and the La Siesta people seem to have a chance for some of the good things of the year.

The Pleasanton horses have been measurably successful in their trip East. They won several races, but Margaret S, the crack filly, was defeated in slow time the other day at one of the Michigan race meetings. The horses will be at home in time to take part in the Oakland meeting. The fourth payment has been made on Margaret S in the four-year-old stake at Sacramento.

The San Diego Fair will be held this year at Escondido. The program of the racing events is: Trotting, 2:40 class, purse $250; running, one and a quarter mile dash, purse $150; mixed race, pacing and trotting, purse $250; San Diego derby, one and one-half miles, purse $200; free-for-all trot, purse $300; running, half mile and repeat, purse $100; trotting, three-minute class, for county horses, $150; running, three-fourths of a mile dash, $75.

There were six of the entries paid up in the State Fair two-year-old stake on the 1st of July, three in the three-year-old stake and four in the four-year-old stake. In the four-year-old stake the entries are Lillian Wilkes, Margaret S, Ladywell and Ariana, the last two being Palo Alto fillies that have never trotted in public. One of them is by Electioneer, and the last-named by Ansel. The three-year-old stake has Regal Wilkes, Millie Wilkes, a new one, and Alxira by Ansel, also a new candidate. There is some fast talent in these two stakes and they will furnish interesting races if all of the horses are kept in.

Two more of the California colts made a showing for themselves last week when Homer and Rinfax, of the Undine stable, ran first and second in the Friendly stakes at Chicago. The starters in the race, seventeen in number, were the very best two-year-olds in the West, and yet these two Palo Alto bred youngsters simply galloped away from the field and raced home alone, winning an event that is worth considerable money to their owner, and also one that gives great honor to both of them. Though the season opened in a bad way for the Californians, they bid fair now to eclipse all form records on the Eastern tracks and to come back in the fall with more money to their credit than ever before.

FORESTRY.

Trees for Profit.

EDITORS PRESS:—Testimony from Australia has established with us the reputation of the Jarrah to withstand the teredo. An experiment in the harbor of San Francisco, however, with supposed Jarrah piling shows this wood to be quite as subject to the teredo as any other. The contradiction between the Australian and Californian experience is so great that the genuineness of these Jarrah piles has been called in question. I am glad to say that another experiment will be tried with piling of the *Eucalyptus marginata* (Jarrah) under the supervision of the Harbor Commission at San Francisco. Special care has been taken to secure the true Jarrah piling. Until this experiment is completed, it will be wise to suspend judgment on the value of this tree. If it be found that Jarrah will withstand the teredo, no tree plantation will bring so great a profit to the grower. If, however, such should not be found the case, other trees will bring a quicker and better return.

Of these is the *Acacia decurrens* or black wattle. This is a rapid grower, reaching its highest market value between its fifth and tenth years. It is valuable for tool handles, carriage-work, etc. For firewood it is of the best, but its great value lies in its bark, which contains a larger proportion of tannin, with one exception, than that of any other known plant.

This acacia comes from the seed easily, and is one of the few trees in our State that can be planted by the seed in the place where it is to grow. Arid and sandy places seem to suit this tree better than good soils, and consequently it is especially suited to waste lands. The bark contains from 29 to 40 per cent of tannin, averaging about 35 per cent. Limestone formation is the least favorable to the development of its tannin. The bark should only be stripped during the spring months. In planting by seed, the ground should be prepared as for a crop of corn and seeded much as corn would be, thinning out later. The seed is very hard, and to germinate promptly should have boiling water poured on it and then be allowed to soak until soft. It may be safer to have the water at a temperature a little less than boiling when first poured on the seed. The water must not be kept hot. [At the State University the seed has been actually boiled in a cloth bag with good results.—EDS. PRESS]

The short time required by the *Acacia decurrens* to come to its perfection, the waste lands upon which it will thrive, the cheapness of planting, together with its high commercial value and the presumption that tanning bark will increase in value, make this tree one that may be safely planted for profit.

The *Acacia pycnantha* carries a somewhat higher percentage of tannin, but does not produce so large a crop of bark per acre as the *decurrens*.

I recommended both these trees some years ago while chairman of the State Board of Forestry, but discouraged their planting shortly after on account of the ravages of the white cottony cushion scale. The introduction of the vedalia has destroyed this scale, and it need no longer be feared. The time now seems ripe to call attention again to these valuable trees.

Returning for a moment to our piling it may be well to mention the fact that a pile of any kind of wood driven in a harbor opposite or near the discharge of gas-works waste, or in fact at the mouth of any sewer, may be taken out one, five or ten years after, without showing any signs of the teredo. The teredo cannot live in very foul water. It is therefore clear that great care must be exercised in experiments to ascertain the value of piling.

A Good Eucalyptus.

Perhaps one of the best all-around trees introduced some years ago by the State Board of Forestry is the *Eucalyptus corynocalyx* (sugar gum). This tree is symmetrical and attractive in appearance; of rapid growth and produces a valuable timber. It is being largely planted in the southern part of the State. It stands frost as well as the blue gum, but not so well as the *Eucalyptus viminalis* (manna gum). This rapidly growing and graceful tree has been largely planted in this State as "red gum." The error was due to the dishonesty or incompetence of seedsmen. This incompetence as to this tree still exists and seed recently purchased for *E. rostrata* (red gum) turned out to be the manna gum. Both are good trees and both have proved successful over wide ranges of soil and climate in California.

Suitable trees in suitable localities have proved profitable in California and to an extent sufficient to encourage an enlargement of this industry. We must never forget, however, that safety from torrents, from increased winds and extremes of temperature, and above all security for our summer supplies of water depends on an intelligent forest policy looking to the preservation of the forests on our mountain water-sheds. If we expect to enlarge the area of irrigated lands, if we desire to see the State maintained and increase its productive power we must protect the mountain forests. ABBOT KINNEY.

Santa Monica.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Watsonville Astir Betimes.

Preparations for State Grange.

EDITORS PRESS:—A special meeting of Watsonville Grange has been called for Saturday, July 26th, at 2 o'clock for the purpose of receiving a number of applications from persons who desire to become members of the Order in time to entitle them to attend the State Grange, which will ere long convene here; also for officers' drill, as visitors from various Granges will be present at the next regular meeting, August 2d, to witness the initial ceremony of the largest class ever received by a subordinate Grange—a distinction in which this Grange feels a pardonable pride. A last opportunity is thus given those farmers and their families who have not realized how near the time approaches for the State meeting. Any names presented before the close of the "special" will yet be in time.

Weekly notes will appear of the busy movements of Watsonville Grange between now and the meeting of the State Grange October 7th.

Reduced rates have been secured on the railroads under conditions already published in the RURAL, while arrangements for a number of excursions are under advisement. An opportunity will thus be given people from all over the scorching interior to feel the cool breezes and feast their souls (some for the first time) on the vastness and grandeur of ever-changing old Pacific.

Besides the delegates, visitors from all parts of the State, and fraternal delegations even from Oregon and perhaps Washington, have promised to be present. H. E. Hayes, Master of Oregon State Grange, will doubtless address our farmers on the vital issues of the day.

Notwithstanding it is an "off year," every effort will be made to render the coming State Grange session the best ever held. Watsonville, fully alive to the honor conferred on her in being selected as the place of holding the State conclave of the bone and sinew of the land—when such places as San Jose, Marysville and Oakland offered their attractions and boundless hospitality—will respond nobly to the demands of the occasion. Her cereals, fruits and flowers will fill to overflowing the cornucopia of progress and plenty, and after the meeting shall have adjourned it will be the general verdict that the holding of the State Grange so far from its old headquarters proved a gratifying success.

Watsonville Grange will hold meetings as follows: A special meeting Saturday, July 26th, at 2 o'clock; a regular meeting Saturday, August 2d, at 1:30 o'clock sharp, when the first and second degrees will be given; a regular meeting August 16th, when the third and fourth degrees will be conferred; August 23 a special meeting at 10 o'clock in the morning, to conclude with a grand Harvest Feast at 12 o'clock; and at 1:30 P. M. a select program will be rendered, with addresses by W. M, Davis and others.

You farmers who have been undecided, here is your golden opportunity, which, if now let slip, will never return. If you have not time to attend to the matter in person, hand some friend the small fee of $3 for yourself or son, or $1 for your wife or daughter, with your plain, honest name and age, and become actively enlisted in a cause as great as it is just.

A. P. R.

The Grange in Lake County.

There are favorable prospects of organizing a good Grange at Middletown and another at Kelseyville within a short time. The Secretary of the State Grange met a number of farmers and husbandmen at the school-house in Middletown last Saturday, but not enough to effect a reorganization. A Republican primary held in town during the afternoon and the smoke of a forest fire discerned in the home neighborhood of some who had come in town to attend the meeting, lessened the number of attendants.

The meeting was organized by the election of Messrs. Connolly chairman, Whittinger secretary and Abbey treasurer, who were also appointed a committee to arrange for another meeting at 4 P. M., August 2d. There are some earnest old Patrons, as well as other farmers, who seem desirous of establishing and maintaining a good Grange at Middletown and we hope they will have an early success.

FREIGHT CHARGES ON GRAIN.—A telegram from Washington announces that the Interstate Commerce Commission has decided to issue an order making a reduction in the grain rates from Iowa, Nebraska, Kansas and Missouri to St. Louis and the Mississippi river, and to Chicago. The food-product rates east of the Mississippi, not involved in other suits before the Commission, are not found to be excessive.

RECEPTION.—We learn from J. D. Hollister, W. M., that Eden Grange will tender Bro. and Sister A. Adams, recently returned from the East, an ice-cream reception Aug. 9th. E. W. Davis, W. M., has been invited to be present.

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

There are indications that the rate of State taxation will be higher this year than it was last year. How long, oh, how long will the farmers of California allow this imposition to continue? Let us have more practical men in the Legislature. Don't you say so? Then look to the man you vote for. Be sure he is *the* man for the place. Don't be in doubt! Help nominate and elect a man who will ask: "*Why?*" before voting the people's money away. That will give us lower taxes, better laws and more social, financial and general prosperity.

Don't you think it is worth the time of every farmer in California to plant a few nice shade trees every year? The Sisters of the Grange will look well to the planting of flowers and blooming vines. Arbor Day ought to be encouraged and patronized by every Grange in this State.

If every member of the Grange in this jurisdiction will but add one new name before the State Grange convenes, the membership will thus be increased one hundred per cent. Who can't bring out one new name? Try each one, for *one new number*.

The English farmer is faring much worse this year than his brother on this side of the Atlantic. While we of the farm have short crops, we will receive a fair price. In Great Britain hay is rotting on the ground, wheat is mildewing, fields are turned into ponds and the fruit crop is an utter failure. Gloom has enwrapped the agricultural classes of England, if reports are true.

Produce from the brain as well as from the soil, if you want success on the farm.

Three conditions of success are: good health, good habits and good education. Get these, and most other elements of success are at your command.

The Grange asks none to join it who cannot see good in their fellow-beings; but to all interested in agriculture, who have generous hearts and open hands to help the needy and aid in making the labor of this life cheerful, we say: "Welcome to the Grange." Don't you indorse the above sentiment? Then why not join the Grange?

If there is no Grange in your locality, write to A. T. Dewey, Secretary of the State Grange, 220 Market St., San Francisco, and he will furnish you with all the blanks and full instructions how to organize. You may make $15 by getting up a charter-list. Try it, fellow-farmer! The one safe guide to success is: "Be sure you are right." Do we always so act?

Do you ask yourself for a reason why such a thing should be done? Do you stop to think that Reason is the lever which elevates man? Do you know that the more you study, the more you will want to study, reason and inquire? There is no harm in knowing, "why?" Tell us *why* you plow, sow, eat, sleep, converse, have a home, a wife, friends? Tell yourself *why* you want *all money* and none of the comforts and blessings of the home, with its library, music, friends, happy children, loving wife, and joys too numerous to mention. Don't you know, fellow-farmer, it is a good thing to ask *yourself*, as well as others, "Why?"

Know the facts, and you will know enough to be President. Better have a fact than a fancy.

Be just to all! Have an ambition to be, and *be*, an industrious, frugal (but not stingy), intelligent, useful citizen.

Remember the school-house. It is the twin companion of the Grange hall. America needs and must support both. Good manners, good morals, good thoughts reside therein.

Bro. J. H. Brigham, Worthy Master of the National Grange, under date of June 30, 1890, says: "I have no doubt of the ultimate ratification of the amendment reducing membership fees; yet the arrangement has not yet been made."

Governor Waterman will soon have to name eight representatives to the Farmers' Congress, which is to meet at Council Bluffs, Iowa, Aug. 26th to 29th.

The Grange takes no part, as an Order, in any political convention; but it is safe to assert that the members of the Order will do some telling work on undeserving candidates when election day arrives.

Some one has written an article on "Lack of Conscience as a Means of Success." No doubt the writer is now, has been, and probably always will be, a politician. Those are the fellows who find it most easy to succeed when conscience is *not* consulted.

Patrons, don't forget, now that conventions are being held, to nominate men for the Legislature who will pass some sort of legislative bill for the relief of an overtaxed people who *insure* their property against damage or loss by fire. The insurance laws of this State need to be modified and amended. See to it!

The Executive Committee of the State Grange will be expected to have their report ready for the *first day* of the session. So, too, it is hoped that each officer will have a written report ready for the first day. Heretofore our work has always crowded us the *last* days of the session. Let us reverse the rule this time and crowd the work the *first* day. The Master sincerely hopes that each officer and representative will answer "Here!" at the first call of the roll. Though *others* may be tardy, don't *you* be one of the tardy. If all will do this, no one will be behind time and the work of the session will be done both harmoniously and promptly. Won't you be "on time" all through the session? I am sure I hear you say "Yes."

Plumas Grange is to hold an agricultural fair at Beckwith, Oct. 1-3, and Bro. D. Flint is to deliver the annual oration. Bro. Thos. McConnell of the Executive Committee is expected to be there too, and we miss our guess if the Patrons of Plumas don't have a rich treat. Wit, wisdom and philosophy are always attendants of Brothers Flint and McConnell.

Sonoma County Pomona Grange.

EDITORS PRESS:—The regular meeting of the above Grange was held at Hahman's hall, Santa Rosa, July 16th.

Report of Committee on Revision of Constitution and By-laws was considered *seriatim*, and amendments adopted as recommended by committee.

The preamble and resolutions of Creston Grange were read and indorsed by this Grange.

The communication from San Joaquin Pomona Grange, relating to the proposed ballot law, was referred to the following committee: S. T. Coulter, Santa Rosa; G. N. Whitaker, Bennett Valley; M. Litchfield, Sebastopol.

The report of the Legislative Committee of the National Grange was read, and on motion the following was adopted:

Resolved, That the report of the Legislative Committee of the National Grange receive the approval and indorsement of this body, and that the Secretary be directed to send each member of said committee the thanks of this Grange for the zeal, ability and fidelity with which their duties have been discharged.

A Communication from the Legislative Committee of the National Grange, under date of April 24th, was read and referred to a committee consisting of E A. Rogers, G. N. Whitaker and W. P. Crane, who submitted the following report, which was unanimously adopted:

We, the special committee appointed to consider the questions contained in the report of the Legislative Committee of the National Grange, beg leave to recommend that our represetatives in Congress be requested and urged to vote for and secure the passage of such bills as will bring relief to the farmers of America, and as are recommended by the Legislative Committee of the National Grange.

A communication on women's special work, by Sister C. E. Kinney, was referred to a special committee, consisting of Sisters F. L. Gamble, G. N. Whitaker and S. T. Coulter.

Bro. E W. Davis, W. M. of State Grange, gave some well-timed remarks.

Crop reports from the different sections of county are not very encouraging.

Bennett Valley reports fruits about one-half crop; hay mostly volunteer; grapes fair.

Santa Rosa—Prune crop poor—about one-half crop—prices good; peach crop nearly a failure.

Sebastopol—Fair crop with most all kinds of fruit, and good prices; hay scarce.

Two Rock—Cereal crop not very flattering; potatoes good; fruit, except apples, a failure; dairy interests on the decline. Fraternally,

DON MILLS S.o'y.

HYDRAULICKERS HEAVILY MULCTED.—On Monday last, Judge Sawyer fined the Omega Water and Mining Co. of Placer county $3000 for contempt of court. Some time ago suit was brought by Edwards Woodruff against the North Bloomfield Mining Co. et al. to prevent the dumping of debris into the Sacramento river, the result of hydraulic mining. The Omega Water and Mining Co. was also made one of the defendants. The decree of the court enjoined the defendant from carrying on the work of hydraulic mining. A bill of exceptions was filed by the O. W. and M. Co., and the matter was referred to Master in Chancery Houghton. The report of the Master in Chancery showed that the company was in contempt, and the report was confirmed by the court. The court thereupon ordered the fine of $3000 recorded against the company. This is the heaviest fine ever ordered by the court. The usual amount was $500.

THE attention of farmers outside of the Grange is called to the communication of "A. P. R." of Watsonville in another column. The farmers not of Watsonville only but all over the State, should make a note of the opportunity offered themselves and families for being richly benefitted at this time. Especially should there be a revival of interest in all the Granges in Santa Clara, San Benito, Santa Cruz and Monterey counties. Every Patron in the State should prepare for a good time at Watsonville.

The Grange and What it is For.

[By Gov. CYRUS G. LUCE, Master of Michigan Stat Grange.]

[Leading Grangers can often do the Order good service by expounding the aims, purposes and principles of the Order for the benefit of the masses without the gates. Such an effort is that of Bro. Luce of Michigan, which appeared lately in the *Rural New Yorker*. Worthy Master Luce is a Patron of good repute for solidity and steadfastness and has often used his great influence toward the righting the wrongs under which farmers have suffered. His visit to California to attend the meeting of the National Grange last November, gave many Californians the pleasure of personal acquaintance with him, and he won much favor by his dignified bearing and genuine cordiality.]

The Grange organization is now and has been in active operation for about 18 years. It was organized and is maintained for five distinct though kindred purposes: First, to improve the farmer, his wife, sons and daughters intellectually; second, to improve him morally and strengthen and unify the moral forces found in the rural homes; third, to elevate and improve socially; fourth, to protect and benefit him financially; fifth, to increase his political power. It has certainly accomplished much in all of these lines of action. The farmer is educated by coming in contact with his fellow farmers. He can and does through the influence thus exerted become more successful and prosperous. The success achieved in this direction is perceptible in every neighborhood where a good live Grange exists. Its meetings are conducted and governed by the same parliamentary rules observed by deliberative bodies everywhere, and in this way members become somewhat skilled in the methods adopted by conventions, associations, etc. They are also taught to think, speak and write, and in this way broaden and deepen thought, and stimulate action in a way that shall make them wiser and better citizens.

The mothers, wives and daughters become active members and are endowed with all the rights and privileges of the fathers, husbands and brothers. The Grange has accomplished wonders for the farmers' wives; it has relieved toil to a great extent, of its drudgery. It has elevated and stimulated their ambition and aspirations. By families coming in contact with families, husbands have been compelled to think in relation to the burdens borne by the wives. The farmer's calling in and of itself does not stimulate the mental activities to the extent that many other vocations do, and hence an organization that shall aid him, or even compel him to think, is required by him to a greater extent than by other men.

The Grange, in its Declaration of Purposes, pronounces strongly in favor of the highest morality. It teaches this in the Grange room. It tries to concentrate and utilize the moral forces. While not claiming that the farmers are all saints and other people all sinners, the members generally, as I believe society does everywhere, concede that the highest average of morality is found out in the country where the temptations are fewer. It has struggled long and faithfully to stimulate and elevate all social life, and in many places it has accomplished wonders in this direction. The bright-eyed boys and girls in the country have the same social aspirations, the same desires for association with their fellows that actuate their brothers and sisters in cities. There has been no duty imposed by parentage oftener neglected than that which demands of parents opportunities for the social enjoyment and improvement of their sons and daughters, and the Grange came in to use its influence, and operates to supply this long-felt want. And again, the isolated condition of the farmer renders him too often a fit subject for the wiles of the speculators and sharpers, and the Grange comes in with its words of admonition to aid and protect its members from imposition and loss. It also invites all to study the market values of their products, as well as of the implements, goods and wares which they purchase, and while it has not made a specialty of doing business to any great extent, it stands ready at all times to protect its members from extortion. Its great mission is not to tear down, but to build up; not to destroy, but to create; not to oppress, but to protect, and in doing this it opposes laws that open wide the doors for extortion. In this State it has done much to avoid the payment of royalty to shysters and patent-right speculators. It has achieved a great success in the courts, and has protected the farmer generally from speculators in royalties. It stands ready to buy implements in quantity where the dealers will not supply at fair rates.

It encourages the building up of manufactures and the growth of towns by encouraging its members to become better farmers so that they will be enabled to become better customers for manufacturers, merchants and commerce. It is non-partisan politically. It has united its forces with none of the political organizations, and yet it has endeavored to influence legislation. It has generally been ready to oppose those who were arrayed against the agricultural interests. It is the eternal foe of trusts and combinations that have for their purpose the imposition of burdens upon the people. It carefully watches the candidates that are nominated; and its members are urged at all times and under all circumstances to become active politicians—politicians in a better and wiser sense if necessary; to attend conventions, to become a power in the party where their judgment and conscience have taken them. It exists in 36 of the States of this Union. In some

it is very strong; in others it is weak, but it has through its precepts and example, through the spoken words and printed pages promulgated the desire for agricultural association. Though many are uniting with other somewhat kindred associations, it is stronger in power and influence to-day than ever before. While it possibly has not as much faith in the efficacy of legislation to cure *all* the evils which confront us as some others of the active farmers' associations may have, yet it does believe an enlightened public can dictate legislation that will protect and benefit. It believes, universally I think, that while the policy of protection to American industries remains in force, agriculture is entitled to its fair share of protection. It believes that the cotton of the south and the wool of the North and West are no more raw materials than anything else that is produced by toil. Its membership comes from all political parties and from nearly all of the Christian churches. It has enlisted the active efforts of the patriotic and the ambitious.

Agricultural and Industrial Training.

In regard to the bill recently introduced into the U. S. Senate by Senator Morrill of Vermont, to apply a portion of the proceeds of the public lands to the more complete endowment of the colleges for the benefit of agriculture and the mechanic arts, established under the provisions of an Act of Congress, approved July 2, 1862, Bro. J. H. Brigham, W. M. N. G., has lately written as follows:

When this bill was pending before the committee, I, as the head of a great farmers' organization, was invited to appear before the committee at the hearing. I was present and stated that if there was placed in the law a limitation, requiring the money so obtained to be expended only in the teaching of such branches as relate to agriculture and the mechanic arts, then I would not oppose the passage of the bill. Without such limitation, I did not think our members would indorse the bill. It was agreed that such limitation be placed in the bill, but, when pending in the Senate, all such limitations were stricken out, and an effort has been made to rush the bill through before the knowledge of this amendment reaches the farmers.... I look with some suspicion upon bills introduced and pressed to passage in the name of agriculture, which have never been asked for or indorsed by any farmers' organization, and I fear that much of this fund, if obtained, will be expended as dishonestly as was the original land-grant fund.

I give you the above facts that you may understand the situation and use your influence for or against the passage of this bill, as may to you seem right and in the interest of agriculture. If you desire to be heard, I suggest that you at once telegraph to the Congressman from your district and also to James O'Donnell, Chairman of Committee of Education. Follow telegram with letter.....Act promptly if you desire to influence the passage of this bill.

The Superintendent of Public Instruction.

As the present State Superintendent of Public Instruction, Bro. Ira G. Hoitt of Sacramento Grange, was endorsed by a convention of Patrons four years ago, the following creditable record of his work and its results may be of interest to those who supported him.

He has done much toward establishing Arbor Day among the schools, and in causing the American flag to be raised over school buildings. He has devoted himself assiduously to the duties of his office, and during the fiscal year ending June 30, 1890, besides attending the meetings of the various educational boards of which he is a member, he traveled in the discharge of his duties 17,274 miles, visited 13 orphan asylums, attended 30 county Teacher's Institutes, visited 240 classes, delivered 255 educational lectures and addresses, and turned back to the State Treasury $198.70 of the $1500 appropriated for the traveling expenses of his office. The following figures are interesting as indicating progress in the schools:

Increase in number of children in the State between 5 and 17 years in 1889 over 1888	4,802
Increase in number of children belonging to the public schools in 1889 over 1888	12,103
Increase in average daily attendance in 1889 over 1888	11,506
Increase in number of teachers who subscribe for some educational journal in 1889 over 1888	595
Increase in number of teachers who attended Institutes in 1889 over 1888	447
Increase in number of school visits made by County Superintendents in 1889 over 1888	821
Increase in number of school visits made by Trustees in 1889 over 1888	3,427
Increase in number of school visits made by other persons in 1889 over 1888	18,012
Number of new school-houses erected in 1889	218

The *New England Journal of Education*, May 29, 1890, says of Bro. Hoitt: "Few men have planned more sensible reforms in educational administration than he, and few have accomplished that which they planned so uniformly and completely. He has great capacity for hard work, riding farther, talking and writing more, and visiting more schools, than would be possible for most men. He has business elements with which few are gifted. He knows what is being done in every department of education in every other State; wherein his State is weak or strong, and is always planning to strengthen the weak places."

Rambling Thoughts.

EDITORS PRESS:—It is with much pleasure and profit that one reads in your valuable columns reports of the doings and sentiments from all over the Pacific Coast and also from the "States," as we used to call our old homes beyond the Rockies.

Just think of it! When the writer in 1852 came the "plains across," the country lying west of the Missouri river and east of the summit of the Sierras was a howling wilderness inhabited by the Indian, the buffalo and the cut-throat, and now there exists a cordon of States the entire distance of nearly 2000 miles. No mortal man, since the world was sent on its ceaseless round, has seen such progress as the adult population of to-day. But this spread and progress of civilization is more than matched by the march of invention and discovery.

The writer is familiar with farm life for half a century, as it appeared in the old Middle States and as it moved westward until stopped by the Pacific ocean. Toward the close of the century some one, perhaps many, will attempt to sketch the progress and achievements of the centennial, when the material will fill a library.

It is not my purpose to dwell on what everybody knows, but when I contemplate the advance in agriculture, I fairly envy the man on a gang-plow or the pilot of a modern harvesting outfit. Fifty years ago I was a lad big enough to carry water and whisky to the reapers, who cut the grain by hand with great sickle-hooks, and while they rested to refresh themselves, I tried my hand with distressing effect and will carry the scar through life. I have also seen much thrashing with flail, and rode on horseback the unceasing rounds over the barn floor, tramping out the grain while father shook up the beaten straw.

Thus a glance at present methods shows the wonderful progress of the age, and the great distinction enjoyed by this generation over all former periods of the world's history.

Steam Harvesting.

These thoughts forced themselves anew to the front when, a few days since, I witnessed the steam-harvesting in operation on the farm of Henry Best, about eight miles southwest of Yuba City, in Sutter county. A traction engine did the plowing, drawing 16 plows and was performing the work of at least 30 animals in pulling an 18-foot cut header and separator, equal to the task of thrashing and cleaning 30 to 40 acres of wheat in a day. What a sorry figure, thought I, would father's reapers and methods cut alongside this monster machine.

But enough of this, for the tale has been told a thousand times from town and hamlet by the lightning current, thus discounting the 30 to 40 miles an hour of the iron horse.

Crops in Sutter.

The harvest of our county is nearly over and the crop is a light one, though most excellent in quality. One of those untoward seasons, of which we have read in other lands, though never experienced in California before, has touched us, and for a while stayed our onward march. Not half the acreage was planted on Nov. 16th, when all field operations were closed by excessive rain, and practically remained closed until too late to make amends. Thus it is the short acreage and slight damage has reduced the volume of our crop, but it has left us a good quality with fair prospects of an enhanced price over the past year or two.

Now if it is asked: "What shall be done about it?" let the answer be in the old adage that may be considered more forcible than elegant: "Grin and bear it."

No country or clime has escaped unfriendly visitations, and none has been more favored than our own cherished California. Having in the past dealt so lavishly with us, let us not chide her for this uncommon season of weeping.

Lessons of the Year.

But there is in this a purpose of an overruling Providence, and its wisdom will doubtless in due time be made apparent to our benefit. One is already plainly to be seen, which is—plant your orchards upon high and well-drained soil, and in future avoid the consequences of excessive wet. This is the more applicable now because our fruit interests are yet in their infancy, but rushing forward with giant strides. We shall also learn to be more economical and to more carefully husband our resources. Possibly we may find less necessity to go to the springs or watering places for health. We may even find more enjoyment than we thought possible at home and among our friends and neighbors. We may also learn how to curtail our wants in other ways and still be content. Other generations and peoples have had similar lessons and human nature is still the same. Let us be thankful for the blessings we have; there is plenty for all and a surplus for the needy of other lands.

Truly yours, EUREKA.

Yuba City, July 20, '90.

RAILROAD LANDS.—In the House, 21st inst., the Committee on Public Lands reported a resolution calling upon the Secretary of the Interior to inform the House by what authority and why he authorized and directed the issue of patents to the Union Pacific Railway Co. for lands granted the company prior to the payment of the debt due to the United States from said company; that he also report to the House the amount of land patented or certified to each of the land-grant corporations of the U. P. R. system up to this date. Adopted....On the same day, the Senate Committee on Public Lands ordered a favorable report on the House bill to amend the Act of June 22, 1874. It extends the privileges granted by that Act, subject to the provisions and limitations and restrictions thereof, to all persons entitled to the right of homestead or pre-emption under the laws of the United States who have resided upon and improved for five years lands granted to any railroad company, but whose entries or filings have not for any cause been admitted to record.

Two Weeks in Tulare.

EDITORS PRESS:—This is a fine, prosperous county. I was fortunate on entering this region to fall in with my old friend, J. C. Russell of Traver. He gave me every possible aid, in showing me the fine fruit raised in his locality, his own orchard not being behind as to culture and fruit.

Next I was fortunate in meeting Major T. J. McQuiddy of Hanford who cheerfully consented to take a seat in my buggy and show me the finest and most prosperous orchard and vineyard section that it has ever been my privilege to behold. Apricots, 800 to 1300 pounds to the tree; peach-trees loaded with all they could bear up under, and that of the finest quality, and to make the joy of the owners complete, the prices obtained for their fruit are all they could ask.

I next headed for Waukena and there received a hearty welcome from our old and tried friends and Grangers, Mr. and Mrs. A. J. Woods, who have done all that could be done to make it pleasant and profitable to a representative of our PACIFIC RURAL PRESS. I went with him to his fine field of wheat and there witnessed the best work that I ever saw done with a harvester. He has Holt Bros.' machine, which, under the management of the able men he has to run it, turns out from 300 to 360 sacks per day, weighing on an average 148 pounds.

Mr. Wood has taken me to all places of interest, among others the famous estate of Page & Morton. They have 600 acres in orchard and 900 acres in raisin vineyard. They employed 225 hands to handle their apricots. Wages made, $1.90 to $2 per day. Will realize some $300,000 this year from their best tract.

Tulare Grange.

With Brother and Sister Woods I attended Tulare Grange last Saturday. The busy season prevented a large attendance but those present were alive to the interest of the cause.

All have done their best to aid me in my work for the PRESS, and will please accept my thanks. E. B. TAFT.

Tulare, July 22, 1890.

The National Master on the Tariff.

In a letter to the Cincinnati *Grange Bulletin*, dated Delta, O., July 14th, W. M., Brigham, says:

I, as Master of National Grange, have never issued an appeal to the Grange to use its power for the passage of the McKinley bill as a whole, but I have repeatedly urged our members and farmers generally to insist upon the provisions contained therein, which are particularly favorable to farmers.

We must look after our own interests in both State and National Legislation, and we must recognize the results secured at the polls if we are to accomplish anything of practical advantagtage for our class. The revision of the tariff by the present Congress will necessarily be from the protective standpoint, and we should ask for all the benefits for our industry which that policy can afford. We need not be modest in our demands, because there is no danger of obtaining more than a fair share for the farmers. When the people reverse their decision (if they do reverse it) then we must conform to the changed conditions and guard well from unjust discrimination, our great industry.

I think the members of our Order are substantially agreed upon this line of work, as an Order. Individually, however, we are free to act with any party, or to support any policy which seems to us best adapted to the wants of the people. It is my opinion that the McKinley bill will pass in some form and will remain the law for several years, unless the party now in power shall undergo a change of views upon the subject of tariff, as such party seems certain to hold some branches of the law-making power for a considerable period of time.

Believing this, I have been very anxious to obtain all the direct protection for the farmer which can be afforded under this policy. It is possible that what is called the free trade policy would be better on the whole for the farmer, and whenever manufacturers and their employees are ready to make a fair trial of such policy, I, as a farmer, am also ready but I am not willing to have one policy for the above named classes and another for the farmers.

IN NORTHERN COUNTIES.—There is talk of organizing the Grange in Modoc and Lassen. Farmers who feel interested and desire to aid in the movement may address H. Kelley, Adin, Cal., who is supplied with the petition-blanks and other documents.

A Good Patron Gone.

Stockton Grange, No. 70, P. of H., at their meeting July 19th, passed the following resolutions:

In Memoriam.

WHEREAS, The Divine Master of the Universe, in his unerring wisdom, has permitted death again to enter our Grange circle, removing from our fellowship on earth our worthy and estimable brother, W. D. ASHLEY, a charter member, and one of our oldest and best, therefore

Resolved, That in his death Stockton Grange has lost a worthy, faithful and consistent member, who won the regard of his fellow Patrons by his modesty, calm judgment and candor. We will miss his cheerfulness, his courteous deportment toward his brothers and sisters in the Grange.

Resolved, That his many good qualities are worthy of imitation.

Resolved, That his family has lost a tenderly devoted husband and father, the community a moral, upright and substantial citizen.

Resolved, That we extend to the family of our deceased brother our heartfelt sympathy, knowing how futile is human aid in this painful bereavement. We commend them to the loving kindness of the All-Father, without whose Divine behest a sparrow does not fall to the ground. He has promised to care for the fatherless and widow. We pray that in the beauty of Christian resignation they will rest in the promise.

Resolved, That these resolutions be spread on the minutes of Stockton Grange, and that a copy be sent to the family of our departed brother, and a copy to the PACIFIC RURAL PRESS.

MRS. J. B. BOODY,
L. E. OVERHISER,
J. M. BARBER,
Committee.

Grange Hall Stockton, July 19, 1890.

THE PRESIDENT TO THE PATRONS.—In a letter written by President Harrison in response to an invitation to attend the National Grangers' exhibition, he says: The tariff question is the most important of the day, and the people should be thoroughly educated on it. As there is no doubt that the farming element is the backbone of this or any other government, it is necessary that they should understand this question so that they can choose between free trade and protection. The free trade question is a dangerous one to handle, and if it should win in 1892 it would cause great distress throughout the land, something never experienced by the American people. [It will take a greater man than the President of the United States to make the farmers of this country think alike on the tariff question before the next Presidential election.—EDS. PRESS]

THE FARMERS' ALLIANCE in Minnesota went into joint convention with the United Labor party, last week, adopted resolutions and nominated a State ticket, which it is hoped they will elect.

OVERSEER A. P. ROACHE gives us a loud boom from Watsonville this week.

Fairs of 1890.

Los Angeles (6th Dist.), Aug. 4-9
Ione (26th Dist.), Aug. 5-9.

Salinas (7th Dist.), Oct. 30-Nov. 4.

STANISLAUS ORCHARDS.—Messrs. Lelong and Rice, of the State Board of Horticulture, returned last Saturday from a tour of inspection among the orange orchards of Stanislaus county, all of which they found in a thriving condition, especially those around Oakdale and Knight's Ferry. They distributed about 200 of Australian ladybugs in that neighborhood.

A FINE APRICOT.—E. Wolleb places on our desk an apricot from his "Botheration Ranch" in the hills back of Fruitvale, south of Oakland, which is a grand specimen of its kind. Its greatest diameter was three inches and its weight six ounces.

CROPS IN MODOC.—Our agent at Adin writes: We have had no showers since the middle of June, and it is hot and dry. Spring-sown grain will not fill well, as the weather is too warm. There will be considerable grain cut for hay.

The Lesson of the Rose.

Would pause the rose, its perfume
To stay or speed its flight
'Twere idle, for move on it must,
However rich or rare.

No charm it holds. Can it possess
No property its own?
With ceaseless aim Dame Nature's claim
Must ever *first* be shown.

As catch we from the rose
The perfume as it goes,
So heart must deeply drink from heart
While inspiration flows.

The fountain that to-day is flush,
To-morrow may be dry;
For hearts must move with the roses
At nature's ceaseless cry.

Look well the beauties of to-day
To harvest as they pass;
To-morrow's sun may scorch and fade
The green upon the grass.

—*A. P. Reed.*

The Real Good.

"What is the real good?"
I asked in musing mood.

Order, said the law court;
Knowledge, said the school;
Truth, said the wise man;
Pleasure, said the fool;
Love, said the maiden;
Beauty, said the page;
Freedom, said the dreamer;
Home, said the sage;
Fame, said the soldier;
Equity, the seer—

Spake my heart full sadly:
"The answer is not here."

Then within my bosom
Softly this I heard:
"Each heart holds the secret—
Kindness is the word."

Cleaning House.

In Sapping Time.

The man folks wuz all orf down to the sap orchard, and they'd taken their dinners along, 'cause they dassent leave the sap for fear 'twould bile over. I thought 'twould be a grand chance fur me to clean house, and I'd take the fore room and spare chamber.

The rag carpet in the best room hedn't ben took up for two year, for sense Maria Jane wuz married we hedn't much call for a parlor, but I thought I'd ought to git it up this year; then, too, 'twas sich a good windy day to put it out on to the line and beat it.

I wuz orf up garret a lookin' over a chest o' woolen things to see 'f the morths hed ben agnawin' of 'em, when I heerd a knock at the back door, so I runs down, and there stood Jake Penniman, the tin peddler. I told him I wuz dreffal busy, but I wuz asufferin' fur a long-handled dipper and a three-pint basin, so I fetched out the paper ragbags ('cause he sed 'twant noways like that he should be 'round agin under four weeks), but rags is so cheap now that I hedn't enough to pay inter tew and a quarter cents, so I hed ter hist inter the garret agin and hunt up some more rags, for I allus hed better calkerlation than to be apayin' out the money fur tinware.

Then I went to work up chamber agin, and hed got the spare room about into shape, when there come a knock to the front door.

I peeked out o' the winder, and 'twuz a dretful slick lookin' chap, with a leetle bit of a mustache, and glasses on. Thinkses I, 'taint nobody that I know, but he's got a carpet-bag; looks z ff he wuz gwin' to stop a spell. Maybe he's a connecshun o' Hezekiah's fust wife, that's come to pay us a visit. They're allus a aturnin' up in my porridge dish. So I went to the door, and he shook hands with me, and called me Miss Henderson zif he'd allus knowed me.

"Wal!" sez I, "walk rite inter the parlor, but you've completely got the hands of me, for who in the old cat and Tom Walker you be I hain't no kind of an idee. You hain't a kin o' Mirandy's be ye, she that wuz Hezekiah's fust wife? Pears to me you do favor the Shinnersees. I hope you'll excuse my looks, fur I'm a cleanin' house."

"O, certainly," sez he, "and I'm very sorry not to be able to claim relationship, but I am an agent for the most remarkable book that was ever published—the sermons of the learned Dr. Bixenberry of New York," and he talked to me a blue streak for about 15 minutes, a showin' me the picture and the different kinds o' bindin', and tellin' of me where to write down my name. I couldn't git a word in edgeways, but at last I riz, and sez I: "Hezekiah an' me goes over to the brick meetin' house to the village every Sunday, when the goin's sost we can git there, and we pays Elder Wadkins 50 cents a Sandy, if he don't do but half a day's work now, but he preaches 'mazin' powerful sermons, and all that Hezakiah and me is a needin' of in that ere line jest now."

He hung on a spell longer, but when he found 'twant no use, he asked all about the folks down to the next house, and went on.

Then I tackled the fore room in annest. I'd got the carpet out onter the line, and wuz jest wipen' up the floor, when the stage come along. I vum! if it didn't stop rite agin the house, and out jumped Sairy Ann Jenkinson, she that wuz Sairy Ann Doolittle, in the day of her, Hezekiah's step-sister Jermimy's darter, and the twins and the little boy. They come a pilin' in pell mell, as I stood there in the entry, like a statute, a wringin' out my mop.

"How do you do? Aunt Patience," sed Sairy Ann. "We're awfully glad to see you. We're come to get some sap sugar!" yelled the children.

Now I wuz a plannin' to take a lettle cold bite to the cupboard, and not git no dinner, the man folks bein' all gone, and here wuz this rigermunt ter feed. We wuz a takin' of our meals out in the back room tew, fur I'd jest painted the kitchen floor the day before. Wall, I jest dropped everything, and went to work to cook 'em some taters, and fry 'em some ham and aigge, and that made me think of the bacon that I wuz a smokin' out in the back yard. That agent hed pestered me so that I'd clean forgot all about it, and the berrill hed ketched fire and burned all up, the ham fell inter the coals and wuz burnt to a crisp. "So much," sez I, "fer hevin' so many irons inter the fire." After a while I got 'em somethin' to eat, then Sairy Ann, she thought she'd take the children and go down across lots to the sap place, and liker nuff they'd find some Mayflower blows out.

I wuz glad to git rid on 'em, though I thought Sairy Ann might hev offered to wipe up the dishes, but she keeps a hired gal, so I 'spose she never thought on't.

I hedn't more'n begun to wash up the fore-room floor agin, when who should drive up inter the dooryard but Elder Calvin Wadkinses folks, he and his wife and all four young uns, on a buckboard.

"Wal," sez I, "you've ketched me in the suds this time; the man folks is a sappin," and I'm tryin' to clean house; so you'll hev to visit in the foreroom without erry carpet, and eat in the back kitchen."

The elder sed he'd ben a promisin' the children to take 'em out here to git some sap sugar, and Miss Wadkins she sed I needn't make no excuses, 'cause the place she hed to eat in warn't never so much account to her as the vittles she hed to eat, no how.

I knowed she wuz a dretful feeble woman, hed to hire all her work done, but she hedn't never seen nobody a sappin', so she sed she'd go over with father and the children and git some warm sugar. I knowed if the sap didn't bile over Hezekiah would when he see all that caravan a comin', but, of course, I couldn't say nothin', so I finished a wipin' up my floor and put my carpet down, then I flaxed round and got on a clean geeum gownd and made cup custards and warm biskits, and hed the supper ready fur 'em 'ginst they got home.

They got ketched in a April shower, and bein's they hedn't no ambrils, they wuz wet's drounded rats. In they all cum a trackin' the mud onter my clean floors. The elder sed they'd been glad to stay and set with us a spell in the evenin', but he sh'd be obleeged to be back to prayer-meetin', so jest as soon as supper wuz over they started off.

When Sairy Ann and the children wuz gone to bed, me and Hezekiah sot by the fire, nigh onter an hour, talkin' over our troubles. He sed 'twuz the last run o' sap, and he wuz glad on't, and I told him I shouldn't never try to clean house agin till sappin' wuz over.

RAPIDITY OF THOUGHT.—Prof. Donders of Utrecht recently made some interesting experiments in regard to the rapidity of thought. By means of two instruments which he calls the neomatachograph and the noernatachometer, he promises some important and interesting results. His experiments up to date show that it takes the brain one .067 of a second to elaborate a single idea. Writing in regard to this, Donder says: "Doubtless the time required for the brain to act is not the same in all individuals. I believe, however, that these instruments may be perfected until we will be able to determine the mental caliber of our friends without our friends knowing that we are testing their aptness." The professor says: "For an eye to receive an impression requires .077 of a second, and for the ear to appreciate a sound .149 of a second is all that is necessary which, however, shows that it acts with nearly double the rapidity of the ear."

POTT & KETTLE is the odd name of a wine-making firm that has been formed at Cucamonga. Robert Pott and Geo. P. Kettle are the members of the firm. A few years ago the firm of Sadd & Gay of Santa Barbara attracted some attention on account of the oddity of the firm name.

ENGLISH as she is advertised in a Japanese paper: "This teeth powder is not a common thing, as be selled in the world; it is powerful to hold the health of teeth, and recover the teeth from its sick. If you only examine, should find that it never tell a lie."

A First Glimpse of the Pacific.

[Written for the RURAL PRESS by MAUDE S. PEASLEE.]

Having never seen the ocean, it was with feelings of expectation akin to awe that I prepared for a trip to the Cliff House and Sutro Hights.

On the Jackson-street cable line we passed many fine residences and noticed much improvement going on. Streets were being repaired and new buildings in process of erection were to be seen on every hand. On the outskirts of the city the sandlots were being constantly reclaimed from the shifting winds for building purposes. Changing to the steam cars at the neat little station, I took a seat on the side indicated as the "ocean side."

Steaming along on the narrow road that skirted the bay, suddenly a broad expanse of gleaming water spread out before my eager eyes. We had just passed the "Golden Gate," famed in song and story—a gateway in truth giving entrance to the land of gold. The old fort stands on one of the points grimly guarding the approach to the bay. The lighthouse on Point Lobos still warningly rears its head to guide the belated sailor.

In front of us and gradually widening to the view spread the placid dimpling waters of the Pacific, now glistening with a million diamond-points in the morning sun.

Whirling along the narrow way, listening to the faint thud of the breakers heard above the din of the train, we sped through a tunnel out in the rock, out again into the welcome sunlight and soon reached Sutro Hights. After a short stroll through the well-kept walks of this pleasure resort, we sat down on the terrace facing the water.

The wind had not yet come up, and the soft balmy air swept over us like a breath from heaven, bringing healing on its wings. A few fashionable women near us were chattering noisily of topics dear to their hearts, but with that exception all sat quietly and blissfully drinking in the beauties of the scene. How could one read, talk, write or do aught but thank God for life and this beautiful world? I wondered if Italy had more to boast of than this sunny land of ours.

Our time was limited, else I would have gone no further for that day. Being restricted to a few hours, however, we wended our way to the Cliff House proper. The roar of the seals was plainly heard, and as we sat on the broad veranda we could see them playing and basking in the sunshine on Seal Rock.

Down on the beach to the left, dozens of children, with their parents or nurses, played in the sand and among the waves that even now began to break more violently on the beach. Here and there groups reclined lazily in the warm, dry sand, watching the little ones digging and mound-building. On one of the large rocks in front of us, huddled hundreds of birds, making the rugged surface black. Suddenly, from a small boat out in the ocean, a shot rang out, and with a deafening noise, screeching and calling, the birds took wing and circled round and round in terror. The gunner secured his prey and the boat was rapidly rowed away to the great relief of the birds and seals. The crowd of spectators and tourists assembled on the broad veranda watched the sight with disapproval, not, however, unmixed with interest.

We noticed a change coming over the face of the waters—the wind was rising, and the old peaceful feeling gave way to one of unrest. I was no longer content to sit and idly dream.

Rising, we paced the length of the platform, watching the panorama before us. The ocean wild, restless in its motion, its brilliancy all gone, covered with the white caps of the angry waves that swept its surface, appealed to the wild, restless, unsatisfied part of one's nature, with an even stronger force than the peace of the morning had touched the diviner chords of the heart.

The people who had children in charge withdrew one by one, the health and pleasure-seekers dwindled down to a few tourists and novelty-lovers like myself. The wind was blowing a perfect gale; we instinctively clutched at our draperies and bowed our heads to its power.

The tide was coming in. The waters seethed about the rocks, where a short hour before the seals had sported in the sunshine. The green surges came in, laden with sea-weed, to cast themselves furiously against the unyielding rock, only to recoil upon the next incoming wave.

Farther down on the beach, where the children had erected their mimic forts, the waves rolled in more quietly, breaking in foam over the work of a happy idle hour.

Having already overstayed our time, we gathered lunch-basket and wraps together, and started to catch the next train.

Casting a parting look of regret at the angry sea, I recalled the exclamation of the poor woman who exclaimed at first sight of the ocean: "Thank Heaven there's a plenty of something!"

MINUTENESS IN ASTRONOMICAL WORK.—When Sir John Herschel was defending the character of astronomical science, in view of an error of nearly 4,000,000 miles in estimating the sun's distance, the correction was shown to apply to an error of observation so small as to be equivalent to the apparent breadth of a human hair at a distance of 125 feet.

"The Lord's Prayer in Old English."

EDITORS PRESS:—In your issue of June 28th, under the above caption a fair correspondent says: "The study of the growth of our English language of to-day is a most interesting one." It is truly so, and few scholars even, are aware of the great changes through which the English language has passed in successive centuries. The Lord's Prayer as given by your correspondent, is not "old English" but Anglo-Saxon, pure and simple; it is to be found in the first translation of the New Testament into Anglo-Saxon, A. D., 940.

The English spoken in Chaucer's time (A. D., 1328–1400) was very different: *vide* the Lord's prayer A. D. 1300. Also the English language spoken 300 years ago was altogether different to that in common use 600 years previously.

Our language was in a transition state for several centuries. You will readily perceive the gradual change by the following examples:

A. D. 1158.—Fader ur heune, haleweide beith thi neume cumin thi kuneriche, thy wille beath idon in heune and in earthe. The euyren dawe rieud, gif us thilk dawe. And vorz if uer detters as we yorsiten ure dettoures. And leue us naught into temptation, but delyvor eus of evel. Amen.

A. D. 1300.—Fader ure in heavene, halewyn be thi name, thi kingdom come, thy will be done as in hevene and earthe. Ona urche days bred give us to daye. And forgive our dettes as we forgive our dettoures. And lead us not in temptation, bute delyvor us of yvil. Amen.

The foregoing have been copied from ancient missals of the respective dates. A. D. 1384. From Wickliffe's Bible. It was the first translation made into the English language, but never printed, though there are manuscript copies of it in several public libraries:

Ours fader that art in heunes hallowid be thi name, thi kingdom come to, be thi wille done in earthe as in heune, geve to us this day oure breed, oure other substances, forgeve to us our dettis as we forgauen to our dettouris, lede us not into temptation, but delyeur us yvel. Amen.

A. D. 1526.—William Tyndale printed the first Bible in the English language. The following is verbatim from the first edition of his New Testamant:

Ooure father which arte in heven, hallowed be Thy name. Let Thy kingdom come. Thy wyell be fulfilled as well in earth as it is in heven. Give us this daye our dayly brede, and forgive us our trespaces even as we forgive our trespacers, and leade us not into temptation, but delyver us from evell. Fyr thine is the kingdome and the power and the glorye forever. Amen.

A. D. 1568.—A new translation of the Bible was ordered by Archbishop Parker. It is called the "Bishop's Bible." In it the Lord's prayer is as follows, showing considerable progress in the language:

Our father which art in heven, sanct fied be Thy name. Let Thy kingdom come. Thy will be done, as in heaven, in earth also. Give us to-day our substantial bread, and forgive us our dettes as we forgive our detters, and lead us not into temptation, but deliver us from evil. Amen.

This is a forcible example of the effect of the Elizabethan age in improving our language.

A. D. 1611.—King James' Bible, the version now in use by Protestant churches, was brought out. The reading of the original edition is:

Our father which art in heaven, hallowed be Thy name. Thy kingdom come. Thy will be done in earth as it is in heaven. Give us this day our dayley bread, and forgive us our debts as we forgive our debtors, and lead us not into temptation, but deliver us from evil. For Thyne is the kingdom and the power and the glory forever. Amen.

Pray excuse me for trespassing so much on your valuable space, but these people are very apt to ride their hobbies to death.

210.—ANAGRAM.

A *whole* one day inquired of me
My views of his philosophy;
And then he talked in way so blind
About the power of mind on mind,
And of his potency and skill
To subjugate the human will,
And such outlandish words he used
As got me mentally confused.
I listened till I heard him through,
Then told him that I little knew
About the science he proclaimed,
And which he said was much defamed,
Or those whose names were on its lists,
But that I thought their views "mere mists."

NELSONIAN.

211.—ARITHMETICAL.

A gentleman divided $2.40 among his three sons, but generous Tom gave to his brothers as much as each had received from their father, and then he had only 20 cents remaining. Dick, equally generous, gives to Tom and Joe as much as they now have, leaving only 40 cents in his possession. Finally, Joe gives to his brothers as much as each one has, and they are pleased to find that financially they are equals. How much did each receive from their father.

RETLAW.

212.—TRANSPOSITION

He who boldly shapes his *first*
Cannot be by *first* accursed,
For he holds that destiny
Never is by *first's* decree.
'Tis a *two* to be admired
When by right ambition fired;
Poverty or humble birth
Cannot chain a man to earth.

Louie's Gold Piece.

"Five dollars! Oh, dear! Isn't it nice to have five dollars? Mamma, did you ever know before of a little girl no bigger than me having so much money?"

"Not very often," said mamma, with a smile.

"How kind Uncle George is. I wish he would come to visit us every summer."

"So he would give us money? You ought to be ashamed of yourself, Lou," said her brother Dick.

"Of course I don't mean that," said Louie. "Mamma, what would you do with all this money?"

"Keep it carefully until you decide on what will be the best way to spend it," said mamma.

"I'll be sure to do that," said Louie.

"Of course she will," said Dick, in a teasing tone. "As careful as when she lost the quarter out of the hole in her pocket."

"Now, Dick, there's no use talking about that. I paid back the quarter out of my own money, to punish myself."

"Or as when she carried the ink to the window seat and left it there and it was thrown down," went on Dick. "You can't pay that back, for the big black spot will last as long as the carpet."

"Dick, you needn't keep on at me so. You know I said that was going to be a lesson to me every time I saw it."

"You ought to see it a little oftener then," persisted Dick. "Mamma had better skew the carpet round and get it right out here in the middle of the floor. Then, perhaps, you'll remember to mend my gloves as you promised a week ago. I'll bet you five cents you'll never spend that money, that you'll lose it."

"I don't bet," said Louie, with dignity.

"No, I guess you hadn't better."

He ran out with a provoking laugh, while Louie turned to her mother with a mournful face.

"I really am trying to cure myself of being so careless, mamma. A month ago I began fining myself a cent for anything I forgot and everything I lost or broke. And it took every cent I had. For I put them in my missionary jug, you know, and for two or three weeks it kept getting heavy very fast. Just lift it, mamma."

She brought to her mother the little earthen jug in which the Sunday-school children put their savings for the missionary fund.

"I think it will be full by the time it gets broken," went on Louie. "But I'm being more careful now, so it won't fill up so."

She took up her gold piece again.

"Dick needn't say I'll lose this. I'm going to be as careful. I'll tell you what, mamma, I'm going to make you a promise. I am going to make my gold piece teach me to be careful. I won't spend it until you can tell me you really and truly think I'm getting over being careless."

"Very well, dear," said mamma, "that will surely help you to remember."

Louie kept the gold piece in a blue, satin-lined corner of her writing-desk, very often going to take a look at it, with many a calculation as to how it should be spent. As Christmas drew near she formed enough delightful little plans to have used up a dozen five-dollar pieces.

"Haven't spent it yet, hey, Lou?" asked Dick one evening.

"No, I promised I wouldn't till I got over being careless."

"But I think you may do it before long, dear," said mamma.

"And haven't lost it?" continued Dick.

"No, indeed. You'll find yourself mistaken about it, Dick."

"Well, I shan't feel sure about that until I know it is safely spent,' said Dick teasingly. "Are you really sure you have it yet?"

"Of course I am." Louie opened the cover of her desk and took out the gold piece.

"I wouldn't have believed it," said Dick, raising his hand in pretended amazement. "She actually knew where to lay her finger exactly on it. I tell you, Lou, it's a good thing for me that you wouldn't bet. I should have lost my five cents. How much bigger is it than a five-cent piece?"

He drew one from his pocket to measure by, then took a pencil, and, laying the coin under a piece of paper, began rubbing a facsimile of it. Louie brought some paper and produced a very clear impression, first of one side, then the other, of her gold piece.

"There's the doorbell," said Dick.

The visitors proved to be some friends of their own, and both went to the parlor to meet them.

And not until she was in school next day did Louie remember that she had forgotten her money, and left it on the library table.

Hurrying home at noon she made hasty, anxious search on table and carpet but no shining gold piece rewarded her efforts. She drew the shades as high as possible, moved chairs and stools, but all to no purpose. Where could it be?

"What are you looking for?" asked mamma, who entered the room, followed by Dick.

"For my five dollars, mamma," said Louie, a little color rising to her cheek. "I left it here when Clara and Archie came last night."

"We must ask Jane about it," said mamma, ringing the bell for the girl whose duty it was to keep the room in order.

"Jane," said Louie as the girl appeared, "did you see any money when you swept here this morning?"

"Yes," said Jane. I found some lying on the floor and I picked it up and put it in there, where I've often seen you putting money. I knew 'twould be safe there."

She pointed to the little earthen jug which stood on the mantle-piece.

"Safe!" exclaimed Dick with a shout of laughter. "O Lou! I'll have to take it all back. You haven't lost it. And you can't. It's in safe keeping, sure enough."

Poor Louie stared in astonishment and dismay.

"Why, mamma, what can I do about it? How can I get it?"

"Only by breaking the jug, dear, of course," said mamma.

"But we all promised not to open them till we took them to church."

"Never mind," said Dick mockingly. "You've given a lot of money, more than any one else will, so you can take comfort in that."

"But," said Louie bursting into sobs, "I didn't mean to give it; it went in spite of me, just because I was careless, and it won't count as a gift. I meant to give some of it when I changed it, but not all."

She cried and went to her room, refusing to be comforted, refusing to eat her dinner, and returning at length to school in a very unhappy frame of mind.

"May I come in?" Dick tapped at the door of Louie's room after she had gone to it in the evening.

"Come in," she answered.

"Look," he said, "here is your money."

He placed the gold piece in her hand.

"Why, Dick, how did you get it? Where is my jug?"

"Here," he said, giving her a jug. "All the rest of your money is in it."

"But how could you get this out?"

"Well," said Dick, "I'm not going to be mean to you any longer, Lou, so I'll right out with it. *You* promised not to break it, but I didn't. I hunted all over town this afternoon after I came from school to find a jug exactly like yours—"

"Why, I thought you had a base ball game for this afternoon."

"So I had, but another boy took my place. I tell you, Lou, I'm sorry I've been so hateful and teasing, and I'm not going to keep it up any longer."

"O Dick, you are so good to give up your play for me. "But," she added, looking doubtfully at the $5 piece, "I don't know that I ought to take this back, Dick. I was trying, and trying with all my might, to give it willingly."

"That's all nonsense," said Dick bluntly. "As if you had to give it just because Jane slipped it in the jug. Next thing you'll be telling me you're sorry I got it out. Good-night."

Nothing more was said about Louie's money until one evening she had a talk with her mother.

"So you really think that I getting over my carelessness, mamma?"

"Yes, dear. I think your ugly little fault is losing its hold on you."

"Well, I told you the gold piece would help me. Ever since I was careless about it and it went into the jug because of that, and it seemed so dreadful when I did'nt mean to give it, I have thought of it every time I was going to be careless. And I'm glad you think it has been a help to me. And now, mamma, see—I am giving it with all my heart now."

Into the consecration fund slipped the gold piece, and when the jugs were opened only mamma and Louie and One other knew from whom had come such a liberal gift.—*Sidney Dayre, in the Advance.*

DOMESTIC ECONOMY

COOKIES.—One cup each of lard and sour milk, two cups of sugar, one teaspoonful of soda; flavor with lemon, add flour to knead well, and bake in a quick oven.

CREAM PIE.—One pint milk, the yolks of two eggs, one cupful maple sugar, two spoonfuls of flour; boil till it begins to thicken, flavor with lemon; put into the crust; bake and use the beaten whites of the eggs for frosting.

TO MAKE RASPBERRY JAM.—Put six quarts of raspberries in a porcelain-lined kettle, add two quarts and a pint of granulated sugar. Mash the fruit with a long wooden spoon, stand over a quick fire, boil and stir continually 40 minutes. Put away as directed for jams.

GINGER SNAPS.—One quart of New Orleans molasses, one pound of brown sugar, three-fourths pound of lard and butter mixed, and one tablespoonful of salt, two tablespoonfuls of ground cinnamon, the same of ginger, flour sufficient to make rather a stiff dough; roll very thin.

APPLE TAPIOCA PUDDING.—Soak a large coffeecupful of tapioca in three cups warm water two hours; slice one pint of sour apples into a pudding-dish; sift sugar over them, and pour the tapioca over them; cover with a granite pie-plate and bake one hour; eat whipped cream or butter and sugar sauce with it.

RHUBARB JAM.—Wash the young rhubarb and cut it into pieces about an inch long. Do not peel it. Weigh, and to each pound allow three-quarters of a pound of sugar. Put all in a porcelain-lined kettle, bring slowly to a boil, then boil and stir continually for three-quarters of an hour. Put into jars or tumblers, and tie as directed.

BLACKBERRIES.—To every pound of blackberries allow a quarter pound of sugar. Put the berries in a porcelain-lined kettle, cover them with the sugar, and let stand one or two hours, then add a quarter-teaspoonful of powdered alum to each quart of fruit. Stand over a moderate fire, and bring to boiling point. Skim, and can immediately as directed.

COMMON FRUIT CAKE.—One cup butter, two cups sugar, one cup molasses, two eggs, two teaspoons cream tartar, one heaping teaspoon each of cinnamon, cloves and allspice, one nutmeg, one pound of raisins, stoned and chopped a little, and rolled in flour, one-half pound of currants, five or six ounces citron, one teaspoon soda dissolved in one cup of milk. Add flour to make a stiff dough. Test by baking a small portion first.

THICKENED MILK.—With a little milk, mix smooth a tablespoonful of flour and a pinch of salt. Pour upon it a quart of boiling milk, and when it is thoroughly amalgamated, put all back into the saucepan and boil up once, being careful not to burn, and stirring all the time, to keep it perfectly smooth and free from lumps. Serve with slices of dry toast. It is excellent in diarrhœa, and becomes a specific by scorching the flour before mixing with the milk.

MARBLED CHOCOLATE CAKE.—Butter, one cup; sugar, two cups; flour, four cups; four well-beaten eggs; one cup of milk; baking powder, two teaspoonfuls; vanilla, one teaspoonful. Take out one cup of this batter and mix it with four tablespoonfuls of grated chocolate dissolved in a little milk. Cover the bottom of the pan with white batter, and drop upon it, in places, spoonfuls of chocolate, forming rings, then another layer of white batter, and so on until all is used. Bake in a moderate oven.

GOOD HEALTH.

Health of the State.

The State Board of Health Report for June is at hand. The usual 84 localities have made their returns which indicate an improved condition of health throughout the State. The Secretary of the Board, Dr. C. G. Tyrrell, says in his report that "until the official result of the late census is published we have to accept the estimated population as furnished by our own correspondents. The actual death rate is therefore uncertain until we can get the correct number of the population affected. There has been very little zymotic disease reported as particularly fatal, except cerebral fever and cholera infantum, and these in limited number."

Diphtheria and croup have been collectively reported as causing 35 deaths, which indicates a very much lessened prevalence of disease. Twenty-six were from diphtheria and nine from croup. Typhoid fever is mentioned in a limited number of reports, the cases being all sporadic. From this time onward we may look for an increase in this preventable disease, as it seems impossible to educate the public upon the necessity of keeping the premises free from accumulating and decomposing filth. The air they breathe, the food they eat and the water they drink, through becoming contaminated, are dangerous to health. Reports from 84 localities indicate an improved condition of the public health. Disorders of the bowels were prevailing to some extent and some few cases of cholera morbus were noticed; this disease was no doubt induced by eating unripe or unsound fruit or vegetables. Zymotic disease, such as measles, scarlet fever and diphtheria were not prevalent anywhere, and where present were in a mild form without a tendenoy to spread. Cancer claims 27 deaths, a little short of its usual quota.

The cholera is increasing in Spain and it is not improbable that a lack of sanitary care will permit it to spread throughout Spain and then reach America through the Mediterranean or Eastern ports. It is supposed to have originated from opening the graves of some of the victims of the disease of 1885, and is of an equally virulent type. As it has been proven that cholera cannot prevail where perfect cleanliness is observed, it would be a matter of simple prudence to prepare to defeat any attempted inroad of this disease into California by a general clean-up of cities, towns and villages. Once the disease appears, this measure would be too late. We cannot be sure that cholera will not come to America; we hope it will not, but with the means of prevention so easily applied we would be criminal to neglect the warning thus timely given.

NUTRITIVE VALUE OF FOODS.—Speaking roughly, a quart of oysters contains, on the average, about the same quantity of actual nutritive substance as a quart of milk or a pound of very lean beef, or 1½ pounds of fresh codfish or two-thirds of a pound of bread. But while the weight of actual nutriment in the different quantities of food material named is very nearly the same, the quality is widely different. That of the very lean meat or codfish consists mostly of what are called, in chemical language, proteine compounds or "flesh formers," the substances which make blood, muscle, tendon, bone, brain and other nitrogenous tissues. That of the bread contains but little of these, and consists chiefly of starch, with a little fat and other compounds, which serve the body as fuel and supply it with heat and muscular power. The nutritive substance of oysters contains considerable of both the flesh-forming and more especially heat and force-giving ingredients. Oysters come nearer to milk than almost any other common food. Their values for supplying the body with material to build up its parts, repair its wastes, and furnish it with heat and energy, would be pretty nearly the same.—*Century.*

SUDDEN STARTS, JERKS, ETC., WHILE ASLEEP.—F. W. C.—Sleep restores vigor and tone to the brain and nervous system, and while one is asleep the muscles and tissues become relaxed. The spasmodic movements are due to nervous reaction for the most part. It is sympathetic sensations for the most part that cause the jumps and jerks that awaken when the person is just falling into slumber. Often external causes, a noise, a touch, the pressure of the bedclothing will produce such effects through the sympathetic nerves. Generally people whose nerves are very active during the day experience these not always pleasant sensations. They receive impressions, consciously or unconsciously, that somehow may revive in the early stage of slumber, and the sleeper catches a glimpse of a dream, in which he seems to be falling or exposed to vague danger, and an instinctive impulse to save himself is expressed in the jump or jerk that arouses to full consciousness.—*Phrenological Journal.*

BACILLI IN CELERY.—Dr. Charles M. Cresson of Philadelphia states that he has more than once found the typhoid bacilli in the juice that he has squeezed out of celery grown near Philadelphia.

The Week.

Things are at the midsummer level. The grain harvest is well over and the yield, as previously stated, is light, though there is much good grain included in it. Fruit harvesting is progressing favorably, the only regret being that the crop is not larger, for it is the farmers' ancestral luck to have small weight when prices are up; still it is hard to find a complaining fruit-grower this year.

The schools are opening, and the vacation-takers returning to the city. Such signs of the advancing year are unmistakable. Soon the first of the fairs will give another token. Arrangements for observing the great historical event of the year in California are progressing, and the fortieth anniversary of the birth of the State will be made notable. It is probable that the city will bloom with bunting and resound with music and the tramp of parades as it has not for years. The Native Sons propose that the great twin holiday of Sept. 8–9 shall see the greatest possible manifestation of the California spirit.

FRUIT FOR CHICAGO.—The fifth expedited fruit train of the season left this city last Saturday evening. The consignment consisted of deciduous fruits entirely.

The Fruit Trade.

Readers of the RURAL have been kept well informed from week to week of the unusual activity in the fruit market, the liberal prices being obtained at Eastern sales and the higher bids of local buyers as the only means of securing even a share of the fruit. Our correspondence from the different counties and our extracts from local journals have reflected the spirit of buoyancy which prevails in the fruit sections, resulting from the considerable amounts of money now being distributed and the good prospect for fruits not yet mature. This is pleasant to contemplate and will help upon their feet many who have assumed considerable obligations in the purchase and improvement of orchard lands. The experience will, of course, lead to wider planting, which will, we believe, also prove profitable if wisely done and well maintained. There is a little danger that this year's results will lead to less care for the production of fine fruit, for, as an old friend writes us, "peaches which are not worthy the name of California fruit are selling at fabulous prices; even pits with a little fur around them are passing for peaches and selling high." Of course the influence of one such year will be to beget carelessness among those disposed thereto; and having sold poor fruit for a good price once, such people will expect to have it indefinitely repeated. We have always retained confidence that reasonable freights and wide distribution in the populous States east of the Rocky mountains would open a demand for all the fruit that can be grown here, but we are sure it is not wise to expect fruit to sell ordinarily, as it is doing this year, We shall come again to careful selection and grading, and buyers will again be bearish and discriminating. The proper caution should be not to lose one's head in such flush times, but to discern that while California fruits properly handled will always be profitable, we shall come again to the necessity of producing only the best and of producing it economically as well. Therefore do not conclude from this year's experience that it does not pay to thin fruit, or grade fruit, or do any other such progressive and intelligent work, because any one who now marks out a slack policy for the future will suffer for it and probably suffer badly.

And yet it is delightful to read of the ruling prices, and more delightful still, perhaps, to pocket the coin. Nor does there seem to be the slightest doubt but that it will hold through the season and affect directly or indirectly almost everything which has seeds, pips or pits in it. Writing of the fruit prospects for 1890 in the New York *Mercantile Exchange Advocate* of July 5th, G. S. Palmer says:

As the season advances, more complete reports from various sections indicate that the general fruit crop for 1890 will be the smallest for many years. The loss most seriously felt by dealers and consumers generally will be that of the peach crop, which is almost a total failure in all sections of the country (except California), and it will be considered a luxury the present season. Its most natural substitute, the pear, is also a general failure. The same severe frost which destroyed the peach crops also blasted the pear buds, and the late reports from many of the large apple sections in the Hudson River counties and Western N. Y. state that a great deal of the young fruit is dropping from the trees, and indications are of a short product from this principal source of our winter supply. The early crops of fruits, such as strawberries, raspberries, currants, thus far have been unusually short and seem to have been fruited very lightly, which is also accounted for by the open winter, and then being followed by the severe frosts during the time of the early development of the plants. The reports from the West are yet incomplete, and the fruit-growers of those States (providing they have good crops) may again profit by the Eastern failure, as they did last season in the marketing of their apples here.

The attention now given to quicker means of transportation and improved packages for carrying perishable fruits enables distant growers to place their products on our market in good time and in prime condition, and the present and prospective favorable prices are certain to prove remunerative to all those who can send their fruits to this market, even from the more remote points on the Pacific Coast, and they have already commenced and will continue to ship largely throughout the season.

Pertinent to the same end is the following note, which we just received from a special correspondent in Illinois:

EDITORS PRESS:—My predictions to you last spring in regard to the fruit prospect for Southern Illinois have been, if anything, more than verified. There were large quantities of strawberries of some varieties; while others were from a partial crop to near a failure; but most of them went into market in poor condition. There were no plums, and so few cherries that we might say there were none of them. Raspberries were a fair crop, but blackberries have not been more than a third the usual yield; and what have grown have been so dried by the dry weather we have had that they are very poor. There will be scarcely a third of a crop of apples, and what we have are of poor quality.

There are no peaches. Fruit is so scarce in our own market now, in the midst of a fruit country, that people are buying California canned fruit for their tables. There are going to be considerably many grapes here where people have the vines, but of late years grapes have been so uncertain on account of rotting that there are very few vineyards, and what there are are small.

As I said in the article of last spring, Southern Illinois must depend largely this year on California for her canned fruit. There will be more than twice the canned fruit sold here the coming fall, winter and spring than heretofore, and nearly all of it will come from your State. A few years ago nearly all the canned fruits sold here were from Baltimore. One of our leading grocers told me yesterday that he did not handle any Baltimore goods now.—G. H. FRENCH, *Normal University, Carbondale, Ill.*

A New York telegram, dated July 22, has the following interesting allusions:

It is said here on the best of authority that the outlook is good for California to gain another bull point on apricots and peaches. A local firm last year shipped 20 boxes experimentally to Germany and the concern has just received an order for 100 cases of each fruit from Germany. Meanwhile, the boom for California products in the Eastern markets continues, and advances for standard canned fruits from 10 to 15 cents have been made the past few days here. The feeling for dried fruits continues very strong. Twenty carloads of California green fruits were sold here last week, something unprecedented at this time of year. It is reported that big shipments of green fruit make certain a good market for canned goods, the market being very short and practically bare.

The large amount of fruit being shipped green has increased the cost of the fruits needed by canners and prices of canned goods are said to be in doubt. Dried fruit has risen notably and rapidly in value, not only dried tree fruits but raisins and dried wine grapes are advancing. This fact, coupled with the advance in wines, gives the grape grower a good chance of his share in the picnic although the grape yield will be exceptionally large.

PLANT REGISTRATION.—The movement to secure registration of plants in such a way that the newness of a "novelty" can be easily determined and to secure to originators of new varieties exclusive rights of propagation and sale of the same, if they so desire, is making due progress at the hands of an energetic committee. A circular has just been issued stating explicitly what is hoped to accomplish by winning the support of all societies and individuals who approve the undertaking, and finally bring all such influence to bear upon Congress to secure the enactment of the necessary laws. We have commended the undertaking as a progressive one and one which after full discussion and criticism will yield practical points upon which wise legislation can be based. To this end we advise all to apply for copies of the explanatory circulars to A. L. Bancroft, 132 Post street, chairman of the committee. These circulars will serve to introduce the subject at horticultural meetings, where the discussion of it will no doubt be of interest and value.

SWINDLING WINE BUYERS.—Producers must be constantly on their guard against the swindler who operates under the guise of commission merchant or dealer in distant cities. It is announced that there is a gang of such thieves in New York City who send orders to California wine-producers and dealers and never remit for what they receive, changing their names and locations often enough to throw pursuit off the trail. They pretend to send references with their orders, but the references are only others of the same gang. Producers cannot be too careful about sending property to distant receivers without actually knowing something about their standing. It is risky enough dealing with honest men in these days of quick reverses. A producer puts too much value into his product to send it to swindlers, no matter how much he needs to make a sale and no matter what blandishments they may offer.

NEVADA POTATOES.—Reports favor a good yield of the fine potatoes for which some parts of Nevada are famous.

The Chicago World's Fair.

The dispatches are full of what seems to be a conflict between the city of Chicago and all the outside world concerning the selection of a site for the World's Fair. Chicago wants the fair on the lake front, which seems to bear something the same relation to the city that the front lawn does to an ordinary homestead. Chicago wants the fair there so that some grand buildings which will be erected will serve as permanent ornaments to the city after they have done the fair thing by the memory of the great Christopher. This alone would not be objectionable; it would not be a bad thing to have a permanent monument to Columbus even in Chicago. But the trouble seems to be that the lake front is not big enough for a decent fair ground, and the idea of erecting the fine buildings in her front yard to suit Chicago and to have the outdoor features of the display, for instance, the horticultural and agricultural departments, banished to Chicago's back yard, does not please the outside world. We would not be so sure of that were it not that even the State of Illinois is emphatically opposed to the Chicago plan, and if her own State cannot stand it what can be expected of St. Louis and all the rest of the world. Feeling is running so high that it is even proposed to petition Congress to take the fair away from Chicago and put in some place where suitable accommodations can be had. This will, of course, not be done, for some compromise will be effected, but it is unfortunate that a grand four-hundred-year event should be handicapped by such a squabble as now seems to be in progress.

To show more specifically the point at issue between the Illinois farmers and the Chicago people, we quote the following, telegraphed from Chicago on Tuesday of this week, as the words of Secretary Garrard of the Illinois State Board of Agriculture:

"We insist, and every State Board of Agriculture in the Union will insist with us, that the agricultural exhibits must not be embarrassed in such a manner as to impair a successful exhibition. We do not desire to dictate to the directors where they shall hold or select a site, but we have a right to insist that the site shall be one that will supply every demand for space. Four hundred acres would not be an excess for the agricultural exhibits of the World's Fair; 200 acres will be the minimum which will accommodate the States of this Union.

California alone asks for 40 acres for its agricultural, fruit and vintage exhibit, and will probably not be satisfied with less than 15 or 20. The State of Illinois will want 40 acres, if the demands of the State Board are to be observed. Other States will want 5, 10 or 15 acres each. All told, the States cannot get along with less than 200 acres, and it is absolutely impossible to give this in the lake front site. We will positively not be satisfied with a site which places the agricultural exhibit a mile away from the other principal features.

In my opinion, in case the lake front is selected as a site, the Illinois Board of Agriculture will drop the subject entirely and not make any exhibit. Of course, however, if the next regular session of the Legislature makes an appropriation and instructs us to make an exhibit, we will carry out the provisions of the law. But it is our opinion that if the lake front is selected, the agricultural boards of the country will regard the World's Fair in advance as a failure, and abstain from any attempt at a successful exhibit of the agricultural products of the country.

It is to be hoped that this matter will be satisfactorily settled before long. State aid for State displays must be had from this winter's Legislatures to be in season, and the amount of such aid will depend much upon the character of the displays proposed. Above all things in this immense country, the lack of a few acres of ground should not be allowed to endanger the success of a grand international exhibition.

SNAGGING THE SACRAMENTO.—The San Francisco Produce Exchange lately passed a resolution urging the removal of the snags which impede the navigation of the Sacramento above Butte City, and threaten to interfere seriously with the movement of grain by barge and steamer. In consequence of their representations, through Congressman Clunie, to the authorities at Washington, the U. S. snagboat has been ordered to go up the river at once and begin removing the obstructions.

WHEAT AND WEATHER.—It seems from all advices that the unfavorable weather which it was apprehended would reduce the wheat product of Great Britain has proved quite as bad as was feared, and the prospective shortage has not been exaggerated.

A Grand Redwood Reservation.

Our readers will be pleased to learn of the progress of Col. J. B. Armstrong's plan to donate a grand area of redwood forest in Sonoma county to the people of California as a perpetual reservation. Col. Armstrong has been a devoted lover of nature always and an earnest advocate of rural improvement which aims to "hold the mirror up to nature," and thus to do away as far as possible with the aspects of the cultivated country, which are almost a desecration of natural beauty. This spirit, of course, manifests itself in many ways, and one feature of its work lies in the effort to reserve certain representative areas of nature's grand work from the ax of the lumberman or settler. This is sometimes accomplished by the Government, sometimes by individual grant, and in some respects at least, the latter method is better, because the grantor being of necessity a nature lover can so place his gift that it shall be beyond the control of those with mercenary motives or those who have no love nor taste for such matters. Government grants or property granted to public use under Government control are very apt to suffer from mismanagement or sacrifice.

Col. Armstrong having prospered in this State of his adoption, now proposes to make a grand gift to the people of California and to place it in such hands that it shall always remain true to nature and true to its beneficent mission. We find in the Santa Rosa *Democrat* an outline of Col. Armstrong's plan, which may not be accurate in all particulars, but it gives outlines of the plan:

Col. J. B. Armstrong proposes a reservation of a park of 600 acres near the end of the Guerneville branch of the S. F. & N. P. railway, in Big Bottom. Four hundred acres of it are covered with the natural virgin growth of redwood, laurel and other sorts of timber, some of the trees of great size and beauty, from five to 15 feet in diameter, and exceeding 300 feet in hight. It is the last large tract of redwoods on Russian river that is a fair specimen of the great forest once covering its banks in a state of nature.

We understand that it is to be conveyed to trustees, in perpetuity, for the people, under few restrictions, together with an endowment sufficient for the annual income to improve the grounds with drives, ornamental buildings, gateways, porter's lodge, etc. Two hundred acres, being improved with orchards, buildings and the like, are to be made productive so as to yield an annual income toward developing the park, and will afford a suitable site for growing flowers and plants under glass for planting along roadsides and filling vacant places under the direction of a landscape gardener, as time rolls on. For it is not for a day, but for all time. Fifty years hence, when these forests are a memory of the past, the gift will be appreciated. Colonel Armstrong proposes to retain control so long as living, but will begin and complete many improvements, with due regard to preserving the natural features of the forest. One of the restrictions will be a positive prohibition against destroying the timber, or even trimming the trees. The drives and paths will be made throughout so as to bring into view the beauties of the place, and water will be introduced in fountains at various points. The grounds are flanked by the foothills of Mt. Jackson, protecting the big trees from the winds, and there is no reason, except fire, why, with care, the park should not stand for all time.

Such a grand act as the rescuing of such piece of forest land from spoliation and the perpetual devotion of it to public instruction and recreation, should yield the donor much satisfaction in consciousness of well-doing. It will, of course, perpetuate the memory of the donor among men, but that to a man of Col. Armstrong's retiring disposition, is probably the smallest consideration involved. To preserve the trees he loves for the improvement, elevation and enjoyment of mankind, for whose ennobling he has always worked with voice and pen and purse—this is the grand central thought in the project, the realization of which we trust the donor may live many years to direct and enjoy.

The Irrigation Surveys.

According to telegraphic advices from Washington things do not look bright for the continuation of the irrigation survey from which so much has been anticipated in developing and building up the great West. It does not prove from the striking out of the appropriation for the irrigation survey by the Senate that the movement will stop, but it places it in rather a hard position to say the least of it. The following is the current telegraphic gossip on the subject:

The fight which has been made in the Senate upon irrigation survey will be renewed when the Sundry Civil bill goes to a conference committee. From the tone of the speeches in the Senate chamber there is very little probability of any recession on the part of the Senate, and while the House is not so strongly committed to the scheme the chances are that the irrigation survey authorized a couple of years ago, and by which a great bureau of the Government has been created, giving employment to a large number of people, will be abolished.

The General Land Office officials claim that there is no part of the public domain that is free from the grip of the irrigation scheme, and very little land could be settled for months to come unless something be done to abolish the bureau, for, until the men under Major Powell complete their survey, none of it could be put upon the market.

Major Powell is a hard hitter and does not propose to yield without a strong effort to retain the newly acquired bureau which he has operated in conjunction with the Geological Survey. Those who are opposed to him in this particular feel assured that the bureau will be abolished.

A question has arisen as to whether or not, if Congress should abolish the irrigation survey, those people whose entries have been thrown out because the land was reserved from settlement should be compelled to make entry for the land *de novo*. Commissioner Groff of the General Land Office expressed the opinion that such second entry would be unnecessary.

OUR POPULATION.—A telegram from Washington says the census will show that while the rate of increase in the Northern and Atlantic States has been about the same as usual, the Western States have increased at an almost fabulous rate. Of the Southern States, Alabama, Georgia and Texas will show a marvelous increase in population. The other Southern States will remain about the same. It is probable the census will show that the rate of increase among the blacks has fallen far behind the rate of increase of the whites. The Census Bureau is now enumerating the returns at the rate of 1,000,000 per day. As a matter of fact 2,000,000 a day are being counted, because on each day, besides the 1,000,000 new names counted, the 1,000,000 counted the previous day are recounted to insure absolute accuracy. It will take 60 days, and possibly 70, to complete the entire count, which it is reasonable to believe will be concluded about September 1st.

Our Lumber Interests.

Eastern lumbermen continue to prospect this coast for places to plant their enterprises. The large land captures by syndicates of foreigners for future sale to lumber makers are not nearly so desirable to the State as more modest ventures, the conductors of which propose to bring the money and machinery and help the advancement of the coast by beginning manufacturing at once. John P. Fleitz of Michigan, a noted lumberman, is now credited with the intention of putting up mills in Tulare county. He is reported to have said:

"It is a foregone conclusion that lumber will steadily increase in price, as the supply is limited, and as I have said, you will supply the world from this coast. Already redwood shingles and finishing lumber find a ready market all over the East. In Chicago to-day scarcely a new house is built in which California redwood and pine are not utilized for finishing purposes. Your timber is becoming the fashion in the East.

"When the coast has cheaper freights and competing railroads, you will find a greater outlet for your timber. It is only because of the high freight rates that more timber from the coast is not handled in the East. Your fir and sugar pine are the best timber in the world for shipbuilding, and the supply of both is limited.

"I believe the Pacific Coast will control the future lumber business of the world. You have a great market here and can supply China, Japan, Australia, in fact, the whole universe. To-day, although the people of California are not aware of the fact, the Eastern States are receiving great supplies from this coast. Even the wooden derricks used in the oil regions of Pennsylvania come from California and Washington, and yet Pennsylvania was once a great lumber producing State."

Mr. Fleitz seems to be a lumberman with a conscience, and recognizes the fact that trees are useful for some other purpose than to keep saws going. He said: "The new laws interfere somewhat with the fluming, and then again all the water at your command is needed for the fruit-growers. The Government should take some method to protect the watersheds of the State, or evil results will follow. In America we are very careless in this respect. In Switzerland and the greater part of Germany the natural growth has been destroyed, and the people have been compelled to do much replanting, a process that will not answer in this country." Our law-makers should not overlook such hints. Each year the value of their acceptance becomes less and the evil of neglecting them greater.

A LOGGING TEAM WITH GANG OF LOGS AS EMPLOYED IN CALIFORNIA LUMBERING.

Preventing the Overflow of the Mississippi.

The late extraordinary rise in the Mississippi river, and the imminent danger threatened therefrom, seems to have induced a new and more resolute determination to adopt some preventive measure for such danger in the future. It appears to be universally acknowledged that some more adequate engineering means of defense than the present system of levees for retaining the waters within their natural barriers should be devised and adopted. There are several alternative plans—namely, the provision, in the lower course of the river, of outflow channels, that may be utilized in seasons of threatened floods, and when the volume of the river becomes dangerously swollen; and the provision, along the headwaters of the great river and its tributaries, of great impounding basins, covering great areas, and capable of retaining temporarily the flood-waters, which would be permitted to flow off gradually without endangering the country below, as at present, by its sudden accession to the river.

As the levee system is already in operation for hundreds of miles along the course of the Mississippi, having been developed year by year at enormous cost to the Government, it would be the wisest policy doubtless to maintain these artificial barriers in their present extent, and to supplement their protecting influence by both the engineering expedients above suggested. With these precautions, it is almost assured that the annual destructive floods of the lower Mississippi country would be avoided in the future. The use of embankments alone has been found, in the experience of all countries where the system has been tried, to be extremely hazardous. The gradual rise of the bed of the stream, caused by the deposition of silt, necessitates either continual dredging or the continual elevation of the walls of the embankment.

In China where this primitive system has been practiced from time immemorial, the embankments have had to be carried up so high from this cause, that the surface of the rivers are many feet above the level of the surrounding plains, and the frightful disasters that are periodically reported as being caused by the overflow of the great rivers of that country, can readily be understood. The subject of applying proper remedial measures to control the flow of our great river, it is gratifying to note, is now receiving the anxious attention of the Government engineers, and adequate measures for accomplishing this result will doubtless be adopted and carried into execution at once.

A Sequoia Reservation.

It is reported from Washington that Secretary Noble has rendered a decision which virtually secures a sequoia reservation in the public interest. Three sections of the land in the Visalia land district, Cal., were suspended from entry and sale in 1880 upon the recommendation of the Surveyor-General, for the reason that "they are covered by trees of the Sequoia gigantea variety, some of which are reported to be 40 feet in diameter and from 300 to 400 feet high, constituting a remarkable and rare curiosity, which should be preserved." After a reservation had been ordered, a man by the name of George Hening applied to enter, under the Act of June 3, 1878, a quarter-section of this land. His application was rejected, because the land containing the mammoth trees had been reserved. After he made another application to enter the land, and that also being rejected, he appealed to the Secretary of the Interior. The latter, in a decision rendered today, rejected the application. The secretary states that the trees are regarded as a remarkable and rare curiosity which should be preserved, and to this end the land containing them was withdrawn from sale and entry, so that all questions in regard to them could be properly considered. "Being thus placed in reservation," continues the decision, "by competent authority and for sufficient reason, it is not in the power of the party to acquire rights by treating such reservation as of no effect." He adds that there is no statute giving general authority to the President to reserve lands, but the right of the President to put public lands in reservation so that all questions in reference to them might be properly considered has always been maintained by the courts.

A Logging Team.

Our photo-facsimile engraving shows a characteristic scene in the lumber regions—a "bull team" hauling a gang of logs over a skid-road. Less force is used to move the gang down the inclines, but when the level is reached the full team is employed to haul it over the skid-road to the mill. The logs are fastened together with "dog-chains," the biggest log ahead as shown in the picture. The skids are oiled or watered, as the practice varies, and the logs are thus moved from stump to saw.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

BARLEY CROP—FIRE.—Livermore *Herald*, July 17: Ben Thomas thrashed last week for Johnson Righter the crop on 23 acres of barley on the latter's ranch on East avenue. It turned out 430 sacks of barley, averaging 112½ pounds each—a total of 48,160 pounds. This gives an average of 2093 pounds per acre. Mr. Thomas reports that all grain is plump, and the yield the best he has seen for years....A fire started on the Patterson ranch, south of the Arroyo valley, last Saturday, and destroyed about 2000 acres of feed before it could be stopped. R. T. Pope lost nearly 1000 acres of grass.

Butte.

A BIG FIRE —Chico *Enterprise*, July 17: A big blaze could be seen from Chico last evening, toward the river, and through a telephone dispatch to F. C. Lusk this morning, it was ascertained that the fire was on the old home place at the Glenn ranch. The fire occurred about 10 o'clock, and destroyed 43 head of fine work horses valued at $6000, and several barns with a value of an equal amount. The origin of the fire was presumed to be through carelessness in smoking. There was no way of fighting the flames, and they had full sway and destroyed everything in their course. Mr. Lusk stated that they had just removed 100 head of horses from the barns day before yesterday. The destroyed animals were the best stock at the ranch and were valued at $300 per span. An insurance of $10,000 was carried on the horses and barns. Some grain and a large amount of farming implements were burned.

The *Enterprise* of July 21st further says: From Charles V. Hobart, who had been over inspecting the result of the fire on the Glenn ranch last week, we learn that there were 42 animals burned; 37 of them were Percheron horses and 5 mules. There were also two large barns, 40 sets of harness, 2 header wagons and other traps. There was not much hay or grain stored in the barns. Mr. Hobart carried the insurance, which was $6100. The horses were the most valuable on the ranch, and had they pulled back could have broken their halters and escaped, but they seemed to hug the mangers and were suffocated where they stood.

Colusa.

DAMAGE BY THE HAIL.—Colusa *Sun*, July 19: We rode out over the Ware field with J. C. Bedell, a few evenings ago, just after the harvester had passed over, and found the ground covered with wheat heads that had been cut off by the recent hailstorm. There must have been five or six sacks to the acre thus destroyed. Mr. Bedell is putting hogs on the field to save this waste.

HIS FIRST FRUIT DRYING.—Orland *News*, July 19: A. L. Hall sold this week 5000 pounds of dried apricots to Cone & Kimball of Red Bluff, at 10 cents a pound. It was Mr. Hall's first attempt at apricot drying and he did not make a very good job out of it, or he would have received 2½ cents a pound more for his fruit. Besides the 5000 pounds dried by him, Chinamen have dried some 2000 pounds. Mr. Hall has about 13 acres in apricots and this year did not have over one-fourth of a crop, but $700 for 13 acres in an off year, besides what green fruit had been sold, is considerably better than wheat farming.

Fresno.

A LARGE WATERMELON.—Fresno *Inquirer*, July 18: Last Monday afternoon Mr. Frank Fanning left at this office a watermelon weighing 53 pounds. Mr. Fanning says that was the largest of a load he brought to sell. He says that just as good melons can be raised in Fresno county as anywhere, and he can make more money raising melons than raisins. Here is a pointer for some of our ranchers.

PRUNES DROPPING. — Fresno *Republican*, July 17: D. McLaughlin of Oleander has sent to the *Republican* office half a dozen prunes, some half ripe and some green, that have dropped from his trees. The following communication explains itself: I find the French prunes are all dropping. About three weeks ago mine began to turn dark and drop from the trees, and up to date there is one-third of them on the ground. The sample is from one tree where one is as well protected from sun or wind as the other. The trees have been well irrigated and the foliage is fine. I find all the trees in Oleander are the same. Yours, D. MCLAUGHLIN.

FLUME BUILDING.—Fresno *Republican*, July 18: H. R. Smithern, who arrived from the terminus of the Moore & Smith flume last Thursday, reports that work is progressing at a lively rate. Last Wednesday the workmen put in 140 boxes, each 16 feet long. The work of construction is progressing at the rate of about half a mile a day. The flume has now reached a hill, around which it must be built for a distance of four miles. After passing the hill it will reach the valley.

Modoc.

CROPS IN SURPRISE VALLEY.—Alturas *Independent*, July 17: From several parties who have come over the ridge during the the past two weeks, we hear encouraging reports regarding the outlook for grain crops in Surprise valley this season. There was a good soaking rain over there about the middle of June which helped grain out wonderfully. Mr. A. Hall of Lake City, who came over after a mower and rake one day last week, told us that everything was looking lovely about Lake City and taking the valley all over it was his firm belief that the coming harvest would be the most abundant which the valley has ever known. As to the hay crop, he says it is a long way the best he has ever seen. He says a few days prior to coming over here he walked across Fred Bissel's meadow and went through timothy shoulder high and as thick as it could stand, and he estimates it will yield 3½ to 4 tons per acre.

Kern.

FIGS.—Bakersfield *Echo*, July 17: John O. Miller tells us that the fig trees at San Emigdio are literally breaking down under their weight of fruit this year. They are old and very large trees, and the yield is always large, but this year it is unusually heavy. They are of the blue variety, and an extra effort will be made this year to cure them in a marketable way.

Lassen.

THE HAY CROP. — Susanville *Advocate*, July 17: We learn that the hay crop in interior valleys where irrigation is practiced is turning out heavily. Barham & Burkhart, the owners of Pete's valley ranch, have a fine show of alfalfa starting, and they have cut 60 tons of wild rye hay on ground that was never before mowed. The yield is 1½ to two tons per acre. This came from a moderate irrigation.

Napa.

DESTRUCTIVE COYOTES.—Napa *Register*, July 18: The Coombs-Coughlan ranch in Gordon valley carries some 3000 head of sheep, and were it not for the coyotes that prowl in the neighborhood the increase would be annually large. Since taking the wool olip last fall, over 600 lambs have been destroyed by these jackals. They bite into the neck of the innocent, suck its blood and leave the carcass for the vultures to eat.

THE GRAPE CROP.—Napa *Register*, July 18: Notwithstanding statements made through the press of the State to the contrary, Mr. Chas. Thompson of Rutherford informs us that the vintage will this season be light in Napa county; that not two-thirds the quantity of wine grapes gathered last year will be gathered this. To the only wave of hot weather experienced this summer this is largely attributable. It came when the bloom was on and with blighting effect. There will be a very light yield of Zinfandels and they comprise one-fourth the entire crop of wine grapes in the county. This condition of things will have a tendency to elevate prices.

Nevada.

TO RUN A STEAM WAGON.—Wheatland *Four Corners*, July 19: The Board of Supervisors of Nevada county passed an order permitting J. H. Roberts to run a steam wagon from Truckee to the Sierra county line, requiring him to give a bond in the amount of $2500 to be responsible for injury that may accrue to persons or property by the use of the wagon on the public road.

Orange.

LARGE POTATOES.—Anaheim *Gazette*, July 17: Jacob Vetter has shown us some samples of mammoth potatoes raised on his place on East street. There were five in the hill, and three of them weighed four and three-fourths pounds. One of the largest was cut for cooking before being weighed. The five potatoes would have weighed upwards of seven pounds. The land in which they grew was sandy, and seems especially adapted to potato growing. These are the largest potatoes ever seen here.

CANNERY AND OLIVE MILL. — Santa Ana *Blade*, July 17: The Capistrano Cannery commenced operations yesterday with a force of eight or ten hands, the first work being that of crystalizing apricots. The fruit grown in the neighborhood of the cannery will be utilized, and as much as may be necessary will be brought in from other portions of the county. An olive mill is soon to be added, which should encourage many of our horticulturists to cultivate the olive.

A GOOD OUTLOOK.—Santa Ana *Blade*, July 17: From the best information at hand the estimate of the yield of barley of the San Joaquin ranch for the present season will foot up a total of near 12,500 tons or 250,000 centals, which will represent at the present San Francisco quotation, $1.15 to $1.18 per cwt., for good barley, the net sum of $287,500. This amount added to the income from grain raised in other parts of the county, and those amounts combined with the large revenue that will be derived from this season's heavy fruit crop, represent an amount of no small proportion.

San Diego.

THE FLUME COMPANY.—San Jacinto *Register*, July 17: The Land, Flume & Irrigation Company are still busily at work constructing their flume. The first 100 feet was put in position this week. The injunction proceedings instituted by the Hemet Land Company are about to be dismissed by agreement, the difference between the rival companies being settled by arbitration out of court. An artesian well has been sunk upon the Company's land at the *Cienaga*, which proves that they have an abundance of artesian water in addition to the surface flow of the *Cienaga*. In a depth of 100 feet investigated, three strata of water-bearing gravel are passed, each stratum adding to the strength of flow of water. The company expects soon to place an order for a cargo of redwood lumber with which to build its line of flume to the mesa, and before another season comes, water will be flowing copiously through the flume upon the mesa lands.

THE UNION'S EVAPORATOR.—National City *Record*, July 17: Last week the Producers' Union started up a large evaporator which is now being run day and night and doing excellent work. Though its capacity is large, it is probable that another one or two will have to be put up at once.

San Bernardino.

THE SMILEY RESERVOIR — NORTH FORK DITCH.—Redlands *Citrograph*, July 19: The second Smiley reservoir has been completed and the water has been turned in. This reservoir is 130 feet long, 76 feet wide at the widest part and 12 feet deep. It holds nearly 1,000,000 gallons, and is on Albert K. Smiley's property. It is lined all around and on the bottom with hard granite bowlders, and then cemented smoothly all over. The work was done by Coulter & Hammond. It is believed that this is the largest private reservoir in the county, if not in South California, and will serve to indicate the scale upon which the Smiley work is being done in Redlands....Last Tuesday there was quite a break in the North Fork ditch a little way above Highlands. A force of men was immediately put to work, and the repairs were completed in quick time.

San Joaquin.

WATERMELONS SHIPPED.—Lodi *Review*, July 17: Two carloads of watermelons were shipped Monday, three carloads were shipped Tuesday, and five carloads left this place last night for San Francisco. Melon shipping, however, is not in the hight of its glory until it reaches a maximum of 20 carloads per day.

Santa Barbara.

IRRIGATION.—Santa Maria *Times*, July 19: Messrs. W. L. Adam and J. F. Goodwin have again tested their irrigating ditch this season by tapping the river at Fugler's Point and bringing the water as far down as W. H. Rice's place, about three miles from town. Mr. Rice is irrigating a part of his place for summer crops. The water flows nicely over the land, and it is said by one who knows that the land here is as easily and successfully irrigated as the lands down about Los Angeles. While we need no irrigation for our winter crops, our summer crops would be much more of a decided success if the land was irrigated once or twice in the spring. As there is an abundance of water, sufficient to irrigate the whole valley, that can be taken from the Santa Maria river at Fugler's Point, it is only a matter of a short time we think when it will be demanded.

Santa Cruz.

THE WELL AT THE SUGAR FACTORY.—Watsonville *Pajaronian*, July 17: The work on the big well being bored by the beet factory across the slough is nearly finished. In putting down this well several months' time has been employed, and the work has involved a considerable expenditure for labor and material. But the company has been fully repaid for the outlay, as it has a bonanza in the immense flow of water—more than sufficient to supply all the needs of this city if it could be appropriated to that use. Supt. Waters expects that the well work will be finished this week.

Shasta.

FIGHTING GRASSHOPPERS.—Anderson *Enterprise*, July 17: E. F. Buss piloted a gang of amateurs to the young orchard of Baldwin & Atherton, three-quarters of a mile below town, on Tuesday morning to fight grasshoppers by firing into their camp. For some time the hoppers have been encroaching little by little on this orchard but being fed liberally of a deceptive blood cauterizer they were kept well in check until their blood got used to it, when a few of them would hold counsel together on a nice-looking tree, and when they flew away take the tree with them. It was for the purpose of stopping this continual carrying away that Buss and his army kept the flames ascending and grasshoppers simmering the greater part of the day. Millions took wing and flew away while other millions stayed to feed another day. These miserable pests have done irreparable damage to young fruit trees of several localities in this neighborhood this year and there seems no certain way of stopping the ravages.

Solano.

INCREASE IN FRUIT SHIPMENTS.—Vacaville *Enterprise*, July 19: The extraordinary high prices which are being received this year for Vacaville fruit in the Eastern markets, led an *Enterprise* reporter to inquire into the amount of fruit being shipped and if possible obtain some approximate idea of the returns therefrom. Up to the afternoon of the 17th inst. 276 cars have been dispatched from this depot, and they are now going out at an average rate of five cars per day. They were loaded by the following parties: California Fruit Association, 16; Frank H Buck, 23; Fruit Growers' Association, 36; Earl Fruit Co.. 30; sundry shippers, 171. At the close of business Friday afternoon, Edward Fisher, cashier of the Bank of Vacaville, furnished as the result of the shipments of fruit from May 1st to July 17th the following figures: $167,920.44, which passed through this bank alone and into circulation. Probably $10,000 more came in, but did not pass through his hands.

Sutter.

HARVESTER DISABLED.—Marysville *Democrat*, July 18: Berg Bros.' combined harvester which has been in operation on their large farm in Sutter county, a few miles above Yuba City, was visited by sneak thieves, last Tuesday night. When the employes left the machine at a late hour on Tuesday afternoon, everything was intact, but on returning to resume their work on Wednesday morning, several of the essential parts of the machine were missing, including chains, two elevators, "dog-house," a large number of sacks, needles and a quantity of twine. The thief was tracked as far as Yuba City where all traces of him were lost.

HARVESTING POTATOES.—Yuba City *Farmer*, July 18: Fred Klemp began harvesting his potato crop on the Teegarden tract last Tuesday. He first mowed the tops and raked them from the field and is now plowing the ground and gathering the potatoes. The potatoes are large and of a good variety. Mr. Klemp will realize about 100 sacks per acre to the field.

Tulare.

THE CREAMERY.—Visalia *Times*, July 17: The directors of the Visalia Creamery Association met on Saturday last, and among other business transacted was the appointment of a committee, consisting of W. H. Blain, D. K. Zumwalt and S. Gilliam, to purchase the necessary machinery to put the creamery in operation. This committee met on Monday, and after having examined the bids presented for supplying the machinery, let the contract for the supplies. It will take three or four weeks to get the machinery here and place it in position, and then the manufacture of cheese is expected to begin. The directors are of the opinion that milk will be needed about the 10th or 12th of August, but every effort will be made to commence operations at the earliest date possible.

Yuba.

SUPERIOR WHEAT. — Marysville *Appeal*, July 18: The wooden warehouse of the Farmers' Co-operative Union is beginning to receive for storage a considerable quantity of wheat. An *Appeal* reporter was credibly informed Tuesday that at least 75 tons of wheat were being received there daily. All this wheat is in excellent condition, and is being stored by the owners in hope of a rise in the market. A gentleman who had sampled some of this wheat said that the most of it was exceptionally heavy and would weigh four or five pounds more to the sack this year than last.

LATE SOWN WHEAT.—Yuba City *Farmer*, July 18: T. B. Hull brought to town last Wednesday a sample of his late sown wheat. He had pulled two bunches from the field, one of "Proper" wheat and the other of "Club" wheat. Both bunches had good straw nearly three feet in length and the heads were well filled with good kernels. The wheat was sown just eighty-four days from the time it was pulled up and had made that remarkable growth and matured in that time. The field will yield over six sacks to the acre.

THE ORANGE CROP — Marysville *Appeal*, July 18: The prospect for the local orange crop is good this year. The fruit is now about as large as walnuts. There has been no loss from dropping of fruit here. The expectation is that the crop will be double that of last season. Nursery stock last winter did not lose a leaf from frost, and is coming on well this season.

FRUIT SHIPMENTS.—Marysville *Appeal* July 18: Fruit shipments by freight from Marysville are beginning to pick up. The following big shipments were made yesterday, besides numerous smaller which are not mentioned: The Sutter Orchard Co. shipped 400 boxes, or one car, of Bartlett pears to parties in Chicago. There were also 200 boxes of the same fruit consigned to Eastern purchasers by some Chinamen residing in Sutter county. The Marysville Canning Co. shipped a carload of this year's canned fruit to dealers in Chicago. The Bartlett pears mentioned above, bound for the Eastern market, are loaded into a common freight car at this point, taken to Sacramento, and there reloaded into a refrigerator or fruit cars, and forwarded on East.

ARIZONA.

THE OUTLOOK FOR STOCK.—Wilcox *Stockman*, July 19: Since our last issue, there have been splendid rains in almost every section of Southern Arizona, and the present outlook for a good year for stockmen, so far as feed is concerned, could not be better. We rejoice with our friends, the rangemen, over the flattering condition of affairs.

A GRAND CANAL SCHEME.—A telegram from Phœnix, July 18, says: D. M. Ferry, the famous seedman of Detroit, and C. C. Bowen to-day made a proposition to build canals on the south side of Salt river, to build a new dam across the river, and to consolidate the heads of all the canals on that side. The plan is to locate the dam above that of the Arizona canal, which feeds all the canals on the north side, being a short distance below the Verde river. Here two points of red sandstone project into the river, where a dam 450 feet long and 40 feet high is to be built. Hence the canal will lead the water directly at a right angle through a rock bank. The canal will be 50 feet wide at the bottom, six feet deep, and carry 50 000 miners' inches of water. The rock cut will be two miles long and 36 feet deep at places. The undertaking will be one of the largest in the valley, and will cost more than $500,000. The canal will furnish great water-power. There will be one drop of 14 feet to the Highland canal, another of about 20 feet to the Mesa canal, one of 15 feet to the Utah canal, and a magnificent fall of 30 feet over which to carry the 9000 inches of the Tempe canal.

LADIES' TOILETTE.

outline curves high over the hips and describes a sharp point at the front, and a fashionably long and narrow postilion at the back. The velvet sleeves are stylishly full and rise well above the shoulders, and they are finished at the wrists with cuffs of the suit goods. At the neck is a rolling collar of velvet, which meets the fronts in notches, the fronts being reversed to form lapels, below which they are closed with buttons and button-holes. Button-holes are made in the right lapel, with a jaunty coat effect. A shirt of striped percale, a Piccadilly collar and a four-in-hand scarf showing dark-blue spots on a cream white ground are worn with this handsome basque.

The skirt is in the approved four-gored style, and may, if desired, be worn over a small bustle. The front-drapery is arranged to fall over the gores in graceful folds and wrinkles, which are produced by a cluster of three forward-turning plaits at the belt that flare toward the center at each side; and the back-drapery falls in a well pressed double box-plait at each side of the center of the back. A band of velvet edges the front drapery and makes an effective foot-trimming; above this is applied an upturned row of Vandyke points, and similar points are placed on the basque at the shoulders.

Henrietta cloth, French maline, chevoit, tweed, cashmere or challis may be appropriately chosen for a toilette of this kind, and many effective combinations of shades and fabrics may be produced by associating velvet, Surah, faille, Bengaline or *crêpe de Chine*, which will be used for the sleeves, with wool goods, or those showing a mixture of silk and wool, such as cheviot, silk-warp Henrietta, etc. Fancy braid, galloon, passementerie, velvet, ribbon, etc., may be applied as preferred, but a plain finish will best harmonize with the simple elegance of the style.

The hat has a straight brim and is made of the suit goods, and the brim is faced with velvet and almost covered with a frill of lace.

Fashion Notes.

Ladies' Toilette.

Plain suit goods of a pale heliotrope shade and velvet of a darker tint of heliotrope are here combined, and Kursheedt's Standard Vandyke-points are used in the garniture. The superb adjustment of the basque is performed by the usual number of darts and seams, and the lower

THE RANGE INTERESTS.—Even special agents are now in the field, making an enumeration of the live stock on the ranges for the eleventh census. These great grazing-fields are year by year being curtailed as the regular farmer comes along and takes up his homestead. Still, for many years to come large tracts of land will be used for grazing purposes only at certain seasons of the year. The census of 1880 gave 3 750,000 head of cattle, 7,000,000 sheep and over 2,000,000 hogs on the ranges.

SAN FRANCISCO, CALIFORNIA.

Modoc and Lassen County Notes.

EDITORS PRESS: I left Adin this morning, and arrived at Bieber at 8 o'clock. Bieber is a lively little town, located in the central portion of Big Valley, 15 miles from Adin, and about six miles south of the town of Lookout. There are two hotels, a blacksmith shop, two livery stables, two stores, one store is owned by Mr. Packwood, formerly owned by N. Bieber; the other store is owned by Mrs. Rodey. Both stores seem to be doing a very good business. There are also two saloons. The town has a very neat and lively appearance. Mr. S. Boyd's place of business is on Bridge street. He takes the RURAL for his patrons to read. The printing office belongs to Mr. Ford, the enterprising editor of the *Mountain Tribune*, who is a thorough gentleman.

They are having races here to-day. I have seen many farmers and stockmen here. I find many warm friends here of the RURAL PRESS. N. Bieber is an enterprising business man. Mr. Bieber told me that he owned nearly 6000 acres of the best land in Big Valley. He is now in the real estate business, and will sell his lands at 50 per cent less than the actual value, in order to induce settlers to settle in the Valley. I called on Dr. J. J. Van Male. He is a good physician. He says he is located here to stay and is well pleased with the country.

As I came from home this morning I passed some very lovely rural scenes. Along Willow Creek the meadows of A. Gregg and B. N. Studley looked very fine, green grass standing nearly to the top of the fences. Hillman brothers also have a fine crop of grass which will soon be cut and made into hay.

Taking everything into consideration, times are looking better for all branches of industry. All this country wants is the right kind of cultivation and then the fertile soil will show for itself. I passed several fine fields of wheat between Adin and Bieber, which was sown last fall. The wheat on Mr. I. Bassett's ranch, three miles from Bieber east, is hard to be beaten in any country. It was sown last fall.

The beautiful green meadows stretching for miles north and south from Bieber, make the scene one of beauty and loveliness, skirted a few miles to the west with mountains covered with a heavy growth of timber of evergreen, fir, pine, and other valuable timber.

I was in Lookout on June 30th and July 1st. Lookout is located 12 miles west of Adin, on a beautiful raise of land near Pitt river. It has two stores, two blacksmith shops, one hotel, with good accommodations, kept by Mr. Winchel. Reid, Morris & Co. and Mr. Strawbridge, who keep the stores, have full lines of general merchandise, and seem to be doing a good business. H. KELLEY.

Bieber, Lassen Co., Cal., July 5, 1890.

Outing in Alameda County.

EDITORS PRESS:—The RURAL PRESS and its conductors are evidently favorites at "Agua de Vida Springs" under the grand live oaks on the mountain side above "Arroyo Mucho," beyond Livermore, where we enjoyed the delicious water and invigorating breeze, after our comfortable ride on the buckboard from Capt. Crosby's ranch, "Mulfontes" (many springs) near the Arroyo Valle, eight miles away. "We always keep the RURAL PRESS on file, the index makes it so valuable for reference," says Mrs. C.

One of your staff, visiting here, has ridden 16 miles on horseback and kept us well supplied with seasonable game, bringing in his first deer—the first he ever saw when he was out hunting — hung across his saddle bows this morning; a fine, young buck, shot through the right shoulder, killed with one rifle bullet in approved RURAL style. The Lady Isabel, aged seven months, has already crowned his white helmet with a wreath of bay, of laurel leaves, and we are to have our supper of venison steak cooked in hunter fashion by our two Maine veterans, out of doors, by the Arroyo.

It is perfect happiness to be here in this pure mountain air, nearly 2000 feet above the sea, among live oak and pine trees, and to have it so cool and yet warm enough for the gentlemen to wear white linen coats, always becoming, and for the ladies to don the comfortable summer lawns they never can use in San Francisco. We enjoy eating the ripe, sweet peaches from the trees by the flume—indeed, everything tastes delicious here. We walk and drive and ride on horseback. The roads are safe and good, though the declivities are frightfully precipitous to unaccustomed eyes. The mountains in purple morning light or rosy evening glow are an ever-changing joy. We have a cottage to ourselves as a domicile and everything is charming. K. B.

Mulfontes, July 16, '90.

A DECISION ON WINE PRESSES.—A. S. Pare, of the firm of Pare Bros. of this city, brought two years ago a suit in the United States Circuit Court against Bernard Toulouse and John Delorieux vs. the Commercial Machine Works, for infringement on a wine and cider press, better known as the "Le Merveilleuse," invented by Dominque Lille of Troucens, Department du Gers, France, for which M. Pare bought the right for this country. The case was decided Monday, the 21st instant, in favor of plaintiff by Hon. Judge Sawyer, and transferred to Commissioner Houghton for an accounting.

THE VETERINARIAN.

Acute Rheumatism.

EDITORS PRESS:—I have a mare that became stiff in one hind leg just after foaling, and in two or three days limped badly in the same leg, being barely able to step with that foot. It is now six weeks since she became lame and she still limps badly. I can find no bruise, nail or other cause for the lameness. Is it probably a result of foaling? If so, what would be a remedy for the trouble? When the foal first began to suck, the mare would hold her leg outstretched behind.—H., *Watsonville.*

EDITORS PRESS:—From H.'s description it seems to me a case of acute rheumatism. It is not at all uncommon for rheumatism to develop after foaling. The proximate cause of rheumatism has been maintained to be a poisonous substance circulating in the blood (Latic or some other acid). The *exciting causes* are: Sudden chills, exposure to wet and cold. *Predisposing causes:* A rheumatic diathesis.

Treatment.—First of all give a saline purgative and keep the bowels open by regulation of diet. Give bicarbonate of potash in large doses three times daily. If the temperature is increased, give two or three full doses daily, for two or three days, of salicylate of soda; locally, apply anodyne lotions of opium or belladonna. In the later stages, stimulating liniments are useful.

Chronic rheumatism may follow acute, or it can occur independently. When the disease is of a chronic character from the first, give bicarbonate of potash and iodide of potash; also give tonics. Use stimulating liniments, locally. Sometimes it is necessary to blister or apply the actual cautery.

A. E. BUZARD, M. R. C. V. S. L.
11 Seventh St, S. F.

Solano County Notes.

GOOD FRUIT PRICES — EDITORS PRESS:—The way things are booming in our little town at present is a sight for a stranger—in fact, it almost takes the breath away from the old settlers. The prices that fruit shipped from here is bringing in the East are paralyzing the grower, shipper and all concerned. Two to three cars a day are going East, while the Bank of Vacaville is cashing checks for San Francisco shipments to the amount of between $3C00 and $4000 per day, and the ball has only just opened. The weather so far this summer has been cool enough to have all fruit leave here in first-class condition; the thermometer has not reached 110° this season. Offers are made of 14½ cents for dried apricots, with a prospect of bringing 16 cents within a month. Sales of crops of fruit are being made at about what, one year ago, was the selling price of the land that they stand on. Yes, the fruit men have an inning this year. P.

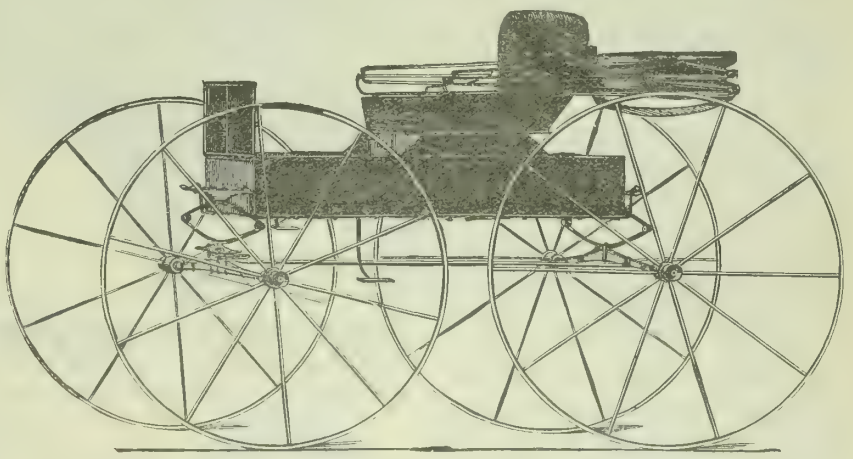
Vacaville, July 21.

California's Stallions.

I beg to announce that, with a view of perpetuating the forms and characteristics of the leading stallions of California, I am issuing a series of lithographic likenesses. Each portrait issued will be an acknowledged likeness, the result of a close study of the horse and an artistic treatment of the subject. In order to secure for the series an immense advertising value, from a breeder's point of view, 4000 copies, at least, of each portrait will be issued.

Terms, $100 for first issue of 100 copies. In quantity, for advertising purposes, copies will be furnished at low rates.

H. BOYD, Artist.
268 Golden Gate Ave., San Francisco.



FATAL EXPLOSION.—A dispatch from San Luis Obispo states that the boiler of Frazier's thrashing outfit exploded on the 22d, near Miles station, fatally scalding Fireman John T. Pryc, who died a few hours after; crushing the skull of Walter Kyle, who will probably die, and severely injuring Engineer Ed T. Frazier. Pryo and Frazier were blown 100 yards, and part of the engine, weighing three tons, was launched like a rocket over the heads of the gang at the separator, being thrown 125 feet.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,
—WITH—
Remedies for their Extermination.
BY MATTHEW COOKE.
Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 25 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price $4, postpaid. For sale by DEWEY & CO., publishers, 220 Market St., San Francisco.

Important Auction Sale

— OF —

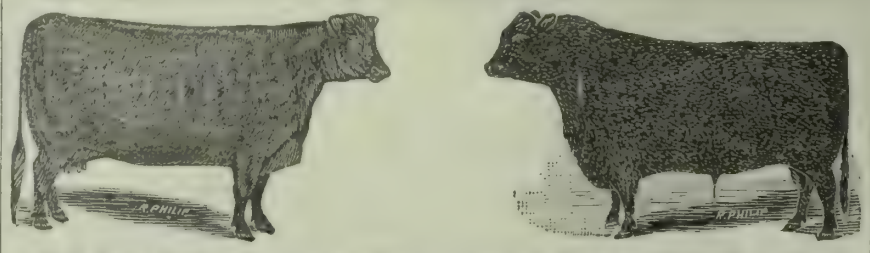
Standard and High-Bred Trotting Horses

— AND —

THOROUGHBRED HOLSTEIN CATTLE.

Property of J. H. WHITE, Esq., Lakeville, Sonoma County, Cal.

On Thursday and Friday, September 4th & 5th, 1890.



At RAILROAD STABLES, Cor. Turk and Steiner Sts., San Francisco.

On account of a contemplated change in business, we are authorized by Mr. White to dispose of all the high-bred stock upon his noted breeding farm at Lakeville, Sonoma County. This comprises over forty head of high-bred Trotting Stallions, Brood Mares, Colts and Fillies, most of them standard and all exceptionally fine individuals. They consist of the get of Stallions by Electioneer, Director, Antevolo and other noted horses. Most of the brood mares are with foal by Hernani, one of Electioneer's most prominent sons. Several have been bred to Director. Taken collectively they are, in size and form, the finest looking lot of trotters yet offered in California, and their breeding is upon the most approved speed lines.

The Cattle comprise over one hundred head of thoroughbred registered Holstein Cattle. The progenitors of this herd were selected of the choicest strains upon the famous breeding establishments East, and have been judiciously crossed with a view to develop to the fullest extent the milking strains. Mr. White has expended a large sum of money and great care in perfecting this band of cattle, and can justly claim it as one of the superior herds of the United States.

Catalogues are being prepared and will be sent on application only. Horses and cattle may be seen at ranch, six miles from Petaluma.

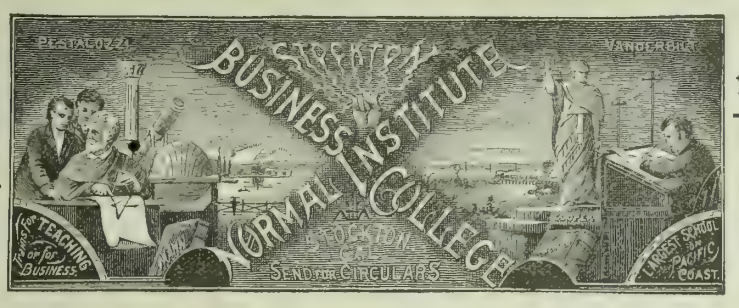
JUDSON POWDER,



The Only Reliable and Efficient Powder

For Stump and Bank Blasting. From 5 to 20 pounds blows any Stump, Tree or Root clear out of ground at less cost than grubbing. Railroaders and Farmers use no other.

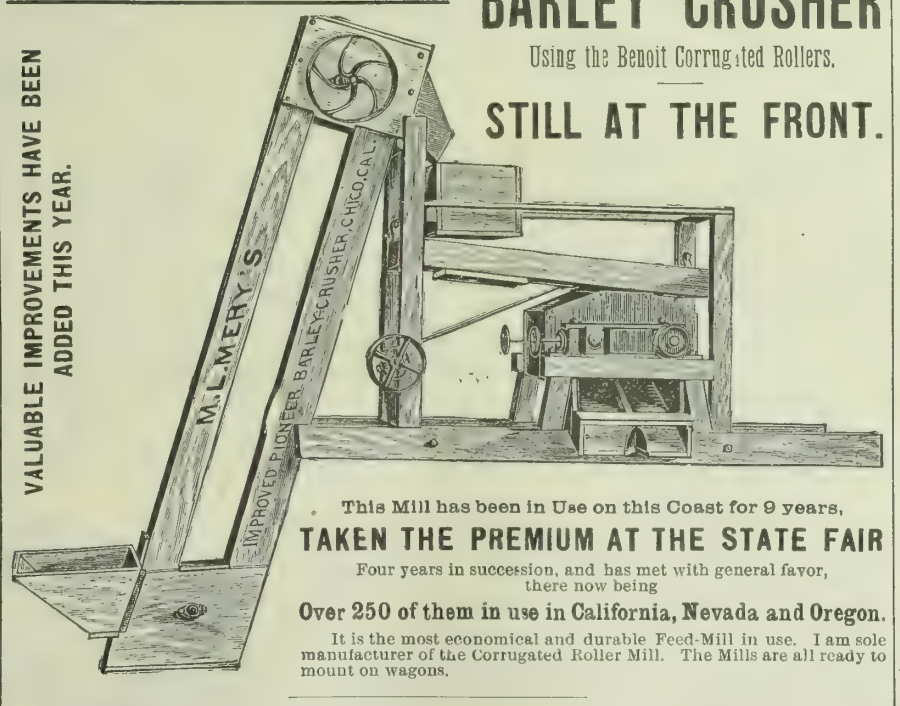
As other makers IMITATE our Giant Powder, so do they Judson, by Manufacturing a second-grade, inferior to Judson.

BANDMANN, NIELSEN & CO, General Agents, San Francisco.

EXCELLENT BOARD, $10 per Month.

FURNISHED ROOM, $3 per Month.

Occupies two elegant buildings, containing over 70 rooms. Employs the ablest teachers, has the largest attendance and is the most highly recommended of any private school on the Pacific Coast. Board, Room and Tuition for six months, $128. Board, Room and Tuition for fifty-two weeks, $244.



Circulars containing Rules, Rates of Tuition and Board, and Courses of Study sent free to any address; also, beautiful specimens of Penmanship. Address,

TRASK & RAMSEY, Stockton, Cal.

MERY'S IMPROVED PIONEER
BARLEY CRUSHER

Using the Benoit Corrugated Rollers.

VALUABLE IMPROVEMENTS HAVE BEEN ADDED THIS YEAR.

STILL AT THE FRONT.

This Mill has been in Use on this Coast for 9 years,

TAKEN THE PREMIUM AT THE STATE FAIR

Four years in succession, and has met with general favor, there now being

Over 250 of them in use in California, Nevada and Oregon.

It is the most economical and durable Feed-Mill in use. I am sole manufacturer of the Corrugated Roller Mill. The Mills are all ready to mount on wagons.

GRAINLAND, BUTTE CO., CAL., June 9, 1887.

Mr. M. L. Mery—DEAR SIR: We have used one No. 2 Roller Barley Crusher now for eight years and have used it steady during that time; have crushed 45 tons a day and the Crusher is as good to-day as when it came out of your shop. I am satisfied that it is the best mill made. You may reconstruct this testimonial to the best advantage for you and sign our names, for you cannot overrate the merits of your mill. F. E. REAM, JOHN P. SUTTON.

DURHAM, May 21, 1887,

Mr. M L Mery—DEAR SIR: In reply to yours of the 19th, would say that I crushed from two to two and a half tons per hour, but could crush three and a half tons if my elevators were large enough to carry the barley from the machine. The No. 1 machine I used at Gridley was run on a sack a minute, but if we got behind we could run through five tons an hour, and do good work. The machine I use here is a No. 2. Yours, WM. M. TAYLOR.

I thank the public for their kind patronage received thus far, and hope for a continuance of the same.

M. L. MERY, Chico Iron Works, Chico, Cal.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, July 23, 1890.

Trade in general produce has been quite active. The higher prices obtained this season for fruits, cereals, etc, speak well for the future, so far as farmers' financial condition is concerned. The fairly easy money market is in favor of sellers. At the East and abroad wheat has advanced under slight fluctuations. The following is to-day's cablegram:

LIVERPOOL, July 23.—Wheat— Firmer. California spot lots, 7s 1d to 7s 4d; cargoes off coast, 38s 3d@38s 6d; just shipped, 37s 9d; nearly due, 38s 3d; cargoes off coast and on passage, firm; Mark Lane wheat, firm.

Foreign Grain Review.

LONDON, July 21.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: Expectations on the acreage of 1889 has lessened 1,000,000 quarters as regards wheat, although oats and barley are uncertain. English wheat in London advanced 2s 9d in one fortnight. Trade in foreign wheat is disappearing, although the tone on Friday was somewhat encouraging. Spring-corn trade is in favor of sellers. The immense quantity of Maize afloat prevents an advance. Barley is slightly dearer. At to-day's market there was an extremely reduced supply of English wheat, the prices demanded outside being 40s. Foreign wheat was irregular. Californian was 9d dearer. Flour favors sellers. Maize is steady.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	July.	Aug.	Sept.	Oct	Nov.	Dec
Thursday....	7s2½	7s2½d	7s3½d	7s3½d	7s4d	7s4½
Friday	....	....	....	....	....	....
Saturday	....	7s3½d	7s4½	7s4d	7s4½	7s4½d
Monday	7s3½d	7s3½d	7s4½	7s4½	7s4½	7s4½
Tuesday	7s3½d	7s4d	7s4½d	7s5d	7s5d	7s5d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s0d	37s6d	38s0d	Firmer.
Friday.....	....	....	....	.....
Saturday.....	38s0d	37s6d	38s0d	Firm.
Monday.....	38s0d	37 6d	38 0d	Stronger.
Tuesday	38s0d	37s6d	38s0d	Firm.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
Thursday	94⅝	93⅝	93⅜	93½	94½	96½
Friday.....	....	....	....	....	....	....
Saturday.....	96⅛	94½	94½	....	....	96⅛
Monday	96	94½	94½	94⅝	96⅛	96
Tuesday.....	96⅞	94½	94½	....	....	96⅝

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	July.	Aug.	Sept	Oct.
Thursday.....	....	86⅞	88⅜	....
Friday.....	....	87½	89⅛	....
Saturday	....	88½	90	....
Monday.....	....	87⅜	89	....
Tuesday.....	....	88⅛	89½	....

NEW YORK, July 23.—Wheat—98¼c for cash, 94⅞c for August, 94⅞c for September, 96⅜@96½c for December, and $1.00⅛ for May.

CHICAGO, July 23.—Wheat—88c for August, 89¾c for September, 91½c for December, and 95¼c for May.

Discouraging Crop Prospects Abroad.

LONDON, July 20.—A week ago it was felt that the weather in England since the beginning of June had already become too grotesquely ridiculous a thing to be discussed in ordinary language. Since then there has been the heaviest rainfall known in any one week since 1878 and the whole six weeks' record is the worst since 1813. The havoc this continuous downpour has worked in the fashionable world of regattas, lawn fetes and riverside parties, is of no lasting consequence, but the direct pecuniary loss to the farmers has become something terrible. I came in this morning from Shepperton, 20 miles up the river, and saw literally hundreds of acres of meadows in which the cocked hay was four-fifths under water. Two bright, hot days in the middle of the week revived the hope that the wheat might after all be saved in something not too far below the average crop; but subsequent tropical rains and arctic temperature have dissipated this. Everybody admits now that it is likely to be the worst yield since the unprecedented disaster of 1879. The stock of English wheat is now all but exhausted, and under the influence of this and the evil prospects of the growing crop, prices have advanced about another shilling per quarter during the week. Much the same stories continue to come from the continent. The Russian rouble went up on the Berlin Bourse in sympathy with the general advance in silver, and there was a further advance yesterday owing to the demand to pay for Russian wheat. As to the real condition of the Russian crop, much uncertainty exists. The official report of the month makes a very gloomy showing, but it is suspected in Berlin that this is done to favorably affect exchange and that Russia, in fact, has a tolerable crop. If this be true, Russia ought to make a great deal of money, because all Europe will perforce be buyers.

Cereal Crop in Central States.

WICHITA, Kan., July 21.—The thermometer throughout the Arkansas Valley stood at 104° yesterday. The hot winds which prevailed all day have finished the destruction of many thousand acres of corn. A rainfall now would save only the corn in the very low lands.

KANSAS CITY, July 21.—The *Star* says: Yesterday was the hottest day of the year in the greater portion of Kansas, and the heat did still further damage to the corn crop. The most conservative estimates cannot now place the probable yield at half what was raised last year.

Dried Fruit.

NEW YORK, July 20.—The position of canned and most dried fruit favors sellers daily. Buyers fully realize the strong bearing the Pacific prices have assumed in the widened competing bids that must attend this season. Spot apricots in blocks are selling 25c higher than a month ago. No excitement in raisins. There is a line of buyers who regard the increased number of packers as a feature in their favor, consequently the standards are not persistently inquired about. A popular brand of prunes sold here for 9¼ to 12c, six sizes. Geo. W. Meade, who is back from Europe, states that he found much encouragement for a further opening of the English trade in American raisins and prunes. The latter are favorably spoken of by some good houses.

Hops.

NEW YORK, July 20.—Choice hops higher. The market was stiffened by several round lots taken for England brewing demand, but it was checked by the new figures offering light common to best new State, 18@23c; Washington, 19@22c; California, 18@21c; all 88's, 12@15c.

Wool.

NEW YORK, July 20. — Wool had a light trading here. Some good-sized parcels are in hopeful treaty. Stronger foreign markets impart some buoyancy of tone, but the buyers are not disposed to pay more money or fully support the continued extreme views at primal points. The run at present is upon a good cheap grade. Fifty thousand pounds spring California and 25,000 pounds scoured, private terms; 30,000 pounds, defective, do, 40@41c; 55,000 pounds spring Texas, 21@23c; 15,000 pounds XX and above, 33½c; 211,000 pounds domestic, 110,000 pounds foreign and 170 bales, private terms.

Boston reports a quiet market and an independent feeling among buyers on the price question. The sales are 2,124,000 pounds foreign and domestic, including 118,000 of California spring, 17@25c.

Philadelphia reports light trading and no disposition to pay top rates and, a considerable accumulation of stock.

BAGS—The market is weak at lower quotations. Hand-sewed standard-size are quoted at 6⅜@6½c.

BARLEY—The sample market has held strong at advancing prices under light offerings and good buying—speculative and legitimate. In futures, trading has been more active at strong prices. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—200 tons, $1.23½; 100 tons, $1.23⅜; 700, $1.23. Buyer season—100 tons, $1.30½; 100, $1.29⅞. Seller 1890, new—100 tons, $1.20; 100, $1.19 ₩ ctl. Afternoon Session: Buyer 1800—100 tons, $1.23¾; 200, $1.23; 100, $1.-29⅜. Buyer season—100 tons, $1.29⅜; 200, $1.-29½; 100, $1.29⅝ ₩ ctl.

BUTTER—The market appears to be working into better shape for the selling interest. Receipts are light and demand free.

CHEESE—The market shows continued improvement under lighter receipts and a good demand. The supply to draw from is light.

EGGS—Strictly choice fresh laid are strong at full figures. The demand is good.

FLOUR—The exports continue free. The market is reported firm at full prices.

WHEAT—The sample market has ruled strong under light business in this city, but active buying in the country at slightly higher prices than quoted here. In futures, trading on Call has been fairly active of slight fluctuations. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—600 tons, $1.43¾ ₩ ctl. Afternoon Session: Buyer 1890—100 tons, $1.43⅜; 800, $1.44; 200, $1.44½; 300, $1.44¾. Buyer season—100 tons, $1.50½; 500, $1.50¾; 400, $1.51; 100, $1.51¼. November—100 tons, $1.41¾ ₩ ctl.

Cereals.

The local wheat market has exhibited continued strength, with considerable quantities changing hands in the interior at advanced figures on quotations furnished by buyers in this city. As a rule, sellers part sparingly with their grain, only letting go enough to cover running expenses with now and then sales made to cancel matured and maturing indebtedness. Continued wet weather abroad creates a decided bull feeling, which is supplemented by the strength exhibited by silver. Free purchases of wheat in Russia have already brought the rouble into better demand at Berlin, causing an advance to obtain for that silver coin, while the Indian rupee (silver coin) and Council Bills sell for more money in England. This, of necessity, has a favorable influence on the English and Continental wheat markets. The scarcity of spot and near-by vessels is against wheat, for it keeps charters strong in the near future. The tonnage on the way to this port is about 18,000 registered tons larger than at this time in 1889, while the tonnage on the way to British Columbia, Puget Sound and Portland is more than twice as much. This shows well for an ample supply of tonnage later on.

Barley has not only held strong, but shows a decided advance. Toward the close the market, while more quiet, is no lower. The tone to the market exhibits a degree of strength that looks well for the selling interest. It also acts as if there is quite a short interest on the market, which, combined with the legitimate demand, will not only maintain values around present quotations, but as the season advances will send prices to still higher ranges. The consumption of brewing promises to be larger than it was in 1889.

Oats are firmly held under light offerings and a fair demand. The stock of old is light, while the crop of new does not promise any material change from that of last year.

Corn shows more strength with an advance obtainable. Crop prospects in this State are not so favorable, while in the Central States they are decidedly worse.

Rye shows continued strength at last week's advance.

Feedstuffs.

Ground feed is in good demand at a slight advance for bran, middlings, ground barley and feed meal.

Hay is without essential change, the demand and supplies being about equal. There is a settled conviction that the crop this year turned out much better than claimed, while in Nevada there was a larger out-turn than for years. While the crop turned out well, yet the increased consumption will, it is claimed, keep the market well up throughout the season.

Fruits.

San Francisco continues the dumping ground for poor fruits, which, except under an active demand, move slowly. Fine large fruits of all kinds meet with a quick demand. The market is better supplied toward the close; this is largely due to the fruit being too ripe for overland shipment. Plums are slow, prunes are scarce, peaches are in liberal supply, poor apricots are in free receipt, green gages are in good supply, and pears are in freer supply with quality generally poor. Choice Bartlett pears are wanted. Apples are coming in more freely, causing a shading in prices. Figs are firm.

Berries do not show any material change.

Grapes begin to show an improvement in quality as receipts increase. It is claimed that owing to the high prices for dried fruits, more attention will be given to drying grapes. Wineries are in the market for Zinfandel, Mission and Mataro grapes. For new dried grapes, 3@3½c is freely bid for future delivery.

For dried fruits the market continues strong and active. The market is quotable as follows, with fancy selling at a slight advance over quotations: New evaporated peaches, 16@17½c; new bleached apricots, sacks, 13½@15½c; boxes, 15@16c per lb. We quote futures for new crop at 12@14c per lb for White nectarines, 9@12c per lb for Red nectarines, and 7@10c for California prunes.

For 1890 raisins there is a good demand, with reported sales for September and October delivery made at $1.75@2.25 for layers.

Live-stock.

Bullocks continue weak, under liberal offerings. Large butchers look for an improvement soon. Mutton sheep are strong at full prices, with another advance looked for at an early day. Hogs move slowly, with packers doing little. For the block, prices keep up. In horses and milch cows, there is nothing new to report.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c ₩ lb. dressed, 7@8c ₩ lb.; heavy, 3⅞@4½c ₩ lb.; dressed, 5¾@6¼c ₩ lb. Stock hogs, 4¼@4⅝c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¾@—c ₩ lb.: second quality 5@5¼c ₩ lb.; third quality, 4¾c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7½@8c ₩ lb.; ewes, 7@7½c ₩ lb.; lamb, spring, 7½@8½c.

Vegetables.

Garden truck is in liberal supply causing lower prices for beans, cabbages, cauliflowers, etc. Tomatoes fluctuate with the tendency downward. Green corn is slightly lower under free offerings.

Onions have made a slight advance under light receipts and a good demand. The demand is both local and export.

Potatoes show a stronger tone under a good demand and only moderate receipts. Overland shipments continue free. Nevada advices are confirmatory of a larger crop than for years, which gives that State a surplus from which California dealers can draw. Oregon has a good crop.

Miscellaneous.

Poultry shows a firmer tone, with some slight changes reported.

Beans are coming in more freely and, as buyers are offish, concessions are necessary to induce free purchasing.

Trucksters have been peddling honey, owing to the high prices for fruits. This causes honey to move more freely. Receipts are free, which causes weak prices. Choice, white comb is quotable at 9@11c, and in 1-lb frames 10½@12c, ordinary 1c less. White extracted sells at 5@5½c, and amber, 4@5c.

Hops are very strong, with 20c more freely bid for future delivery of 1890. Latest advices from abroad report that the English and German crop outlook promises a reduction of from 25 to 35 per cent, which causes the higher markets abroad.

Wool is dull, with some holders looking for better prices later on. Eastern markets are reported unchanged.

Overland shipments in last month aggregate as follows: Beans, lbs, 317,460; brandy, gals, 13,259; wine, gals, 281,525; canned goods, lbs, 1.459 670; dried fruits, lbs, 110,250; citrus fruits, lbs, 1,400,840; deciduous fruits, lbs, 2,798,310; honey, lbs, 118,340; hops, lbs, 182,890; mustard seed, lbs, 33 400; onions, lbs, 226,430; potatoes, lbs, 1,760,000; raisins, lbs, 32,330; wool, grease, lbs, 2,194,040; pulled, 123,940; scoured, 532,710.

Exports by sea the past week aggregate as follows: Wheat, ctls, Liverpool, 52,449. Flour, bbls, Nanaimo, 109; Kahului, 275; Cork, 16,250, Honolulu, 1356; China, 13,483; Japan, 3103; Vladivostock, 750. Dried fruits, lbs, Nanaimo, 500; Honolulu, 589; China, 125; Japan, 850. Barley, ctls, Kahului, 1053; Honolulu, 2768. Beans, lbs, Honolulu, 30,310; China, 18,126; Victoria, 6725. Wine, gals, Honolulu, 4361. Bran, sks, Honolulu, 2125. Raisins, bxs, Honolulu, 117. Hops, lbs, Japan, 300; Victoria, 250. Rye, ctls, Japan, 8000.

From the *Commercial News* of July 23d the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port.....	257.412	241,456
On the way to neighboring ports	19,264	26,374
In port, disengaged.....	11.246	20,327
In port, engaged for wheat....	43.340	55.020
Totals.....	331,262	343,177

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to July 18, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls.....	344 522	528,842
Flour, bbls.....	27,638	72,970
Barley.....	3,910	9,203

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

California Fruits East.

CHICAGO, July 17.—The Earl Fruit Co. sold Bartlett pears to-day at from $2.90@3.50; Purple Duane plums, $2@2.45; Bradshaw plums, $2.40@2.55; German prunes, $2.40@2.50; Early Crawford peaches, $2.50@3 35; Peach plums, $2.95; Hale's Early peaches, $1.60@1.75; Washington plums, $2.40.

Porter Bros. sold three carloads. Bartlett pears $3 10@3.40, except one lot of small, slack-packed stock at $2.20@2.25; Crawford peaches, $3.65@3.80; Tragedy prunes, $3; Gold Drop plums, $2.60; Japan plums, very small, $1.80; German prunes, $2.40@2.60; Hale's Early peaches, $1.90; Columbus plums, $2.65; Washington plums, $2 60, except one lot in poor order, which went at $1.75@1.90.

CHICAGO, July 18.—The Earl Fruit Co. sold peach plums at the following prices: Half crates, $4.10, boxes, $2.75; Washington plums, $3; apricots, 65c@$1.65; Hale's Early peaches (small), $1.35; Early Crawford, $2.25@2.65.

CHICAGO, July 18.—Porter Bros. Co. sold three carloads of Bartlett pears to-day at $2.80@3.15; Washington plums, $1.10@1.90; Columbia, $2.25; German prunes, $2.25@2.55; Peach plums, $2.70@4.20; Crawford peaches, $1.80@3.05; grapes, half crates,in poor order, $1.50@2.55; Purple Duane plums, $2.25@2.65; Royal Hative, $1.90@2.20; Figs, small boxes, 60@65c; Hale's Early peaches, $1.50@190; Nectarines, $1.75@2; Bulgarian prunes, $2.40.

CHICAGO, July 19.—The Earl Fruit Co. sold two carloads of Japan plums at $3.20 per half crate; Peach plums, $2.80@3.20; Gros prunes, $3.15; Crawford peaches, $2.50@2.90; Bartlett pears, $3.05@3.10; Bradshaw plums, $2.30@2.70; Purple Duane, $1.90@2.65; Columbia, $2.60; Royal Hative plums, soft, $1.50@1.80; apricots, soft, 65c@$1.35.

Porter Bros. Co. sold three carloads of Bartlett pears at $2.95@3.50, except one line of very fancy, which went at $4.20. Hale's Early peaches went at $1.50@2.15; Crawford $2.40@3; Purple Duane plums, $1.90@2.40; German prunes, $2.35@2.60. Barry prunes, $2.35; Washington plums, $1.35@2.20; Magnum Bonum plums, $2.40; Bradshaw plums, $2 40.

NEW YORK, July 20.—California fruit has been selling at good figures throughout the past week, notwithstanding a supply larger than in any previous week. An auctioneer has had sales of car lots which have grossed as high as $2500, and in the face of heavy supplies this is certainly good. The fact is well illustrated that the New York fruit market will bear upward and keep firm under the most trying circumstances. Prices ran about as follows: Bartlett pears, $3.50@3.90; Early Crawford peaches, $2 95; Purple Duane plums, $1.75@2.25; Purple Bradshaw plums, $3.30, also Yellow Egg plums, $2.80; Peach plums, $3.80; German prunes, $2.60@2.65. A good many members of the trade were stuck on apricots, owing to the fruit having been heated and keeping badly. Raisins, L. M. 3-crown, $2.15@2.40.

NEW YORK, July 20.—One firm sold 17 cars of California fruits at auction—a heavy percentage in poor order. Good to best Bartletts sold at $3.10@4.55; other, $1.10@2.60; Crawford peaches, $2.95; Hale's, $1.10@2.70; some, 45@80c. Apricots had a wide range of 70c@$2.35. German prunes, $2.15@3.55; Tragedy, $2.60@3.30; Peach plums, $1.75@3.85; Duane, $1.75@3.50; Hative, $2.60@3.50; Bradshaw, $3.30@5.10; Columbia, $2 85; Egg, $2.65@2.80; Gold Drop, $1.

California Fruit Union, two cars. Many rejections and part of the apricots were actually leaking. Merchantable prices: Hale's Early peaches, $2.25@3.05; poor, $2.05; Crawford, $1.05@2.20; Bartletts, $3 85@3.80; apricots, 85c@$1.50; Peach plums, $3.55; Duane, $2.40@3.15; Quackenboss, $1.80; German prunes, $3.35.

CHICAGO, July 22.—The Earl Fruit Co. sold at auction to-day Bartlett pears at $3.10@3 20; Peach plums, 95c@$2 95; Columbia plums $1.60@2.65; German prunes, $1.70@2.55; Purple Duane plums, $1.70@2 10; Bradshaw plums, $2.10@2.45; Crawford peaches, $2.65; Royal Hative plums, $1.40@1.70; apricots, $1.20@1.40.

CHICAGO, July 22.—Porter Bros. sold seven carloads of fruit to-day: Bartlett pears brought $2 75@3.25; peaches, $1.05@3.25; German prunes, $2.65; grapes, $1.35@1.75; nectarines, 70c@$1.45; Purple Duane plums, $1.90@2.25; Kelsey Japan plums, $1.45; Walling plums, $1.75@3.05; Clapp's Favorite pears, $2.45@2.70; figs, 35@85c.

NEW YORK, July 22.—E. L. Goodsell sold at auction to-day four cars of California fruit as follows: Bartlett pears, ripe, $2.25@3 10; Purple Duane plums, $2.25@2 95; German prunes, $2.70.

CHICAGO, July 23.—California green fruits are inclined to be very easy, but no material decline. The supply is fair, several cars having lately come in. The demand is moderate but not large. Apricots, 20-lb. boxes, $1.50; Peaches—Hale's Early, $1.50@2; Crawford's, $1.75@2; German Prunes, $2.50@2.75; Plums—Purple Duane, $2.25@2.50; Royal Hative, $1.75@2; Pears—Bartlett, $3@3.50; Clapp's Favorite, $3@3.50; Sweetwater Grapes, $1.50@2: Nectarines, case of four baskets, $1@1.50. Hops are firm, for good qualities will not be ready for some time to come. Brewers are in want of stock and choice grades are very fair sale. Common and low grades at the same time are not cared for. Washington, choice, 23@24c; prime, 21@23c; fair, 18@22c ₱ lb; California, choice, 22@24c; fair to good, 19@22c; Oregon, choice, 18@23c. Beans are more active. The market is also strong at the advance in prices recently noted. During the preceding period of dullness stocks in all quarters were allowed to become very small. There has resulted a simultaneous flow of orders from all quarters, and in turn a marked improvement in the demand here, with a result favorable to sellers. Crop advices are rather conflicting; some time ago they were generally favorable. Since then there has been some change, and in several instances receivers say their correspondents in bean-producing sections do not give very glowing prospects. Present prices range as follows: California Lima beans, choice, 5¼c per lb; common, 2@4c.

CHICAGO, July 23.—The Earl Fruit Co. sold California fruit to-day as follows: Bartlett pears, $2.85@3.05; peaches, $1.50@3.15; grapes, $1.55@1.75; plums, $1.80@2.70.

BUGGIES AND BUCKBOARDS.—A complete assortment of vehicles in every grade and style. For circulars write Frank Brothers, San Francisco.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING JULY 15, 1890.

432,116.—EXCAVATING APPARATUS—H. Casebolt, S. F.

432,373.—DOUBLE-ACTING PUMP—J. M. Clark, Colfax, Wash.

432,119.—WINDOW-SASH HINGE—G. D. Crocker, Oakland, Cal.

432,021.—CULTIVATOR—Wm. Davis, Los Angeles, Cal.

432,121.—SUPPLYING GASES AND LIQUIDS TO MOVING VEHICLES—L. J. De Puy, Phœnix, A. T.

432,133.—WASHING MACHINE—W. H. Gilstrap, Pixley, Cal.

432,307.—LAWN-MOWER ATTACHMENT—R. R. Grimes, Santa Monica, Cal.

432,162.—COVERING FOR PIPES—H. M. Hanmore, Santa Cruz, Cal.

432 140 —SAFETY RELIEF VALVE—A. D. Kilborn, Oakland, Cal.

432,420.—COTTON HARVESTER—J. H. Masters, Stockton, Cal.

432,191.—WIRE-ROPE TRANSMISSION—B. Mc Intire, S. F.

432,065.—LAWN-MOWER ATTACHMENT—W. C. McQuillen, Los Angeles, Cal.

432,320.—FRUIT-BOILER—Alice W. Miller, Ashland, Or.

432,427.—FUSE-CAP FASTENER—N. W. Moody, Fresno, Cal.

432,146 —WINDMILL—O. W. Parker, Oakland, Cal.

432,336.—EXPLOSIVE COMPOUND—S. D. Smolianinoff, S. F.

432,150.—VEHICLE RUNNING GEAR—Geo. A. Stom, Golden Gate, Cal.

432,217.—SAND-BAND—Jas. Van Curen, Ferndale, Cal.

The following brief list by telegraph, for July 8, will appear more complete on receipt of mail advices:

California—Daniel Best, San Leandro, variable eccentric; Francis A. Bishop, San Francisco, rotary watermeter; Harrison I. Briggs, assignor of threee-fourths to A. Myers, J. B. Birdsell, South Bend, Ind. and W. T. Carskadon, Los Angeles, split pulley; Oliver C. Christian, Brodie, steam food cooker; William T. Cottier, Oakland, ventilator; Evert Dewitt, Hanford, windmill; James C. Gould, San Jose, railway cattle guard; George F. Gray, San Francisco, cable railway construction machinery; R. Hall, San Francisco, salve; Arthur C. Harper and C. S. Hamlin, Los Angeles, machine for punching and riveting; Wallace S. Holland, Pasadena, sash or blind holder; Robert L. Hottel, Cedarville, middlings purifier; Byron Jennings, San Jose, conduit electric railway; Howard Legge, San Francisco, pencil box; Thomas McConnell, San Francisco, loading elevator; Edward C. Sessions, Oakland, street railway car. Washington—Syerling W. Baker, Tolalo, stump-puller; Isaac N. Groves, Montesano, lifting jack. Oregon—Charles C. Hogue, Corvallis, water-wheel. Utah—Bernard R. Maybeck, Salt Lake City, assignor of one-half to A. White, Kansas City, Mo., toilet fan.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,
No. 220 Market St., S. F.

$500,000

TO LOAN IN ANY AMOUNT AT THE VERY LOWEST market rate of interest on approved security in Farming Lands. A. SCHULLER, Room 8, 420 California St., San Francisco. **

$3,250,000

TO LOAN ON MORTGAGE ON RANCHES AND CITY real estate below market rates. HOWE & KIMBALL, 508 California St., S. F. **

FISH BROS. WAGONS of pioneer merit and sold by the trade everywhere. Ask for them or write Frank Brothers, San Francisco.

Large Eggs Again.

EDITORS PRESS:—I have just read of a hen's egg which was laid at South Bend, Washington, measuring seven inches and five-eights by six inches and one-fourth. I can beat that. I have a Plymouth Rock hen whose eggs are always large, but a few days ago she distinguished herself by laying an egg which measures eight inches by 6⅛ inches and weighs almost 3¾ ounces.

If anybody can beat that, let us hear from them. A. S. WIESTER.

2933 Folsom St., S. F.

THE Martinez cannery is employing all the girls it can get canning apricots, and is short-handed.

ROAD CARTS in great variety, also our $35 Phaeton Body Cart. Write for Circulars, Frank Brothers, San Francisco.

A NEW BOOK.—NOW READY.

CALIFORNIA FRUITS

—AND—

HOW TO GROW THEM.

A MANUAL OF METHODS WHICH HAVE YIELDED GREATEST SUCCESS; WITH LISTS OF VARIETIES BEST ADAPTED TO THE DIFFERENT DISTRICTS OF THE STATE.

BY EDWARD J. WICKSON, A. M.,

Lecturer on Horticulture in the College of Agriculture, University of California; Horticultural Editor of the PACIFIC RURAL PRESS, of San Francisco; Secretary of the California State Horticultural Society; President of the California State Floral Society, Etc.

Contents.

PART I: GENERAL.—The Climate of California and its Local Modifications; Why the California Climate Specially Favors the Growth of Fruits; The Fruit Soils of California; The Wild Fruits of California; California Mission Fruits; Introduction of Improved Fruit Varieties.

PART II: CULTURAL.—Clearing Land for Fruit; The Nursery; Budding and Grafting; Preparation for Planting; Planting the Trees; Pruning Orchard Trees; Cultivation; Fertilizers for Fruit Trees and Vines; Irrigation of Fruit Trees and Vines.

PART III: ORCHARD FRUITS.—The Apple; The Apricot; The Cherry; The Peach; The Nectarine; The Pear; Plums and Prunes; The Quince.

PART IV: THE GRAPE.—Rise and Progress of the Grape Interest; Propagating and Planting Vines; Pruning and Care of the Vine; Grape Varieties in California.

PART V: SEMI-TROPICAL FRUITS.—The Date; The Fig; The Olive; The Orange; The Lemon, Lime, etc.; Minor Semi-Tropical Fruits.

PART VI: SMALL FRUITS.—Berries and Currants.

PART VII: NUTS.—Nut-Growing in California.

PART VIII: FRUIT PRESERVATION.—Fruit Canning, Crystallizing and Drying.

PART IX: FRUIT PROTECTION.—Injurious Insects; Suppression of Injurious Animals and Birds; Protection from Winds and Frosts.

PART X: MISCELLANEOUS.—Melon Growing; Fruit Packages.

THE PELTON WATER MOTOR

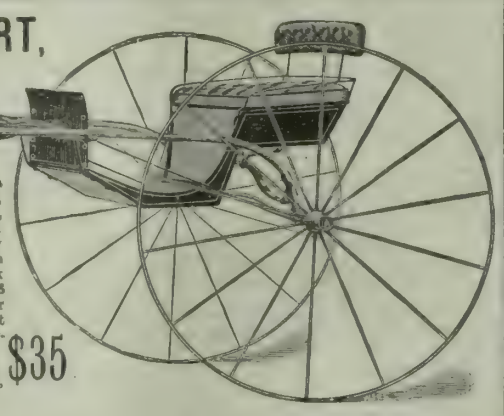
Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.

It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.

These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.

The cost, considering capacity and efficiency, is fully 50 per cent less.

Circular, giving full information, sent on application.



Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

THE PELTON WATER WHEEL CO.,

121 Main Street, San Francisco, Cal.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. H. G. ROOT, M. C., 183 Pearl St. New York.

The Cylinder Grader

Has proved the most rapid working machine for GRADING PRUNES, BOTH GREEN AND DRIED, that has ever been introduced. Wherever it was used last season it gave perfect satisfaction, both in the quantity of fruit graded and the way it did the work. The capacity is practically unlimited, as it will grade the fruit perfectly as fast as it can be shoveled into the machine.

I make all sizes of this Grader, from the large 30-inch cylinder down to a small hand machine for the use of growers whose crops are small. I furnish the Grader mounted complete, or the Cylinder alone if, as is often the case, the purchaser prefers to mount it to suit himself.

Send for circulars and prices.

THE INVASION OF BABYLON BY CYRUS THE ELDER, B. C. 538.

The Fall of Babylon.

The origin of Babylon is wrapped in obscurity and its exact site was not a matter of controversy until recent explorations uncovered the ruins of the city and disclosed material which verifies many of the statements of the ancient historians.

According to Herodotus the city of Babylon stood on both sides of the river Euphrates, in the form of a square, of which the sides were 15 miles each. The walls inclosed rather populous districts than cities, so that the whole population might find shelter within the space inclosed. Though the area of the city was thus large, its chief buildings were adjacent, and it was at this part of the city that the artist chose to depict the wonders of the city and the entrance of the invaders. It will be remembered that Cyrus the elder diverted the river Euphrates from its channel while Belshazzar was feasting and thus prepared the way for the entrance of his men through the old river bed which passed beneath the walls of Babylon. Thus the great city fell into the hands of the invader in the year 538 B. C.

It was during this crowning disaster to the greatest city of the East that the artist times his portrayal. In the uncovered bed of the stream the troops of Cyrus are seen advancing, while the grounded ships are burned to light their pathway. On each side of the river are seen the two great palaces, while on the farther side are the temple of Belus and, beyond, the unfinished tower of Babel. Fire is attacking the proud structures on all sides. In the foreground, lighted by the conflagration, are seen the guests at the feast of Belshazzar coming forth from feasting to carnage. Upon the right is a scene in the "hanging garden;" the flight of the inmates from the burning palace.

This "hanging garden," which is always suggested when the name of Babylon is spoken, the Greeks regarded as one of the Seven Wonders of the World. This singular structure, which is ascribed to Nebuchadnezzar, was a square, each side of which measured 400 Greek feet. It was supported on several tiers of open arches, built one over the other and sustaining at each stage or story a solid platform, from which the piers of the next tier of arches rose. The top of the building, which was about 75 feet high, was covered with a large mass of earth, on which grew not only flowers and shrubs, but trees of a large size.

Boys and Girls and Fruit.—In the central part of the State there seems to be plenty of help available for the fruit-growers, though in some parts distant from towns and cities there has been scarcity of help and high wages complained of. The *Yolo Mail* says: "Every orchard of any importance affords employment for at least 20 boys and girls; and in some of the larger orchards as high as 70 are employed. One of the noticeable features is the scarcity of the Chinese in the orchards. No doubt the fruitmen have about realized that one good thrifty and industrious boy or girl is worth two Chinamen. During the last week about 1000 boys and girls were given work in the Winters and Vacaville orchards. The girls receive 20 to 25 cents per hundred pounds for picking. Some of the ladies who are fast pickers earn on an average of $2.50 per day."

To Advance Horticulture.—The Illinois Board of Horticulture has decided to invite the various National, State and other prominent horticultural and floral societies and nurserymen's and forestry associations to meet in Chicago on the 27th of August to take action on the best method of properly representing the horticultural interests at the World's Fair.

FRUIT PRESERVATION.

Prunes in France and California.

EDITORS PRESS:—In a letter addressed to me some time last winter, Mr. J. P. Koch of San Jose, a gentleman much interested in the prune business in California, remarked that he knew of some parties here who were seriously thinking of going to France and there buying up the ripe green prunes, dry and cure them in the California style and export them to New York in competition with our own prunes, of course, to be sold as ours, for cooking purposes, and not to be eaten out of hand.

I replied to Mr. Koch that such a proposition couldn't be carried out, and would have to be abandoned as impracticable, for the French didn't have large, regular prune orchards as we have in California, the largest number on one owner's place being from 100 to 500 trees, even orchards of 1000 to 2000 trees being very scarce in that country, and that the French never pick their prunes inside of a week as we do here, and for the sake of making competition to the "sauce" article of California would not for any consideration jeopardize their more valuable crop of dessert prunes or prunes to be eaten out of hand, without which the prune business would have for them very little profit. In the St. Catharine prune district, I added, such a speculation could be carried out more successfully, because there they do the picking as we do here, parties buying up the whole crop and drying it themselves, but in the d'Este district it could not be done.

In the meantime, Mr. Koch had left for an extended tour to France and Spain, to study there the olive, orange and prune, so my letter was sent to him there and he received it while at Bordeaux this spring. Now, as I think that Mr. Koch's letter contains very interesting facts in regard to the prune business, I have taken the liberty to send it to you for publication, in the expectation that it will prove of much interest to the readers of the PRESS.

Mr. Koch's Letter.

BORDEAUX. May 2, 1890.

Felix Gillet, Esq., Nevada City, Cal.—DEAR SIR: On arriving yesterday from Spain, where I spent some time in visiting the various olive and orange orchards and vineyards, which, by the way, I found in general appearance far inferior to our California plantations, I received via Holland your favor of March 25th, addressed to San Jose. Before going to Spain I made an extended visit to the valley of the Lot-et-Garonne and found, as you say, very few prune orchards of any size and none planted in the way we have them in California.

Besides that, the trees look all very bad and although I did not see that orange scale and other insects (a few caterpillars excepted) on them that we have in California, the poor looks of the trees satisfied me that the soil must be very much exhausted. Still they produce some fine fruit, although in quantity not more than one-half of our California trees, and I am perfectly sure that if our trees were thinned out as much as the trees here, we would have at least as large prunes as the largest fruit in France. I showed some of the prunes I dried in San Jose, of the largest, to several of the growers and dealers here and they all pronounced them fine fruit, although they preferred the taste of their French prunes here. I am myself of the same opinion. To eat out of hand I prefer the French prune as cured here, which, however, is an exceedingly simple way. They just place them on wooden trays in a large bread oven, where there is very little or no circulation of air and where they do not heat the air continuously, but only from time to time. As most farmers have only a few trees, and they generally sell their fruit dried in that way, they can, of course, afford to dry them in that slow way. Whether this alone causes that different taste, I do not know; I hardly think so. The way to blacken the fruit inside and outside is very simple, too. If ever the American market wants them that way, nothing will be easier.

The Americans whom I mentioned in my last, intended to buy up green ripe fruit in France and dry them in the California way; they have decided provisionally not yet to commence operations, as they find they would have to pay at least two cents per pound all around to the farmers, and unless similar prices are paid in California, they did not consider it likely to be profitable to lay out capital for a plant in France.

Although I agree with you, as I said before, that to my taste the French prune in France to eat out of hand is better than the California, it is a fact that several of the largest dealers in New York informed me for certain that our California prunes placed size per size against the imported French, our prunes would sell at one cent per pound more than the French. The imported French sold last year in New York at 6c to 6½c per pound for the four sizes in boxes, caused a loss of from 1c to 2c to the French shippers.

I made special inquiry about the way of picking, and found that they pick the fruit just exactly as we do; as soon as the first prunes commence to fall, they go around the trees, shake them a little and then pick them up to dry in their ovens. They do so every four or five days, or those who have only a few dozen trees, as most of them have, go around once a week. The women and children then grade them by hand as they come out of the oven, and when the whole crop is thus dried they sell them at the market in the nearest village where they are bought by various buyers who either ship them on their own account or sell them to Bordeaux merchants; some, like Fau, Goudillot, Violet, Dafour and others, then cure them over again and pack them in air-tight boxes and tins, and ship them all over the world.

I had read in California papers before leaving California that prune trees were planted in France in a very large way wherever the phylloxera had destroyed vines, etc. That report is entirely unfounded. Outside of the Valley of the Lot and Garonne, there are but very few prune plantations anywhere in France, and as Mr. Fau, who has been in the prune business all his life, informed me, they had several times tried to grow the Prune d'Ente in other parts of France, but always without success. He said the only place where they could grow the same *Prune d'Ente* was in California, and that only for those prunes he was afraid of competition. Mr. Fau, by the way, did not know that I came from California, and as I saw him in company of some Frenchmen, I had no occasion to inform him.

In conclusion I may say that I consider the future of our California prune industry very good indeed. The crops in France are rather diminishing than increasing, and with the increased popularity of our California prunes, and with the rather limited area where even in California they can be grown profitably, I think those who own good prune land in California will never regret planting and raising prunes, provided good care is taken of orchards and trees.

J. P. KOCH.

Mr. Gillet's Comments.

You will notice that in his letter Mr. Koch falls into the very same mistake that so many of our people do in California, when comparing the fourth and fifth grades of the French (the only grades exported to this country outside of "sauce grades") with our best California grades. The first grades of the French under the name of "Imperials" go mostly to the capitals of Europe, and sell on the London market, as Mr. Coates, who was there a year ago, informed your readers, at 35 cents per pound *wholesale*. Let it be well understood for once that the first grades of prunes of the French (which are all to be eaten out of hand as dessert prunes) never come to this country, only the inferior grades, part to be eaten out of hand, part for cooking. Of course, we can easily beat with our best grades of prunes the inferior or "sauce" grades of the French, but mind you, not the "Imperials," the very grades that make the prune business pay so well in France.

Mr. Koch thinks that if our trees were thinned out we would have as large fruit as they have in France. This is a mistake, for it is not by thinning out the fruit that the French obtain large prunes. Then thinning out so heavily loaded trees as our trees are in California would not pay, and I doubt very much that any good results could be so obtained. It is a very tedious and slow work to thin out a well loaded tree; I tried it once and gave it up. Then what is the use for us to bother trying to obtain as large prunes as the French do, which are sold to be "eaten out of hand," when there is, as you may say, no market for them in this country; as the RURAL PRESS said in the issue of January 25th of this year, "the American people don't want prunes to eat out of hand—they prefer peanuts; but they do want 'sass'—millions of tons of it." I suppose the PRESS to be right in its sweeping assertion, so then we should be contented in growing prunes of the size we do, as they are all destined to be turned into sauce, and for sauce purposes a small prune will do as well as well as a big one, so it is said. Mr. Fau of Bordeaux, when he said to Mr. Koch that only from California prunes was he afraid of competition, of course meant "dessert prunes"—the first five grades—which are never turned into sauce; as to the "sass" article, what did he care, for he doesn't handle it.

It is to be regretted that Mr. Koch while being in Lot and Garonne, didn't go to the very centers of the prune district at Clairac, Villeneuve, Montclar, and examine the various patterns of driers used there, for only the small farmer who owns but a few trees uses an oven to dry his crop of prunes. At Clairac and Villeneuve are held in the fall of the year a "concours" or competition prune fair, and there can be seen over 20 different driers competing for premiums awarded to the best working driers.

Last spring I received from a prominent prune-grower of the Valley of the Lot, a letter in answer to queries I had put to him in regard to prune-growing. Here is an extract from his letter:

> There do not exist here what could be called properly "prune orchards," prune trees being planted scattering around anywhere and everywhere; on the larger farms they are planted in rows, and the rows far apart, from 30 to 90 feet; the interval between the rows being planted into wheat, corn, potatoes, hay, etc., or grapes; this is the reason why there does not exist here a special *personnel* for the prune as it does for the grape; it is the hands employed on the farm that do the pruning of the trees, picking and curing of the fruit. Sometimes the largest farmers hire men well versed in pruning prune trees, who are paid from 50 to 60 cents per day and board to pick prunes; a woman is paid from 15 to 20 cents per day and board.
>
> I would like very much to know your special method of preparing your prunes, which I found very well prepared and so nicely preserved, that is, so soft, so well flavored and yet well cured.

The last paragraph refers to prunes of my own growing and curing which I sent with my request for information. FELIX GILLET.

Nevada City, July 23, 1890.

[We have to thank Mr. Gillet sincerely for this most interesting contribution to prune knowledge.—EDS. PRESS.]

AGRICULTURAL SCIENCE.

An Experiment With the "Curl Leaf" in the University Orchard.

EDITORS PRESS:—With the hope of finding out something of this in many places troublesome disease of the peach, and also of a preventive or some stage in the life history of the fungus in which it might be checked, a few experiments were undertaken in the University orchard at Berkeley the past spring. At that time no remedy was known; since, some practical growers have found successful means of combating it, and these experiments now deserve no further credit than that they were intentional and not a matter of chance.

From the start, two objects were constantly kept in view, viz: To get facts as to the life history of the fungus, and the use and effect of fungicides. Dr. Galloway of the Department of Agriculture considered the chances of a successful outcome to be very small, as the weight of opinion of those who had studied this fungus and its relatives was that this one would prove to be a perennial, that is, to live in the soft tissues of the twigs from year to year, pushing out with the buds in the spring. If this had proven to be true, all treatment with sprays would be useless, since to remove the disease all buds and young twigs must go too. To test this matter, Dr. Galloway suggested the use of paper bags to cover a few twigs, and this was tried with results given further on.

Not so much with the hope of accomplishing the purpose for which these experiments were begun, but with the intention of destroying any spores that might be clinging to the buds of the tree and to the rough bark, an ammoniacal copper carbonate solution was applied to an Elruge nectarine, and its mate (these trees stand in pairs) left untreated. This variety is as badly affected as any, and the many swollen twigs of last year's growth indicated the severity of the disease. The result of the spray was surprising; the untreated tree, with the first appearance of the leaves, showed signs of the disease, and later became a mass of curl, showing barely a healthy leaf. The sprayed tree came out strong and healthy, and only a few buds, mostly at the tips of the upper twigs, gave signs of the disease. The condition of some twigs, chosen to represent about an average, will best give an idea of the difference between the two trees. Six small branches from each tree were taken and the buds counted. The result was 151 buds of the untreated tree all showing curl, and of these, 118 showed it badly: of 189 buds of the sprayed tree, 13 showed curl, and only three badly. From five to seven leaves had been sent out by each bud, and a badly affected one was considered as one of which over one-half the tissue of over one-half the leaves was diseased.

A dozen twigs swollen from the presence in them of the disease, last year, were selected and covered with paper sacks. These were allowed to remain until April 28th, when several leaves had started from each bud. At the time of uncovering, a larger number and finer and darker leaves than those uncovered had pushed out from each bud, and their condition was as follows: Of five sacks on the Elruge nectarine the twig from one shows one bud badly curled, two show a few spots of curl and two are perfectly clear. Of five sacks on Rivers Orange peach, three are free from the trouble, and two show two or three spots each. Two sacks on Vineuse peach show no curl. The covered twigs received no treatment and as the sacks were put on late it is probable that some spores were included with them, and the buds became infected in this way. If the fungus lives in the twigs during the winter and appears in the new growth in the spring, the covered twigs would have been as badly affected as those uncovered, which was not at all the case. The experiment deserves repeating with the added precaution of dipping the twigs in some fungicide just before covering.

For practical considerations, at least, the above experiment would indicate that the fungus is not a perennial or has not enough of that habit to be of importance. On the sprayed Elruge tree the swollen twigs averaged as healthy in leaf as the others, and this is evidence in the same direction.

To further try fungicides, applications were made shortly after the leaves were out of the copper carbonate solution, the basic copper acetate solution and the Bordeaux mixture. None of these gave a marked beneficial effect, and upon close examination the reason why was very evident. Not only does the fungus live in the leaf of the peach, but it at once pushes its way into the young growing stem, following the growing point as fast as it lengthens and passes into the leaves as fast as they appear. No external applications can stop such a fungus growth, and spraying after the buds have burst and the fungus has become established, will have no effect.

During the winter two young trees were taken from the nursery and started in a warm house. All the leaves from the upper and larger buds of these were diseased. The house was closed and there were no currents of air that could bring in the spores, so they must have already been present on buds or twigs and only awaited the bursting of the buds to penetrate the young tissue. Later, these trees made a clean new growth from latent buds, and one of them even did not contract the disease when exposed in the orchard among other badly infected trees.

The rainfall of last winter was so exceptional that the ordinary habits of many fungi were affected, and among them probably that of the fungus which causes the curl. Young trees in nursery, growing slowly all winter, became diseased in December and January. The heavy and continued rains appear to have stimulated the winter spores to early movement, until about the first of April their germinative power was apparently expended — a comparatively small amount of infection only being noticed after that date. In a very dry winter with late spring rains, it is possible the spores may be active for some time after growth has commenced, and this would be an added difficulty in the way of a preventive treatment.

It is probable that any of the fungicide remedies will be effective if rightly applied. In some respects, however, winter treatment is peculiar and calls for a spray that is adhesive and not liable to be washed off by the rains. As long as the spores are in movement, the spray must be ready and effective to protect the trees. Of the three washes tried, the Bordeaux mixture has behaved in the best manner. Applied April 14th and passing through several heavy showers, it still covered the tree well and gave a good test for copper shortly before the time of taking the last notes on June 11th. The copper carbonate has proved of undoubted effect, but it is washed from the tree too easily, and something more adhesive will be better. The first heavy rain, about a week after its application on the last day of February, appeared to have washed all from the upper twigs and much from the lower. This left the tree ready for later small amount of infection that took place. With a persistent wash it is probable that not a trace of the disease would have been found. L. E. B.

Berkeley.

THE APIARY.

Honey in Arizona.

EDITORS PRESS:—I write you in regard to the honey industry of the Salt River valley. A few years ago, as an experiment, a few hives of bees were brought to this part of Arizona. Being a success, others followed. All the honey produced brought eight cents per pound, which soon created quite a demand for bees. As usual, the rage for bees cooled off, and to-day many hives can be bought for first cost of material, bees, honey, wax or whatsoever they might chance to contain, all thrown in for good measure. Last spring I bought out a small apiary of 75 hives for $2 per hive, when the same apiary was set up at a cost of $2.50 for the new empty hive. Last season the bee-keepers of this county organized an association but failed to effect much as to business. Our local merchants threw a wet blanket over the thing, and thought that the thing had ceased to exist.

The spring of 1890 opened up very favorable to the bee-keepers, so the call for the bee-keepers brought out a large attendance, resulting in an incorporation with five directors, who, as a prime movement "fired out" the old coal-oil package, and with the firing-out a few went off at a tangent, still adhering to the flavor of "coal-oil in theirs."

We prospected the market for cans from San Francisco on the west, to Chicago on the east, and the best we could do our cans cost us $1.05 per case (two five-gallon cans and case). When we get going we expect to do better.

Now for our export! Our honey association met, and we were stalled over the situation. We counted up, and found three cars of honey on hand, and extractors all running. Our inspector found that he had a delicate job to grade the honey. Just look round and see where your hat is, and how far it is to the door, before you tell the lady of the house that she doesn't make good butter; and it is about the same when you condemn the flavor of honey—sometimes!

But we get back to business. The Maricopa Bee-Keepers' Association has one car of No. 1 honey in new packages, and expects to ship to Chicago in a few days. This honey is mostly contributed near Phœnix. Tempe has two cars of honey mostly in old coal-oil packages, which will go to Chicago soon. All told, up to date, of this season's crop, about six carloads of honey have been produced in this valley. Our merchants had gotten prices pretty well demoralized, but our corporation has set the price of No. 1 at 5 cents per pound, and the value of package added.

We have had a sample of our alfalfa honey passed on by A. I. Root of Medina, Ohio, and is pronounced equal to the best of clover honey

of the East; so it is no very hard matter to get at value of our honey in an Eastern market.

Since writing the above, I have to add that the M. B. A. starts a car to Chicago July 22d. The honey sold at 7 cents. Another car will go in a few days. GEO. KAY MILLER.

Tempe, Ariz., July 19

THE FIELD.

The World's Wheat Production.

From the report of the Kansas State Board of Agriculture, which we have just received, we take the following article, which our wheat-producers will find of much interest. The report says:

We are indebted to the editor of the Cincinnati *Price Current* for the following statistical table, which he compiled from reports of the Department of Agriculture, Washington, D. C., and we publish for the information of our people. The editor of the *Price Current* says:

An effort has been made to present an exhibit of the approximate wheat production of the different countries in which the supplies have an influence on the leading grain markets of the world, with comparisons for a series of years. The accompanying special compilation is a close approximation for the years indicated. The crops of India, Australasia, etc., are those which were harvested at the beginning of the calendar year. Various other countries produce considerable wheat, such as Asia Minor, Persia, Syria, South Africa, etc., the aggregate of these countries being about 100,000,000 bushels annually; but such supplies do not usually enter into commercial channels to an appreciable extent.

The table given herewith shows by countries the quantity of wheat grown in the world which enters into commercial channels. The product of each country constitutes a factor in determining the price of wheat in the world's market. Practically there is but one market now, and that is the world.

Steam and electricity have in a large measure eliminated space as a factor in commercial transactions, and all parts of the civilized world are brought into more intimate commercial relations to-day than different parts of the same State were 50 or 60 years ago. An order from Liverpool, England, 4000 miles away, for a carload of flour is received by wire in Topeka, and in 12 days from receipt of order the flour is in Liverpool at a cost of 50 cents per 100 pounds.

Sixty years ago it cost as much time and more than twice as much money to transport 100 pounds of flour from Lewistown, Pa.—my native home—to Philadelphia, a distance of only 165 miles, than it now costs to transport it from Topeka to Liverpool, a distance of 4000 miles.

Farmers, while they are learning other things which are needful, must also learn that a revolution has been effected in the commercial world since the time they were boys, and that a due regard for their own interests demands that they adapt themselves to the changed order of things and broaden out their intellectual vision, taking in the world's agriculture.

By consulting the above table, we see that the world's climax in wheat production was reached in 1884 The immense aggregate quantity of 2,184,069 000 bushels is recorded, an amount not equaled before or since in the world's history.

How much this amount of wheat was above the needs of the world, we have no means of knowing with any degree of accuracy. Yet we know the surplus must have been great, for the volume of wheat which was forced into commercial channels during that year and the next caused a break in the market from which it has not yet recovered, even though the annual product grown each year since has been less. Statistics show that the export price of wheat in our country fell from $1.12 7-10 per bushel in 1883 to 86 2 10 cents in 1885. In like manner, we see there has been a decline in export prices of farm products generally.

The world's wheat product in 1885 was nearly 185,000,000 bushels less, and has never since been equal to the crop of 1884, yet the average export price has remained nearly the same, reaching 89 7 10 cents in 1889. At such times, when there is a wheat surplus and the price declines to about the cost of production, many farmers in old countries who are able to hold, store their wheat in their granaries and carry it from year to year until there is a rise in the market. When a rise comes, they place this reserve or a portion of it on the market. In this way the farmers of Russia, Germany and the Eastern United States, notwithstanding the reduction of the world's wheat product in subsequent years, have prevented any considerable rise in the Liverpool markets since 1884.

In 1889 the wheat product of Europe, as shown by the table, was 115,939,000 bushels less than the average product of Europe for the four preceding years, and the aggregate product of India, Algeria, Egypt, Australia, Chili and the Argentine Republic in 1889 was 49,489,000 bushels less than their average product for the same years. Together the total aggregate wheat product for 1889 of all the wheat-growing countries of the world whose product enters commercial channels, with the exception of the United States and Canada, was 165,428,000 bushels less than their average annual product for the four preceding years.

When this shortage was made known almost a year ago, quite a sensation was created among the grain manipulators of our country, and it was generally believed by men who were posted that before another crop was grown better prices would prevail. It was afterward ascertained, however, that this shortage in foreign countries was in a measure met by an unusually large wheat crop in the United States last year, being about 65,000,000 bushels above the average annual product for a term of years; and in consequence no impression was made on the market until last spring. At that time it became apparent that the condition of wheat then growing throughout the winter-wheat States of our country indicated a shortage in the product of that cereal, and the price advanced rapidly, not wholly because of the discouraging outlook for the crop of this year, but for the further reason that the available supply of wheat in the world was estimated to be lower than it had been since 1882. At that date wheat was worth one dollar and over per bushel in Kansas.

Of course no one can predict with certainty the future price of wheat. The only data upon which to base an intelligent opinion is the statistics which show the amount of wheat grown in all wheat-producing countries of the world whose products enter commercial channels. Each of these countries constitutes a factor in determining the problem, but the United States is the most important factor of all, because she is the heaviest export nation of the world, exporting nearly twice as much wheat and flour as any other nation.

In the United States less than ten States west of the Mississippi, which grow all the export wheat, have largely the control of this matter.

In one of two ways better prices may be brought to prevail, independent largely of foreign countries: By continuing the present area sown to wheat and waiting until consumption of our country overtakes production, or by the more radical method—applying the knife and cutting off about 20 per cent of present area.

JAPAN AND CHINA.—While Japan last year celebrated the completion of 1000 miles of railway, China has at present only 87 miles of road; but a decree of the Chinese Emperor, directing that work on a railway 700 miles long should be undertaken, has been welcomed by the ablest statesmen of the Empire, who have all declared themselves in favor of the proposed improvement.

GRASSHOPPER SOAP.—A Spanish inventor renders from grasshoppers a fatty substance which is declared to make the finest soap yet produced.

FURNITURE POLISH.—One pound olive oil, one pound oil amber, one ounce tinct. henna.

POULTRY YARD.

"Cut-a Cut-a Ca-da Cluck."

EDITORS PRESS:—Having now been long enough engaged in raising poultry for profit in this State to have learned some things about the business, I propose relating in part our experience. My father has had considerable experience in good old Connecticut, and as we have been out here but eight years, I know something about it myself in that State, but the conditions which obtain here are so different that not until lately have I felt willing to report progress.

We started in five or six years ago increasing the number of fowls for the purpose of making more of a business of it than we had done, and although we have at present not more than 175 hens, we have made such a fairly good record that we shall by no means give it up. We work principally for eggs, and are clearing year after year $1 per hen annually, which is a fair profit. Father has made in Connecticut $1 50 per hen, but it is much more difficult to make money here on hens, because of the warm climate breeding vermin worse, the long, dry summer, when bugs and worms are not to be had, and the ground, except in rare places, cannot be of direct use to the hens, necessitating feeding green food abundantly, and because it is more difficult to raise young chickens in summer. We have built three houses, two for roosting-places for hens and the third for young chickens.

The hen-houses are ordinary affairs of pine and redwood, strongly built, one about 6x18, the other 8x24, the latter including a feed-room eight feet square at one end. In each of those houses we keep from 70 to 80 hens, a number double that which I myself think can be kept together with best results. One of the yards is one-third of an acre in extent, the other about three acres.

As we raise hens for the eggs, we have not tried to keep them pure, but have bought eggs from any neighbor whose stock we know to be a little above the average, and are well satisfied with the result. By this time it is, so far as I can judge, a well-established fact that mixed breeds will lay as many eggs as any single pure breed, if care be taken, of course, to exclude fowls of a notoriously low-laying record, such as the Brahmas or Cochins. We started in with nearly five Brown Leghorns, and still have a good many, but by this time they are pretty well mixed with White Leghorns and Black Leghorns; a few Plymouth Rocks we are removing.

We buy all the grain, middlings, etc., that we use, the principal grain being barley, though we use about a ton and a half of wheat also. It is our experience that barley soaked in water for three days, or until it begins to sprout, is just as good as wheat, and certainly a great deal better, if not fed more than half the time than wheat would be if used exclusively. One of the three or four principal things in the care of hens is to give them a change of food, yet it is not always practiced. We do not cook any of the food we give the hens. In the morning I feed to 70 hens a mush of equal parts of bran and middlings, about three quarts of each, mixed in water, making an ordinary pail a little more than half full. In winter, three quarts of grain are added—perhaps cracked corn, if the weather be colder than usual. Corn, however, must be used very sparingly in this section, or the fowls will surely get too fat to lay. We never feed to 70 hens more than eight or ten quarts in a week, seeing by experience that they do not need such heating food. We have at times bought bone meal and mixed five or six tablespoonfuls with the mush, but have decided that when they have abundance of common building mortar handy, any other shell-making food is not needed. At night I feed, at present, equal parts of wheat and barley—about four quarts of each—but I watch them, and if they seem quite eager for more, I may give another quart or even two, never giving so much that it shall be left. A little attention ought to enable one to gauge pretty accurately the amount best for them, but so much depends upon circumstances that each owner must decide for himself.

Does any one still need to be told that pure drinking water is an essential in the care of fowls! O, of course, I know they will drink anything fluid that they can find, and many times prefer some dirty pool on the ground to a pure vessel of water, but it is bad for them to drink filth of any kind. This caution is not so unnecessary as it may to some people seem. There are persons who get such funny and unreasonable ideas in their heads that a sensible course must constantly be kept before them. One of our neighbors, for instance, was told by some one that a tablespoonful of food was enough for enough for a hen at a meal, and instead of seeing the absurdity of it she actually fed her hens for a time on that scanty diet! And this neighbor is an unusually bright and business-like woman, too, but she surely forgot that time to be reasonable.

For green food during the summer and fall we raise cabbages, beets and carrots, as it is very important that they should have an abundance of such food. One of our neighbors has a plot of alfalfa which he irrigates and keeps green continually—an excellent plan. Another point not less important is to provide gravel or grit of some kind, or they cannot grind up the food.

For a time we had case after case of hen-diphtheria, or roup, really a cold in the head, and found it was caused by too much ventilation. It can be cured, but 'tis too much trouble.

The third house we built is for small chickens, and has glass on one side. The house is 16x16, nine feet high, at one end, roof slanting to a point five feet from ground, where the glass commences; it is divided into four runs, and a passage-way three feet wide along the highest end admits to each run. We made the floor of Portland cement, but found very soon that when the chickens came in from their back-yards and forgot to wipe their feet, the cement would adhere by degrees to the toes until a ball would form so large that they could not get around easily, making it necessary to relieve them frequently. A cement floor is useless, wood answering all purposes. In this house we have at times kept 200 chicks, 50 under a hen, letting them out in the day into runs built of lath fences in sections eight or ten feet long.

I have lately bought a 120-egg Petaluma incubator, and shall use this instead of Nature's method. This is our first experiment with an incubator. I set it just one week ago, and so far have been quite pleased with the way it works, not seeing, indeed, how it could do any better, except occasionally when the regulator allows the heat to run up two or three degrees higher than it should. I have heard of one man who had a machine made by the Petaluma Company, same capacity, which did not work well, but some one says that a while ago they used to put two thumb-screws in a machine of this size, in connection with the regulator, and as mine has but one, it may be that one works better than two. I am running it now more as an experiment than from the belief that it is a good time to hatch chickens, but all the same I shall be disappointed if out of the four dozen eggs I put in I do not get 35 or 40 chicks, it is operating so well. For the benefit of those who, like myself till I tried, do not know how much oil a machine of that size consumes, I will say that at present it takes a trifle less than one pint in the 24 hours; in colder weather or in a more exposed place, it might use a pint and a half.

If I can be of service to anyone in further telling our experience in this line, I shall be glad to write more. There is fair profit in this business for anyone who is willing to attend to details and does not despise the day of small things; it is not "overdone," as some think, any more than the fruit business in this State is overdone. Find out what there is a demand for and then supply it.

The following very interesting comparison between the principal breeds, yield of eggs and their weight was made before the London Society of Arts:

Light Brahmas and Partridge Cochins, 80 to 100 eggs per annum and 7 to the pound; Dark Brahmas, 70 per annum and 8 to the pound; Black, White and Buff Cochins, 100—8; Plymouth Rocks, 100—8; Houdans, 150—8; Black Spanish, 150—7; Dominques, 130—9; Game fowl, 130—9; Creves, 150—7; Leghorns, from 150 to 200 per annum—9; Hamburghs, 170—9; Polish, 150—9; Bantams, 60—16; turkeys lay from 30 to 60 per annum, weighing about 6 to the pound; duck's eggs vary greatly with the different species, but range from 5 to 6 per pound; geese, 4 to the pound and 20 per annum; guinea fowls, 11 to the pound and 60 per annum. C. P. NETTLETON.

Haywards Cal.

Diseased Turkeys.

EDITORS PRESS:—Can any of your readers inform me what to do for "swell head" in turkeys, and also how they act with the cholera? Mine are dying with some terrible disease, but I do not know what it is. They will droop around the water all the time—just sit in it constantly—and the manure is of a yellow color, like sulphur; finally they get the gapes and die.

I should like to find out what it is and what to do for it. Giving the information will greatly oblige A SUBSCRIBER.

Valleton, Monterey Co., July 23, 1890.

AMERICAN-BUILT CARS FOR EUROPE.—The Jackson & Sharp Works, at Wilmington, Del., are building passenger cars for the railways in France, Spain and Austria. Mr. William Voss, writing about the cars after a visit to the works, says: They are a curious mixture of European and American practice, and are built according to complete sets of drawings sent over. Of course it is sectional work, like that sent to South America. These cars are about 50 feet long, some of them day coaches and others of the Mann boudoir style of sleeper. They have combination wood and iron sills, *bogie* trucks, the old country draw-hook and buffers, etc. All the heater and water pipes are of copper, windows run in brass guides (a very good but expensive thing). There is a vestibule at each end, but they do not touch like ours, being about four feet apart when coupled, and iron aprons and railings form the bridge. The entrance is through the vestibule and steps like ours, but *different*. The exterior is mahogany, natural wood finish. Roof much like ours, and is covered with canvas and sheet copper on ends and at eaves. Some of the cars have been shipped, six or 12 more are almost done, and a lot of six is just being erected.—*National Car and Locomotive Builder.*

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Endowment of Colleges of Agriculture and Mechanic Arts.

Under the title "Agricultural and Industrial Training," we last week reprinted portions of a letter lately written by National Master Brigham, on the need of carefully guarding from misapplication all funds appropriated by Congress for the teaching of such branches as relate to agriculture and the mechanic arts. The *American Grange Bulletin* for July 24th has this to say upon the matter referred to:

On July 9th, W. H. Scott, president of the Ohio State University, and Alexis Cope, secretary of the Board of Trustees, together with Henry E. Alvord, president of the Maryland Agricultural College; H. H. Goodell, president of the Massachusetts Agricultural College, and George W. Atherton, president of the Pennsylvania State College, had a hearing before the sub-committee of the House Committee on Education, which has under consideration "An Act to apply a portion of the proceeds of the public lands to the more complete endowment and support of the colleges for the benefit of agriculture and the mechanic arts, established under the provisions of an Act of Congress approved July 2, 1862." This bill has passed the Senate, but it is now receiving the opposition of the colleges interested and the National Grange.

The objections to the bill as it passed the Senate are due to the exclusion of an amendment which will limit the disbursement of the money appropriated to certain branches of education. A document signed by the college presidents above mentioned and by the Master and Secretary of the National Grange, which was presented to the sub-committee, submitted the following amendment to the bill: Insert after the clause of appropriation. "To be applied only to instruction in agriculture, the mechanic arts, the English language and the various branches of mathematical, physical, natural and economic science, with special reference to their application in the industries of life, and to provide the facilities for such instruction." The adoption of this amendment, the paper states, will be satisfactory to the representatives of the colleges interested and the National Grange, and so far as signers know, will remove all objections to the bill.

The objectors to the bill, as it now stands, claim that unless this amendment is adopted the sums appropriated will be misapplied, and will not be used for the purposes intended. The delegation which appeared before the sub-committee left the same afternoon with the impression that the amendment would be adopted and reported to the House. Representative J. D. Taylor, who is chairman of this sub-committee, stated, however, that although a number of the committee were in favor of the bill being immediately reported to the House thus amended, some others wished for another meeting, and it was decided that no action should be taken until a second meeting of the sub committee could be held.

Bro. Trimble sends us a copy of the Act (as it was committed to the Committee of the Whole House on the State of the Union and ordered to be printed July 12, 1890) adding: "They have left out *our amendment*, and we fight for postponement or death of the bill." We will all stand by you, Bro. Secretary.

An Unintentional Tribute.

While a friend was once accompanying me on a Grange canvass, we met one old member who said that the P. of H. had cost him $10 or $12 and he had never received any return.

In less than five minutes' conversation, he gave his history, showing that before the Grange started he had been running steadily behind, but since then had so improved upon his business methods as to place him among the most prosperous farmers of his section. The pith of the whole talk was that he had learned business ways in the Grange, both as to producing and disposing of his products, which had resulted in changing his business from a loss to a profit.

In visiting farmers, talking Grange, and noticing farm management, the conviction grows very strong that thousands could gain ideas that would help them to do that very thing; and that there are almost as many who would give the Grange no credit if they did.

F. S. C.

TULARE GRANGE.—According to the *Register*, the special meeting of Tulare Grange, held on the 12th ult., was not largely attended, as several of the regularly attending members were away from home. After the reading and considering of several communications of importance, Bro. Stewart gave a short but interesting address on experimental stations, which was followed by a general discussion participated in by most of the members present. The session was short, but pleasant and profitable.

The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

General Deputies.

The General Deputies appointed to visit each of the subordinate Granges in the State have yet much work ahead. The Executive Committee will expect them to visit all Granges in the territory assigned them, or else if they find themselves unable to do that, to report the same to the Worthy Master, so that some officer may be detailed to do the work. It is highly important that each Grange shall have an official visit before the meeting of the State Grange. Will the General Deputies go to work at once? Let us hear from you, Brothers Frisbie, Coulter, Flint, Goodenough, McConnell, Overhiser, Johnston, Steele and every officer of the State Grange. Visit the Granges and write up the result for the RURAL, so that the Order everywhere may know what the signs of promise are. Don't keep your light under a bushel. Brothers Loucks, Webster, Cressey and your humble servant are ready for the fall campaign. Brother Dewey is at work all the time for the Order. Let us join in the onward march.

Woman's Work in the Grange.

This is a subject which should be very carefully considered by the State and every subordinate Grange of California. The comfort that learning, that social progress, that home, that dignity, self-respect and manhood can give are all bound up in and dependent upon Woman's Work. Won't you join in appreciation of what our sisters, mothers and sweethearts have done, are now doing, and will continue to do for us? The Grange may safely rely on the wisdom, patriotism, devotion and calmness of the women of the Order. They are ever ready to work for the welfare of the P. of H., our country and mankind. Brothers, let us appreciate (and say so, too) "Woman's Work in the Grange."

All candidates for public office should be honest, be just and fear not. Is there any objection, Patrons, to such a test? Then look to your ballot this fall!

The farmers of America are industrious, they are frugal, honest, painstaking, zealous, constant, and yet they are not making money. It is true they are the one great producing class; they are the ones who cause, or help to cause, two blades of grass to grow where but one grew before. The farmer is the pride of the nation. When agriculture fails, degeneracy begins. The time will yet come when justice to the farmer will reign; when Faith, guided by her twin sisters, Hope and Charity, will be attendants, and when, in fidelity, he shall have

A fair reward for toil,
A free and open field,
An honest share for wife and home
Of what his labors yield.

Don't let the circus keep you away from the Grange meeting. Now that the circus is "touring" the State, we hope John Robinson won't be more popular than your own Grange associates. The one is a temporary investment and the other is a *permanent* and profitable one. Choose with soberness!

That farmer makes a mistake who thinks he can cultivate all out-of-doors. Better have a small farm and till it thoroughly and economically, than a large one and "skim" it over. Don't make the mistake of doing anything shabbily. Do well all you do and the pay will be more than you expect.

The farmer's best friend is his own brain, muscle and wife. Know that *your own* is better than anybody's else for you and yours. Better ride in your own wagon than in another's buggy, for *independence* is a fortune to any one.

Seek not public applause, for it may not be the best possible proof that you are right. But have the approval of your own conscience, and then you are sure that one honest person approves your course. Better be *right* and alone than *wrong* and with the crowd.

When will some of our Eastern Grange journals stop advertising lottery frauds?

Don't forget the real issue, *i. e.*, vote for no man for legislative honors who is *afraid* to say he will be the farmer's friend. We want a lower rate of taxation. We want honor, honesty, intelligence and bravery in positions of political trust.

Let every farmer "be up and doing with a heart for any fate," for the wary politician is doing and he is hardly ever late.

Cherish a forgiving disposition; it is better to be too good-humored than to be sour and morose.

Better go straight ahead in the pursuit of the True, the Good and the Beautiful, than to swerve to right or left, or be in doubt as to your life work.

The Grange represents intelligence, progress, virtue, honor, culture, sociability and all that is purifying and elevating. Try the Grange. See what it will do for *you*.

A Good Work at Tulare.

The fact was noted some weeks ago that an arrangement had been made by the Tulare *Register* for a P. of H. department in that daily local journal, under control of the Order in Tulare valley and edited by our old friend J.W. Mackie, with Bro. Moore and Sister Hawkins as associates. The publishers did this in the hope that Granges and Grangers will interest themselves in making it a valuable feature of the paper and an important factor in furthering the agricultural interests of that region.

In his salutatory, Bro. Mackie says: "The generous offer of the use of the columns of the *Register* to the Grange, and cordially accepted by it, comes most opportunely—comes at a time when farmers' souls are being tried and their worth put to the severest test; when even those most distantly related to the farmer perceive the imminent danger which threatens him and the farming interests of the country; when all parties seem to deem it their duty to devise ways and means of escape. Coming at such a time, it gives opportunity to farmers to be heard, for while such interest is being manifested in favor of the farmer, it will naturally be expected that he will be active in stating his own case and at least suggesting what he thinks might help him in his present difficulties."

It strikes us as no more than due the local press that the Patrons should furnish editors and also help the circulation; and it seems to us our State and National Granges are penny-wise and pound-foolish in that they seldom appropriate a dollar toward editing or circulating their official organs, but leave them, in some instances, even to pay for grange correspondence. In the Tulare case, we are pleased to observe the P. of H. staff are filling their space creditably in successive issues.

Picnic at Paso Robles.

Just after the RURAL had gone to press last week we got word from Bro. R. D. Cruickshank, Worthy Secretary of Paso Robles, that they had invited Creston and San Miguel Granges, together with all farmers and friends of the cause, to join them in a basket picnic at Experiment Station, on Saturday, July 26th, and inspect the grounds and workings of the institution. It was hoped that Bros. Webster and Fisk would lend their presence and voices on the occasion, which we expect to hear was well improved and greatly enjoyed.

AGRICULTURISTS' CONFERENCE.—The *Ohio Farmer* has called a convention of delegates from the various farmer organizations of the State, to be held in the Board of Trade rooms in the City of Columbus, on Wednesday, Aug. 13, 1890, to consult together and agree upon some general plan of action and unite on a platform of principles, "so that we may be able to make our power felt and respected." As this is not a convention to form a new political party or to nominate candidates, nor called in the interest of any existing political party, but a convention solely in the interest of depressed agriculture, S. H. Ellis, W. M. S. G. of Ohio, suggests in a letter to the *American Grange Bulletin* that each Grange in the State (both subordinate and Pomona) elect a delegate to attend this convention and furnish him with credentials of such election signed by the Master and Secretary.

THE UNION PACIFIC.—About a month since the Senate adopted a resolution calling upon the Secretary of the Interior to state whether or not in his knowledge the U. P. R Co. has guaranteed the stock or bonds of any other corporation; whether or not said U. P. R. Co. has paid out of its earnings the indebtedness of any railway company, and if so, whether such guaranty and payment are in accordance with the law and consistent with the obligations of the U. P. R. to the United States. In response, Secretary Noble says that the Union Pacific Railroad Co. has guaranteed the bonds and interest of quite a number of other corporations, but has done nothing unlawful.

JOINT PICNIC FOR FARMERS' ORGANIZATIONS.—The Olathe, Kansas, *Patron* says that the committee on arrangements are rapidly maturing their plans for the joint picnic on the 9th of August. Hon. J. H. Brigham of Ohio, Master of the National Grange, will deliver the address on the past of the Grange, and Hon. W. H. Utley of Labette Co., Kansas, has been secured to deliver the address on the part of the Farmers' Alliance and I. U. Stuck's grove, a short distance west of Olathe, has been secured by the committee, and other arrangements are being rapidly perfected looking to a grand successful picnic.

UNION LABOR PARTY.—The National Convention of the Union Labor party is called to meet in St. Louis, Sept. 3. The Greenback party, Farmers' Alliance, Grangers and other kindred labor organizations are invited to send representatives.

HOME AGAIN.—Bro. and Sister McConnell have returned from their long Northern tour and visitings, and she has sent us a very readable sketch of their trip which will soon appear.

THE National Farmers' Congress will hold its Tenth Annual Session at Council Bluffs, Iowa, Aug. 26th to 29th, inclusive.

The Fruit Interest in the Census of 1890.

At the June meeting of the State Horticultural Society the Secretary was instructed to correspond with the Census office concerning the proper representation of the California fruit industry in the census of 1890. The following reply has been received:

DEPARTMENT OF THE INTERIOR,
CENSUS OFFICE,
WASHINGTON, D. C., July 9, 1890.

Dear Sir:—I have the honor to acknowledge receipt of yours of the 21 instant regarding the importance of the horticultural interests of California, and the apprehension on the part of some of your fruit-growers that said interests may be overlooked in the census returns; and in reply I take pleasure in saying that I feel confident that in the final reports the facts and figures of the "Golden State" will have the full share of credit which I know is so justly her due in this direction.

In no part of the agricultural division have the inquiries and investigations been more extended than in the horticultural line. As a lifelong horticulturist myself, I have, with others, noted the slight attention given this great industry in former United States censuses; while tobacco, cotton and meat products have had special investigations and elaborate reports, as they very properly should, the interests of the fruit-growers have received but little consideration. In view of this fact, in preparing the agricultural schedule I gave special thought and care in this line, as you will see by the sample copy of the general schedule of agriculture, which I inclose herewith, with questions marked referring to horticulture that have never before been asked.

In addition to this, we have arranged for special investigations and reports on viticulture, nurseries, florists, seed and truck farms, tropic and semi-tropic fruits, etc.

I inclose samples of some of the special schedules in this line to show the extent of these special investigations, and our attempt to obtain full details, that now needs only the active co-operation, which I am glad to say we have so far received, of all horticulturists to make it a complete and gratifying success.

I had the pleasure of visiting your State for several weeks last November and December, while attending the session of the National Grange, and participated in the 16 days' excursion trip to all parts of the State, and was impressed with the importance of your fruit-growing industries; and, as you will note on the general agricultural schedule, which was in the hands of every census enumerator in California during the month of June, and taken to every farm and ranch in the State, the various horticultural specialties of your favored land receive full recognition, such as apricots, prunes, cherries, raisins, etc.

Mr. J. H. Hale of South Glastonbury, Connecticut, was also one of our Grange party last fall in your State. He has a national reputation as a progressive horticulturist, being one of the most successful fruit-growers and nurserymen in the Eastern States. I have given him special charge, as you will note on the schedules, of some of these special investigations, and he has been actively engaged in getting as full and complete a directory as possible of all the persons engaged in these horticultural lines in your State, to whom the proper schedules will be sent for details. I also have planned to have him visit your State in the fall or early winter, that he may personally obtain full and complete data for the final reports.

I feel confident that, after this explanation, yourself and horticultural friends need not have any fears that California will not, at least in this direction, have full credit in the census returns.

Will you kindly inform our friends of these facts in such manner as you may deem best. Perhaps a few lines from you in the agricultural and horticultural press on the subject would please all concerned.

Personally I beg to express to you the great satisfaction I have had in reading your valuable book "California Fruits," a copy of which I received at the hand of my friend Mr. A. T. Dewey of the PACIFIC RURAL PRESS. It is indeed up with the times, and I have had occasion to refer to it many times in my official work. Very respectfully,

MORTIMER WHITEHEAD,
Chief Special Agent.

E. J. WICKSON.
Sec'y California State Hortic'l Society.

[We are pleased to know that Bro. Hale will visit California in discharge of his important duties, and can assure him all the aid and interest on the part of our people which he may find desirable.—EDS. PRESS.]

STORAGE OF GRAIN.—In the U. S. Senate, July 25th, Call introduced a resolution instructing the Committee on Interstate Commerce to prepare a bill to compel elevator proprietors to accept grain for storage at reasonable rates. It is aimed at the combination of elevator proprietors on the Northern Pacific, who threaten to refuse grain and compel the farmers to sell at once.

YUBA CITY GRANGE meets on Saturday, Aug. 2d, to confer degrees. A literary program will be rendered and refreshments of ice cream, etc., served. All members are requested to be present and sojourning Patrons are cordially invited.

The Despotism of Gold.

Following is an extract of a letter, addressed to the *Oregonian* from Grant's Pass, July 4th, by James G. Clark:

Currency is the breath of life to the lungs of commerce, and all breathing things must have breath or die of suffocation. If free silver coinage means anything, it means expansion, not stifling contraction, of currency. Unless it means money, and plenty of it, for the masses to handle without risk of being robbed by public and private usury, thieves and "bonus" bandits, it is only a delusion. And if it really means fresh air for the lungs of exchange, it means precisely what Wall-street costermongers don't mean, and what they will not permit so long as Congress allows them to apply to the bust of the Goddess of Liberty the "single gold standard" corsets, and to pull the strings till there is not sufficient breath left in the body politic to move the diaphragm. Gold, as a basis for a system of speculation through which a certain few sharp, unscrupulous men get rich and purchase unmerited prominence and position socially and politically at the expense and through the impoverishment of men who are infinitely more use as factors in the moral and intellectual development of the race, is certainly a shining success. But as a basis of commercial exchange or type of values, it is a most deplorable failure. More and more it is being manipulated to the disadvantage of the many who lack the sordid quality and foresight possessed by the few that reap the advantage obtained in a medium of exchange which is and always must be too limited in quantity to answer the demands of trade—in other words, to "go around" where and when it is most needed.

Hence, gold, when measured as we measure persons, things and institutions—that is, by that which is justly required of them and claimed for them—is a notorious failure, pretense and fraud.

This being the case—and where is there an intelligent business man who dare deny it?—it is certain that sooner or later gold itself must be demonetized, and something substituted for it that will respond to the needs of an expanding civilization, and become the servant of the people instead of being the slave of a few and the master of the many, as gold now is. It is the shame of civilization for men like Rothschilds and Jay Gould to be able through the control of gold to hold in subjection the markets of the world and to play with the destinies of nations. There is no infamy that a money king may not legally accomplish.

There is no reasonable excuse for this bondage to gold, which enslaves republics no less than monarchies. And if there is no escape from it save through the red sea of revolution, then let us march for the sea, and the sooner the better. Some of us can remember how Jay Gould and his associate pirate Col. Jim Fisk, just as we were emerging from the storm and darkness of the most terrible civil war recorded in history, coolly cornered the gold market in Wall street, and actually compelled the United States to enter the lists and act as competitor over the yellow metal in order to avert general bankruptcy and disaster. And yet there was no law to reach those worst of criminals against society. "Black Friday" was simply the Wall-street tumor "gone to a head"—the legitimate end of our blood-poisoned system. The Government only lanced the tumor then. The next time the people must remove it.

We talk of anarchy among the laborers—of insanity in our lunatic asylums, but there is nothing on earth more utterly abandoned to disorder and lunacy than the "bulls" and "bears" of Wall street, when let loose in the midst of rising and falling of stocks. Compared to the Wall street opsrators on such occasions, the wildest maniac seems harmless and mild, and the patient speculator of our inland towns, who quietly plants his scores of thousands, and then calmly bides his time and awaits the harvest, is an angel of mercy and contentment. The genuine Wall streeter is always in a crazy fever and hurry, that waits for nothing. He has no time to plan for the future, but simply dives into the whirlpool of chance to get his share and the other fellows' too. He shoots the goose while on the nest, and then sucks the golden egg before it gets cold. * * *

The question for us to solve is: Are we, as a nation, to be governed by the enlightened instinct of freedom, or by the councils and dictations of Wall street?

It is strange that statesmen like John Sherman and others who are intelligent men and ought to take pride in being at least outwardly honest, will go to Wall street for advice concerning a policy which if at all successful means the weakening of Wall street's clutch on the public throat, if not the ultimate destruction of a weakening system in which that band of land pirates was born and in which it lives, moves and has its being.

Wall street operators are, by the law of self-preservation, naturally opposed to any policy that fails to direct all the fountains of wealth into their own immense reservoir, without regard to the hunger and thirst of mankind in general. Yet the keynote of our financial policy is always first sounded in Wall street. And whenever a new idea in behalf of the people is presented in our government councils our statesmen of the finance committee at once apply their ears to the Wall street telephone for the keynote. And when the twang of the Jay Gould, Sage, Windom, Rockefeller & Co. tuning fork comes floating back to the capital from the "central office" in New York, the party organs take up the theme in the same key and play the variations over and over again till the one tune fills the whole land with the ravishing music. And then the faithful voters in city and country, on the farms, in forest, and in the shop, join in the grand party dance, following the stentorian call of the "floor managers," and in the end pay the fiddler out of their scant day wages and their crops. And all this comes under the head of "wise statesmanship" and "practical politics." And our wage-workers and farmers—whose impoverishment and degradation mean revolution, if they are worthy to be called men, and monarchy under the shadow of a dictator, and a standing army, if they are content to be serfs and slaves to money kings—have been engaged in this delightful and fascinating exercise for a quarter of a century, until wages in our mines and our shops have been reduced almost to the last extremity, and the nation's grand army of foot-travelers can tramp across the agricultural States from ocean to ocean and gulf to gulf and walk on mortgages all the way.

These mortgages are only taken up in order to drive one farmer out and put another farmer and mortgage down to follow the first, while the sad evicted and exiled pilgrim finds himself obliged to "pitch his moving tent a day's march nearer" the pauper and starvation line, tramping away in quest of "cheaper lands" and new mortgages, and higher interest rates, leaving the hard earnings of a lifetime, in the way of improvements and paid installments, in the hands of legalized thieves and robbers, who never take a risk of any kind, and whose social, political, business and even church standing is enhanced and made more "solid" through the very means of their crimes against their fellowmen and before high heaven.

If our honorable Senators and law-makers in Washington regard this as a desirable state of things, to be continued and encouraged in a republic, it is perfectly proper for them to go to our national gambling hell in New York for counsel and advice.

Otherwise let them go to the people, and then keep their pledges, for the time is at hand when public traitors and bribe-takers may realize that treason to the voter involves more than the loss of office, character and property.

Nebraska Farmers and Labor Men.

Nearly 900 delegates from all over Nebraska attended the "People's Independent" Convention at Lincoln, July 29th. Farmers' Alliance and Grangers predominated, the remainder being Knights of Labor and Union labor men.

The platform demands that the financial system should be reformed by the restoration of silver to its old-time place in the currency—its free and unlimited coinage on an equality with gold—and by the increase of money circulation to the sum of $50 per capita, all paper issues necessary to secure that amount to be made by the Government alone and be full legal-tender. Land monopoly should be abolished, either by limitation of ownership or graduated taxation of excessive holdings. Alien ownership should be prohibited. The railroad system as at present managed is a system of spoliation and robbery, and its enormous and fictitious valuation is absorbing the substance of the people in the interest of millionaires. The General Government should own and operate railroads and telegraphs and furnish transportation at cost. The Legislature should enact a freight law which shall fix rates no higher than those in Iowa. Reform of State and National systems of taxation is called for. The adoption of the Australian-ballot system is demanded; also that eight hours shall constitute a day's work, except for agricultural labor, and that soldiers shall receive a liberal service pension.

The platform further declares that "the political machinery of the State has been controlled by corporate power for the plunder of the people and the enrichment of itself, and we have entirely lost confidence in the efficacy of that machinery of unjust laws. We therefore give voice for a call of a people's independent State Convention to nominate pure and honorable men for the different State offices on the principles above named, and we hereby pledge ourselves to vote and work for their election."

Hop-Growers in Council.

The State Hop-Growers' Association held a meeting in Sacramento, July 29th, at which the following resolution was adopted:

WHEREAS, We feel the injustice of a seven-pound tare; and, whereas, the State Hop-Growers' Association at its last meeting adopted a resolution that a tare of 3½ pounds be declared a proper tare; therefore be it

Resolved, That we concur in and reaffirm the resolution introduced at the last regular meeting; and be it further

Resolved, That the secretary be instructed to notify all dealers or buyers of hops that the growers will allow only a tare of 3½ pounds per bale.

The hop-growers appear to be so well organized as to be able to compel dealers and consumers to recognize their demands.

A committee of three was appointed to draw up a form of contract between growers and Chinese contractors for picking, by the terms of which extra pay to the foreman and cooks of hop-picking gangs would no longer be allowed.

THE STOCK YARD.

Operation in Cattle and Railroads.

The rumors of a great cattle concern to be established in California by leading men of the West have already been mentioned in the RURAL. The affair is now coming over the wires in a very energetic fashion, and as the project, if realized, must exert a great influence on this coast, either for the good of producers or otherwise, we give the following statements from recent Chicago dispatches:

CHICAGO, July 28.—Several weeks ago dispatches from San Francisco announced the arrival in that city of Peter E. Iler of Omaha and Obed How of Chicago, two of the largest stockholders in the Armour syndicate, operating mammoth stockyards and packing-houses at Chicago, Kansas City and other points. The same dispatches announced that the object of Messrs. Iler and How's visit to the Pacific Slope was to found somewhere on the coast an establishment rivaling in size either of their Eastern concerns.

Mr. Iler was quoted as saying in an interview in San Francisco that he had come to the coast to stay, and that the necessary steps toward securing the land, erecting the buildings and arranging for shipping facilities would be taken at once. He announced that the location for the yards and packing-houses had been selected and the refusal of the land had been secured. The syndicate expected to have everything in readiness, he said, within six months from the date of the purchase of the land, and he fixed the cost of the land and buildings at about $1,000,000.

Following the above dispatch, a second telegram from San Francisco, received about the 15th of July, announced the completion of negotiations and the purchase by the Armour syndicate of 1920 acres of land in San Mateo county, being a portion of the celebrated Charles Lux estate. Great as the enterprise was announced in these dispatches, it now transpires that the stockyards and packing-house project of the syndicate is but one of several gigantic enterprises it intends establishing on the Pacific Coast, while the 1920 acres of land purchased is but a small portion of the total acreage for which the syndicate now holds deeds. In addition to the large body of land purchased from the Charles Lux estate, it was learned here today that the syndicate has purchased 200 acres from Miller & Lux, 250 acres from Ansel Easton, a nephew of D. O. Mills; 400 acres from D. O. Mills himself, 40 acres from E. W. Burr, and a number of smaller lots from other parties owning land adjoining the original purchase, making in all over 3000 acres of land, for which the enormous sum of $776,000 was paid.

The principal parties engaged in the transaction are Nelson Morres, a large holder of Atlantic & Pacific railroad stock; Philip D. Armour, who, in addition to his stockyards and packing establishments, is also a large holder of Atlantic & Pacific securities; Hammond & Co., Swift & Co., and P. D. Iler, the millionaire pork-packer of Omaha, who has been the financial agent of the syndicate in San Francisco.

The 3000 acres purchased will be divided as follows: Twelve hundred acres will be used by the different stockyard corporations already organized in this city, and the other 1800 acres will undoubtedly be used for the shops and roundhouses of the Atlantic & Pacific railroad, which will be extended from Mojave on to San Francisco with all possible speed.

The following companies have been organized here and in Kansas City to operate the immense establishment in San Francisco: The Stock Yard Land Co., capital $2,000,000; the Avatory Co., for butchering, with large chilling and freezing houses, capital $300,000; the Stock Yards Banking Co., capital $250,000; and, lastly, the Stock Yard Co., capital $1,000,000. The last company includes the stockyard proper. Miller & Lux will remove their butchering business to the new yards.

Field Controlled by the New Company.

CHICAGO, July 28.—The importance of the great stockyards and packing-houses to San Francisco, exclusive of the competing railroad company, can hardly be estimated. The butchering business will undoubtedly be transferred entirely to the new company's establishment, thus ridding San Francisco of a great and dangerous nuisance. In fact, it is stated here that the company has arrangements made with all the large butchering firms in San Francisco. A thriving town will of a necessity be located at Baden, near the yards, as it is estimated that fully 4000 men will be employed in the stockyards and packing establishments, exclusive of the railroad employes, who will number at least 1000 more.

The packing company will compete not only for the coast trade in canned, pickled and packed meats, but it will secure the trade of the South seas, the Hawaiian islands, Alaska, Central and South America and China and Japan. No company ever started out with a greater field. With its advantages it can easily obtain the trade of all the countries mentioned, besides supplying the hundreds of steamers and sailing vessels which annually leave San Francisco. It is estimated that within a year the business of the packing company will rival that of the Union Stock Yards of this city, and will outstrip those of Kansas City and Omaha.

THE VETERINARIAN.

Anthrax in Cattle.

EDITORS PRESS:—There is a very mysterious and fatal disease among the calves in Big Meadows, Plumas county. In some instances it has killed more than half out of a drove of 50. No age or condition is exempt, but it seems to choose the healthiest and finest looking. It gives little warning and leaves no mark but death. The animal apparently well in the morning may be dead before night. He lies down and dies without a struggle. A slight bloody froth exudes from the nose. No one has observed anything wrong with any of the organs unless, perhaps, the throat is a little swollen. The disease seems to be epidemic, but not contagious.

Can you give us any light in the matter as to what it is or what to do? We are utterly helpless and would be very thankful for any suggestion.

A. F. MARTIN.

Prattville, Plumas Co., Cal., July 18, 1890.

There is no doubt at all that the cattle are suffering from some form of anthrax.

Anthrax is due to bacteria in the blood—*bacillus anthracis*. Anthrax is not infectious—that is to say, animals in contact with others which are diseased do not suffer unless some of the blood or tissues of the diseased animals enters the blood. Even eating food containing the germs of the *bacillus anthracis* appears to be insufficient to induce disease, unless there are abrasions in the mucous membranes of the digestive organs, through which the spores can enter the blood.

All animals are liable to anthrax. Undoubtedly wild ones diffuse the bacteria and bring them into parts of the country where they have been hitherto unknown.

Flies, too, are vehicles of contagion. In this case the supervisors of Plumas county ought at once to employ a thoroughly competent veterinary surgeon to investigate the matter, as it is of a very serious nature.

A. E BUZARD, M. R. C. V. S. L.

Bloody Milk.

EDITORS PRESS:—My cow gives bloody milk. Please state what I must do for her, and oblige a subscriber.

Cows are sometimes constitutionally inclined to give bloody milk, and this trouble exists chiefly among high-bred or very large milking cows. The tension of the glands, under the strain of a large secretion, causes the capillary vessels to give way and the blood exudes with the glandular secretion.

To remedy the trouble, first reduce the feed; give no grain food. It may be well to give a pound of Epsom salts to relieve any fever which may exist. The milk should be drawn frequently and the udder bathed with warm water, and then well rubbed with camphorated-soap liniment. A newly-calved cow should be milked promptly, if the udder is hard and appears full; or previous to calving, if the udder is swollen and hard. A cow about to calve should have no grain food for three or four weeks previous.

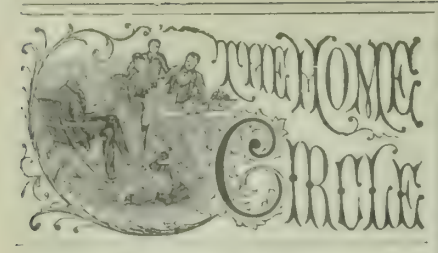
DR. A. E FUZARD, M. R. C. V. S. L.
11 Seventh St., S. F.

Calves, "Blackleg" and Garlic.

In our "Agricultural Notes" for July 5th, mention was made of farmers about Bloomfield and Tomales losing a number of calves by an unknown disease. We at once addressed a letter of inquiry on the subject to Mr. H. P. McCleave, the chief loser, but there was some delay in our note reaching him; so we have but just received the following answer, which is especially interesting in connection with the above letters from Mr. Martin and Dr. Buzard:

EDITORS PRESS:—The first calf I lost was a fat heifer. It drank its milk at night all right and seemed well, and in the morning it was dead. It had not been out to grass; it was milk-fed. I had others up in corral with it.

I had five others about four months old turned out to grass that were fat; they had grass only. In a few days I missed two of the best of them; looked for them and found them lying in a dry creek, one of them dead and the other dying. The night before they were well, or apparently so, at sundown.



The next, a few days later, was another up in the corral we were feeding milk. It was well at night, and in the morning was dying.

I then had three of the five older ones left out in the pasture. A few days later two of them came to get some water. I went to see where the third one was, and found her dead. She was apparently well the night before.

I cut one of them open and found that the lungs and liver were much larger than they ought to be and much discolored. I was then pretty certain that my young stock had some fatal disease, and I found others had lost some, so I mentioned the fact to several, and a gentleman from the old country told me that he had seen the blackleg in cattle which was about as fatal as I had stated, and that the only thing that could be done was to try to prevent it, and the way they did in his country was to make an incision about 1½ inches long in the animal's tail, about three inches from the lower end; insert a piece of garlic into it and bind it up. So I went home and did as he told me with three that I had left. I kept the bandage on 48 hours and then took it off, and since then have not lost any, so I think that the garlic has acted as a preventive in my case.

HENRY P. MCCLEAVE.

Petaluma, July 25, 1890.

A Lump of Carbon.

Tell me, lump of Carbon burning
Lurid in the glowing grate,
While thy flames rise twisting, turning,
Quench in me this curious yearning,
Ages past elucidate.

Tell me of the time when, waving
High above the primal world,
Thou a giant palm tree, lifting
Thy proud head above the shifting
Of the storm-cloud's lightning hurled,
While the tropic sea, hot laving,
Round thy roots its billows curled.

Tell me, did the Mammoth, straying
Near that mighty trunk of yours,
On the verdure stop and graze,
Which thy ample base displays,
Or his weary limbs down-laying
Sleep away the tardy hours?

Perchance some monstrous Saurian, sliding,
Waddled up the neighboring strand,
Or leapt into its neighboring sea
With something of agility,
Though all ungainly on the land;
While near your roots, in blood-stained fray,
Maybe two Ichthye beasts colliding,
Bit and fought their lives away.

Tell me, Ancient Palm-Corpse, was there
In that world of yours primeval,
Aught of man in perfect shape?
Was there good? and was there evil?
Was it man, or was it ape?

Tell me, lump of Carbon, burning
Lurid in the glowing grate,
Lies there in each human face
Something of the monkey's trace?
Tell me, have we lost a link?
Stir thy coaly brain and think,
While thy red flames rise and sink,
Ages past elucidate.

Travelers' Journal.

Helen's Heroism.

"There ain't so much difference in folks as some seems to think," said the stout, good-looking man in front of me.

We were on a Western-bound train which had just been raided by a gang of ruffians, and only the greatest good luck, aided by the coolness of the man opposite, had kept us from falling an easy prey. While waiting to get under way—for they had gagged and bound the engineer and brakeman before entering our car—some one had said it was strange such fiends were allowed to live, and then he had spoken.

I asked sarcastically whether he meant that people were all thieves, or that thieves were good people.

"No, I don't mean that," said he; "I know better. But I tell you folks hadn't orter judge, 'specially them that's had a good fetchin' up. Now, my wife could tell you a story that would make my meanin' clear—a sight clearer than I can. She thinks everybody has good in 'em that's put there to save 'em—it's the leaven spoke of in the Bible, she says. If 'twant so, God wouldn't be just; an' it's the part of other folks to set the leaven to workin' till it leavens the whole lump—and she's right, too. She always is right!" he declared with emphasis. "See that little house over there on the hillside, with a whole yardful of posies in front? It's all by itself; you can't help but see it."

"Yes, I see it," said I.

"Wal, that's where we live—Helen and I. 'Helen of Troy,' I call her, because Troy is the name of the town. This railroad curves in the shape of an 8, an' in a dozen miles it fetches us in sight of the house ag'in—but the back side of it instid of the posy-beds. I've a good mind to tell you the story in my way, though I'd like to have you hear Helen tell it—there's plenty time before we git to Troy."

I looked my interest, and he proceeded.

"I'm a Yankee, an' I see you be. Wal, to begin 'way back, I was a wild feller when Helen took a notion to me. She was as fur above me as the stars is above this train. She was a schoolteacher, an' had money laid up; but I hadn't not one dollar to my name, an' nothin' else to speak of 'cept what I'd been a sight better off without.

"I hain't told ye how my wife looks. Wal, she's one of them pale little women with gray eyes that looks right through ye an' makes ye want to be better, an' pretty, brown hair that grows kinder cunning about the ears—you've seen it; her mouth is firm—dreadful firm. I might as well tell you I'm right under that little thumb of hers—an' its jest where I wanter be, 'cause I know if I trust to her leadin' I shan't go fur wrong.

"Wal, as I told you, Helen had laid up some money, an' had jest begun to set up housekeepin'. She'd got tired of not havin' no home of her own, an' she cackerlated on givin' of her Aunt Mary one with her, an' so havin' a home to come to when she warn't teachin'. She'd lotted a pile on that home, an' she'd hired a house an' got her money outer the bank, an' was intendin' to go to town the very next day to buy furniture. She'd borrowed some things of a friend jest for the time bein' so's to stay there, for, she's told me sense, them four walls seemed so sweet to her she couldn't bear to leave 'em even for one night. Women all seem to sorter hanker after a home of their own, you know.

"Her money was in the house. She'd hid it away; but first she'd marked every bill an' took the number, an' give the list to the friend she'd borrowed the bed an' table of. She thought it wouldn't do no harm, she said. Her money had come hard, an' she meant it shouldn't go easy.

"That night, after she'd cleared away, she set down to her knittin' or sewin', I forget which, an' in a little while she thought she heard a step on the suller stairs. She'd bought some pertaters that very day an' seen to their bein' put in the suller, an' she knew she'd locked the door, an' the key was in her pocket that minute. So if any one was in the suller 'twas a burglar, an' if 'twas a burglar he was after her money. She thought of all this in a twinklin', so to speak, betwixt the first step he took an' the second. There wa'n't no way to fasten the suller door. It opened right into the room where she set. She thought of a pail of hot water that set on the stove, how she might throw it into his face, an' she thought of the bread knife. Women are awful defenseless when you think of it. Helen has got a revolver now, an' she knows how to use it, too; but she's so tender-hearted, I don't s'pose, come case in hand, she'd do more'n threaten to use it. But she didn't go for the knife nor the hot water; she jest stood up slim an' straight behind her chair an' waited.

"The door opened kinder softly an' a man came in. He was young an' didn't look so dreadful bad, she said. He was dressed decent, but he looked as if he'd been kicked an' cuffed 'bout the world ever sense he's born.

"'Good evenin',' says my wife, settin' him a chair, jest as if her comp'ny always come up the suller stairs; 'what kind of a night is it?'

"'Blowin' an' stormy,' says he.

"'Then you must be cold,' says she.

"She bustled round an' made the fire burn better, an' set on the teapot.

"She knew, for all her calmness, that she was in mortal peril, but she said a little prayer an' drawd out the table.

"'I've had my supper,' said she, 'but it was so long ago I don't mind eatin' ag'in. "Nothing like a warm supper," my mother uster say, "to cheer a man in cold weather."'

"An' all the time she was a thinkin' how she could get rid of him, an' a-hopin' some one would come in; but they didn't.

"'Come,' says she, 'the tea is drawd, an' you can eat jest as well now as any time.'

"She set down opposite of 'im an' poured out the tea an' passed the vittles, all the time a-talkin' 'bout one thing another, as perlite as you please. After supper he got up an' then set down ag'in. My wife knew he was tryin' to git his courage up, an' she began some kind of talk, but he jumped up and says, says he, awful gruff:

"'There ain't no use foolin' any longer. You know my business as well as I do; you know I've come for that money you've hid away in the straw tick of your bed.'

"She knew then he'd been a-watchin' of her, an' she felt as if she should sink through the floor, but she didn't let him see she was skairt.

"'It can't be,' says my wife. 'You ain't the man to take my money—the money I've earnt, dollar by dollar. You don't know what I've gone through to earn that money. I was an orphan—'

"'So was I,' says the man.

—"'But I wanted to grow up good and respectable, because you see I could remember my mother an' father, an' how they used to pray for me when they knew they must leave me alone in the world. Father was a fireman, an' got injuries that killed him in a big fire, an' mother died with consumption. When I run away,' says she, 'I went to live where I could work for my board, an' go to school—'

"'I didn't,' says he. 'I run away to sea, an' went straight to the devil.'

—"'I didn't care as much as some for finery, an' when I began to teach school I laid up a little every year. I might be sick, you know, an' I hadn't no home. But I've got one now. I hired this house for me an' Aunt Mary, an' moved in yesterday. The money you speak of is to buy furniture. You can see I need it. The bed an' table are borrowed, but the bench an' dishes an' stove are mine.

"'You can take the money, of course, for you are strong an' I am weak. See, your hands are twice as big as mine. But I don't believe you will take it; you are not the kind of a man to do such a thing.'

"'I need money, you don't know how much,' said the man. 'I hain't had work for six months, an' I hain't eat a mouthful for two days till to-night.'

"'I'm sorry for you. I know what it is to be cold an' hungry,' says she, 'an' out of work. You don't say so, but I know you don't want to be a thief; you have formed bad habits, perhaps, an' got into bad comp'ny, but if you could get money honestly, you would rather do it.'

"'That's so,' said the man, 'I'd rather earn a dollar than steal one any day, an' I ain't lazy.'

"'Let me lend you fifty dollars,' said my wife, 'you can pay me some time. I am not able to give it to you, an' you wouldn't want me to; but if you can't pay me, don't let it trouble you.'

"'What kind of a woman be you?' spoke up the man. 'I didn't s'pose there was sich folks in the world as you. I never see any. If you hand me fifty dollars, do you ever expect to see it ag'in?'

"'Yes,' says Helen, 'I do; but then mebbe you can't pay me; somethin' may happen to prevent.'

"'But of course you know I can take the two hundred as well as the fifty if I want to, don't ye?' he said.

"Yes, but you won't; so don't let us talk about it at all. Besides, I haven't told you that I marked every bill with a private mark an' took the number of each, and gave the list to a friend as a safeguard. The money would bring you into trouble the first thing, but if I let you have the fifty dollars, it will be different. It shall be yours until you can pay it. Will that be enough? I will divide with you if you say so.'

"'Twenty-five is all I shall take,' said the man, 'an' I wouldn't touch a cent of it if there was any chance in the world for me to get money decently. I've walked miles and begged for work as I never begged for bread, an' I'd begun to think that honesty didn't pay.'

"'Is this the first time?' asked Helen.

"'No, but it's the last,' says he.

"She went into her little bedroom, shet the door, and counted out the money. She trembled so she could hardly stand, an' cold chills run over her from head to foot. What if he should change his mind an' take the whole; how could she prevent it? She looked like death when she came out, an' the man said:

"'Don't look like that. I wouldn't harm a hair of your head no more than I would my mother if she stood there, an' I trust you as I would her. You say these bills are marked. They would put me in prison as quick for these as for the two hundred if you folier 'em up.'

"'But I won't, you know; I won't,' said my wife.

"'No, I know you won't,' said he solemnly.

"She warn't afraid after that, but tears—mebbe 'twas nervousness—came into her eyes as she said to him:

"'Your mother is watching you; don't forget that.'

"'Do you believe it?" said he.

"'I know it,' says she.

"My wife goes to church reg'lar an' believes in her religion with her whole soul, an' her faith sorter moved him.

"'I sha'n't forget that you say so,' he said.

"'If you need any more money, let me know it; but come through the front door,' she said, smiling jest a little.

"'I shan't need any more, an' I'll pay this back.' His head was up now an' his voice had a clear, honest ring to it, so Helen said."

The speaker stopped here, and I thought his narrative was finished.

"Your wife is a real heroine," said I.

"She was sharp to get off with the loss of twenty-five dollars."

"Sharp! She knew she should git it back, an' she did. Lucky for her that it wa'n't some burglars, though. But she'd managed some way; she's up to anything. Wal, in jest three weeks, one Sunday morning a young feller come up the garden-walk. She knew him in a minute. It was her burglar.

"He had come to pay her, he said; an' sure enough, he pulled out his pocket-book an' handed her the money. They fell to talkin' upon that, an' he told her how she'd ben his salvation when she might 'a' ben his ruin, as 'most anybody else would; an' she asked him if he'd found work, an' he told her he had—good, stiddy work that brought him in ten dollars a week. So they talked together awhile an' then he went away."

"And that was the end of it, I suppose," said I.

"No 'twa'n't. He married her in two years' time. That was twenty years ago, sir, come next New Year's Day."

"You don't mean—" said I.

"I do," said he, straightening up and looking every inch a man. "It was me, and now you understand why I spoke as I did. If there was more like Helen in the world, ready to take people by the hand instid of sendin' 'em to the gallers, 'twood be better than 'tis; but she is one of a thousand. She's ben the makin' of me, and I—wal. I hope I know it. If it hadn't 'a' ben for her I might 'a' ben as bad as them fellers that boarded the train. Wal, good-by."

We shook hands, and he got off at the next station.

"Know that man?" I asked the conductor, "anything about his character and standing?"

"Tip-top! One of the first men in Troy!" said the conductor. "Made a big strike in flour a few years ago."

One Way to Cleanse a Carpet.—Having dusted and removed such articles as can be carried from the room, wring a flannel mop out of hot water and wipe the carpet thoroughly, wringing the mop from clean water as often as it may become soiled. Now, sweep with a broom, as you ordinarily would, and when you have finished you will have a bright, clean carpet, with little or no dust, and all at the expense of a very little hard labor. Those who have not tried this method are skeptical about its merits; but one trial will convince.

The man who reeks nothing is likely to wreck himself.—*Birmingham Republican.*

How Language Grows.

The late Cornelia Gracchus gave
Unto her elder sonny
Sempronius, the wise and grave,
Some nice Hymettus honey.

Tiberius Sempronius
Said to his little brother,
"This honey—*without wax* to fuss—
Is clearer than all other."

Then Caius answered laughingly,
As wishing to be funny,
"Some people—so it seems to me—
Are like Hymettus honey."

"Is not veracious Scipio,
(Not grandpa, but the other),
Sincere, if I may say it so?"
"What slang!" reproved the brother.

Yet, over-wise Sempronius,
With glossaries to back us,
We deem your blame erroneous,
And side with Caius Gracchus.

—*Portland Transcript.*

Home Courtesy.

Editors Press:—The fire of courtesy and etiquette should glow the brightest on the domestic hearth. If there is any place where politeness and kindness should be freely exchanged, it is at home. The pure influence of courtesy is felt over the whole household and is wonderful in its subduing power. Every home has a heap of embers, which should be kept in a glowing fire; if they are scattered they soon flicker and die. Courtesy is mighty and will glorify the humblest home; it is contagious and extends over the whole household. If the father be courteous to his wife, so will the boys be likewise to their sisters, the girls will imitate their mother in gentleness and patience and if big brothers are noisy and heedless (and they very often are) with their gentle demeanor and full show of love and kindness, the girls soon throw that sweet courteous influence over all, and the boys show their appreciation by submitting to the rule, which always *should* be the rule, and not the exception; it prevents jarring, and wards off many an unhappy hour, caused by harsh words, spoken in a moment of anger and thoughtlessness. It seems so strange that a man will speak more rudely to his wife than to any other lady. A man is very often a perfect gentleman in society, but a bear at home. A brother will be harsh to his sister, while to her female friend he is everything that is respectful. It is sad, indeed, but nevertheless true, that many mothers, wives and sisters are indebted to strangers for all the politeness shown them. Why is this? Only because there is a lack of courtesy among the members of the household. So long as they appear well in the eyes of the outside world, the comfort of the dear ones at home is neglected. Ah! this should not be. "*Home*" should be *first* in every heart. When the angel of death awaits to call the spirit of some heedless mortal to its eternal home, who is it that comforts the last dreadful moments and hovers over the bed with unfailing love and kindness, waiting with gentle touch and breaking heart to soothe the last moments of the weary sufferer? Is it the society friends who have received all the sweet smiles and the courteous manners, or a faithful household member who has taken all the harsh words and unpleasant glances? Oh! why should not all actions of love, kindness and courtesy originate around the glowing hearthstone of that sweet word "home"? It heals all wounds and ennobles human nature; it fills one's soul with loftier feelings and brings one nearer to God, whose loving eye watches over all with the tenderest care, and His blessings will surely rest on those who try to do right. Ada E. Taylor.

Stockton.

Chaff.

"How does this suit you?" asked the mother bird, as she dropped a nice fat worm into the yawning mouth of her young son. "One might say it fills the bill," answered the little wretch, and his mother began to seriously consider the advisability of letting him starve.—*Terre Haute Express.*

"He fairly dotes on her, but her father won't let him in the house." "The old man must be something of an antidote."—*Harper's Bazar.*

"Where did you get that imitation sealskin sacque?" "At the bargain-counter." "It looks like a counter-fit."—*Munsey's Weekly.*

As the electric light kills insects, it is understood that Uncle Jerry will advise the farmers to put an electric light at each cabbage-head and potato-hill.—*St. Paul Globe.*

"See, yonder comes old Mr. X——, who has helped to dry so many tears." "The dear, kind-hearted man! And pray tell me how?" "He is a manufacturer of pocket-handkerchiefs."

Mrs. Smith: So your daughter has graduated with honors? Mrs. Jones: Yes, she understands painting and astronomy and piano-playing, and Lord knows what all. "You ought to be very proud." "I suppose so. I expect she will be very happy in her married life, if she finds a husband who knows how to cook, sew on buttons and dress children."—*Siftings.*

Young Folks' Column.

The Wonderful Boot-Jack.

Wallace Earl was sitting in his aunt's kitchen eating pop corn. He had come to the bottom of the pan, where were left only the round, brown grains which had refused to pop.

"Why do you eat that, Wallace?" asked Hubert Black, his cousin, "If you really want some more pop-corn, I'd just as soon pop it as not."

"Thank you," answered Wallace, pushing away the remnant of their late feast. "I believe Aunt Maria has put away or cleared up our muss, and I wouldn't like to make her do it over again. Besides, I have had all I want, and all that is good for me. Thank you just the same," he reiterated, glancing around the room absently, then scanning his ten-year-old cousin's face.

"Pop-corn don't hurt anybody, and it's no trouble to clear up the muss," persisted Hubert.

"How do you know?" Wallace asked, almost sharply.

"Why because," began Hubert, wondering at his guest's manner.

"I guess that's about all the reason you could give," laughed the older boy.

"What shall we do, then?" queried Hubert, putting aside a subject which he did not understand, or which was not interesting to him.

"I believe I'll go to bed," answered Wallace, with a yawn. "I see you've already pulled off your boots; and it's 'high time,' as Uncle Jerry says." He took up the boot jack which Hubert had just thrown upon the floor, and regarded it with a thoughtful air for a moment before he spoke again: "I like this boot-jack better than any other I ever used. Now, ours at home don't come up with it."

Hubert drew nearer and became unusually interested in the useful though homely object which had served him unnoticed for a long time. "It's only made out of a piece of board. Our hired man made it year before last; I saw him saw the notch and nail on the cleat," he said, wonderingly.

"That so?" began Wallace. "I wonder if I couldn't make one like it, but I am afraid not. Where is this hired man you spoke of? Was he a sort of magician?"

"Pooh! I don't know what you are talking about. What kind of a boot jack have you at home?"

"An iron one, something like a beetle in shape. Where did you say this hired man lives? You see, I have taken a great fancy to this boot jack."

There was a slight mocking accent as Wallace continued, and Hubert began to detect the sarcasm: "You needn't make fun of our old boot-jack, if yours at home is a nicer one," he pouted.

"Make fun! I say, 'Handsome is that handsome does.' Ours at home can't hang itself up: I always have to do it myself." Wallace was speaking earnestly now.

"Hang itself up!" exclaimed Hubert. "I guess you're crazy."

"No, I'm not crazy," persisted Wallace. "I have noticed that you never go to the trouble of picking it up after you are through using it, and in the morning I never see it lying on the floor where you left it. Now I call that a labor-saving machine."

Hubert looked uneasy, though he forced the answer, "Somebody has to pick it up; it never does so itself."

"You don't say!" exclaimed Wallace. "Probably some one who can do it more easily than you can."

"It's easy enough to hang up a boot-jack. Come, I thought you wanted to go to bed so fast."

"How do you know it is easy enough? You never have made the experiment. Who do you suppose does hang it up?"

"Oh, come on to bed! Throw the old boot-jack down!"

"Hubert, who will hang it up if I don't?" There was no mistaking the severe earnestness of Wallace's tone. "I know who will hang it up: it will be Aunt Maria, and I can't think how it will be any easier for her than for you. Now, I am only taking this boot-jack as a text. I have noticed that you never put anything back in its place. You find where a thing belongs readily enough when you want to use it; but when you are through with it, you forget where it belongs, and your mother has to stoop down and pick up things forty times a day."

"Oh, now, Wall!"

"Well, but don't you see how mean it is for you to force other people to do your duty? But I don't suppose you can begin to see, else you would be too ashamed to ever trespass on other people's rights again."

Wallace began to look as if discouraged, and his tones manifested the hopelessness of his cause.

"Why, boys, you are letting the fire go out; you will take cold. I thought you were in bed half an hour ago." Mrs. Black came into the kitchen, intent upon the last household matters for that day. She stooped to put the boot-jack in its place. Hubert sprang forward and said:

"I'll do that, mother!" And with a shame-faced glance at his cousin, he hung up the wonderful boot-jack.

"Now that's nice!" began Mrs. Black, with a pleased look. "I believe it is easier for you to stoop down than for me to do so. I wonder you never thought of it before."

Then the boys said "good-night" and started off upstairs, Wallace wondering why mother and son had never thought of it before.—*Phœbe Parmelee.*

A Boy from Texas.

A slender, yellow-haired, frank-faced boy is a more than ordinarily distinguished guest at the police headquarters nursery to-day.

John Tracy is 16, and has a face and manner to inspire confidence in his ability to do anything. There is nothing of the wild Western braggadocio about him. He simply knows what he wants, and his brain is quick in devising means of getting it.

A month ago John was a bellboy in the McLeod hotel in Dallas, Texas. He was born in Bryan in the same State, but, his father and mother being dead, he lived with a grand-uncle in Dallas. When John announced his intention to go to New York to seek out his nearest living relation, a cousin of the name of Claudia, the uncle said: "All right." Probably he knew it was of no use saying anything else, and John started.

He had no money, but that was to him no obstacle. He had laid out a route by rail up the Mississippi, and he went by it just as though he owned the road. He simply told the conductors where he was going, and the conductors, sizing up the lad in a single look, passed him along and gave him food.

Once in awhile the boy would stop off to have a look at the town, and would take the next train, always with the same experience.

Coming thus, by way of Memphis, St. Louis, Louisville, Cincinnati and Buffalo, he reached New York and his journey's end yesterday on a New York Central train.

Johnny went out of the Grand Central depot to take a look at things as soon as he got in, and concluded, after a brief inspection, that New York was considerable of a town, and that he might consequently have trouble in finding his cousin, of whom he only knew that she was married to a man by the name of Knox, "with sideboards;" Claudia Knox, that was all.

The lad decided that under the circumstances the way to do was to go to work and prosecute his inquiries until he found her. The office of the Union News Company was handy, and he applied for a job without delay.

Whoever was at the desk there missed the opportunity of a lifetime in the way of securing an employe. John would have been superintendent of the company before he had time to grow a beard. He was told, however, that he must go away and get "security."

The lad smiled at the notion and went out to think it over. It was evening, and it was cool and pleasant along the North river, which he had reached in the stroll. A policeman found him there getting ready to "turn in for the night" on a plank, as contentedly as if it was a bed in the Fifth Avenue hotel. The officer kindly took the boy to police headquarters.

Sergt. Rheinisch scratched his head as he counted the Knoxes in the directory this morning and tried vainly to fix upon one as the probable husband of John Tracy's cousin. The lad looked over his shoulder with a humorous twinkle in his eye.

"Let me copy them out," he said. "They're a goodly lot, but I can go to them all and ask."

"You have got a job on hand to do that, my boy," said the sergeant. "This is a bigger town than you think."

"Well," said Johnny, "what is the matter with writing them a letter to say that Claudia's cousin is here looking for her?"

That is what will probably be done in order to discover the right Mrs. Knox. Meanwhile, John Tracy of Texas rests at headquarters, none the worse for his long journey.—*N. Y. World.*

Persevere.

One morning not long since, a teacher of music was giving his usual lesson in a certain primary school in New England. He had requested several of the little people to sing alone the exercises on the chart.

At length he turned to a bright-eyed little boy, five or six years old. The little fellow arose, his face aglow with interest; but he failed to sing even the first measure correctly. He repeated the attempt with the same result.

Had they been allowed to do so, several of the children were inclined to laugh at the discordant notes. The little boy turned questioningly his flushed face toward the teacher, who said: "I think you can't sing to-day, Johnnie."

"Yes, sir, I can. Please let me try again."

But it was a failure this time, and the music teacher himself said: "No, little boy; we will let some one else sing it. You have done your best, but it isn't quite right."

"Please, sir," said Johnnie, timidly, yet standing as firm as a soldier, "I know I can sing that piece."

The gentleman smiled, thought of the few moments left, and replied: "You may try it again, my little man."

It was better this time, and, after repeating it once or twice more, Johnnie stood triumphant; he had at last sung it without mistake.

That boy will make a true man. He will not turn aside for trifles, but will try again and again, until he succeeds in what he has undertaken. Such boys are wanted everywhere—boys who *can* and *will*.—*Exchange.*

Good Health.

The Prevention of Sunstroke.

The following hints for the prevention of sunstroke are given by Dr. Edwin C. Mann of New York city, in an article upon this subject in one of the medical journals: "To avoid sunstroke, exercise in excessively hot weather should be very moderate; the clothing should be thin and loose, and an abundance of cold water should be drunk. Workmen and soldiers should understand that as soon as they cease to perspire, while working or marching in the hot sun, they are in danger of sunstroke, and they should immediately drink water freely and copiously to afford matter for cutaneous transpiration; keep the skin and clothing wet with water. Impending sunstroke may often be warded off by these simple measures. Besides the cessation of perspiration, the pupils are apt to be contracted and there is a frequency of micturition. If there is marked exhaustion with a weak pulse, resulting from the cold water application, we should administer stimulants. The free use of water, however, both externally and internally by those exposed to the direct rays of the sun is the best prophylactic against sunstroke, and laborers and soldiers and others who adopt this measure, washing their hands and faces as well as drinking copiously of water every time they come within reach of it will generally enjoy perfect immunity from sunstroke. Straw hats should be worn, ventilated at the top, and the crown of the hat filled with green leaves or wet sponge. It is better to wear thin flannel shirts in order not to check perspiration. We may expose ourselves for a long time in the hot sun and work or sleep in a heated room and enjoy perfect immunity from sunstroke, if we keep our skin and clothing wet with water."

Seven Hours' Sleep at Least.—There is not one man or woman in 10,000 who can afford to do without seven or eight hours' sleep. All those stories written about great men and women who slept only about three or four hours a night make very interesting reading, but I tell you, my readers, no man or woman ever yet kept healthy in body and mind for a number of years with less than seven hours' sleep. Americans need more sleep than they are getting. This lack makes them so nervous and the insane asylum so populous. If you can get to bed early then rise early. If you cannot get to bed till late, then rise late. It may be as Christian for one man to rise at 8 as it is for another to get up at 5. I counsel my readers to get up when they are rested. But let the rousing bell be rung at least 30 minutes before your public appearance. Physicians say that a sudden jump out of bed gives irregular motion to the pulse. It takes hours to get over a too sudden rising. Give us time after you call us, to roll over, gaze at the world full in the face, and look before we leap.—*T. De Witt Talmage.*

Poisoning by Lead Dust.—Cases of lead poisoning among the jacquard weavers in a Swiss factory were traced to the dust from the leaden weights which are used by the weavers to carry the thread of their warp. After the varnish has been rubbed off from the weights, the lead begins to wear away and falls in fine particles among the dust on the floor. In some cases the dust was as much as 56.86 per cent lead, and even when the utmost care had been taken, nine or ten per cent of lead was found in it.

Nose Bleeding.—An eminent physician says: "The best remedy for bleeding at the nose is a vigorous motion of the jaws, as if in the act of mastication. In the case of a child, a wad of paper should be placed in its mouth, and the poor child instructed to chew it hard. It is the motion of the jaws that stops the flow of blood." This remedy, he says, is so extremely simple that many will feel inclined to laugh at it; but it has never been known to fail, even in severe cases."

The Growth of Nails.—It is said that the growth of nails on the left hand requires eight to ten days more than those on the right. The growth is more rapid in children than in adults, and goes on faster in summer than in winter. It requires an average of 132 days for the renewal of the nails in cold weather, and but 116 in warm weather.

The Taste.—Different classes of substances have been found to affect the organs of taste in the following order: Bitters, acids, saline substances, sweets and alkalies. The taste nerves are nearly 2000 times as sensitive to quinine as to sugar.

Boiling Milk.—Experiments in St. Petersburg have shown that boiling milk greatly reduces its nutritiousness.

Gould, with all his millions, has to walk the streets at night to induce sleep.

A Company to utilize underground water for irrigation and other purposes has been organized at Pueblo, Col. The projectors claim to have discovered a point where by placing a dam on the bedrock of a valley 500 yards wide, a flow of a million gallons of underground water per 24 hours will be stored.

Domestic Economy

Salad Dressing, with Olive Oil.

Editors Press:—In reply to the request of "S." in your last issue, I will give my recipe for salad dressing, which is pronounced a success by all who have tried it.

Take one-half teacup of olive oil and the same quantity of vinegar, add one egg—or the yolks of two—well beaten, one tablespoonful sugar, small teaspoonful salt, a pinch of black pepper, also of ground mustard; blend half a teaspoonful cornstarch with vinegar, or water if your vinegar be strong; stir all well together and place over the fire and stir until it is heated through and the consistency of cream; do not let it boil.

The same dressing without the cornstarch is good without the heating, served with plain lettuce salad. L. E. S. W.

Potato Balls.—To two cupfuls cold mashed potato add an egg, a teaspoonful of butter, and salt and pepper to taste. Form with floured hands into small round balls, and fry in deep fat.

Coffee Cake.—Two cups sugar, one cup butter, one cup molasses, one cup strong coffee, one egg, two teaspoons each soda, cloves, one cinnamon, one teaspoon nutmeg, one cup raisins, flour.

Potatoes Hashed with Cream.—Chop cold boiled potatoes fine, and stir them into a cup of hot milk in which has been melted two tablespoonfuls of butter. Pepper and salt to taste. If you have cream, use this and half as much butter.

Butter Cakes.—Prepare dough as for quick biscuit, roll it out ¼-inch thick, and cut into small rounds. Roll each of these out until as thin as cookies, prick with a fork, and bake in a quick oven. When done, butter well. Leave in the oven half a minute longer and send hot to table.

Dropped Fish Cakes.—One cup of salt cod picked very fine, half-cup milk, one tablespoonful butter, two teaspoonfuls flour, one egg, pepper to taste. Make a white sauce of the flour, butter and milk, stir the fish into this, add the egg beaten light, season and drop by the spoonful into boiling lard, as is done with fritters.

Chicken Mince.—From the bones of a cold roast, boiled or fricaseed chicken cut all the meat, and mince it fine with a sharp knife, chopping with it two hard-boiled eggs. Stir this into a cup of gravy, or if you have none, use instead a cup of white sauce. Season to taste, fill a pudding-dish or scallop shell with the mixture, and serve very hot.

Lyonnaise Potatoes.—Slice cold boiled potatoes into neat rounds; cut a medium-sized onion into thin slices, and put it with a good tablespoonful of butter or bacon dripping into the frying-pan; when the onion is colored, add the potatoes, about two cupfuls, and stir them about until they are a light brown. Strew with chopped parsley and serve.

Hasty Muffins.—Two cups flour, two eggs, one tablespoonful mixed butter and lard, two teaspoonfuls white sugar, one teaspoonful baking powder, saltspoonful salt, one cup milk. Into the eggs, beaten very light, stir the melted shortening, the sugar, the milk and the flour, well mixed with the salt and baking powder. Stir well and bake in thoroughly greased tins.

Parisian Potatoes.—From peeled and washed white potatoes scoop out little balls with the cutter that comes for this purpose; boil them for five minutes, then put them in the frying-pan with two tablespoonfuls of melted butter; stir them about until every ball is well coated with the butter, pour into a colander and set them in the oven until brown; sprinkle with salt and a little minced parsley before serving.

A Delicious White Cake.—One cup of granulated sugar, one-half cup of butter, one-half cup of milk, 1½ cups of flour, one-half cup of cornstarch, two teaspoons of baking powder, whites of six eggs; cream butter and sugar and add the milk; mix flour, cornstarch and baking powder, and stir into butter and sugar; have the whites beaten very stiff beforehand and add. Any flavoring can be used; almond is especially delicate. This cake can be used also as a layer cake.

Broiled Steak with Mushrooms.—Broil your steak over a clear fire. Before you put it on, open a can of mushrooms, take out half of them, and cut each mushroom in two. Saute them in a frying-pan with a little butter, unless you have a cup of bouillon or clear beef soup or gravy at hand. Let them simmer in this for ten minutes, and when you dish your steak, pour gravy and mushrooms over it. Leave it covered in the oven five minutes before sending to table.

Salads.—One rule, often disregarded by second-rate salad-makers, is that a plain French salad should consist of one kind of vegetable only—lettuce, endive or Batavian, as you will, but never two of these mixed together, else their delicate and subtile flavors are impaired, if not destroyed. The English olla podrida of lettuce, watercress, mustard and cress, beetroot and radishes is a different thing altogether, although very appetizing when craftily compounded.

The Week.

Active preparations are in progress for the various district and local fairs. So far as we can judge there seems to be rather more than the usual interest being taken by directors and contending exhibitors, and this bodes well for the exhibitions. Next week the season will open with displays in Los Angeles and Amador districts, and we trust they will prove auspicious and successful. The State Fair, we are glad to see, is commanding wider attention than usual and preparations for county exhibits are more general. The experience gained during the last few years should result in something notably fine in these undertakings. People are also learning to look for them and to canvass discriminatingly the materials brought forward, and this should be another inducement to enterprising citizens to take part in the work.

The carnival of the fire fiend has kept progress during the week past with the dance of the mercury. Hot weather is bad enough without the danger to life and destruction of property by the careless fire carrier. Careless campers, careless smokers and other public devastators should be caught and prosecuted.

The Lottery Evil.

It certainly seems now that something may be done to check the evil work of the great lottery swindles which are robbing the poor, misleading the weak and idle, corrupting public journals, and, in short, spreading abroad poverty and demoralization greater, perhaps, than can be traced to any other form of vice. As States seem powerless to cope with the prevailing evil, the thoughts of those who desire to free the people from it have turned to the National Government, and, fortunately, a hope of an effective remedy is now outheld. The President of the United States, in a message to Congress on July 29th, uses the following words:

If the baneful effects of lotteries were confined to the States that gave the companies their corporate powers and license to conduct business, the citizens of other States being powerless to apply legal remedies, they might clear themselves of responsibility by the use of such moral agencies as were within their reach. But the case is not so.

The people of all the States are debauched and defranded. The vast sums of money offered to these States for charters are drawn from the people of the United States, and the Government, through its mail system, is made an effective and profitable medium of intercourse between the lottery company and its victims. The use of the mails is quite as essential to the companies as a State license. It would be practically impossible for these companies to exist if the public mails were once effectually closed against them, and thus stop the prostitution of an agency only intended to serve the purposes of legitimate trade and decent social intercourse.

It is not necessary, I am sure, for me to attempt to portray the robbery of the poor and the widespread corruption of public and private morals, which are necessary incidents of these lottery systems. The national capital has become the sub-headquarters of the Louisiana Lottery Company, and its numerous agents and attorneys are conducting here a business involving probably a larger use of the mails than that of any legitimate business enterprise in the District of Columbia. There seems to be good reason to believe the corrupting touch of these agents has been felt by the clerks in the postal service, and by some of the police officers of the district. Severe and effective legislation should be promptly enacted to enable the Postoffice Department to purge the mails of all letters, newspapers and circulars relating to the business.

The message of President Harrison, from which the above extract is taken, was sent to Congress in approval of a bill which the P. O. Committee of the House of Representatives has agreed upon as a substitute in lieu of the number of pending bills adverse to lotteries and which has been ordered reported to the House. The committee says that the present legislation is inadequate and that more forcible laws must be enacted to prevent the use of the mails by lottery companies. The present law can be enforced by the courts only and conveys no power to the Postmaster General.

The substitute prohibits lottery circulars and tickets, lists of drawings, money or drafts for the purchase of lottery tickets, or newspapers containing lottery advertisements or drawings, from being carried in the mails or delivered by carriers; and the penalty of a fine not exceeding $5000 and imprisonment not exceeding one year are imposed upon any person depositing such matter in the mails. The Postmaster-General is also authorized upon the evidence of the existence of the lottery or gift enterprise to cause the registered letters directed to the company to be stamped "fraudulent" and returned to the senders, and he may also forbid the payment of money orders addressed to the lottery or gift enterprise company.

It is encouraging also that the friends of decency and morality in Louisiana are not cast down by the recent triumph of the lottery managers in the Legislature of the State, but are organizing vigorous war upon that villainy.

The N. O. *New Delta* contains an account of a highly successful picnic, given July 16th, by the Farmers' Union of Cheneyville, Rapides parish, at which Mr. Steve Pearce, Rev. Mr. Cooper, Mr. Grayson and Mr. Ed Hunter delivered short but stirring addresses on the lottery question, and in bitter opposition to the lottery amendment to the State Constitution. The writer says: "Mr. Hunter is a brilliant young lawyer, and his whole soul seems to be aroused on this subject, and we are proud of him.....Mr. Steve Pearce of Avoyelles is a man of great influence, and every word he spoke on this occasion went home to the hearts of his hearers.....I tell you, sir, we have the material up here in Rapides and Avoyelles that will make the lightning strike this lottery concern when the batteries are turned on."

The president of the Anti-Lottery League of Louisiana has called a convention of the Democratic opponents to rechartering the Louisiana lottery, or chartering any other lottery, to meet at Baton Rouge, on Thursday, Aug. 7th.

All these are hopeful signs of the awakening of public sentiment on this important subject. Legislation should now be secured in all the States which would check the infamous local traffic which is carried on. All publications of lottery advertisements, lists of drawings, glorifications of prize-winners, etc., should be made illegal and punished severely. California has certainly a duty to do in this regard, and this winter's session of the Legislature should do it.

Causes and Cure of Hard Times.

In seeking to get at the causes of "hard times," we find one that lies far deeper down, far nearer the heart of the matter than any question about free silver coinage, or the tariff, or loaning money on mortgages. These are indeed matters of equity, expediency and (so to speak) convenience; but deeper down lies the fact that the producers and actual manufacturers and *honest* carriers and commission merchants—deeper down, we say, lies the fact that those who honestly do needed work and are content with a fair share of what the world's work produces, are but part (alas that they are so small a part!) of those who enjoy the *products* of such useful industries. However ingenious the plans devised for making money plenty, the honest toilers will still be robbed of their due, so long as wolves, foxes, and leeches are propagated. The deeper cause of hard times is the prevalence of that spirit which breeds parasites and robbers, which allows young men and maidens to grow up with no manly nor womanly longing and resolve to be of use in the world; to grow up concerned only to get all they can—their own share and the shares of others, too, if possible—with no sense of the truth that if "the world owes them a living," it is only as they each one owe the world life-service.

Let us try to make the best of existing circumstances; but let us nurture in ourselves, in one another, and above all in the boys and girls who are to be the people a generation hence, the spirit of industry and a truer appreciation of life's duties and responsibilities. Let it be known that to have better times we must have better men and women to create them by a force of character and a manner of private and public conduct, which are now too seldom seen and too little praised.

The Black Wattle.

It would be well if those who go abroad and return bringing information of what is being done in foreign agriculture, knew more about what has already been accomplished in this State. For example, Mr. Merry, who was Assistant Commissioner at the Melbourne fair, has been writing pointedly of the value of the wattle-bark industries in Australia, and urging the adaptation of the wattle acacia to growth in the south and southwest of the United States, and urging that seed of the tree be imported and planted. Mr. Merry evidently does not know that the *acacia decurrens* has been growing successfully in this State for the last 20 years; that young trees and seed were sent out by the State University a decade ago and frequently since that time; that trees from this source are now bearing seed abundantly, and that there is no more need of importing seed which can be had in large quantities in this State by making arrangements with those who have the trees. These facts are well enough known to readers of the Rural, and it is not creditable to see in other California papers paragraphs calling attention to the tree, and the importance of sending to Australia for it, when probably the editors brush against the trees every day as they stroll through the streets of their towns or linger in the gardens of their subscribers.

The continued drouth in New Hampshire is seriously affecting the crop of both cultivated and wild small fruits.

Copperas for Vines.

Jacob Schram of St. Helena, the well-known vine-grower, is naturally much interested in the announcement made recently in one of the daily papers that Prof. Felix Michel, a Frenchman, had "discovered" that a solution of sulphate of iron (green vitriol or copperas) was a cure for the phylloxera of the vine. The reason Mr. Schram takes so much interest in this announcement lies in the fact that Mr. Schram himself announced the same thing at a vine-growers' meeting in this State a decade ago, and not only that, but has made constant use of copperas in his vineyard practice, and has found much benefit therefrom. We had a talk with Mr. Schram on the subject at the meeting of the State Horticultural Society, and he assured us that he not only used it on vines, but used it in his compost pile, aiming thereby to kill all injurious germs of insects or fungus which might lie therein. In application to the vine itself, the following is his practice as told by himself to a reporter:

In the spring before the vines bud, but after they have been pruned, I use fifty gallons of water to ten pounds of sulphate of iron. I take a barrel and pour in a bucket of hot water to warm it. Then I throw in the sulphate of iron and add another bucket of hot water and then fill up with cold water. I stir it to prevent the chemical from crystallizing. I apply it with a sponge tied to the end of a stick, thoroughly swabbing the vine and allowing some of the liquid to sink in around the roots. The mixture will prevent mildew and make weak vines strong. It is the most wonderful stimulant I ever saw, and as it is very cheap, there is no reason why everybody should not use it. None should be used while the vines are in leaf, as it will burn the leaves all up. During the past sixteen years, while vineyards all around me have been affected with phylloxera, mine has been perfectly healthy, owing to the use of this mixture. I do not think its efficacy can be longer controverted.

A Meeting of Dairymen.

The following brief notice which we find in the Santa Maria *Graphic* of last week is significant:

All dairymen are requested to attend a meeting to be held at Santa Maria on Saturday, August 2, 1890, at 11 o'clock sharp, to devise some means whereby we can dispose of our produce and realize its full market value. Dairymen attend, one and all.

This is another outcropping of the old complaint of the difficulty of marketing dairy products satisfactorily, and we have often expressed the belief that the dairymen by organizing, first in the localities and afterward in a general association, could much advance their interests. The *Graphic*, commenting on the meeting of Saturday, says:

The shipment of butter from this section is very large. There is probably no point on the coast where larger are made, and the quality is A 1, always commanding the top figures. Very seldom is it that butter of inferior quality is shipped, and then the shipper does not expect the market price for good butter, and when the returns come, showing a low price, he is not disappointed. But when butter of the best quality is dubbed "poor" or some flaw is continually found in order to give the commission man a "hole to crawl out of," the dairymen claim it is time to kick, and that is just what they are doing now. They have blood in their eye and mean business.

Fruit Prices.—There is complaint that quotations of San Francisco fruit prices cannot be correct because interior sales are made at higher rates. The fact is, San Francisco prices do not govern fruit sales now. Much of the fruit sent in for city sale is that which is not desired by canners or Eastern shippers who are buying in the orchards and pay high for what suits them. Naturally, then, the price in San Francisco may not be a guide as to the value of good canning or shipping fruit. It is probably due to this fact that our city prices sometimes seem too low.

Premiums at Golden Gate Fair.—Mr. George Bement, the well-known breeder and director of the Golden Gate District, brings us the welcome information that his association has increased its awards for some entries of live-stock this year, and has made especial provision for fast-walking horses, etc. Exhibitors should apply for the new premium list which will soon be ready for distribution.

The grape crop of New Jersey will be a failure this year, owing to rot and the rose-bug. The loss to growers will be more than $500,000.

The Mount Lyell Glacier.

The fact that the Sierra Nevada bears the record of having formerly been the source of immense glaciers has been recognized by all geologists who have visited the region, but no systematic study of the glacial phenomena displayed throughout a large portion of the range has been carried out. An arduous task, but one of fascinating interest here awaits the geological explorer.

The labors of the geologists of the California Geological Survey has shown that glaciers of great magnitude existed on the high peaks about which Kern and Kings rivers rise. Here are the most southern glacial records that have been reported in the Sierra Nevada, but the extreme southern limit of the glaciated regions has not been definitely determined.

A summary of what is known concerning the living glaciers of the Sierra Nevada will be found in an essay on the existing glaciers of the United States in the Fifth Annual Report of the U. S. Geological Survey. The present ice bodies of the Sierra are small and are but miniature counterparts of the glaciers found in many other regions. They occur mostly in deep cirques on the north sides of the more lofty peaks, and with few exceptions flow northward. Observations made during the survey of the Mono basin show that there are nine small glaciers within the area draining into Mono lake.

At the head of Tuolumne canyon, on the north side of Mt. Lyell, is the largest glacier in the neighborhood of Lake Mono. The accompanying view, taken from the Geological Survey Report, will obviate the necessity of a lengthened description. The moraines now forming about the foot of the glaciers are shown. Each of the ice bodies observed occurs at the head of a deep canyon which was once filled by a magnificent trunk glacier. The largest of these ancient glaciers originated in the amphitheater on the side of Mt. Lyell, and flowed down Tuolumne canyon, forming a veritable river of ice, over 2000 feet deep near its source and about 40 miles long. The present glaciers are perhaps the shrunken remnants of the ancient ice rivers, but they may have had a fresh beginning within quite recent times.

THE MOUNT LYELL GLACIER IN THE SIERRA NEVADA.

SANTA MARIA FAIR.—The catalogue and premium list of the 4th annual fair of the Santa Maria Valley Agricultural and Stock Association is just received from Sec'y R. W. Nuttall. The fair is to be held at Santa Maria, Sept. 10–13.

NAPA FAIR.—We are indebted to Secretary Conkling of the Solano and Napa Agricultural Association, for a complimentary ticket to the 25th District's fair, which is to be held at Napa City, Aug. 18th to 23d inclusive.

WOMEN CARPENTERS have appeared in London.

FLORIST AND GARDENER.

Mr. Hopkins Flower Farming at Menlo Park.

A writer for the *Bulletin*, who recently visited the floral farm of Timothy Hopkins at Menlo Park, San Mateo county, gives the following interesting notes of operations carried on:

This is the first year that the garden has sent sweet peas to the San Francisco market, and how successful the venture has been one may judge by the demand for them at local florists. Speaking dramatically, they were a great hit, being valued not only for their fragrance, but their odd colors. Those who visited the last exhibition of the State Floral Society saw a sample of these garden favorites. It is doubtful if so many varieties of sweet peas were ever gathered together in this State before. For over four years Mr. Hopkins and his head gardener, Mr. Lynch, have been collecting these. From England, Scotland, France and various gardens of the Eastern States, the seeds came. Such combinations of color and such high-sounding names were never seen or heard of in plant life of the average modest garden hereabouts. Eighteen kinds of sweet peas were flowered this season. All are high growers and trained to wire trellises. Here the blue and white Princess of Wales and the pink-hued Crown Princess of Russia blossomed side by side in international harmony. An odd pea that did not take very well was a sort of yellow pink. Ladies found that it would not harmonize well with the average costume, and so the novelty was neglected. The Jaynes is a variety from Chicago that has claims to the artistic. In picking, the varieties are kept distinct and tied in brilliant bunches. Most of the picking is done by Chinese, who become very adept to the work.

After the peas, those who watch our florist's windows will see Chinese asters. They begin blossoming during July, and daily many bunches will come here from Sherwood Hall. There are thousands of plants here growing and buds are on them now. After asters will come various bulbs, hyacinths, tulips, tuberoses. The floral calendar for this section, so far as cut flowers for the city market are considered, is figured as beginning in autumn with chrysanthemums. After them are roses and violets, and these last through until May. Then come sweet peas, then asters, and the bulb flowers tide over the gap until chrysanthemums are again ready. A novelty in the way of poinsettias, big waxy leaved flowers of flamingo red, will come this year from these Menlo gardens. One long hot-house is given up to them. They have sold here at times for 25 cents apiece. They are natives of Mexico, where they are known also as the Christmas flower. For a table setting this brilliant flower is unique and attractive.

More carnations have been sent to this market from these gardens this season than ever before. They are grown in hot-houses. They do better there for marketing purposes than outdoors, for there are more blossoms, and the late rains cannot damage them. The brilliant red Portia has been the best market variety. It is very prolific, and the color is one that patrons never tire of buying. Soil in these carnation-houses has to be renewed yearly. In the spring months these hot-houses are heated only by the sun, and during all warm days air has free circulation through them.

As in most gardens, the rose here is queen of most of the time. Occasionally a choice specimen of the imperial Japanese flower is forced indoors, when size more than quality is thought the prerequisite.

One thing about violet culture Mr. Hopkins has learned which other California gardeners may profit by. He has found that violets do their best under the big live oaks that abound on his place. The shade and the leaf-mold soil afford just what the violet needs. Here in all are about five acres of the modest flower that poets never tire of singing about. The plants run in long rows, about two feet apart, close up to the trunks of the oak trees. For over six months of the year these immense beds are a mass of blue and purple and white, and the delicate odor is so heavy in the air as to be almost oppressive. The double white Swanley, the double blue Marie Louise, the light-blue Neapolitan, the Czar and the odd Palmesia are the violets grown. The last-named is an Italian variety. It is blue, but on one of the petals is a faint dot of red so small as to be unnoticed except to the practiced eye. These five acres of violets are probably as profitable as any other five acres in the State. Every morning during the season the crop of violet blossoms is shipped to the city. The average shipment is 50 bunches, but some days, as, for example, last Christmas, when 150 bunches were sent, the shipment runs heavier. Head Gardener Lynch is a violet enthusiast, and Mr. Hopkins has to kindly, but firmly, repress his inclinations, else Sherwood Hall and all its structural surroundings would be razed to make room for violets. The head gardener has many assistants, but the demands of the cut-flower trade are such, and the improvements in hot-houses, etc., so many and necessary, that all are kept very busy. For his new nursery scheme Mr. Hopkins has great plans. Excellence of stock and all flowers true to name he expects to make the cardinal principles of the venture.

Violets and Chrysanthemums.

Four marketable flowers are here made specialties—the rose, carnation, violet and chrysanthemum. Others are incidental to merely fill in gaps of the floral calendar. Over 10,000 chrysanthemums are growing here now. They comprise all the popular sorts, and along in October their chromatic display will begin. They and the violets are grown out of doors, but the other specialties are shielded by glass all. Over 150 varieties and 50 times as many shrubs are growing. In the nursery project just started, many of these young roses will be utilized if other rose fanciers desire to draw on the stock here collected. All the new sorts of Eastern growers are here, but for the cut-flower branch of the business only a few standard varieties are relied on. These are kinds that have long been tried by the unerring standard of public favor and market value. It has been found that for forcing in hot-houses for the winter trade the best are Niphetos, Bride, Jacqueminot, Perle de Jardin, La France, Catnerine de Mermet and Papa Gontier. The Marechal Niel is grown to some extent. The Mermet is a growing favorite, and threatens to supplant in some degree the long popular La France. The Bride is a creamy white rose that is much liked by Eastern rosarians. The Bon Silene is not valued for forcing. There are many new sorts, with qualities superior to these old favorites but habit and familiarity with the old blossoms work against the kind and profitable reception of the new.

NEVADA'S POTATO CROP is reported to be uncommonly large this year.

TRACK AND FARM.

The Agnew Stock Farm.

A RURAL representative visited the Agnew Stock Farm, five miles south of San Jose, one mile east of Hillsdale, last week. Mr. Henry J. Agnew, well known as an importer and breeder of thoroughbred horses and standard trotters, has purchased the "Center Farm" containing over 200 acres of level valley land, and has mapped out and laid the foundation for an extensive breeding farm for high-grade stock only. A force of men is now at work on buildings to meet the change required for this embryo breeding establishment. The well-known stallion Dawn, formerly owned by A. L Whitney, has been purchased by Mr. Agnew, and will be transferred to his stud soon. Our artist has in preparation a photo-engraving of this great son of Woodnut, which with a full description of his progeny and also of Mr. Agnew's string of standard mares will appear in the RURAL.

This noted farm, bounded by the Coyote creek on one side and a low ridge of hills making a crescent in which are scattered gigantic native oak trees, as also locust, gum and pine trees that were planted by the early American settlers, determined Mr. Agnew to make this his country home. He contemplates building a new residence in the near future, and his accomplished wife is quite willing to exchange "Greenwood," their former residence in the Sandwich islands, for an attractive and picturesque home in the Santa Clara valley, so close to San Jose that the electric lights of that city can be distinctly seen.

The Trotting Horse in Kentucky.

The following extract is from a recent article by Mr. Dudley Miller in *Wallace's Monthly:*

Breeding trotting horses has so rapidly and successfully developed in Kentucky that it has become one of the most prominent and profitable occupations of its live-stock breeders. The amount received for trotting stock in Kentucky has been gradually increasing year by year, until it has to be counted by the millions. Last year the sales in this State amounted to between three and four million dollars. This seems rather surprising when we consider that breeding trotting horses is yet comparatively in its infancy.

The first record of a trotting match in America dates back only to 1818. The breeding of trotters as a business may be said to have hardly commenced before 1837, the year Andrew Jackson's two sons, Henry Clay 8 and Long Island Black Hawk were foaled, and perhaps it is better to say 1849, the date of the birth of Hambletonian 10 and that game racehorse George M. Patchen.

With the advent of Hambletonian 10, the greatest of all trotting-horse progenitors, unless that honor is due his grandsire, Imp. Messenger, the business began in earnest. Thus it is hardly 50 years that horses have been bred for the purpose of racing at the trotting gait, and already we have 3851 trotters that to Jan. 1, 1890, had made records of a mile in 2:30 and better.

There is quite a difference of opinion as to the blood best adapted to the foundation from which to breed trotters. Certain breeders say that we must breed them from pacers, others

from thoroughbreds, and still others say this is all bosh—"breed trotters from trotters."

Well, we were obliged to start with something before we had the trotter, the same as Adam had to give up a rib in order that a wife might be provided for him. The pedigrees of our trotters indicate that, instead of having sprung from a rib like Eve, they are indebted to both pacers and thoroughbreds for that combination of blood which has achieved the greatest triumphs in the trotting world.

Kentucky owes its wonderful success in breeding trotters to its favorable temperate climate, pure air (due to its elevation of about 1000 feet above the sea), to its limestone water, nutritious bluegrass, and other products of lime soil, which has a happy influence on the growth and development of the bone and muscle of live-stock; and lastly, but perhaps not least, to the intelligence of its people, who have availed themselves of these natural advantages.

To the year 1890 seven stallions had each sired 32 or more trotters in the 2:30 list, and one of them, Almont, was foaled in Kentucky, and sired by Abdallah 15, a New York bred son of Hambletonian 10.

Of the 15 gamest trotters, that by the records have made 100 or more heats in 2:30, or better, three were bred in Kentucky; Lady Thorn with 106, Jewett 151, and Harry Wilkes 160 heats.

There are 14 trotters that have records faster than 2:14. Kentucky divides the honors with New York in having four each, and California three, but Kentucky stands first and alone in having produced the fastest two: Maud S, 2:08¾, and Jay-Eye-See, 2:10, both bred by Mr. Alexander of Woodburn.

The Oakland Driving Club is an organization of recent date, but it is already in a flourishing condition. At the last regular racing day there were nearly 3000 people present. The gentlemen comprising the club are all owners of fast road horses, and they race against each other for the pure sport of the thing. They allow no pool-selling on the ground and no gambling machines of any kind. They pay their own expenses and do not expect to derive a revenue from the gate. They have already given one day of public racing, and a large crowd was the result. The sport is a perfectly legitimate one, and all of the road riders of Oakland are members of the club. It is the first club in the State that has had the courage to keep the pool-sellers away from their meetings.

Horse Sales.—A. C. Bruce of the Bruce Stock Farm, Rosemount, Minn., reports following sales: To C. G. Goodrich, Minneapolis, Minn., Aunt Joe, bay filly, one-year-old, by Nutwood 600, dam Mary F. by Mambrino Boy, second dam Adieu by Administrator, third dam Kentucky Clay, fourth dam Mambrino Chief; also Brown Filly by William L., foal of 1890, dam Mabel, full sister to Lou, dam of Axtell, 2:12; price for the two, $4000.

Artificial Honey a Myth.—The seasons of 1887 and 1888, especially the latter, were unpropitious for the "busy little bee," and yielded but little honey. The crop was a general failure, not only in America but also in Europe. The modicum of honey produced, especially of comb-honey, was soon exhausted, and the dealers as well as consumers, North, South, East and West were crying out for honey. The producers were inundated with letters and orders which they could not fill. Now here was the grand opportunity for the manufacturers of "artificial honey." If the article could be sold "at an immense profit at half the price" of the genuine article, as Prof. Wiley assures us, these bogus manufacturers could have coined money—there were "millions in it" apparently. But they failed to appear. The glucose was available, the paraffine ditto, and the "appropriate machinery" ought, in the interval under the law of progress, to have become still more "appropriate" and perfect in its work; but, strange to say, the famine of honey continued. The tempting prices were offered in vain. Not a pound of the stuff ever "materialized," so far as anybody could find out.—*Ex.*

Bridging Behring Straits.—"They can talk about my uncle as visionary and a mild lunatic all they please, but the day will come, and it is not so far off, either, when he will be recognized as a thoroughly sensible, though bold, engineer." So said William Henry Gilpin of Pueblo, Col., at the Hoffman house, New York, recently. Gilpin has been for the last two years with his uncle, Wm. Gilpin, ex-Governor of Colorado, in a tour of reconnaissance on the Northern Pacific Coast. William Gilpin believes that there is no serious obstacle in the way of building a railroad which will join the United States and Russia by way of Siberia, Behring straits, Alaska and British America. The only apparent difficulty is in crossing Behring straits, but this difficulty is only apparent. The straits are only 40 miles wide, and in the middle lies an island big enough to hold New York, Brooklyn and Jersey City combined. The water is nowhere more than 40 feet deep, and there will be no trouble in erecting piers on a hard bottom.

Sawmill Burned.—The steam sawmill belonging to Johnson & Palmer, together with 40,000 feet of clear lumber and about 95,000 feet of rough lumber was totally destroyed by fire last week.—*Adin (Modoc Co.) Argus.*

Agricultural Notes.

CALIFORNIA.

Alameda.

A Big Crop.—Livermore *Herald*, July 24: Joseph Stanley has probably produced the champion crop of wheat for the present season in Livermore valley. From 110 acres D. M. Teeter's machine thrashed 1889 sacks of wheat, averaging 146 pounds each, giving a total crop of 275,794 pounds. These 2758 centals in round figures give an average of a trifle over 25 centals of wheat per acre. During the heavy rains last winter this crop was several times covered with water, and several of our leading farmers predicted that it would amount to nothing.

Proving Title.—Settlers in the mountain ranges are proving up their titles.

Good Times.—Haywards *Journal*, July 26: The prices of our products are beginning to show signs of improvement all along the line. Barley is high, and hay bringing a good figure; wool sells at a paying price, and mutton is dear, while fruit is selling at extraordinary prices, both green and dried.

Butte.

Good Suggestion.—Oroville *Register*, July 24: R. M. Green suggests that when the oranges this fall are ripe in the grove owned by the Oroville Citrus Association, each one be wrapped in a special wrapper upon which will be printed a condensed history of the planting of this grove and the time it has taken the trees to come into bearing, with such other information as may be of value in attracting attention to this part of the State.

Inyo.

Cattle Scarce.—Inyo *Independent*, July 25: So many cattle have been sold in Owens valley this season that farmers are not cutting the usual quantity of alfalfa. Some of them have turned stock upon the fields after the first crop was taken off. At Bishop 2000 head of stock are reported sold recently.

Kern.

Fat Steers.—Bakersfield *Echo*, July 24: About 350 head of fat steers were brought down from the country about Glennville last week. They were bought by Geo. Coffee and a portion of them were shipped to the city, while some were placed on Mr. Coffee's ranch. They were two and three years old and the prices paid were from $20 to $25. Of course they were just off the range, but still they were in prime condition.

Large Artesian Well.—Bakersfield *Californian*, July 26: Probably the largest artesian well that has yet been opened in this county is that finished for Dr. Lask, in the northern part of this county, about two weeks ago. It is 15 inches in diameter and 713 feet deep, and has a seven-inch flow of 4,500,000 gallons per day. The doctor has a section of land and was desirous of irrigating it all from one well and has succeeded, having enough water and to spare. He has proved also that there is economy in the construction of a large well in many ways, and this only cost 25 cents per foot more than one of ordinary size.

Lassen.

Hay.—Susanville *Mail*, July 24: The hay crop will be very large this year, and in this section will be more than an average yield. The farmer who is fortunate enough to have an alfalfa patch of 50 or 100 acres is all right. This sagebrush land seems to be just the soil for alfalfa. Seven tons to the acre is not a bad yield, and after alfalfa gets a good stand, it seems to be no trouble to raise from 7 to 10 tons per acre.

Los Angeles.

Grain Crop.—L. A. *Herald*, July 26: A crop authority says: "The crop this year will be just about half what it amounted to last year. There was so much rain last winter that a large extent of land could not be plowed. What would I estimate the crop in Southern California at? Well, I should say that including the San Jacinto valley, the output of barley will be from 800,000 to 900,000 sacks, and of wheat about 500,000 to 600,000 sacks. That is about half the crop we had last year. But prices, I think, will rule high, and the quality of the grain will be better than last year."

Mendocino.

Shipment of Sheep.—Ukiah *Dispatch-Democrat*, July 25: Six hundred mutton sheep from Round Valley were shipped from this place on Tuesday. They were part of the 3000 recently purchased in that vicinity by a gentleman named Phillips.

Placer.

Potatoes.—Auburn *Herald*, July 26: We have seen no finer potatoes for a long time than a sample of Garret Chilis left at the *Herald* office a few days ago with the compliments of Mr. Jacob Roll, and raised at Uplands, his sightly home in Auburn. They were smooth and clear-skinned, and averaged nearly a pound apiece. They are another proof of what we have frequently said—that we can raise fine potatoes in these foothills, and ought to raise more of them.

Napa.

Napa Valley Wine Notes.—Healdsburg *Enterprise*, July 25: Chas. Krug says: "Our vines looked very promising at the beginning of June, but there has been a change. The grapes began dropping off, making an uneven formation. Some vines are loaded well, while others will bear scarcely any grapes. The progress of the phylloxera is rapid, and many vineyards look horribly. Very little damage by mildew thus far; by coulure considerable, particularly among Rieslings. All parties here report only half crop of Zinfandels, Malvoisies and Johannisberg Rieslings. The yield here will probably reach 3,500,000 gallons, provided there is no further loss of grapes. There are about 300,000 to 400,000 gallons of wine in hands of producers who have no trade of their own as against over 1,000,000 gallons unsold at close of August, 1889."

Orange.

Shippers Busy.—Anaheim *Gazette*, July 24: During the past six months the Cook & Langley Co. have shipped from Anaheim 125 carloads of fruit, including oranges, 25 carloads of potatoes, 15 carloads of cabbages and 5 carloads of corn—a total of 170 carloads. During this time there were 73 carloads of sheep shipped from here by Avery & Everhardy, and 20 carloads of general merchandise and 3 carloads of wine. In the past three weeks shipments of apricots have gone forward at the rate of a carload and sometimes two carloads per day. Reckoning on a basis of ten tons to the car, our fruit and vegetable shipments alone have aggregated 1700 tons, equal, at a cent per pound, to $34,000. The value of fruit now being shipped from Anaheim will go to nearly $300 daily, and shipments will continue for many weeks yet. Nearly 16,000 sheep have been sent forward from here in the past two months.

San Benito.

Land Jumpers.—Hollister *Free Lance*, July 25: Last week the papers announced the passage of a bill through the House by which all the unearned railroad land on the line of the uncompleted section of road between Tres Pinos and Alcalda reverts to the U. S. Government and is therefore open to entry. As a result of this rumor, a number of cases are reported of men who have taken up land which has heretofore been held in large tracts, such as the Topo ranch of Donnelly, Dunne & Co., and others.

To Enforce the Law.—Hollister *Advance*, July 25: A number of our farmers have come to the conclusion that the squirrel nuisance must be abated. They do not propose to keep their own farms clear of pests and feed those propagated by their neighbors. A fund has been obtained to test the validity of the ordinance passed by the Board of Supervisors of this county some time ago. If the law is upheld by the courts, suits for damages will be commenced against land-owners who fail to poison or destroy the squirrels and gophers upon their lands.

San Joaquin.

Tule Land.—Stockton *Independent*, July 27: Speaking of the tule lands, Mr. Ferris feared that the high water will prevent the cultivation next year of the tracts now overflowed, and two seasons' use of the land will probably be lost. The San Joaquin river has fallen but three feet at the railroad bridge, but it must fall 13 feet to be at low-water mark. He is of the opinion that low-water mark will not be seen this year, and the tule lands will not be drained.

San Diego.

A Sand Patch Product.—*San Diegan*, July 17: During the past few days people doing business down town have noticed a driver hauling beets through the city. On account of the talk there has been here about sugar beets, and the profits of beet culture generally, the driver and his beets aroused some curiosity. That driver was met by a *San Diegan* reporter this morning, and gave his name as John Gunton, and in answer to the first question in regard to the beets said: "No, they are not sugar beets; that is, I did not buy the seed for sugar beets. I have sold a lot of them to Mr. Babcock for the hotel, and the rest of them go to dairymen and stockmen to feed to cattle. Last December I leased a little land of the Coronado Beach Company down there on the neck of the peninsula near the brick yard. The land was all sand and people did not think I could raise anything. I planted just six acres in beet seed. I had no water for irrigation, and the crop had to take care of itself. But off that six acres I have sold and got the money for 100 tons of beets, and still have in the ground half the crop. The total yield will not be less than 200 tons. I find an easy market for them at $5 a ton."

Escondido Fair.—National City *Record*, July 24: The Board of the 22d District Agricultural Association, with nearly all of the members present, held a three-days' session recently at San Diego and made complete arrangements for the fair to be held at Escondido commencing Sept. 30th and lasting three days. The premium list last year was largely a copy of the State list, and some useless premiums crept in. These have been eliminated this year, which will make the list much more convenient. The directors have done everything in their power to foster improvements in live stock, poultry raising, fruit culture, etc. The banner won by the Cuyamaca Horticultural Society for the best general exhibit will be reawarded this year for excellence in the same line, and besides this, the association will present a medal to the individual making the best exhibit. Special prizes of $25 and $20 each will be given for the best general exhibit of deciduous fruits, citrus fruits, raisins, grapes, apples, olives and figs. In the cereal and vegetable departments the quantity required to be brought has been cut down from what it was last year. In the case of grain, 10 pounds is all that is necessary to bring. In some of the departments the premium offered is a year's subscription each to the Pacific Rural Press and the *Great Southwest*.

Citrus Crop.—National City *Record*, July 24: The excellent yield and good prices obtained for the orange crop the past season have still further enhanced the value of orange orchards. Those that have come to near maturity are now worth from $2000 to $3000 per acre.

Santa Cruz.

Sugar Beets—Fruit Shipments.—Watsonville *Pajaronian*, July 24: The beet crop continues to improve, and now promises to be much larger than it was estimated two and three weeks ago. In places where no crop was looked for two weeks ago the stand of beets is now very promising. The seed was slow in sprouting. There have been lots of surprises in beet farming, and not the least is the appearance of lots of beets in fields that were given up as being unproductive. At Moro Cojo W. V. Gaffey ran a heavy roller over a piece of beets that did not promise much, and in a few days a wonderful improvement in the stand was manifested....The fruit shipments from Watsonville are about four cars daily. Probably another car daily is added at Pajaro. The shipments of peaches, apricots and apples are increasing, while berries are falling off. The quality of the peach and apricot crop is extra good this year. San Jose canneries have bought up much of the blackberry crop, and the growers are now shipping to them. The second crop of strawberries is not yet on, and it promises to be light.

Sonoma.

Hop Contracting.—Santa Rosa *Democrat*, July 26: The hop-buyers have increased their offers for this year's crop to 18 cents. Not many of the growers are contracting for this price. A number contracted enough of their crop earlier in the year at 16 and 17 cents to be safe, and will hold off for a higher price on the balance.

Siskiyou.

Harvesters at Work.—Yreka *Journal*, July 23: Rose & Co., now farming the immense Scott tract in Shasta valley, near Sowden station, north of Montague, are doing a rushing business in harvesting, with a number of new style harvesters, expecting to get through with the work in about 40 days. One of the harvesting machines, operated by 32 horses, threshed 40 sacks of barley in 67 minutes last Saturday. Crops were never so good in Shasta valley and this vicinity as this year, the past extraordinary wet winter being just what was needed, in consequence of so many dry seasons, and especially the extraordinary dry winter of 1888.

Stanislaus.

A Runaway.—Modesto *Herald*, July 24: Last week the team attached to Henry Holverson's combined harvester ran away, and so damaged the machine as to lay it up for the season. At the time the accident occurred Mr. Holverson was harvesting grain eight miles south of Newman.

Sutter.

Dairying.—*Independent*, July 25: One of the important industries of Sutter county is dairying and cheese-making. The lands bordering along our rivers are specially adapted to the successful prosecution of that business. The attention of intending settlers and home-seekers is directed to this pleasant and remunerative industry which can be very much extended in Sutter county. One of the best features about it is that the returns begin to come in as soon as the business commences, and but a small capital is required after the land is secured. An average family can do all the work at home without the aid of hired help, and it is done principally in the shade and in the cool of the day.

Large Pack.—*Farmer*, July 25: The pack on peaches began at the cannery here last Tuesday. The crop of most of the orchards in this vicinity had been contracted for during last week at from 2 to 3½ cents, according to the grade. Wagon-loads of fine Early Crawford, Foster and Tuscan Cling peaches are constantly arriving. The peach crop purchased this season is estimated at 350 tons, all of which is of a higher grade than any year previous, being better in size, firmness, quality, etc. Plums will begin to come in this week and pears next week.

Steam Harvesting.—*Farmer*, July 25: The steam harvesting outfit of Ed Fagan of Gridley is at work in the grain of David Fisher, a few miles north of Live Oak, and it is well worth any one's time to go and see this great combined invention that is becoming such a strong factor in reducing the expenses in the agricultural world. The monster 50 horse power traction engine draws the harvester, upon which is mounted an eight-horse power engine; the latter power supplied by steam from the boiler of the traction, running the entire machinery of the harvester. With such steam-power under direct control, the outfit can be backed, turned, reversed and handled with an ease that is almost incredible. With this outfit Mr. Fagan has been cutting as high as 85 acres per day, the largest number of sacks thrashed being about 600

The Briggs Orchard.—Notwithstanding the damage done to the famous Briggs orchard, the yield this season will be excellent on some varieties of fruit. The Bartlett pear trees which have been under water most of the winter are loaded with first-class fruit. C. N. Tharsing, the manager, has unbounded faith in

the pear, and when the water was high last spring he sprayed all the trees with an outfit set in a boat which was floated through the orchard. This work destroyed all the pests and invigorated the trees to such an extent that the company will realize an enormous profit from the yield. All the trees in the orchard that have been killed by the water will be dug out and new varieties planted that will stand more moisture. Mr. Tharsing will plant over 20,000 pear trees alone, and his peaches, etc., will be all planted on plum roots, which is well adapted to low ground.

Tulare.

HIGH GRAIN FREIGHTS.—Porterville *Tidings*, July 25: Five dollars is the extra price charged for freight on each car loaded with grain from Deer Creek station to Porterville. One train brought out 16 cars last Friday, amounting to $80. This is on the off-time of the regular train. It is estimated that 100,000 tons of grain will go out from Deer Creek switch in the next three months, the freight on which would be $50,000—pretty good freight for moving the cars eight miles.

ALTA IRRIGATION DISTRICT.—Traver *Advocate*, July 25: The bonds of the Alta Irrigation district, for the purchase of water rights in the 76 canal, have been deposited in the Nevada bank of S. F., by the 76 Co.; also the 30 bonds, which were to be deposited with the treasurer of the district, are in his possession, and the 76 Co. have paid all their irrigation taxes, according to the agreement which they made in the transfer of the canal, etc., to the district. Those who wish bonds for their water rights can now obtain the same, but those parties who desire the money for their rights will have to wait until those bonds, which are deposited for that purpose, are sold.

A NEW LEVEE DISTRICT.—Visalia *Delta*, July 24: The most important business done by the board now in session was the formation of the Visalia levee district. The proposition will be laid before the property-owners within the boundaries of the district on August 9th, when an election will be held to decide whether a levee around the city is wanted. The proposed levee will cost between $5000 and $6000. The area will be called Land Levee District No. 1, and is organized under an Act approved April 15, 1880. The boundaries of the proposed district are as follows: Commencing on the south bank of the St. Johns river, 7½ chains west to the northeast corner of the southwest quarter of Sec. 23, Tp. 18, R. 25; thence westerly along south bank of St. Johns river to W. line of Sec. 12, Tp. 18, R. 24; thence S. to S. W. corner of said Sec. 12; thence W. 1 mile, S. 1, W. 1, S. 1½, E. 2, S. 120 rods, E 1½ miles, S. 40 rods, E 80 rods, S. ½ mile, E. 1½, N. 1, E ½, N. ½, E. 152.50 chains, N. 40 chains to place of beginning.

A STRANGE HOG DISEASE.—Visalia *Times*, July 24: The hogs belonging to Huse Campbell are dying at the rate of six or eight a day. During the month of June he bought about 20 head in Eshom valley, which he drove to his ranch six miles north of town, and where his other hogs, several hundred in number, were being pastured. Several days after the Eshom valley hogs had reached the Campbell ranch they began to die, being affected with a strange disease that has thus far baffled all attempts of Mr. Campbell to check it. He thinks, however, that it is akin to the hog cholera. It affects pigs and shoats principally, only two or three full-grown hogs having died. Some of the animals die shortly after being affected with the disease, while others linger for a week or ten days. Up to Sunday last, Mr. Campbell had lost about 100 hogs, at which time the disease appeared to be increasing in virulence.

CALIFORNIA LIONS AFTER SHEEP.—Visalia *Times*, July 17: Mr. Zimmerman, a large sheep-owner, reports killing two very large California lions a few days ago at his camp in the Kaweah meadows. The lions made a raid on a band of his sheep and killed ten of them before he killed the lions. The female lion measured seven feet nine inches from tip of nose to end of tail; the male was much larger.

Yolo.

MOORE'S DAM.—Woodland *Democrat*, July 24: For the past six weeks a force of men has been hard at work erecting a temporary dam across Cache creek near the head-gates of Moore's ditch, for the purpose of turning the water into the ditch for irrigating purposes, and allowing room for the reconstruction of the old dam. A few days ago this work was completed. Yesterday afternoon the dam broke and a large volume of water was rushing through the break. The pressure, it seems, has been too much for the old dam. We understand that it is this part that has broken, and although it will probably not stop irrigation altogether, it will prevent the use of any very large head of water, and will entail considerable expense on the ditch company to make the necessary repairs.

WALNUT TREES.—A Yolo Co. man, who has a grove of walnut timber, cut a carload out to thin it a couple of years ago, and got $3000 for it. A carload is 9000 feet, which makes the price received equivalent to $300 a thousand for the timber. At this rate, it would pay those who have land adapted to black walnut to plant it for the timber alone, even if they have to wait 20 years for such returns.

Yuba.

FRUIT SHIPMENTS.—Marysville *Appeal*, July 25: The Sutter County Fruit Company of this city have opened their fruit-shipping season in earnest, and are making daily shipments of pears, peaches, plums and grapes to Eastern markets. On Friday they shipped a carload of Bartlett pears to New York, and will make another like shipment to-day.

ARIZONA.

A CLOUDBURST.—A telegram from Tucson, July 21st, says a cloudburst occurred yesterday in the foothills of the Santa Rita mountains and covered an area of a square mile. The water rushed down the canyon in torrents, drowning a number of cattle and horses. Sixty-one wild animals, such as deer, bears and wolves, were caught in the flood. The Schofeldt ranch was completely devastated of crops, orchard and houses. A large freight team was caught in the flood and carried a mile. No lives were lost.

A NARROW ESCAPE.—Tucson *Citizen*, July 19: Mr. W. F. Selleck is in from the San Pedro with some cattle. He had a narrow escape in the cattle pens from an alfalfa-fed steer, which was made wild with the heat. He went into the corral on foot and didn't notice that the steer looked dangerous, but very soon found it out. He would probably have been made short work of, but for timely rescue by a companion on horseback, who soon sent Mr. Steer to the right-about.

NEVADA.

THE "SHEEP TRAVEL" LAW.—Reno *Gazette*, July 24: The first civil procedure over the "Sheep Travel" law passed by the last Legislature occurred Thursday. Newt Evans brought claim against a sheep-owner who last spring had driven his sheep over Mr. Evans' uninclosed alfalfa ranch, just north of Reno. Day before yesterday Mr. Evans, accompanied by Constable Upson, went over the field, and Mr. Evans claimed damages to the amount of $50. Three citizens were chosen as arbitrators, and while agreeing to Mr. Evans' claim under the letter of the law, allowed him a lesser sum of damages.

HEAVY HAY CROP.—Winnemucca *Silver State*, July 25: The hay crop throughout the county is said to be the heaviest in many years. The dry season last year had about the same effect on the meadow lands that summer-fallowing has on grain lands.

A NEW CANADIAN SHIP CANAL.—The Canadians, who have shown a great deal of enterprise in the matter of building ship canals and in otherwise providing for the increase of transportation facilities through their territory, have now under contemplation another scheme which will shorten the route between Chicago and Toronto some 600 miles. It is no less a plan than the building of a ship railway from the Georgian Bay about 66 miles to Toronto.

For Sale.—Valuable land in Tulare county artesian belt. 160 acres, 1½ miles southwest of Tulare city; 480 acres, 7 miles southwest of Tulare, with large flowing artesian well, well-finished two-story horse, large barn, etc.; 160 acres, 2 miles southwest of the above; 480 acres 3 miles southwest of Pixley and about 4 from Alila. For sale by owner in lots to suit at low prices, low interest and very easy terms. For further information, address LAND OWNER, Box 2517, S. F., or A. T. DEWEY, No. 220 Market street, San Francisco, Cal.

Ranch Wanted.

Small general farm, partly improved; not less than 40 acres and costing not over $2000; within few miles of rail or water transportation. Address "Ranch," care PACIFIC RURAL PRESS.

HORTICULTURE.

State Horticultural Society.

The rush of the fruit harvest caused a light attendance at the meeting of the State Horticultural Society held at the State Board of Trade, July 25th. I. A. Wilcox presided, and on taking his seat, called the attention of the members to the death of one of the leading pomologists of the country, Patrick Barry of Rochester, N. Y., who died since the last meeting of the society. He hoped that the members would take some suitable action on this sad event during the course of the meeting. On motion, Messrs. Wilcox, Smith and Wickson were appointed to prepare a suitable expression of the society's sense of loss in the death of Mr. Barry.

The secretary read a letter from Mortimer Whitehead, Chief Special Agricultural Agent of the Census, which is published elsewhere.

There was a general conference concerning fruit crops now being gathered.

C. Sadler of Saratoga reported apples a fair crop, apricots light, prunes very large, but rather scattering on the trees. He had sold prunes at $50 per ton.

I. A. Wilcox of Santa Clara said prunes are a very light crop, apricots and peaches fair. Prunes had sold at $50, but were now going as high as $60 per ton. The prunes were best apparently on low heavy lands, on myrobolan stock, where there was surface drainage even if there was water below.

A. T. Perkins of Alameda said prunes grown on peach stock were larger than ever, but his soil was well suited to the peach.

Howard Overacker Jr. of Centerville reported apricots a small crop, prunes fine, peaches a good crop. Clings have fallen off considerably, but freestones have not.

M. C. Parkison of Antioch reported the peach crop fair. There will be only a light crop of pears. There is a worm there that eats down into the peaches. It is a little brown worm, about one-half to three-quarters of an inch in length, with a flat head. Where it attacks the peach the fruit is spoiled. There are considerable of them. They were never seen before. Almonds were ripening now. They are ten days later than two years before.

The chairman stated that he found a worm answering the above description in his prunes this season, which appeared for the first time.

F. C. Miles of Penryn said the Placer county cherry crop was the greatest ever known. Peaches were very large and handsome, but were scarcer than usual; the less weight is, however, compensated for by the better price. Pears are yielding well. All kinds of fruit are carrying well this year; even the Sharpless strawberry has shipped well. Mr. Miles said some growers concluded they had saved trees which were suffering from excess of water in the soil by digging down and uncovering the main roots, exposing the soil for awhile to the sun and air.

Emory E. Smith presented copies of a circular prepared by the Committee on the Registration of Plants, and reported that the scheme was commanding wide attention as a bright California idea.

B. N. Rowley submitted the following report of progress from the Fig Committee:

Your Standing Committee on the Fig, continued from last season, beg to report that we have again taken up the fig question and will endeavor during the coming season to make a most thorough examination of both the green and dried fig, that we may be in a position to report very fully upon this important subject at the end of this season. We herewith submit for examination two varieties of green figs grown in districts widely remote from each other, and ask that a temporary committee of three be appointed by the Chair to examine the same with the view of naming the varieties and pointing out such peculiarities in their growth as may be discovered, and that said committee report at this meeting.

B. N. ROWLEY,
ALFRED T. PERKINS.

As there was a manifest reluctance to serve on such a committee, it was explained that two of the specimens were types of the *Bulletin* imported varieties and the third was the White Adriatic. Mr. Lelong said that these *Bulletin* varieties had so far fallen off and were evidently unfertilized. This may not always be so. The trees were young, perhaps younger than the bearing age of the fig in Smyrna.

W. B. West was called upon to speak upon the raisin industry in the absence of Dr. Eisen. Mr. West was unprepared to make any general remarks upon the subject, but stated that he had recently received advices from Malaga that the inroads of the phylloxera were very serious, but they have hopes of regaining footing by the use of resistant vines in a few years. The crop in the old vineyards has declined so that the owners are selling out and emigrating. Mr. West promises to write out his information and comments therefrom for publication.

The secretary stated that complaint had come from red spider in a few places in Fresno county, and asked if this insect had made much of a record on grapevines. Mr. West thought not. He had trees ruined by red spider, while the vines beneath were unharmed. Mr. Miles said he had red spider on vines rooting in nursery.

The chairman asked for information concerning the Robe de Sargent prune, whether such a prune existed, its value and characteristics. At the next meeting this matter will be taken up, and all were requested to bring specimens.

Mr. Lelong said he had just seen an improved fruit tray which he thought very superior. Complaints had been made that fruit shipped in zinc trays tasted of the metal. J. L. Mosher of Santa Clara has produced a tray which overcomes all those complaints. The tray is dipped into japan and baked at a temperature of about 200 degrees. The tray so far as tested is a success.

B. N. Rowley questioned whether the fruit acids would not disintegrate the component parts of the japan preparation, but Mr. Lelong replied that it had not done so. The secretary was instructed to request Mr. Mosher to show a sample of his japanned trays at the next meeting.

W. H. Wiester exhibited a model of an improved apple-parer, which pares, slices and cores at one operation. It has a quick action and pares very true. It can be used as a parer, slicer and corer as desired.

The subject chosen for the next meeting was "Fruit Drying and Appliances Therefor."

On motion, the meeting adjourned to the last Friday in August.

Peaches in Southern Oregon.

The *Tidings* of July 19th says: Ashland will ship all the peaches that are sent out from Southern Oregon this year, and the bulk of them will go to the Sound country. Owing to the late frosts there will be by no means a full crop, but in the neighborhood of 15,000 boxes will be shipped from Ashland during the season. In the lower valley, the crop is almost an entire failure, and Ashland will be called upon to supply many places in the county that usually have peaches to ship.

Some two months ago Mr. Spafford, representing the Tacoma house of W. E. Simpson & Co., was in Ashland looking over the fruit prospects and made arrangements with S. B. Galey for the purchase of 10,000 boxes of peaches for his house. Mr. Galey has secured the crop on most of the larger orchards in this vicinity, and last Saturday made the first shipment of 250 boxes. Tuesday he shipped over 250 boxes, and expects to have shipped 2000 boxes by the end of the week. The price paid the orchardmen is three cents per pound in the orchard ready for packing. Three cents is a profitable price to the orchardmen, but even a higher price than that was paid for some choice lots.

Mr. Galey says the peaches are of better quality generally than those of last year, but do not surpass the crop of two years ago.

The Early Alexanders ripened pretty rapidly the first of the week, and the packers were kept hustling to get them ready for shipping.

J. W. Hockersmith thinks he will ship 3000 boxes during the season. Joe is doing a big business in the shipment of blackberries, and will have 4000 gallons on his own place. The blackberry crop about Ashland this year is a magnificent one—never better. The demand for berries is good, and the present price—25 cents per gallon—will probably continue during the season.

Fruitmen say that with the new orchards that will come into bearing next year, Ashland ought to ship 50,000 boxes of peaches next season. The industry is growing every year.

There is not much probability of the peach market being flooded this year with Southern Oregon fruit. The bulk of our crop going to Washington will make a better market in Oregon for the remainder of it.

Replanting Sour-Sap Orchard.

EDITORS PRESS:—Would you please oblige me by giving your opinion of planting trees in the same holes where dead ones are taken out that have died of sour sap? Do you think if there are a few roots left in the ground they will affect the young trees if the holes are left open from now till fall? Please answer through the PRESS and oblige a SUBSCRIBER, *San Jose.*

[We see no objection to the practice, providing water-proof stock is used or proper drainage is provided. If one replants with the same stock that has been killed, he simply takes his chances of the recurrence of the conditions which wrought the injury this year, and this may or may not happen for many years. As the trouble was not in the soil itself, and as the danger of injury from the decay of such roots as may be left is small, we would not be retarded from replanting in the same holes simply because of any danger in the hole itself. What have others to say on the subject?—EDS. PRESS]

Prunes to the Front in Tulare.

EDITORS PRESS:—On the 24th inst., Mr. I. H. Thomas, the leading horticulturist of Visalia, took a seat with me in my buggy and showed me the fine prune prospects about Visalia. We first went to Thos. Jacobs' fine fruit farm and nursery. His prune trees looked overburdened with the immense crop they were striving to bear up. His nursery stock has made an immense growth, giving evidence of the vast productiveness of the soil. We went to other places, all representing some 40 acres of prunes in full bearing, ranging in value for this year's crop from $200 to $500 per acre.

Visalia. E. B. TAFT.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING JULY 22, 1890.

432,851.—STUMP-PULLER—S. W. Baker, Olallo, Wash.

California's Stallions.

I beg to announce that, with a view of perpetuating the forms and characteristics of the leading stallions of California, I am issuing a series of lithographic likenesses. Each portrait issued will be an acknowledged likeness, the result of a close study of the horse and an artistic treatment of the subject. In order to secure for the series an immense advertising value, from a breeder's point of view, 4000 copies, at least, of each portrait will be issued.

Terms, $100 for first issue of 100 copies. In quantity, for advertising purposes, copies will be furnished at low rates.

H. BOYD, Artist.
268 Golden Gate Ave., San Francisco.

ATTENTION is called to the advertisement of Sackrider & Chisholm in this number. We can recommend correspondence with this firm in the matter of buying and selling stock and the livery business generally.

SEVENTY-FIVE MILLION gallons of water a day are now supplied by the new aqueduct of New York.

WORTHY OF GOOD WILL.—Rev. Dr. F. Horton's departure from Oakland will be generally and sincerely regretted. A strong personal force has gone out of the community. We have lost a man of large brain and vivid convictions. He has been a pillar of strength to many good causes and a citizen whom we dislike to lose. —*Enquirer.*

As a neighbor of Dr. Horton for years in Oakland, we delight in saying that Providence, R. I., is fortunate in securing so good a citizen and able teacher, who has the courage of his convictions and dares express them so significantly on important matters of public welfare.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Wanted, Situation

As foreman of a large fruit ranch. Have had 25 years' practical experience in growing, packing and shipping fruit. Was with John Bidwell, Chico, Butte county, Cal., two years.

[COPY OF LETTER FROM GEN. BIDWELL.]

CHICO, CAL., July 14, 1890.

To whom this may concern: The bearer, Mr. J. Luther Bowers, having been in my service for some time, several years ago, as a practical fruit-grower, it gives me pleasure to say that I found him competent and reliable in all respects, and as such I very cheerfully commend him to the kind notice of all persons. Very respectfully,

JOHN BIDWELL.

Can also give good Eastern references. Address,
J. LUTHER BOWERS,
Herndon, Fairfax county, Virginia.

LAND
WORTH LOOKING AFTER
—AND—
Likely to Double in Price Soon.

FINE VINEYARD
CHOICE FRUIT
RARE RAISIN
AND ALFALFA
LAND

EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 480 acres, inclosed with 7 miles of fencing and cross fencing, with first-class improvements, 7-room, two-story, hard-finished house, nearly new, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 30 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; in a healthy location in Southern California; is offered for sale at little or nothing for cost of improvements by the owner, who has engaged in other business. This property is offered for $25 to $30 per acre, on easy terms. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to through the Publishers of this paper. LAND OWNER.

Will be Sold Very Reasonable,
TWO PERCHERON STALLIONS,
One black and the other gray. Both seven years old last spring. Can show their colts. Weigh 1750 and 1840 pounds.

Important Auction Sale

— OF —

Standard and High-Bred Trotting Horses

— AND —

THOROUGHBRED HOLSTEIN CATTLE.

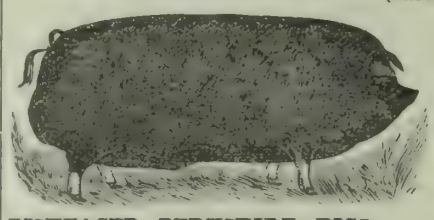
Property of J. H. WHITE, Esq., Lakeville, Sonoma County, Cal.

On Thursday and Friday, September 4th & 5th, 1890.

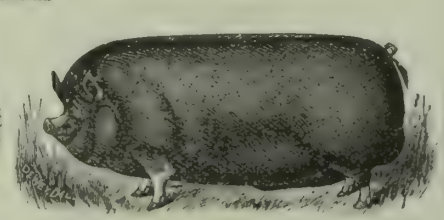
At RAILROAD STABLES, Cor. Turk and Steiner Sts., San Francisco.

On account of a contemplated change in business, we are authorized by Mr. White to dispose of all the high bred stock upon his noted breeding farm at Lakeville, Sonoma County. This comprises over forty head of high-bred Trotting Stallions, Brood Mares, Colts and Fillies, most of them standard and all exceptionally fine individuals. They consist of the get of Stallions by Electioneer, Director, Antevolo and other noted horses. Most of the brood mares are with foal by Hernani, one of Electioneer's most prominent sons. Several have been bred to Director. Taken collectively they are, in size and form, the finest looking lot of trotters yet offered in California, and their breeding is upon the most approved speed lines.

The Cattle comprise over one hundred head of thoroughbred registered Holstein Cattle. The progenitors of this herd were selected of the choicest strains upon the famous breeding establishments East, and have been judiciously crossed with a view to develop to the fullest extent the milking strains. Mr. White has expended a large sum of money and great care in perfecting this band of cattle, and can justly claim it as one of the superior herds of the United States.



Catalogues are being prepared and will be sent on application only. Horses and cattle may be seen at ranch, six miles from Petaluma.



KILLIP & CO., Auctioneers, 22 Montgomery St., San Francisco.

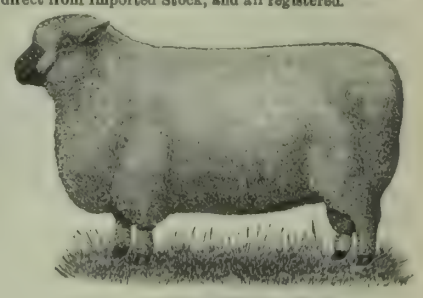
MECHAM & FRITSCH,

—IMPORTERS AND BREEDERS OF—

Red Polled Cattle.

We have 19 head of Imported Stock.

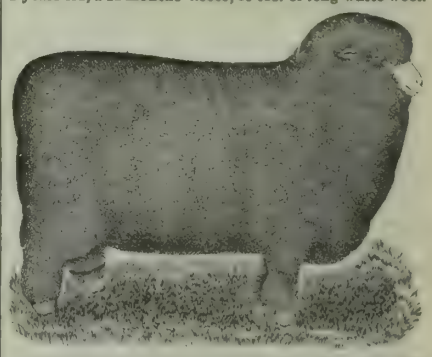


Young Bulls and Crossbreds on Devons for sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep

They were all imported from England in '83, or bred direct from Imported Stock, and all registered.



H. MECHAM,

—BREEDER OF—

American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a large fine sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at 2 years old will weigh from 160 to 180 lbs.; have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. **P. O. Address:**

Stony Point, Sonoma Co., Cal.

R. R. Station, Petaluma.

COLTS BROKEN.

THE SOUTHER FARM,

One and a half miles northeast of San Leandro, Alameda County, has every facility for Breaking Colts properly. Rates very reasonable. Horses boarded at all times.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC

SAN FRANCISCO, July 30, 1890.

Trading the past week in farm products has been quite active, with good prices ruling for both orchard and field products. All kinds of fruits are selling readily at higher figures, as are cereals, particularly wheat and barley. The advance in the latter is due to a short crop, and in wheat to a higher market abroad and a short crop in this State. The markets abroad have strengthened somewhat. The following is to-day's cablegram:

LIVERPOOL, July 30.—Wheat—Quiet but steady. California spot lots, 7s 2d to 7s 5d; cargoes off coast, 38s 3d to 38s 6d; just shipped, 37s 9d; nearly due, 38s 3d; cargoes off coast, firmly held; on passage, red wheat, very dull; white, firmly held; Mark Lane wheat, firm; French country markets, firm; wheat and flour in Paris, slow; weather in England, unsettled.

Foreign Grain Review.

LONDON, July 28. — The *Mark Lane Express* says: Improved weather has bettered the prospects of wheat, although expectations of a crop of over average are gone, the outlook being that it will be 5 per cent less than the usual crop. Barley, oats and beans suffered less than in 1889. In English wheat the patent is at fancy rates; good samples of heavy white are quoted at 38@42s and red at 32@38s. Heavy imports of foreign wheat have prevented an advance. The spring corn trade is firm. Maize is in large supply, yet good inquiry caused an advance of 1d in northern markets and 3d in southern markets. The demand for foreign wheat is fair at an advance of 6d. Foreign is firm.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	July.	Aug.	Sept.	Oct.	Nov.	Dec
Thursday....	7s4d	7s4¼d	7s4¼d	7s5d	7s5½d	7s6d
Friday	7s4¼d	7s4¼d	7s5d	7s5½d	7s6d	7s6¼d
Saturday	7s4½d	7s5d	7s5½d	7s6d	7s6¼d	7s6¼d
Monday	7s4½d	7s5d	7s6d	7s6d	7s6¼d	7s6¼d
Tuesday	7s4½d	7s4½d	7s5½d	7s6d	7s6d	7s6d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s 3d	37s 9d	38s 3d	Firmer.
Friday	38s 3d	37s 9d	38s 3d	Firm.
Saturday.....	38s 3d	37s 9d	38s 3d	Dearer.
Monday.....	38s 3d	37s 9d	38s 3d	Strong.
Tuesday	38s 3d	38s 0d	38s 3d	Firm.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	July.	Aug.	Sept.	Oct.	Nov.	Dec.
Thursday	99	97	96¼	97	...	97
Friday.....	99	96⅞	95⅞	96⅞	...	96⅞
Saturday.....	99	96⅞	97	...	...	99¼
Monday	99	97	96⅞	98⅛	99¼	100
Tuesday.....	...	96⅞	96⅛	98⅛	98⅝	99⅛

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	July.	Aug.	Sept	Dec.
Thursday.....	...	90	91½	...
Friday.....	...	91	92⅝	94⅛
Saturday	...	90	90⅝	90
Monday	...	90⅜	91⅛	91¼
Tuesday.....	92¼	92⅛	94⅛	95⅜

NEW YORK, July 30.—Wheat—$1.00¼ for cash, 97⅝c for August, 97½c for September, 99¾c for December, and 99¾c for May.

CHICAGO, July 30.—Wheat—92¾c for August, 94⅝c for September, 96½c for December, $1.00¼ for January, and $1.03 for May.

Effect of the Silver Bill.

LONDON, July 26. — Chaplin, the Minister of Agriculture, delivered an address at the Lincoln agricultural show to-day. He said the recent rise in the prices of agricultural products was due to an advance in the price of silver, in consequence of the passage of the Silver Bill in the United States Congress.

Excited Grain Market.

NEW YORK, July 28.—A bull fever was raging in both wheat and corn all day long, and in both cereals the prices for options advanced to the highest point of the year. The advance was not so great in wheat as in corn. The upward movement rests solely upon reports of damage to crops here and in Europe. Brokers report that most of the buying orders were received direct from Chicago. The total sales of wheat were 8,520,000 bushels; corn, 4,216,000 bushels.

Hops.

NEW YORK, July 26.—The first bale of hops of this year's growth has just been shipped to this city by R. J. Merkley of Sacramento, one of the largest growers of California hops. "It is very seldom in the history of the hop business," said a hop-dealer, "that the stock of old hops has been so light as at present. The result will be that the market will show an advance of more than 100 per cent over the opening in the September season. The outlook for the growing crop is not auspicious. The probabilities are that in the market for 1890 hops will not be sold for less than 25 cents a pound."

CHICAGO, July 26.—Hops are in small supply and firm. Old hops are in very much reduced stock, and new will not be ready for some time to come. Brewers are in want of stock and choice grades are very fair sale. Common and low grades at the same time are not cared for. Washington, prime, 21@23c ₩ lb; fair, 18@22c; California, choice, 22@24c; fair to good, 19@22c; Oregon, choice, 18@23c.

Eastern Wool Markets.

NEW YORK, July 26.—*Bradstreet's* says: There is little change to be reported in the wool market. The belief is general that the mills will have to buy more liberally soon, but the prospect for the near future does not favor higher prices. Some Montana wool, held by growers at 20c, is coming in on consignment. Ohio fleeces are quiet, but prices are steady. California wools are exceedingly dull and no interest is evinced in either the pulled or carpet varieties. Australian stock has received more attention this week. Hoosier people are showing more interest in lamb's wool. At Boston the receipts show a falling off of about 7000 bales in comparison with the corresponding week of last year. The London wool sales have been well attended and considerable animation in competition has appeared.

Malaga Raisins.

NEW YORK, July 26.—The new crop of Malaga raisins is not expected to exceed that of last year, 600,000 boxes. The first shipments are expected to begin early in September. Owing to the neglect of the lower grade for shipment to America, it is thought a large portion of such goods will find their way to England branded as the 2-crown black loose.

California Products.

NEW YORK, July 29.—The following is from the *Commercial Bulletin:* Monday's reports indicated that the speculative fever in the primary markets for California dried fruits—prunes, apricots and peaches—continues unabated. The growers are having things pretty much their own way. The packers, with strong speculative proclivities, are also doing their utmost to keep prices on the jump. There is just enough of the bullish spirit in this locality to help along the manipulations at the centers of supply. A prominent packer, who, it was reported, refused to confirm the sale of 70 carloads of prunes made by Eastern agents under alleged misrepresentation, claims to control at least one-third the entire crop. This packer, it has also asserted, has made no prices, and will make none until the latter part of next month, while a number of competitors seem to be holding back awaiting his figures.

There are some signs of a bull movement in the new crop of California Lima beans, in which one or two Eastern firms seem more than curiously interested.

Smyrna Figs and Raisins.

NEW YORK, July 30.—A circular issued by Alfred H. Keun of Smyrna, under date of July 12th, estimates the crop of Sultana raisins at 30 per cent less than that of last year, a falling off of 11 per cent in Eleme raisins, an increase of 10 per cent in Black raisins, and a falling off of 30 per cent in figs. The crop of the latter is estimated at 12,900 tons, against 19,250 tons last year, and an average of about 15,000 tons during the preceding three years. The 1890 crop of Sultana raisins is placed at 15,000 tons. Last year's yield was 21,200. The average for 1886 and 1887 was 27,000 tons.

BAGS—The market is reported steadier but no higher for standard size grain bags. Spot quoted at 6⅝@6¾ cts.

BARLEY—The local market has not only held strong but has advanced slightly. The upward movement appears to be well grounded, and therefore looks well for the future. A fair shipment of brewing was made the past week to New York. In futures, trading has been quite active, with slight but attractive fluctuations. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—200 tons, $1.28; 100, $1.28¼; 100, $1.28⅜; 100, $1.28½; 100, $1.29; 100, $1.29¼; 200, $1.29⅝; 100, $1.29¾; 300, $1.29⅞; 800, $1.30. Buyer season—500 tons, $1.35. May, 100 tons, $1.28. Seller, 1890, new—100 tons, $1.23; 100 tons, $1.23¾ ₩ ctl. Afternoon Session: Buyer 1890—300 tons, $1.29; 600, $1.30. Buyer season—200 tons, $1.34⅜; 500, $1.34½; 100, $1.34¾; 500, $1.35; 200, $1.35¼. Spot—100 tons, $1.23¾. Buyer season, Brewers—100 tons, $1.36½ ₩ ctl.

BUTTER—Under light stocks and a good demand, choice to gilt-edged butter is strong and higher. Receipts the past week show an increase, yet the market closed very strong.

CHEESE—The market is strong at another advance. The demand is exceptionally good.

EGGS—The market shows more strength but with no advance in quotations. Receipts show a falling off, but the free supply in cold storage is against much of an advance in prices.

FLOUR—The market is strong at an advance. The demand is improving.

WHEAT—The sample market has been quite active at higher prices. Buyers have been compelled to bid up so as to obtain supplies. Old wheat for milling is quite scarce. Harvest returns are so far in as to enable us to form a fairly correct idea of the outturn. It now looks as if the crop will fall short of last year fully 200,000 tons and the shortage may reach 250,000. This is due to the very light outturn in the Sacramento valley. In futures, trading has been more active with slight fluctuations noted. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—200 tons, $1.46; 200, $1.45⅞; 400, $1.45¾. Buyer season—100 tons, $1.54¾; 100, $1.54⅝ ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.45. Buyer season—700 tons, $1.54¼; 200, $1.54½. Seller 1890, new—200 tons, $1.37¾. Seller season, paid—500 tons, $1.40 ₩ ctl.

[COMMUNICATED.]

Market Information.

Cereals.

The wheat market has held very strong at advancing prices in sympathy with the foreign markets. The advance abroad is due to bad weather in England and France, light visible supplies and higher prices ruling for silver. The close money market abroad and the feverish feeling in financial circles are against a decided bull movement promoted by speculation, therefore the present upward tendency is based on legitimate business principles, supply and demand, and being so grounded gives promise of greater stability in the future. Our local market, although higher, would do still better were it not for an advance in wheat charters. The latest charters reported are as follows: 43s 9d for a handy-sized iron vessel to Cork, U. K., Havre or Antwerp, and 40s for a 1789-ton registered iron vessel to Cork f. o. The vessels on the way to this port show a registered tonuage of about 20,000 tons in excess of last year at this date, while the tonnage on the way to Portland, Puget Sound and British Columbia aggregates 102,964 tons registered (carrying capacity 164,742 tons) against 39,576 tons registered at the like time in 1889.

This year's grade of wheat in California averages better than in 1889, yet it is very mixed. Millers say that a large proportion of the large plump wheat is light in gluten, going more to bran than to flour. They also say that while the flour will be very white it will not be strong. For family use this will be unobjectionable, but for bakers it will hardly answer, for the latter like flour that requires a good deal of water, for it makes more loaves of bread to the 100 lbs.

Barley has gravitated to still higher prices with a strong market at the close. The large increased number of horses at work on railroad construction, drawing, farming and city use give confirmation of a larger consumption this season than for several years past, and as the crop is short, the supply bids fair to run short, or, at least, be quite light by the end of the season. The export movement is light, but it is likely to increase if the bad weather abroad does as much injury as it is now claimed that it will.

Corn has held strong with an advance obtainable. It is claimed that the bulk of the stock is held by two firms. The growing crop is said not to be quite so promising. Worms are reported worse than ever before. In the Central States the crop is said to promise a yield below an average.

Oats are strong under light supplies and a fair demand. The advance in the price of barley has had a favorable effect on oats.

Rye is firm at current quotations.

Feedstuff.

In ground feed the market is firm for bran and middlings, and very strong for ground barley and feedmeal. The consumption shows a steady increase.

Hay has been coming in quite freely, causing some buyers to ease off in their bids, but as yet there has been no perceptible influence on the market owing to the free consumption. The high price of wheat and barley has unquestionably caused fewer fields to be cut for hay, which, if correct, will cut off a large source of the supply of hay.

Fruits.

Apples are coming in very freely with the quality generally good. The market is naturally easy under free supplies of other kinds of fruits. The hot weather of the past week caused fruits to ripen more quickly, which is having the effect of causing a shading off in the prices of some kinds.

Apricots, peaches, plums, and pears are in free receipt, but the market holds up well, with at the close a slight advance obtainable. The quality is still poor, although more large sized are being received, but they, as a rule, will not keep long. It is probable to this is due their being shipped to this city. Canners are buying all they possibly can both in this city and in the country. The prices paid are still very high for the best canning varieties.

Orchardists who accepted the RURAL PRESS advices of a short fruit crop at the East and higher prices here have no cause to complain. Early in the season we gave the above information, which our contemporaries kept back until buyers had made heavy purchases, when they too began to give correct information.

There will be an unusually large quantity of fruit dried, but notwithstanding this the better informed expect all to go into consumption at good prices—no lower but probably higher than now ruling. As far as the writer can learn, driers are meeting the market, preferring to sell now when the fall and speculative demand is on. It is difficult to give correct quotations, for much depends on the locality, how cured or dried and also how sent to market. At this time anything will sell. There have been heavy sales of dried grapes, future delivery, ranging from 3c to 4c ₩ lb in the interior. As near as can be learned the following are the ranges in this market, with fancy selected, dried and packed fetching an advance on outside quotations: Evaporated peaches, 16@18c; bleached apricots, sacks, 13½@16c; boxed, 16@17c. White nectarines, 13@15c; red, 11@13c. Prunes, 8@11½c; grapes, 3½@4¼c.

Raisins for September and October delivery are in good request with buyers naming $1.75@2.25 for layers. Fancy, of course, fetch more money. It now looks as if the pack will not only be larger, but finer, and with care in selecting and packing, should give California raisins a still better reputation.

Vegetables.

Garden truck continues in liberal supply so far as cauliflower, lettuce, radishes, table onions, etc., are concerned, but beans and peas are getting old and consequently sell slowly. Green corn is in free supply. It still continues to be wormy. Summer squash, egg plant and okra are being received quite freely. Cabbages both in size and quality make a good showing.

Onions are selling for more money. The higher price is due to lessened receipts and a fair demand.

Free receipts of potatoes are causing the market to ease off. The quality appears to be better this year. There is still a fair outside demand, which begins to show signs of slacking off. Nevada and Oregon will have large crops.

Live-stock.

The market under free offerings is weak. The warm weather keeps retail dealers from buying freely. The condition of bullocks, sheep and hogs is of the best. It is generally claimed that the supply of hogs for fall and winter use is heavy, but then the consumption is larger.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4¼@4½c ₩ lb; dressed, 7@8c ₩ lb.; heavy, 3⅞@4⅛c ₩ lb.; dressed, 5¼@5¾c ₩ lb. Stock hogs, 4¼@4⅝c ₩ lb.

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5¾@—c ₩ lb.; second quality 5@5¾c ₩ lb.; third quality, 4½c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 7@7½c ₩ lb.; ewes, 6½@7c ₩ lb.; lamb, spring, 7@8c.

Miscellaneous.

From the *Commercial News* of July 30th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port.....	265,158	245,196
On the way to neighboring ports	20,262	24,822
In port, disengaged.....	4 736	12,868
In port, engaged for wheat....	45.346	53,530
Totals.....	330 502	356,416

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to July 25, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls.....	397 585	743,974
Flour, bbls.....	63.430	92,789
Barley.....	8,662	27,518

Poultry is generally weaker under fairly free receipts.

Beans are decidedly mixed; while some kinds are stiff, others are weak. Whites and bayos are firm, while pinks and Limas are weak.

New crop hops have been contracted for fully up to 75 per cent of the total outturn. The remainder of the crop is being held back, no offer under 20c being entertained.

Wool moves slowly. Late English advices report that luster goods wools are easing off, while the finer grades show a better front. It now looks as if slightly better prices may obtain in this country for fine wools, which would cause a better demand for Californian.

In hog product, hams are strong and higher.

The stock of nuts is very light, barely enough to give a basis for quotations.

Honey is in better request, causing slightly higher prices to obtain for the more choice. Two-lb comb is hard to sell, but 1-lb is wanted. White comb 1-lb frame, choice, 10@11½c, ordinary to good 7@9c. White, extracted, 5¼@5¾c, amber, 4c.

Beeswax is strong at 24@26c.

Exports by sea the past week aggregate as follows: Wheat, ctls, Central America, 2202; Cork, 276,548. California Fruits East.

NEW YORK, July 24.—A large dealer in an interview to-day confirmed all that has been said concerning the field for California fruits this season. He deals in fruit largely and is in a position to speak with authority. He says all fruit crops in Delaware, New Jersey and New York are practically ruined. What promised to be a fine crop of Bartlett pears in this State has been destroyed. The prices for California fruit in this market are higher than for fruit grown near by, because the quality is superior and better graded and packed. He says it is not an exaggeration to say that a few years hence California will entirely supply this market with fruit. Illustrative of the readiness of the market, he said that he sold four car-loads of California fruit at auction this morning within 45 minutes. He predicts 3500 car-loads of California fruit will be sold in this market this season. At his auction sale to-day the following prices were realized: Gros prunes, $4.40; Washington plums, $3.35; Columbia plums, $3.15@3.90; German prunes, $3.15; P. D. plums, $3.10@3.30; early Crawford peaches, $3.15@4.05; Bartlett pears, $2.95@3.10; also one car-load of California canteloupes, very green, $1.10@2.35.

CHICAGO, July 25.—The Earl Fruit Co. sold California fruits to-day as follows: Bartlett pears, $2.85@3; peaches, $1.50@2.10; Fontainebleau grapes, $1.25@1.65; figs, 65c@$1.40.

Porter Bros. sold five carloads as follows: Bartlett pears, $2.40@2.75; Fontainebleau grapes $1.25@1.55; nectarines, $1.65; plums—Washington, $1@1.55; Bradshaw, $1.50@1.75; purple Duane, $1.25@1.95; Columbia, $1.80@1.95; Coe's Golden Drop, $1.30; Egg, $1.85; Fallenburg, $1.65; Red Egg, $2.85; Crawford peaches, in very small lots, $1@1.80; German prunes, $1.65@2.35; French prunes, $2.30.

NEW YORK, July 25.—E. L. Goodsell sold at auction to-day three cars of California fruits as follows: 500 bxs early Crawford peaches, $3.20@3.70; 100 bxs Bartlett pears, $2.70@3.10; 350 hf-bushel bxs, $1.80@1.85; Royal apricots, $1.50@1.70; 900 bxs Bartlett pears, $3.15@3.25; Coe plums, $2.45@

2.85; Bradshaw plums, $3.15; purple Duane, $2@2.65.

CHICAGO, July 26.—The Earl Fruit Co. sold four cars of California fruit to-day as follows: Bartlett pears, $2.55@2.60; yellow Egg plums, $1.60@2.50; Crawford peaches, $1.45@1.65; Fontainebleau grapes, $1.60; nectarines, $1.65.

Porter Bros. sold four carloads as follows: Peach plums, $1.90; Crawford peaches, 90c@$1.65; Fontainebleau grapes, 80c@$1.40; Tucson Clingstone peaches, $1.70; Bartlett pears, $1.70@2.50; Bradshaw plums, $1.50; Columbia, $1.40@1.60. One carload was in very bad order.

The Montgomery Auction Co. sold seven cars of California fruit for account of the Earl Fruit Co. and W. R. Strong Co., at the following prices: Bartlett pears, $2.25@2.65; early Crawford peaches, $1.45@1.55; Hale's early, $1.25; nectarines, $1.65; plums—purple Duane, $1.50@1.65; Egg plums, $1.60@2.50; Washington, $1.30; Royal Hative, $1.20@1.45; Columbia, $1.65; German prunes, $1.35; Gros, $1.75@1.85; Fontainebleau grapes, $1.50; Hemskirk apricots, $1.25@1.45; Moorpark, $1.10@1.45.

CHICAGO, July 27.—The Earl Fruit Co. sold four carloads of California fruit at auction yesterday at the following prices: Bartlett pears, $2.55@2.60; yellow Egg plums, $1.60@2.50; Crawford peaches, $1.45@1.65; Fontainebleau grapes, $1.60; nectarines, $1.65

Porter Bros. sold yesterday four carloads of fruit: Peach plums brought $1.20; Crawford peaches 90c to $1.65; Fontainebleau grapes, 80c to $1.40; Decker peaches, $1.40; Tucson cling peaches, $1.70; Bartlett pears, $1.70 to $2.50 (one car was in very bad order); Bradshaw plums, $1.50; Columbia plums, $1.40 to $1.60.

The Montgomery Auction Co. sold yesterday for account of the Earl Fruit Co. and the W. R. Strong Co., seven carloads of California fruit. The prices realized were as follows: Bartlett pears, $2.65@2.25; early Crawford peaches, $1.65@1.45; Hale's early peaches, $1.25; nectarines, $1.65; purple Duane plums, $1.65@1.50; Egg plums, $2.50@2.60; Washington plums, $1.30; Royal Hative plums, $1.45@1.20; Columbia plums, $1.65; German prunes, $1.35; Gros prunes, $1.85@1.75; Fontainebleau grapes, $1.50; Hemskirk apricots, $1.45@1.25; Moorpark apricots, $1.45@1.10.

CHICAGO, July 28.—The Earl Fruit Co. sold three carloads of Bartlett pears at $2.50@2.60; some No. 2's at $2.05@2.50; Crawford peaches, $1.45@1.75; some in poor order at 90c@$1.40; fancy nectarines, $2.05@2.10; others, 60c@$1.35; Fontainebleau grapes, $1.15@1.40; Rose of Peru grapes, $1.35.

Porter Bros. Co. sold ten carloads of fruit. Bartlett pears, $1.30@2.70, average, $2.35; Egg plums, $1.35@1.45; Columbia plums, $1@1.95; grapes, 95c@$1.40; peaches 60c@$2.15. Weather hot, and a good deal of fruit in very bad order. Purple Duane plums, $1.40@1.85; Gros prunes, $1.50@1.70; German prunes, $1.35@1.70,

CHICAGO, July 29.—The Earl Fruit Co. sold California fruits at auction to-day as follows: Bartlett pears, $2.40@2.55; ripe stock, $2.25@2.35; peaches, $1.35@1.75; ripe, 95c@$1.20; Gros prunes, $2.35; Columbia plums, $1.60.

Porter Bros. Co. sold five carloads of fruit as follows: Bartlett pears, $1.90@2.65; peaches, $1@1.50; Foster peaches, $1.35; nectarines, $1.60@1.80; grapes, 70c@$1.30; Japan plums, $1.80; German prunes, $1.50; Gros prunes, $2.80@2.90.

NEW YORK, July 29.—Sgobel & Day, the agents of the California Fruit Union, to-day sold at auction two ventilated carloads of fruit, obtaining for Bartlett pears, $3.30@2 50 ₩ box; Washington plums, $1.75; Crawford peaches, $1.70@1.35; purple Duane plums, $2.15@1.55; Decker peaches, $1.55.

All the peaches had more or less decay, and the plums were mostly undersized. The Bartlett pears ranged from good to ripe condition. The refrigerator cars are landing sounder fruit than the ventilated cars.

CHICAGO, July 30.—The Porter Bros. Co. sold to-day nine carloads of California fruit: Bartlett pears brought $1.85@2.60, except one line in very bad order at 70c; Crawford peaches, 50c@$1.65; Egg plums, $1.25@1.40; Purple Duane plums, $1.30@1.50; Tragedy prunes, $2; Fontainebleau grapes, all in bad order, 30@90c. All the fruit arrived here to-day shows the effect of the hot weather en route.

CHICAGO, July 30.—California dried fruits are firm; apricots are ready sale and are now up to 17½@18½c ₩ lb; peaches are held at 20c; none of any amount have been received yet but some are on the way. A carload of good apricots sold at 17½c. For beans there was a firm market; the inquiry continues good; offerings at current prices are small, hence transactions are few. A few lots of beans remain in first hands, but not many. Those having stock of good quality left are disposed to ask a little above present prices and it is difficult for those wanting to purchase to secure the stock desired. California Lima beans, choice, 5¼c ₩ lb; common, 2@4c.

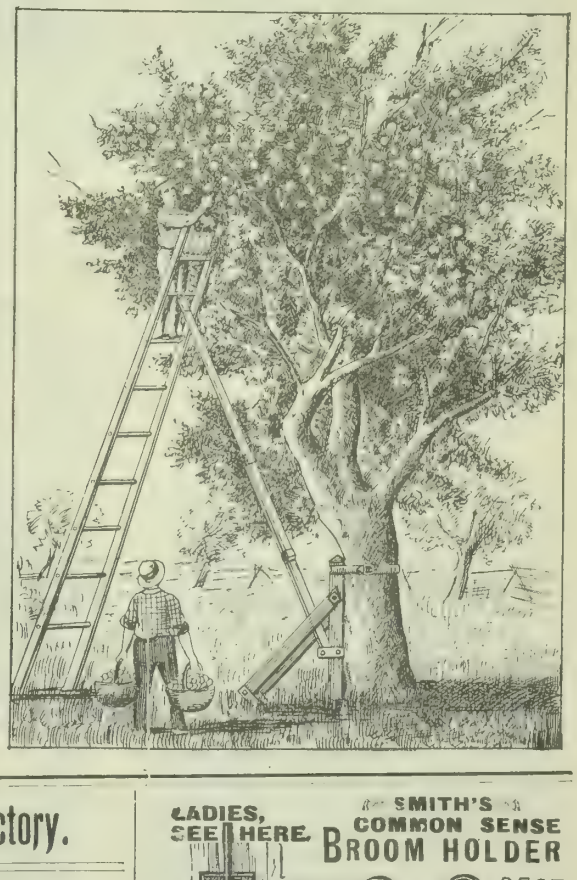
C. E. KIDDER'S

PATENT,

DECEMBER 3, 1889.



This ladder works independent of the limbs, does not rest on them, therefore does not hurt the fruit.

By raising the two braces you can swing the ladder from right to left, or clear around the tree, as the upright turns at the top in a loop in the strap, and has a spike in the bottom which turns in the ground. The two braces have a U-shaped iron, which is pressed into the ground by stepping on the lower ends, to hold the ladder steady. The ladder cannot tip over; can stand on the top of a 20-foot ladder and pick with both hands. You can place the ladder at any place or point in the tree, at the center or at the outside. The limbs may be no larger than a pipe stem and 20 feet long, or the tree may be as large as a barrel or as small as a broomstick.

It is just the thing to thin fruit or prune trees, as well as to pick fruit. It is about the same weight as a step-ladder of the same size. By removing a bolt you have an ordinary ladder to be used about the place. Replacing the bolt you have a fruit ladder. Fruit-growers will see at once that it works on the true principle for getting all around and through and over the top of a tree. Will sell the State right for California cheap. Address,

American Genius.—It is one of the most marked characteristics of American skill and genius that whenever any new industry is started in this country, which materially depends upon the use of machinery for its successful competition with other localities, the desired success is largely brought about by improved devices for its prosecution. Until within a few years it was thought impossible to compete with European countries in the manufacture of plate glass. The business, however, was started and is now firmly established. To show how this has been accomplished, it need only be stated that the German polishing machine formerly in use was bought at a cost of $10,000. Within the past six months American mechanics have constructed a new polishing machine whose cost will not exceed $2700, and thus early in the trial it has demonstrated its superiority over its foreign predecessor by doing the same work regardless of area, in two hours less time, and giving a better finish to its product.

Our Agents.

Our Friends can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Electric Light Bugs.—When the first Atlantic cable was laid scientists asserted that an insect would soon appear which would attempt to destroy it; and sure enough in a short time an insect, not classified by entomologists, began its work on the insulators. The electric-lighting system in large cities seems also to have developed a similar condition of things in the shape of what are called electric-light bugs; and singularly, each system of lighting has its own peculiar insect satellite.

Newspaper Agents Wanted.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

Dewey & Co., Publishers,
No. 220 Market St., S. F.

Language of Fish.—Mr. W. A. Carter, in a recent lecture on "Marine and Fresh-Water Fishes," said that fish have the power of influencing one another by sounds and action. He had observed a shoal of carp following the lead of a single one, which conducted them to a quantity of food at a considerable distance away. He had also noticed that certain fresh-water fish, such as trout, were subservient to a ruler, who might be seen swimming at the head of his tribe. The same was possibly the case with some marine forms, like the herring and bass.

Consumption Surely Cured.

To the Editors:—
Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption if they will send me their Express and P. O. address. Respectfully,
T. A. Slocum, M. C., 181 Pearl St. New York.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, *or beyond the time he intends to pay for it*, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. Look carefully at the label on your paper.

Birds on the Perch.—The reason given why birds do not fall from their perch is because they cannot open the foot when the leg is bent. Look at a hen walking and see it close the toes as it lifts its foot and open them as it touches the ground.

THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.
It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.
These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.
The cost, considering capacity and efficiency, is fully 50 per cent less.
Circular, giving full information, sent on application.
Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

OLIVE PRESS

Have discarded the second pressing, as I only got one-half gallon of wine. Every person who has seen the press working is satisfied that it is the best wine press for work, strength and durability.—WALTER PHILLIPS, Bennett Valley.

The wine press has given entire satisfaction.—E. E. MEYER, Wright's P. O., Santa Clara county.

We think your press is one of the most powerful presses ever made, and very simple to operate. A boy of ten years can run the press and do better work than a man on any other press we have ever seen.—J. & F. MULLER, Windsor, Cal.

Can press two tanks—2000 gallons capacity each—a day, and have plenty of time before 5:30 o'clock to clean everything, with one of your small size wine presses.—R. C. STILLER, Guberville, Cal.

Every wine maker should have one, especially when he does not distill his pomace.—VACHE FRERES, Old San Bernardino, Cal.

The working of your press has been fully up to your representations.—J. F. CRANK, Sierra Madra Vintage Co., San Gabriel, Los Angeles county.

The wine press worked quite satisfactory.—JAMES FINLAYSON, Healdsburg, Cal.

The wine press bought of you gave entire satisfaction. WM. HILL, Petaluma, Cal.

We take great pleasure in attesting the true merits of your wine press. The one in our winery gives the utmost satisfaction. We cheerfully recommend it as good as the best.—DOWNEY FRUIT AND WINE CO., Downey, Los Angeles county, Cal.

Can cheerfully recommend your press as being the most powerful and durable press I have ever seen, and can warrant its giving satisfaction.—WILLIAM PALMTAG, Hollister.

The small wine press bought of you gave entire satisfaction. Would recommend it for small cellars of 25,000 to 35,000 gallons capacity.—A. BURNHAM & SONS, Bennett Valley, Santa Rosa P. O.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. H. G. ROOT, M. C., 183 Pearl St. New York.

The Cylinder Grader

Has proved the most rapid working machine for GRADING PRUNES, BOTH GREEN AND DRIED, that has ever been introduced. Wherever it was used last season it gave perfect satisfaction, both in the quantity of fruit graded and the way it did the work. The capacity is practically unlimited, as it will grade the fruit perfectly as fast as it can be shoveled into the machine.

I make all sizes of this Grader, from the large 30-inch cylinder down to a small hand machine for the use of growers whose crops are small. I furnish the Grader mounted complete, or the Cylinder alone if, as is often the case, the purchaser prefers to mount it to suit himself.

Send for circulars and prices.

1890—THE STATE FAIR—1890

OF 1890 AT

SACRAMENTO,

SEPTEMBER 8th TO 20th INCLUSIVE.

CALIFORNIA'S ANNUAL EVENT!

Showing Progress Made in Agricultural, Mechanical and Industrial Arts.

LIBERATI'S FAMOUS MILITARY BAND OF FIFTY SELECTED ARTISTS AND DISTINGUISHED VOCALISTS

Will give a Grand Musical Concert at the Pavillion each evening from September 15th to 20th.

THE COUNTY EXHIBITS made at these exhibitions have attracted more attention to localities represented than any other form of advertising advanced.

EVERY COUNTY IN THIS STATE should have an exhibit. Begin with harvest and secure samples of your products. The money premiums will almost pay the entire cost of your exhibit.

NEW-COMERS ARE AWAITING to view the products of the State before locating. Hence it behooves every county to be up and stirring.

IT IS AT THESE EXHIBITIONS the Manufacturer meets the Merchants of the interior.

IT IS AT THESE EXHIBITIONS the Merchant views progression made in all mechanical and industrial callings. Hence it behooves the Manufacturer to be up and stirring.

AT THESE ANNUAL EXHIBITIONS the visitor may combine business with pleasure, as the Board of Directors provides for all kinds of recreative amusement in the varied program of events.

THE CONTESTS OF SPEED showing advancement made in the breeding of high-class horses, will be a feature.

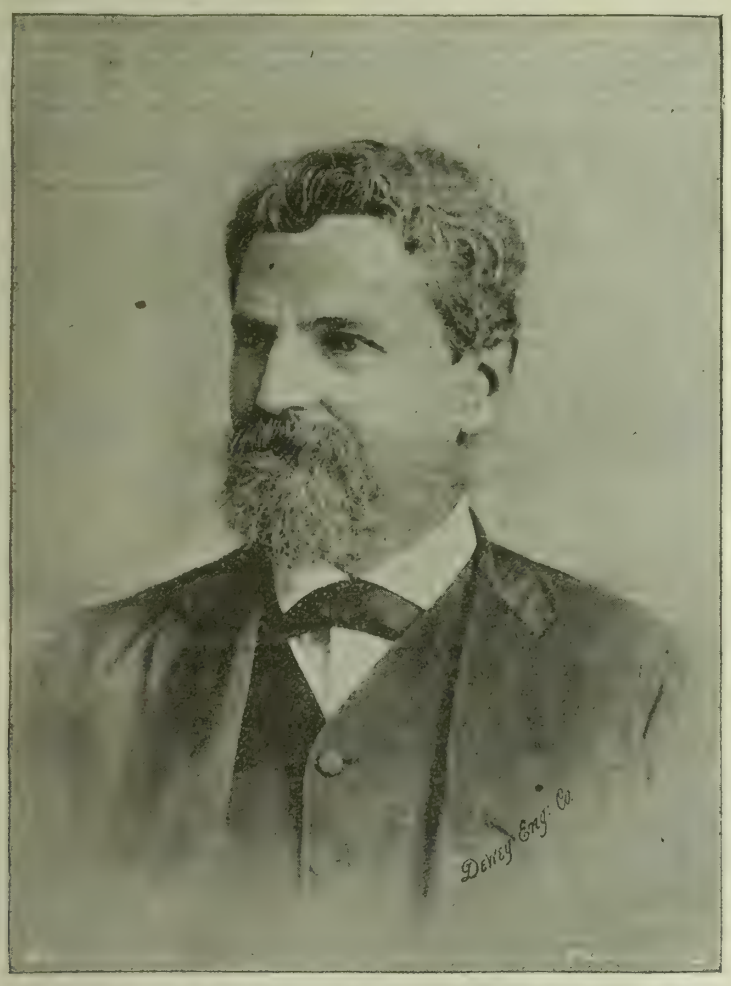
THE GRAND PARADES OF LIVE-STOCK will embrace the various classes of horses, and all the improved breeds of cattle.

OPEN-AIR AMUSEMENTS FOR THE DAY and MUSICAL CONCERTS FOR THE EVENING will afford ample entertainment for all who visit the State Fair.

Every attention will be rendered exhibitors by the Board of Directors.

Premium lists are now ready, and will be furnished upon application to the Secretary, who will also furnish other necessary information that may be desired. Apply at once for space.

Remember, the Southern Pacific Company TRANSPORTS ALL EXHIBITS FREE OF CHARGE to and from the Fair, and gives EXCURSION RATES TO ALL THAT ATTEND.



CHRISTOPHER GREEN, President.

EDWIN F. SMITH, Secretary.

PACIFIC RURAL PRESS

TWENTY-PAGE EDITION.

Vol. XL.—No. 6. SAN FRANCISCO, SATURDAY, AUGUST 9, 1890. DEWEY & CO., Publishers Office, 220 Market St.

HON. F. T. NICHOLLS—THE ANTI-LOTTERY GOVERNOR OF LOUISIANA.

Gov. Francis T. Nicholls.

With pride and pleasure we present to RURAL readers a portrait of that brave and upright magistrate, Gov. F. T. Nicholls of Louisiana, whose righteous and manful hostility to the lottery abomination renders him gloriously memorable. The picture is from a photographic likeness of the Governor, sent us from New Orleans at our special request.

Francis Tillou Nicholls was born in Donaldsonville, Ascension parish, Louisiana, August 20, 1834. His father, Thomas Clark Nicholls (1790–1847) was one of the men wounded in skirmish with the British, Dec. 23, 1814, prior to the general battle at New Orleans; was a member of the General Assembly, Judge of a District Court for many years, and in 1843 was appointed Senior Judge of the Louisiana Court of Errors and Appeals. His mother, Louise H. Drake, was a sister of the poet, Joseph Rodman Drake.

Gov. Nicholls was graduated at the U. S. Military Academy, West Point, in 1855, and assigned to the 3d Artillery. He served against the Seminole Indians; was on frontier duty in 1856; resigned his commission in October of that year, and engaged in the practice of law at Napoleonville, La. In 1860 he was married to Miss Caroline Z. Guion, a descendant from Huguenot stock.

In 1861 he joined the Confederate army as Captain in the 8th Louisiana Infantry, from which he gradually rose to the rank of Brigadier-General. He served under Stonewall Jackson, lost his left arm at Winchester, Va., and was captured, fortunately falling into the hands of old army friends, who treated him as a guest rather than a prisoner. At the battle of Chancellorsville he lost his left foot also, but nevertheless continued in service until the close of the war, when he returned to the parish of Assumption and resumed the practice of his profession. He was elected Governor of Louisiana in 1876, served until 1879, was re-elected in 1888 for the term which he is now serving.

The late Chief Justice of Louisiana, Thos. C. Manning, in dedicating his publication of reported decisions, uses the following words, referring to his first term:

To the Honorable Francis T. Nicholls, Governor of Louisiana at the gravest crisis in her history; whose unsullied private life gave tone to his public acts; whose integrity of purpose inspired all classes with confidence; whose patient waiting upon events prevented a precipitation that would have been fatal to the cause he represented, and whose prompt action, when action was needful, assured success; who was content to be misunderstood and misrepresented, thoughtful only how he could serve the people who had placed him in an unsought position of power and of danger; whose maimed body attested his sacrifices in the field, as his unmaimed character enforced his policy in the cabinet; who rendered to public morals an inestimable service by showing that a man can fill political office and leave it without a stain.

At a meeting held in Grunewald hall, New Orleans, to give reception to the anti-lottery members of the Legislature, the appearance of Gov. Nicholls was greeted with the wildest enthusiasm.

A Precocious Olive.

The engraving upon this page may have a special interest to olive propagators and may reflect some of their own experience and observation. If so, we would be glad to hear from them upon the subjects involved. The engraving is a photo-facsimile of a plant taken from the propagating frames of the Agricultural Department of the State University at Berkeley. Mr. K. McLennan, the foreman, who made the cutting and has watched the progress of this plant and others of the same variety in the same frame, assures us that the variety is the Atrorubens; that the small cutting was put in the propagating bench in the greenhouse in December, 1888; that it rooted well and was put in the three-inch pot and that wood growth started in the spring of 1889, and made the size shown in the engraving during the summer of 1889. It, with a few others, was not repotted for lack of room, but has remained in the three-inch pot shown in the engraving ever since its first potting. In April, 1890, it bloomed and set fruit, but made no wood growth up to the time of taking its photograph last week. Some others of the same variety, also remaining in the original pots, have set fruit and made a few inches of new wood this season; others still having been repotted twice, also have set fruit and made over two feet of new wood. The engraving is about the natural size of the specimen represented.

Aside from the interest pertaining to such early fruiting, there is also another interesting deduction to be drawn from the history of these plants, and that is that continual drenching with water during the blooming period does not seem to interfere with the fruit-setting of the olive. All the plants mentioned above stand in the same frame and have been watered daily either with a watering-pot or a hose.

AN INSTANCE OF EARLY BEARING IN THE OLIVE.

CORRESPONDENCE

Correspondents are alone responsible for their opinions.

Santa Barbara County Notes.

EDITORS PRESS:—We are having a greater amount of warm weather and less fog than usual at this season of the year. Fears are entertained that the heat will materially shorten the bean crop, as the Lima beans set better during foggy weather than when the sun is too hot.

Bean-buyers are plentiful and are contracting the new crop at 3½, with indications of a rise before harvest. The crop will not be so heavy as usual, the hard winter having interfered with putting the land in proper condition, especially in heavy ground. Cutting will begin on small beans this week, the crop maturing early.

The flow of gas from the gas well at Summerland (Ortega Ranch) having held out well, and in fact having increased, has led to the formation of a company to develop the gas and pipe the same to Santa Barbara and other places where needed. They have leased the Ortega Ranch, including the townsite of Summerland, and the chances for successful operations are very good, as gas has been found in many parts of the section in and near Santa Barbara.

In spite of the heavy inducements offered the Southern Pacific to finish their coast road from Elwood to Santa Margarita, it looks as if the company would not commence work until they are pleased to do so. Many men, believing at the time they were working here that the company would push right through to completion of the road, were induced to invest so heavily that they have become financially embarrassed and cannot get on their feet again until through travel livens things up; and as many of these men are among the most public spirited and open handed of our citizens, the effect is very bad on the whole section. Many other reasons could be adduced for the finishing of the road, but the S. P. Company remain obdurate and forgetful or neglectful of their promises, and the work does not move.

Many tons of fine apricots have rotted on the ground on account of incomplete arrangements for drying them and moving them where the sun could do the work. Those who have dried have mostly received good prices for their fruit. Fifteen cents per pound has been paid for many lots in sacks. The Southern California Packing Co., at Los Angeles, bought several carloads, and other lots have been shipped to Santa Paula and Newhall and dried in the sun.

The walnut crop promises to be a good average in quality and quantity, and as many parties are in the field buying, the price will probably be good. Some parties have contracted their crops at eight cents for hard and nine cents for soft shell, and some others have received higher bids. Many trees have been drowned out on low lands and on upland where the clay bottom has held the water like a reservoir. On all well-drained land the trees escaped harm.

Squirrels, gophers, quails and other pests are very numerous this season. Forest and mountain fires promise to be abundant. Santa Barbara had quite a scare a few nights ago by a bad fire on the foothills and mountains north of town. One house and considerable hay, feed, etc., burned; also a barn or two was burned. The fire approached very near the limits of the city and hundreds of people were out fighting the flames.

A number of home seekers have been into the Cuyama valley buying and locating homes. A party of surveyors are locating a road from Santa Barbara over the mountains to Cuyama valley. If this road is put through it will afford a direct outlet from Bakersfield to the sea, and prove mutually advantageous to all on the line. L. B. CADWELL.

Carpinteria.

Morgan Valley.

EDITORS PRESS:—Ten miles southeast from Lower Lake is a collection of small valleys and low hills called Morgan valley. Like other sections of the county, they are complaining of short crops owing to excess of moisture, and of scarcity of money, owing to barter system of trade. We found J. Palmer busy at his heading, and quite proud of a drove of 50 or 60 fine young mules. We passed the flourishing places of Messrs. Reef, Bond, Olser, Fugua and Ebbinghousen. At Albert Morrell's we understood that it was a common thing for his pear trees to produce 3000 pounds each, and that nearly all the crop goes to the hogs. Big stories both! So we went to see and found pear trees 22 years old, upward of two feet in diameter and forty feet high. Some of these were so full from the ground to the top that you could easily fancy that the pears would touch when grown, and they were not only on the outside of the limbs but all through the tree. Some were Bartletts, some Winter Nelis. Some we should have called Seckels had they been smaller and many seemed to be Vicar of Winkfield. Mr. M. says that his apple trees rest every second year, but that he can depend on pears every year.

In 1876 a prominent fruit man prophesied that in less than five years Bartlett pears would be fed to the hogs in California, and this is about the only instance we have seen pointing in that direction. It certainly seems as though those pears might be split and dried without peeling as A. T. Hatch does with such as he doesn't care to ship, and make them net at least $1 per cwt. That is as much as it would cost to buy barley for the hogs.

Pears in Morgan valley are said to ripen much later than any other locality they hear from. There might be heavy shipments if they only had a railroad. As it is, we think they had better haul away dried fruits or nuts worth 5 cents to 15 cents per pound than grain worth 1 cent to 1½ cents per pound.

Almonds are bearing very full with Mr. Morrell. F. S. C.

Lake County Notes.

Dr. Aby's Race.

EDITORS PRESS:—We think it very unfair for the papers to report that Dr. Aby was unable to pass that Chinaman on his fruit wagon. They did not explain that half the way from his place to town the road winds between trees and rocks in such a way that Marvin himself could hardly drive Sunol past a lame cow. Any one who sees Dr. Aby driving his bays tandem on a run through Middletown would be easily persuaded that he could pass any China fruit wagon in a race that was half-way fair.

Anderson Springs.

We found the proprietors very happy in entertaining fifty as lively guests as you often see at a health resort. Far into the night they made the woods ring with their serenades. Nature has made a park here unique in its wild beauty and cool shade. The hills abound in springs that give your choice of mineral waters. The natural steam baths are a feature, and lately they have added a swimming bath. The proprietors are very active in their personal attention to the comfort of their guests.

A Fruit Pest on the Warpath.

Wm. Whittington lost 20 prune trees last year, and five so far this year, from what he supposes to be a very small borer. Clark Wilbur also lost 30 trees out of 200 from the same cause this year. Where Mr. Whittington lost trees last year, the roots have sprouted, and instead of coming up bitter almond, as guaranteed in his contract with the nurseryman, they are all peach. The bark begins to turn black on one side, the leaves to die, and soon the dead bark extends clear around the tree. When cut down, the wood smells like a kiln where they are drying basswood, and all the signs of borer you will find are a few horizontal pinholes, largest near the pith of the tree. We don't think any fair-minded jury in the world would convict these poor little innocents of having done all this mischief.

Last year Prof. Wickson sent, in reply to Mr. Whittington's communication and sample, a copy of Prof. Klee's report for 1888, where he describes (on page 49) the *Xyloborus Xylographus*. It is the professor's opinion that the insect harbors in trees whose sap has fermented and that it is the fermentation rather than the insect that has done the damage. Mr. Whittington thinks the suitable preventive is to burn each tree attacked, and the small percentage of loss this year as compared with last points in that direction. If the insects are doing the damage, of course that is the way to destroy some of them. Please give us best remedy for fermentation of sap. That seems more likely to bring relief.

Middletown's Home Market.

At Oat Hill mine the expense account is said by Supt. Newcomb to be about $10,000 per month for labor and supplies. We have reason to think that the Bradford and Great Western pay out as much more. Then the Anderson and Harbin Springs are crowded when people are visiting springs, and they tell us that Lake county resorts bring in $75,000 cash per year.

Yet still the complaint is that no money is in circulation. It seems that the stores conduct a barter trade and supply the springs and mines with produce and farmers with goods. The railroad is looked forward to as the panacea for this and other ills, but it seems to us that a shorter and more direct solution of this matter can be devised. Let us hear of remedies based on business principles. People certainly don't feel well when they work all the year and never see a dollar.

A Fine Olive and Peach Orchard.

We walked a distance said to be *one and one-half* but seeming to be *four* miles, from Rev. Jno. Appleton's mountain home to the orchard of W. P. Filmer. Here are ten acres of chemisal and stones cleared off from the summit of a mountain, and every tree (so far as we saw) growing and thrifty. The trees are planted 25 feet apart for the olive grove, with a peach tree in the center of each square. Next year we expect Mr. Filmer will have a fine crop of peaches, and already he has made a showing of which the whole section is proud. If the olives take the flavor of that mountain air, we want to order our pickles from the Filmer grove. F. S. C.

Middletown, Lake Co.

PAPER OR PASTEBOARD may be rendered waterproof as follows: Mix four parts of slaked lime with three parts of skimmed milk, and add a little alum; then give the material two successive coatings of the mixture with a brush, and let it dry.

POULTRY YARD.

Hints on Poultry-Raising.

EDITORS PRESS:—Perhaps this is a long while between articles purporting to be in series, but better late, I suppose, than never. Anything on incubation or hatching by natural means and raising of chicks I take to be always in order, as it is now being done all through the year by many, and what gets a brood of chicks through successfully at one time of the year will not, perhaps, do so at another.

During the cold, wet months, great care and unremitting attention are essential to the well-being of the chicks, and even then one must not be discouraged at meeting with considerable losses; while through the warm, pleasant days of spring and early summer, the care is much less and the losses comparatively light, and, excepting through the very warm months say of July and August, the chicks will almost take care of themselves, aside from their supplies of food and water. This of course makes incubation a much pleasanter business in summer than in winter.

To meet the high prices of young poultry ruling during the months of April, May, June and a portion of July, it is necessary to commence setting by first or middle of November, in order to have them of marketable size and condition for those months, but with me it is still an open question whether, in view of greatly added expense in the matter of keeping the chicks properly warm night and day, the high price of eggs then ruling, and the comparative lack of vigor in the egg germ at this time, and losses resulting from this cause and the inclemency of the time, do not offset the high prices one gets for chicks hatched in late fall and winter. If hatched during the months of September and October, the chicks may then attain sufficient size before the coming of cold and wet weather to enable them to meet it without requiring so much outlay, so much attention, or meeting with so much loss as would be the case with later hatched chicks; but then they would be too old to bring the high prices of young fowls which obtain during the months above referred to and would have to go as old fowls at a greatly reduced price, so that if one could hatch at a time that would insure them a profit on their product in market fowls it would be a "happy medium" much to be desired. Many fail through want of proper and unflagging care of their fowls and chicks and consequent discouragement at losses which make the business for them an unprofitable one, for only by strict and unremitting care in all details, however unimportant and "fussy" they may seem, can one hope to be successful in the raising and keeping of poultry in numbers. A dozen or two of fowls may be kept in any manner, perhaps, but when one would keep several hundred in a certain given space there must be due attention to *all* their requirements in the way of food in proper variety, clean fresh water, coarse sharp sand or fine gravel, shells, burned or ground bones, a supply of charcoal (which they greatly relish) an occasional feed of pepper and onions and a constant and ample supply of green stuff of almost any tender kind which they can eat readily or it may be chipped for them. I feed cabbage, young corn, carrot tops, onion and turnip tops, all they will eat every day chopped in an ordinary hay-cutter, running the stuff through two or three times to get it fine enough for the fowls to eat it all. At present such as this forms fully one-half of their feed. For morning and noon, feed a mush mixed as dry as possible and composed of two parts middlings and three parts green stuff chopped fine and mixed twice or three times a week with a soup of scraps or refuse meat from the butcher's and at all times with milk instead of water, if I have it. For a feed at night, I use dry grain of some kind. Then if you keep them supplied with clean, fresh water, clean, well-ventilated and comfortable quarters and shade and a dusting place, you are pretty sure to have healthy, contented and productive fowls, and without all this you may be equally sure of having sickly, mopy fowls that have all they can do to exist without the added drain of laying eggs. Fowls must have first what is needful for the keeping up of a proper condition and a surplus for the making of eggs, or there will be no eggs.

Each day almost sees now an addition to the ranks of poultry-raisers, the greater part of them with an experience to acquire and seeking for what information they find themselves in need of, and while so many are coming in, many are also going out because of want of success or perhaps through finding the business an irksome one, full of care and work, and not paying, because it will not pay one who does not attend to it properly any more than any other business imperfectly attended to will. Not long since a friend of mine who is becoming somewhat advanced in years said to me: "I'm getting too old to work hard, and I think I'll get me 300 or 400 hens and live a little easier." "But," said I, "if you yard your hens, as you apparently will have to do, and care for them properly, you will have perhaps more hard work than you do now."

"Why," he says, "what work can there be to throw them a little grain morning and night, give them water and gather the eggs," and the last I think he *would* find easy enough.

Poultry-raising is beginning to be recogniz d as a business much more so than formerly, not only a business for women but for men as well, for there is much in it that women would perhaps find beyond their strength, or at any rate until a continuance in it had sufficiently improved their health and hardened their muscles, and not only that but it is being learned also that it is capable of paying as large a profit on the capital invested as many other kinds of business which are considered good and legitimate.

Several new incubators have been received in this vicinity lately, and several new parties have gone into the business of poultry-raising—in fact it is getting not uncommon for a farmer's wife to say to him here, "Well, I'll have to raise poultry to live on while you amuse yourself raising wheat," and in not a few cases that has been about the way of it. Statistics show conclusively, I think, that poultry-raising merits a place among the important industries not only of California but of the country at large, a very few only showing larger results in dollars and cents than this or adding more to the make-up of the sum total of the nation's industry.

But after all this is not telling how to incubate or how to brood chicks, neither can that be told in one or two articles, for, as with kaleidoscopic views, there is always something new. True, you set your eggs, watch temperature and moisture and turning of the eggs morning and night and your chicks in due course of time are hatched, and then the labor and the care commences. My practice has been to take the chicks off night and day as they are hatched, as if many collect in the pans they are apt to overlie and smother those which are trying to get out of the shell, and although I have seen it recommended that the machine should be closed and kept closed until the entire hatch is out, I think it bad practice, and can only result in harm to the chicks. I find it much better to take them off and put them in a brooder at the right temperature—perhaps about 90 degrees—but the chicks will inform you when they are too warm by peeping and separating or huddling and peeping when they are too cold.

As I have before said, I have fallen in with the practice of giving during the warm, pleasant weather from 40 to as many as 80 chicks to a good, motherly hen who will take them off and teach them how to scratch for food and gravel. Of course one has to feed them at short intervals a little at a time and supply them with water and skunk tight quarters during the night, or on some morning you may find that all your labor has been in vain. Just a little carelessness in the closing up of two boxes on one night cost me 160 choice Brown Leghorn and Langshan chicks, the skunk getting into one little house at a hole three feet from the ground where I had supposed a rat could not get in, and in the other the board closing the front of the box by some means became displaced and neither "hide nor hair" of that lot remained, the others lying dead on the floor of their house.

For colder weather and wet, stormy weather so many chicks for one hen would not be found good; she must then have only what she can brood well and must be herself confined in a wet-weather coop and the chicks allowed to go out and in at will, keeping them in until the day is somewhat advanced. You may find it better to have a little run fenced for them so that they may not wander too far from the hen. If the hen is an exceptionally good one that hovers the chicks often and does not drag them about too much, it would be found better to let her run with them. When you can have hens of this kind and keep all free from lice, they are better than brooders, as they are self-regulating as to air and warmth, while the best of brooders are apt to be at times (principally at night) too warm and not rightly ventilated; still I do not by any means condemn brooders or give up the use of them.

Lodi, Cal T. B. GEFFROY

THE VINEYARD.

Hints on Raisin-Making.

J. M. Elmiston gives the National City *Record* (San Diego county) the following interesting paragraphs:

As the time for securing our splendid grape harvest is rapidly approaching, there will be many new beginners anxiously watching the changing color and taste of the fruit and inquiring when it will be ready to pick. As such beginners are always in a hurry to see their fruit turned into the raisin, and are consequently apt to make more haste than is wise, permit me through your paper to suggest that if such persons would secure the best results they must be patient and give the sun and vine time to do their complete work. The Muscat is a grape that ripens slowly, and to the novice it will *appear* to be ripe while there is really but little of it but skin and sweetish water. The saccharine matter of the grape is principally stored after this period, and if the vine has sufficient moisture to keep it growing, the process will continue for weeks.

It is impossible to give any very definite rule for determining the proper time to pick, as conditions vary so much.

Some say let the grape remain on the vine until the first soft period has passed and the grape has become firm and the skin brittle, so that it will crack when bitten in two. But the

only real test is the amount of saccharine matter the grape contains. This should not be less than 20 to 24 per cent. A person of acute taste will soon learn to tell that way, and others will discern by its looks. The beginner will naturally try them all, and if he can it is well for him to obtain the aid of some one who has succeeded in making good raisins, in teaching him to discern the proper condition. If, however, his vines are vigorous and healthy, it is safe to let the fruit remain until all possible doubt is gone, for every day's waiting will add both to the weight and quality of the fruit. Of course the question of drying must be considered, and not wait until there is danger of losing the crop by early rains.

Again if the vine and fruit is perishing for want of moisture it is useless to leave the fruit on the vine. It will in that case dry up without filling out with saccharine matter in either event and only make a poor dried grape at best.

Again, it is no evidence that grapes are ripe because they begin to dry up, or sunburn, as it is called. What is termed sunburn is a *disease* which usually attacks the *stem* of the grape, and the grape simply dries up the same as if it had been severed from the bunch. Or, sometimes it will attack the main stem of the cluster, and all of the cluster beyond that point perishes.

I cannot urge too strongly upon those whose vines are troubled with this disease, or whose fruit is small and immature for want of moisture in the vineyard, the necessity of irrigation as a remedy. I never saw vines well irrigated and cultivated in mid-summer that were seriously troubled that way.

I would urge upon all who fear such trouble in their vineyards the advisability of irrigating, as an experiment, a patch of such vines, even as late if necessary as the 20th or last of July. Wet such a patch thoroughly and carefully note the difference in weight and quality. But after irrigating cultivate the ground, so as to avoid baking and retain the moisture. In making such experiment let the water run in furrows or some similar method for several hours so that the ground is soaked down deep enough that it will remain. It will all come up again where the roots can get it. Such experiments are worse than useless unless *thoroughly* done, as they would convey a wrong impression.

To illustrate what might be considered a light irrigation, the writer last week had 7500 gallons of water put on 81 vines in a square block 9 vines each way. Had I been able to run the water over the vineyard I should have used more than double that amount; but I believe that amount will be sufficient to show a difference in results.

THE DAIRY.

Butter Produce of Jersey Cattle.

The following is an abstract of the English Jersey Cattle Society's butter tests, from their commencement in October, 1886, to May, 1890. It appears in the recent report of the Kempton Park Show:

Since this society made its first experiment in butter-testing at the Agricultural Hall, Islington, in October, 1886, ten tests have been made, at which 133 Jersey cows, varying in age from under 2 to over 12 years, have been put to proof.

The results of these tests have been published from time to time, but it seems desirable to collect them together and to present them in a concise form. For this purpose a table is annexed, in which all the cows are classified according to their age at the date of trial; and in opposite columns are recorded the total number tested in each class, the average number of days since calving, the average yield of milk and of butter, and the average quantity of milk required to produce one pound of butter or butter ratio.

It appears from this table that the development of the butter capacity is very gradual, and it seems probable that even at the end of her fifth year the average Jersey cow has not attained her maximum point of butter production.

The milk yield, which between the age of two and three years, reaches an average of 2½ gallons, or say 25 pounds per day, continues to increase till the fifth or the sixth year, when it stands at rather over 3 gallons, or 30 pounds, per day. At the same time the butter shows a corresponding increase from 1 pound 3 ounces to 1 pound 8 ounces per day. During the whole of these four years it appears that the average richness of the milk varies but little from a standard of two gallons to the pound of butter. The exact figures are as follows:

Between 2 and 3 yrs.,	average butter ratio 20.10 lbs.,		about 3 qts.
" 3 and 4 yrs,	"	"	20 24 lbs. "
" 4 and 5 yrs.,	"	"	19 41 lbs "
" 5 and 6 yrs,	"	"	20.75 lbs. "

At or about the age of six years the Jersey appears to attain her prime. Her milk increases materially in richness and her yield of butter shows a proportionate advance. It seems probable that she maintains this maximum value for some two or three years afterward:

Between 6 and 7 yrs.,	average butter ratio 17.81 lbs.,		about 7 qts.
" 7 and 8 yrs,	"	"	18.01 lbs "
" 8 and 9 yrs.,	"	"	18 64 lbs. "

This view of the prime age of the butter cow derives further confirmation from a comparison of the ages of those cows which succeeded best throughout the series of ten tests. These are as follows:

	Yrs.	Mths.	Dys.
Ave. age of 10 first prize cows	7	3	10
" 10 second-prize cows	6	2	0
" 10 third-prize cows	5	8	2
" 10 reserve number cows	5	5	8

The total number of cows of nine years and upward is too small to afford a basis for judgment, but it is sufficient to warrant the statement that some Jerseys maintain a high dairy value in their tenth year, or even beyond. It should be noted that two of the society's gold medals were won by cows in their eleventh year.

Maximum Yields of Butter.

The following cows gave the most remarkable results in their respective classes:

	lbs.	oz.
2 to 3 years, Mrs. A P. Norris' Stella	1	15
3 to 4 years, Mr. Simpson's Pandora 11th	2	0½
4 to 5 years, Rev. S. H. Williams' Tiny 3d	2	7½
5 to 6 years, Mr. Adams' Meadow Pride	2	0½
6 to 7 years, Mr. Brutton's Baron's Progress	3	5
7 to 8 years, Dr. Watney's Sherry	2	8½
8 to 9 years, Mr. Carter's Coquette	2	4
9 to 10 years, Mr. Baxendale's Bramble	1	14½
10 to 11 years, Mr. Baxendale's Broom	2	4½
11 to 12 years, no entries		
12 to 13 years, Mr. H. C. Smith's Lady Savage	2	0½

JOHN FREDERICK HALL.

Scharcombe, Wells.

HORTICULTURE.

System in Fruit-Drying.

EDITORS PRESS:—In riding through the orchards and stopping at the packing-houses in one of our leading fruit districts, the degree of system to be expected in so prominent an industry was not generally apparent. For instance, one leading grower was drying apricots that would not be ripe in ten days. Of course they were sour and unfit to eat, and drying will not help the matter. Somebody will buy them because they are dried apricots and bleaching has made them look well, but that fellow will not want any more dried apricots.

Another very heavy grower was drying his fruit without grading. Side by side on the same tray were apricots all the way from half an inch to an inch and a half in diameter. The small ones will be dried to a chip before the large ones are dry enough to keep. This man said that the little ones would absorb moisture while they were coming into case and that they would not bring much any way if sold alone, but would go if mixed with the others.

Anybody who has ever bought or sold anything ought to know better than this. Suppose Ames had done that way with his shovels, or Faber with his pencils. Who would be looking for their goods in market? A man who puts up fruit that way is ruining his own prospects and injuring every neighbor in the same line of trade.

Another thing noticeable was that in many cases there seemed to be no headwork done. They hire so many Chinamen and set them picking and another lot and set them cutting. You find them sitting all about curled up in all sorts of shapes, spending more time to reach for the apricot than it takes to cut it. At a few places benches were arranged to have the fruit and trays as handy as possible, under a cool shade where the hands would feel like working.

One place showed marked system. Cutters sat on opposite sides of a long table. Enough apricots to cover the tray when spread were poured upon it. Each cutter began on the side next him, and dropped his pits in a cup or saucer right where he was spreading, and each worked toward the center. They were skilled in cutting, spreading the fruit neatly in the fewest possible motions. It makes quite a difference whether you reach a couple of feet for your fruit and then make six or eight motions in cutting and spreading, or whether you only reach an inch or two and then cut and spread your fruit in three motions. Those who cut and spread 1000 pounds a day or more don't fool away time in false motions. It is even reported that Mr. Spalding once cut and spread 1600 pounds of fruit in one day. We thought that a thoroughly competent foreman could take most of the crews we saw at work and double their output in a week's time by careful arrangement of fixtures and training in doing most with a given amount of labor.

F. S. C

Olive-Growing in the Interior.

EDITORS PRESS:—In a former issue of your excellent paper, you were kind enough to print What I Know About Olives, after an extended experience of *three years;* and about the wonderful growth our trees had made, upon an annual dinner of a wheelbarrow load of barnyard manure, washed down with two draughts of Adam's ale in midsummer.

This time I write for information concerning a few things that I do *not* know. (Please note the rare modesty expressed in the alove paragraph.)

Wishing to graft Manzaniello olives into Picholine stock, we (my partner and I) have made several experiments at different times, from March to June, without success. We have also budded several trees, and this, too, has failed. No one could be more successful in grafting deciduous trees, for our grafts seldom fail to grow, on apple, cherry or plum stock.

I have sought information from every available source, not omitting the high science of the State Horticultural Bulletins, but all in vain.

Will not some of your readers who have been successful in grafting the olive in the hot and dry climate of the Sierra foothills furnish information on this subject to the RURAL PRESS?

Many who have planted the much-abused Redding Picholine wish to graft upon it the Queen olive, thinking that pickles will prove more remunerative than oil.

We have 50 plants or more of the Redding olive; and in our search for information upon grafting, we applied to an official of high rank, in whom all men trust, and he advised us not to be in haste about grafting our Redding Picholines, as he "had no doubt that we would obtain quite as much oil from this variety as from any other."

There are several fine groves in and near Auburn, and if the growers there have grafted or budded successfully, their methods as to time of year and manipulation of grafts or buds would be equally adapted to this climate (Butte county). Please let us hear from you, gentlemen.

I wish to divulge my experience with rooting olive cuttings. I set over a thousand cuttings in boxes, and put the boxes in an open hotbed over stable manure for bottom heat, and succeeded in rooting only 50 plants, and this was much better than most of my neighbors did who tried it. Will not some one rise and explain how we can strike olive cuttings in the open air (if possible to be done) in this execrable climate?

I add a remark, that all may know by these presents beyond a peradventure, that I belong to the fairer, "softer" or "gentler" sex; that my postmaster at Pentz may not chaff me so unmercifully upon the receipt of letters addressed to "Jessima Leigh, Esq." He now calls me "Square Leigh." JESSIMA LEIGH.

Pentz, Butte Co.

[We trust some of the many successful horticulturists of Butte county will write us their experience in answer to the above appeal.—EDS. PRESS]

THE APIARY.

Some More Bee Talk.

EDITORS PRESS:—On a recent visit to my friend C., we spent a couple of hours looking at his apiary.

"Now, Mr. W.," said he, "I wish you would explain to me why the bees tear out the foundation I put in the section-boxes. I am inclined to think that there is some foreign matter—some chemical of some kind used in the manufacture of the foundation that the bees don't like, and as a natural consequence they tear it out."

"Did they tear it all out?" I asked.

"No; several sections are drawn out fine."

"Well, in that case I should say it was caused by not being properly fastened in. What do you use for fastening the foundation in with?"

"I generally use melted beeswax. I believe that is the best, all things considered."

"Yes, it is if you mix a little rosin with it; otherwise, after you heat it a few times, it loses its vitality or grit and becomes crumbly after it is cold. By mixing rosin with it you overcome this to a great degree, and it makes a better wax for fastening foundation. To keep the wax in a fluid state, I use a coal-oil lamp, and by turning the blaze up or down, I regulate the temperature of heat to suit myself. I have the coal-oil lamp in a tall box with one side removed, so that it is easy to set the lamp in and out."

"Then I expect the reason that the foundation was torn out was because it was not properly fastened in, as I noticed that the wax was very crumbly. The foundation was not the best in the world, anyway. I had it come by mail, and when I received it, the edges were so badly bruised up that I had to cut off considerable in order to get a straight edge on it again."

"No, never have foundation come by mail; all that I ever got that way was more or less bruised up. Get eight or ten pounds at one time and have it come by express; that is the best way."

"Well, I intend to after this; no more foundation by mail for me. Now for introducing the queen you brought me. What do you think is the best plan of introducing?"

"The queen you see," I answered, "is in a Peet cage and therefore we will use the Peet method of introducing. What hive are you going to put her in?"

"That blue one yonder," and he pointed in the direction indicated.

"All right; light your smoker and we will proceed to business."

"This colony, you see," he said, as he lit the smoker, "has an old queen, and instead of the colony prospering it is going down hill."

"It don't pay to keep old queens," I observed; "you should supersede the old queens at once, when you see a colony beginning to decline. It is not much of a trick to take the old queen out and have a new one laying in a few weeks. Now for finding the old queen in the hive: you give them a little smoke, as I tell you, and I will handle the frame. Here is your queen," I exclaimed, as I handed her to him a few moments later; "she is a very poor queen—has only two frames of brood and at this season of the year she should have at least eight or ten. Now hand me the queen cage with the queen in. You see here is a very smooth piece of comb with a few cells containing honey; it is always best to fasten the cage over some honey. Now you see the cage is held in place by these two strips of tin, and it is no trick at all to fasten the cage or remove it from the comb. To-morrow morning, you must examine this colony and see if they have liberated the queen; if they have not, remove the cage and keep a careful watch of the queen. If they form a half circle around her and appear to be feeding and caressing her, it is all right, but if they attack her by biting or otherwise, you should cage her for at least 24 hours and then liberate her again. I don't think you will have any trouble introducing this queen, as the bees are rapidly gathering honey and are naturally good-tempered at this season of the year."

"Mr. W——, in your apiaries how do you do when two or more swarms go together—how do you prevent them?"

"I don't prevent them. I wait until they are settled, then I shake them on a sheet until I find the queens, and then divide the bees up into as many swarms as I have queens; I shake each swarm of bees in front of an empty hive, and let a queen run in with them. Of course you must have your queen-cages handy, so as fast as you catch the queens, cage them. Sometimes, though, it is very difficult work finding queens when there are so many bees; and if not running for increase, I should hive them as they were, without finding the queens—that is, providing not too many swarms went together. It is a good idea in swarming-time to have a long pole with a queen-cage attached to the end of it, said cage containing a fertile queen, and when the bees start to settle, hold this pole among them, and in nine cases out of ten they will settle on the pole. An old sack should be wrapped around the end of the pole in order to give the bees a good footing. It is a strange fact that bees will settle a good deal quicker where there is a fertile queen than where there is a virgin."

"That is strange, surely. What is the reason of that, do you suppose?"

"It is hard to tell. You know fertilized queens always have a marked respect and attention shown them, while as virgins the bees have very little honor or regard for them."

"Yes, that is so. I have noticed that myself," said Mr. C. "You ought to ask some of those bee scientists that question: Why does a fertile queen attract bees when swarming quicker than a virgin queen?"

"I believe it would be a good question," I answered, "and I guess I will ask them."

Grizzly Flat, Cal. S. L. WATKINS.

That Transaction in Bees Explained.

EDITORS PRESS:—I wish all bee-keepers and the public at large to know that I am the person alluded to in the letter headed a "Transaction in Bees" in the RURAL PRESS of July 26th. Yes, I am the culprit, the swindler, the thief, or whatever name you may please to brand me with.

First of all, allow me to say that the bees were sent to the gentleman in question nearly a month ago (now July 30th).

Next, I do not for a moment question that queens can be raised and fertilized by Feb. 1st and had ready to send out by April 1st, but let me advise any one who wants a good queen not to purchase any that are reared so early in the season by artificial methods.

It is now a well-known fact that the best, the most prolific and the longest-lived queens are those raised in the hight of the swarming season by the natural method (all my tested queens are raised by this method), and perhaps our Grizzly Flats apiarist will be surprised to hear that I had three swarms come off only a week ago, nearly three weeks after the gentleman in question received his bees and "long after all swarming has ceased." According to Mr. Watkins' assertion, San Mateo bees are either not so hot-headed or early as the Grizzly Flats bees—in fact I think they are something like myself, rather slow. I still contend that any apiarist who raises queens by the natural method cannot guarantee the purity of their progeny before May or June, and taking into consideration the fact that there were numerous orders on file previous to that of the gentleman in question, I cannot see that I have sinned so egregiously after all, but I wish to say that after this date I shall inform all customers of the earliest date when they may expect to receive any bees ordered, and if they are not satisfied they can have their money back immediately. WM STYAN.

San Mateo, Cal., July 30 1890.

AMERICAN SCISSORS IN SHEFFIELD.—A trade which at one time was regarded as one of the dying industries is again reviving rapidly—that in scissors. German competition, says the London *Engineer*, has been excessively keen in scissors for domestic use, particularly those in the cheaper qualities. The Americans beat both English and German of the tailors' scissors, which are perhaps the most important branch. American-made tailors' scissors are preferred even in Sheffield.

Patrons of Husbandry.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

Look Out for a Good Legislature.

The Patrons, in common with other good citizens of California, desire that our system of balloting shall be reformed. We can conceive of no one Act of the coming Legislature that can be of greater or more lasting good to the commonwealth. Remember how you were euchered out of the passage of such a bill by the influence of the "Boss" two years ago, and work regardless of party lines for the election of good members.

We want an Enabling Act for the establishment of Farmers' Co Operative Insurance Associations. Remember that there has heretofore been an immense amount of money and a tremendous pressure brought to bear upon the Legislature, to prevent such an enactment. Nominate and vote with an eye toward electing the best of all men to accomplish the measure needed.

We want men chosen who will pass a law for the re-assessment of railroad taxes, that the just dues of this State may be collected from the railroads which tax the people so heavily. Remember that the sum of the unpaid taxes of the railroads for school and other purposes has to be made up by farmers and others who do pay their annual taxes. The sum approximates millions in this State alone.

These are only a few of the reasons why voters of this State should stand no further nonsense in the nomination and election of the men to represent them in the next Legislature.

State Grange Items.

Worthy Master H. E. Hayes of Oregon will be in attendance at Watsonville. The presence of other able visitors is anticipated.

Sister Roache and the Literary Committee will, no doubt, have a splendid program.

Watsonville has the largest beet-sugar factory on this side of the continent.

Watsonville lies between two of our celebrated watering-places—Santa Cruz and Monterey.

Regular fare from Watsonville to Monterey, 90 cents; to Santa Cruz, 60 cents. Sunday excursion rates from Watsonville to either Monterey or Santa Cruz, 50 cents each way. Distance from Watsonville to Monterey, 26 miles; to Santa Cruz, 20 miles.

There are four passenger trains a day from San Francisco to Watsonville, leaving San Francisco at 7:50 and 8:30 A. M. and 2:30 and 3:30 P. M. Distance, 101 miles. Running time, three and a half hours. Returning, arrive at San Francisco at 10 A. M., 11:15 A. M., 6:30 P. M.

There are nine Granges in Monterey and San Luis Obispo counties. We hope every one will have a large delegation at the State Grange.

Would it not be a good idea to appoint a committee in each subordinate Grange on State Grange meetings, to make all arrangements of advantage possible for the occasion?

By resolution of the session of 1888, all officers of the State Grange are required to send their annual reports to the Secretary for printing by Sept. 1st.

We wish to hear of the health and prosperity of our recent distinguished visitors to the National Grange. Send us friendly criticisms and good hints for our annual session, National brothers and sisters.

Pescadero Grange.

Editors Press:—Pescadero Grange met on the 21 inst. to confer the third and fourth degrees on a class of seven and to enjoy the usual Harvest Feast, but postponed conferring of degrees on account of sickness.

The feast and a pleasant social time was enjoyed by all who were able to be present.

I. C. Steele.

Capital is grasping and labor exacting, but we are glad to observe that each is learning the importance of mutual concessions and union, and to respect the power of the other. They both now see that capital cannot prey upon labor, nor labor demand of capital more than the value of its product without mutual injury. Between these two there should be no discord, for the one can accomplish but little without the other, and a want of harmony is certain to bring loss to both.—*Farmer's Friend.*

The Master's Desk.

E. W. Davis, W. M. S. G. of California.

If any Patron has anything in the line of Grange work for the next session of the State Grange, now is the time to send it to the Chairman of the committee. If it is a resolution, send it to S. T. Coulter, Santa Rosa. If it is an amendment, send to I. C. Steele, Pescadero. If it is for the Good of the Order, send to W. L. Overhiser, Stockton. If it is on the subject of co-operation, send to Wm. Johnston, Courtland. If it refers to legislation, send to Geo. Ohleyer, Yuba City. If it be literary or musical, send to Sister A. P. Roache at Watsonville. If on the subject of finance, send to D Flint, Sacramento. If it is of such a nature that you are in doubt what to do, send it to W. J. Hill, Salinas. If, after this disposition, there is yet one who has something that ought to come before the State Grange, send it to the Executive Committee, care of A. T. Dewey, Secretary, 220 Market street, San Francisco. There is much to do. Let us then be at it at once.

That must have been a grand Grange meeting held at Chautauqua last Friday. Just think of three such eloquent, learned and zealous Patrons as Gov. C. G. Luce of Michigan, Gerard C. Brown, "the eloquent," of N. Y. State Grange, and Hon. Mortimer Whitehead, the Worthy and magnetic Lecturer of the National Grange, all to speak from the same platform on the same day. It is an event that will not soon be duplicated. What a treat! Who can listen to such men in such a cause, and not be moved to thought, aye, to tearful thought? How I wish we of California might have such a literary feast. It was an oratorical, mental, and fraternal banquet.

The Grange undertakes to defend and uplift the weak, and to repress and punish the evildoer.

It has been claimed by a very earnest friend of the working classes that there are 2,000,000 men out of employment in the United States. This is a sorry condition of affairs. Would it not be well for laborer and capitalist to consult together, and then let capital put labor to work? There are many acres of land to be cleared, cultivated and made into homes; there are many public improvements much needed; there are streams to dredge; mines to develop and work; highways to be built, and a thousand and one ways of labor helping capital and of capital assisting labor. Let common sense and confidence assume control, and let greed and want stand aside! There is enough for all. A common understanding would redound to the benefit of each class; and don't you know these 2,000,000 men would do a great amount of productive work every day in the year?

The *best* one can do, at the time, is the thing *to* do.

Now is the time to begin to prepare for the State Grange. Calculate you are going; then go. Calculate that when you are there you will do something for the Good of the Order; then do it.

Lake county has again fallen into Grange line. When will Napa county be ready?

Remember the Constitution of the State Grange can be amended only after a month's notice to the several subordinate Granges, and then only at a regular meeting of the State Grange and by a two-thirds vote.

The By-Laws may be amended at any regular meeting of the State Grange by a vote of two-thirds of the members present.

Thanks to Bro. W. M. Hilleary, Sec'y of Oregon State Grange, for a copy of proceedings of the 17th annual session of the Oregon State Grange. It is evident that our brothers and sisters in the North have a full and just conception of the purposes and principles of the Grange. Brother Hayes' annual address deserves to be read by all.

If the farmers would take half as much interest in building up and organizing Granges as they should, they would have less taxes to pay and would enjoy better Government for less money. The Grange is an adjuster.

Teach your children, while they are yet on the farm, to be studious, to be self-reliant, to be independent (not saucy), to feel that they have a niche in the world to fill, and resolve that they are going to find that niche and fill it. Let them suggest plans. Correct them if the plans are faulty and praise them if they are praiseworthy. Help them to climb—anybody can fall. To succeed is work—hard work.

Stand by your *true friends! Be* a true friend, and you will *have* true friends.

The "old oaken bucket, the moss-covered bucket," has been to you a friend and solace many a time. So the old gray-haired friend has befriended you times numberless. Don't forget your other-day associates, provided they were good ones.

Never laugh at another's misfortune, for it is a long road that has no turning.

The Wanderers Return from the North.

Editors Press:—The morning of the 13th inst. found us once more in the dear old home, after an absence of nearly two months in Oregon.

The first week of our visit was delightfully spent with Bro. J. B. Stump's family in Salem, where we were royally entertained. We attended the State Grange, then in session, and listened to the eloquence of many of the brothers and some of the sisters, who delivered sage and seasonable remarks.

Salem, the capital of Oregon, is a beautiful town of 10,000 inhabitants, located in the Willamette valley. The land on the Willamette river is rich and productive, with a pleasant climate.

From Salem we proceeded to Portland, a fine, growing city of 60,000 inhabitants; thence to Eastern Oregon, passing some very grand scenery on the Columbia river. The mountains and palisades here compare favorably with some of the scenery in Yosemite valley.

The Multnomah Falls are wonderful indeed, being 800 feet in hight. The scenery all along the Columbia is grand and varied, the evergreen forests presenting a pleasing and attractive appearance.

There is little farming country seen from the railroad between Western and Eastern Oregon until we reach Pendleton and the Umatilla Indian Reservation. Here is a fine country for wheat-raising, and much is shipped hence annually. Pendleton is a thriving town of 3000 inhabitants. A portion of the reservation is soon to be sold to settlers who will live on it.

From here we pass on for 90 miles through finely timbered country and reach the beautiful Grande Ronde valley in Union county—a fine, rich district, producing large quantities of wheat, barley and other grains.

This valley is 30 miles long by 15 wide, surrounded by a range of blue mountains, comprising several pretty growing towns. La Grande, the largest, is centrally located and has a population of nearly 3000, four churches, good schoolhouses, several stores and hotels, an elevator 120 feet in hight, several railroad buildings and many handsome residences, altogether showing the intelligence and enterprise of the people. There was a flourishing Grange here a few years ago, but for some reason unknown to the writer it is now dormant.

We spent five weeks in La Grande with a friend from whose home we could overlook much of this fine region, and enjoyed several delightful drives around the valley and through the lovely grain-fields. At times the scenery was so charming that we felt we were nearing Paradise; and well we might, for about 20 miles distant is a place called New Jerusalem. The towns of Union and Summerville are at the extreme ends of the valley. Island City is two miles from La Grande, and in the near future will form a part of that place.

July 10th saw us on board the cars again for California. It was with some reluctance that we bade adieu to our new-made friends in La Grande, but stronger ties brought us to the Golden State. The route is a pleasant one and full of varying interest. As we come into the Siskiyou mountains, we are filled with wonder at the grandeur and wildness of the scenery. Mt. Shasta is indeed sublime, with its lofty summit towering heavenward to the hight of over 14 000 feet. We are winding around the mountains in sight of old Shasta for nearly half a day. There is a vast amount of snow on this mountain throughout the year, especially during the winter season. There are many pretty growing towns in Northern California and along the Sacramento river beside which lies our course for many miles. We have traveled almost the entire length of the State and have yet to find a pleasanter or sunnier valley than the Sacramento. L. C. M.

Elk Grove, Cal, July 28, 1890.

Farmers' Reflections.

Reports of a recent discussion of the agricultural situation by several Illinois farmers of evident intelligence show varying views, all interesting, and some obviously useful. Following are expressions as to the rural cloud—with silver lining:

"The profits of farming date back so far from these jobbery, robbery days of syndicate monopolies that it is only a mockery to talk about farmers' profits....At present prices of produce the farmer who supports his family and keeps his farm up square needs all of the combined pluck of a score of live Yankees.... Under present conditions it is safest for the farmer to cut down crops to the home capacity of tillage and avoid the extra bill of hired help. ....Farms at present yield no interest on the money invested, but a man with a crop in the field or barn is at least fairly sure of food and raiment, and that is no small count in the sum of human happiness....Those who have never tried it don't know the comfort there is in watching thrifty crops grow, or in the daily management of a sleek and healthy herd of farm animals. It is nature's own work and best tends to a contented mind."

The suggestions offered for self-help and possible betterment indicate thoughtful consideration of available means worthy of trial in times hard or easy, and include these, in favor of intelligent voting and shorter hours:

"Farming should have less of the rugged routine of back-racking day's work in it, and more of politics, until no man can go to Congress who takes more stock in millionaires and monopolies than in guarding the rights of the common people....No reform has more pressing need of a big boom than the highly moral one that will shorten the day's labor of the overworked farmer....Early and late, every-day devotion to hard work cripples many a man before he is thirty years old, and it doesn't begin to pay, even if it counts up in acres and dollars.... Overwork leads to careless work and the slipshod habit soon grows and leaves its ugly mark all over the farm....One cannot see or say that longer hours yield any more money in the long run of the year....A small farm well tilled gives more profit and pleasure than a large one lacking help to keep it in good shape."—*N. Y. Tribune.*

From Yuba City Grange

Editors Press:—It is very gratifying to note the forward movement all along the line to realize the benefits to be derived from the organization of the Order of Patrons of Husbandry. It must be a holy and glorious cause that elicits such wisdom and patriotism weekly from the Master's Desk of the State Grange! How much more pleasant and profitable would be the lot of the isolated farmer and his family were the Master's teachings heeded and carried out!

There is, to my mind, a growing disposition on the part of agriculturists to trust each other and to make common cause in the furtherance of their interests. I cannot indorse the oft-repeated assertion that the farmers of our land, alone, of all professions and callings, are incapable of coming together for mutual protection and advancement. The assertion is a severe reflection on the most important and ancient industry of civilized life. The farmer is merely the caged lion that knows not his strength, else the cage would be demolished in a twinkle.

I notice that the "Central South" is becoming aroused over the approaching meeting of the State Grange at Watsonville. No doubt the annual convocation of Patrons of Husbandry will be very large and a grand success, the locality being among the most popular seaside resorts, to which the entire State contributes liberally of means and members. And then, who so indifferent as to withstand the eloquent appeal and cordial invitation of Sister E. Z. Roache, W. M. of Watsonville Grange? Of course everybody will go that can, if they have to wear last year's clothes in consequence of a six-month drizzle-drazzle—as I heard the last rainy season described.

Crop Notes.

But if the wheat-farmers have short crops and light purses, it is not the lot of the fruit-grower, for his purse and bank account have swelled to unusual proportions. The crop in these parts is a fair average—not what it would have been with an ordinary amount of moisture; but with the increased acreage in bearing, the grand total will be above that of last year, both in quantity and quality, and the market, too, is all that could be desired, of canned and dried as well as fresh fruits. Every one is glad of this good fortune, whether he is a fruit-grower or not, since it opens to the world the intrinsic value of our glorious climate and matchless productions.

Yuba City Grange

Is still marching on, has not missed a meeting during the current year and has at every meeting labored to advance new candidates in the several degrees.

A month ago the members promised themselves an ice-cream treat for recent triumphs and to convince the new applicants that the Grangers are not such horrid creatures after all—to take effect on Saturday last, their regular August meeting.

The affair was a grand success in every particular, including one of the best-rendered literary programs ever given by the Grange. It consisted of vocal and instrumental music, recitations, select reading, and one of the most mirth provoking dialogues imaginable. The characters were two young ladies and two gentlemen; and the plot, to encourage a bashful lover with a big little brother in the background. It was very funny and the absent missed a rare treat.

A Suggestion.

By the way, friend Grangers, such things occasionally will fill your halls and will repay for the time consumed in study and in listening to their recital. I suggest that something of this kind be recited at the next State Grange, and the selection be based on the portrayal of the beauties and independence of farm life.

The next regular meeting coming on the last day of the Marysville District Fair, the Grange decided to meet a week earlier, i. e., the last Saturday in August, at 10 o'clock A. M., to confer the third and fourth degrees with a Harvest Feast and the customary literary exercises.

Yuba City, August 4th, 1890. Eureka.

From No. 1.—Sister Rogers, wife of C. S. Rogers, W. M. of Pilot Hill Grange, No. 1—the first organized on this coast—called in and paid a year's subscription for our Grange edition. She reports that Bro. Bayler, who instituted the Grange and was long its Master, is now keeping a large pleasure resort at Lake

Tahoe. A number of the members of Pilot Hill spend their summers in the mountains with their stock and are now absent from their homes.

The Paso Robles Picnic.

Both the *Moon* and the San Miguel *Courier* contain reports of the basket picnic held Saturday, July 26th, at the Southern Coast Range Experiment Station, under the auspices of Paso Robles Grange. More than 200 substantial farmers attended with their wives and daughters, and the occasion proved interesting and enjoyable.

Bro. R. D. Cruickshank, who is in charge of the Station, had everything in good order and busied himself all day in ministering to the comfort and pleasure of the visitors. In one of the rooms he had neatly arranged over 90 fine specimens of grain, comprising wheat, barley, oats and rye, that were grown on the grounds this season. This collection is to be sent to the State Fair, and a duplicate sent to the District Fair at San Luis.

Appropriate addresses were made by Worthy Masters J. V. Webster of Creston—who, it will be remembered, donated the 20 acres for this Station and assisted in raising money for the buildings—and Rufus Fisk of San Miguel, and vocal music added to the pleasures of the meeting.

The Experiment Station.

The benefits derived from the work at this Station are hardly yet realized by the people of the district. Its purpose is to experiment with and ascertain the adaptability of various kinds of fruits, cereals, grasses and plants to the soil and climate. Here the result of experimental work may be carefully observed by the farmers without incurring any expense—and every practical farmer knows something of the cost of individual experiments. Though the Station only comprises 20 acres, yet there are four different varieties of soil represented—the red hill soil, heavy adobe, light-colored sandy soil, and what is termed "hog-wallow." This may be considered a fair representation of the greater portion of the Upper Salinas valley.

A note from Bro. Cruickshank says: "When those who did not come heard what a fine time we had they were much annoyed at not having been there. Worthy Master Lindner kindly lent me the wood he had intended to build a house with and let it be cut up for trestles and shading for the people, so you may guess that neither his interest in the cause nor mine has flagged. We intended to see the thing right through."

Tulare Grange Department.

Notes and Extracts from the "Register."

Of late years the only perceptible difference between the "grand old parties" has been the difference between tweedle-dum and tweedle-dee, *i. e.*, a small percentage in tariff duty, and a vague historical or traditional illusion, which manages somehow to preserve a solid South and a united North. In the differences, however, the interest of the farmer plays a very small part indeed. Let farmers of all parties, kickers included, pledge themselves that they will be represented only by one of their own class—a farmer. That while lawyers, clergymen and other professionals, including colonels and generals, may all be excellent men, very learned and very eloquent, they cannot feel a farmer's feeling, nor take the lively interest in agricultural needs and demands that the enlightened farmer can. Nominate farmers; work for farmers; vote for them and elect them. We can do it. Then the g. o. p's will respect us and give us a seat at the table. The farmer need not even then be thankful. He is strong enough in a united effort to reach out his brawny arms and seize these antiquated g. o. p's by the neck, one in each hand, and play Yankee Doodle with their heads.

J. S. Barbee writes us from Armona that he is State Organizer for the Farmer's Alliance, and is desirous that we act as Deputy Organizer for the county. It is pleasing to be well thought of, and our vanity might yield to the request if we did not know that even standing room does not exist for further reforms desiring active service. We wish the Alliance well and hope that it will be a faithful coadjutor with the Grange in uniting the farmers. We must "get there," no matter the road on which the traveling is done.

The late "Kickers' Konvention" at Visalia did not emanate from the Grange, but as it promised co-operation among the dissatisfied, received its hearty sympathy. In the committee appointed to draft a platform of principles the Grange was not represented, though four of the committee were members of Tulare Grange. This is the manner of the politics of the P. of H.—nowhere visible, but everywhere felt. But the Patron is a visible unit, whether in his own special political party or out of it.

We met Bro. E. B. Taft in Visalia. He represents the RURAL PRESS and should receive a hearty greeting and welcome from every Patron. We are sorry that other duties prevented us from meeting him in the Grange. We found him to be a well-informed, level-headed brother, in short a representative Patron of Husbandry.

Accepting Responsibilities.

[Written for the RURAL PRESS by J. C. MOORE.]

We have often had occasion to notice with disapproval the desire so common among men—and not altogether unknown to women, also—for high and prominent positions in political, commercial, literary or social life, and unworthy and undignified efforts to obtain them.

From the longing of the schoolboy for pre-eminence in his baseball club to the secret craving for the Presidential chair, this spirit is rife among us, and to it we may trace much of the inefficiency of execution, the perversion of means, the unfaithfulness to trusts, and the general corruption which inflicts such grievous stains upon our organizations, and frustrates so much of their power for good.

There is, however, an opposite extreme into which another very different class of people is in danger of falling, and which, while winning a kind of sympathy from its utter antipathy to all trickiness and wire-pulling, is yet to be regarded a deplorable public calamity. We allude to the unwillingness of good and capable men and women to assume positions of trust and importance to which they may be appointed. It may be thought that this is so rare a defect, and forms so refreshing a contrast to the eager feverishness of office-hunting, that it needs but little reprobation. Yet this is not the case.

It is surely quite as important that all places of trust be filled with suitable officers as that the unsuitable ones be excluded. Indeed, it is only by the former coming to pass that the latter is made possible. So, whenever the right man declines, from any cause, to fill the place for which his talents, or education, or native qualities peculiarly fit him, he inevitably assists in putting the wrong man in.

Probably but few persons realize that this is so. To decline an honor seems so natural a thing to a modest person, so merely negative a course, so utterly innocent of any ill intention, that it cannot involve any responsibility, or be cause of any injurious effect. Yet when we reflect that for one person well-fitted for an honorable position, there are probably a hundred eager aspirants who are not at all qualified to discharge its duties, we shall see that the retirement of that one is the decisive act which throws the work, almost certainly, into incompetent hands. True, the lack of competence is the usual plea made by those who shrink from assuming responsibility; but unfortunately it is usually the best qualified who feel this lack, while the careless and unthinking, eager only for the emoluments or the *eclat* of the work they sue for, are loud in proclaiming their general abilities and special fitness. Such modesty, then, however pleasing to look upon, should give way before the judgment of others, and learn to distrust its own convictions, rather than suffer them to imperil a good cause.

Many other reasons, also, are urged for refusing positions of trust, want of leisure, pressing duties, the thanklessness of office, its publicity, the criticisms passed upon officials, and oftentimes their unmerited censure.

It is true that such objections are often based on facts. Valuable public work by no means receives all the honor and gratitude that it deserves. Self-sacrifice is sometimes rewarded with obloquy and earnest effort with indifference or scorn. But what then? Is there not another side to be considered? Is not all this effort, self-denial, and even suffering for the good of the community, a means of paying a large debt which is due to society? Ancient civilization taught the strong to use the weak, and the wise to use the foolish as stepping-stones to further power and wisdom and glory for themselves, but the civilization which is born of love and charity teaches that strength, wisdom and talents, and education, money, and leisure, and every other privilege should be freely offered as stepping-stones on which those less favored may climb to hights which would otherwise be wholly inaccessible. All or any of these advantages are so many obligations to use them for the general good. *Noblesse oblige* is as true as it ever was in feudal times, and bears even a higher application.

If each one who possesses any good thing is bound to see for himself that it is doing its reasonable work for the world, then surely when his fellow-men, conscious of their need of it, combine to ask him to use it for their benefit, he should have weighty reasons indeed to justify him in declining. It is no longer the honor done *him* that should be uppermost in his mind, but the service that is due to *them*. The first he might resign, but the latter he dare not if he would be faithful to his trust. There are some with health, talents, culture, taste, judgment and wisdom who in most things seem to have a loyal and generous nature, who shrink from no reasonable demands on their purse, who express sympathy with every worthy enterprise, and who yet decline the very means of doing the highest good in their power by refusing to fill positions of public responsibility. They wish well to schools, churches, hospitals, libraries, city and county governments, State interests; they have their own opinions, and sound ones, on the state of the country and the various questions of the day; they weigh political parties and their respective merits and duties; they hope to see good and true men in high office, and selfish and mean ones removed; and yet when they themselves are urged to take an active part in these things, to put *their* powers out at interest in the service of their city or county, their State or their country, to accept responsible positions for which they are eminently fitted, they shrink back into retirement and plead inability! Does this seem altogether loyal and true? Does not the whole future of our country depend largely upon the character and ability of those who are to lead its enterprises, and if those who are its natural leaders sit down supinely to watch the progress of events, instead of bravely rising to guide and direct them, can they avoid the responsibility of having left it to drift into the hands of incompetence, recklessness and selfishness?

Let all who are disposed thus to bury their talents, their opportunities and their energies in the retirement of private life, against the advice of the good and wise, reflect on the consequence of such a step. Let them remember that it is no more empty honor, but a serious call to duties and responsibilities from which they have no right to shrink; an opportunity to pay a debt which grows naturally out of every endowment of nature and every advantage of circumstance, and which is as much a debt of honor as any that money can discharge, and one which they should equally scorn to repudiate.

If any such persons, loving truth and purity, and seeing so much of the muddy waters of deceit, selfishness and corruption in the social or political arenas to which they are called, fear to plunge in and debase their instincts, let them remember that, as the lily loses her whiteness and beauty when detached from her native soil, so purity and truth lose their life and significance when taken from the soil of active and earnest effort. Only in shedding their luster upon others can they retain it in themselves; only by vitalizing the world can they retain their own vitality.

Those love truth best who to themselves are true,
And what they dare to dream of, dare to do.

Otay, Cal., July 29, 1890.

From General Deputy Steele.

A. T. Dewey, Secretary State Grange:—I have offered my services to every Grange in the sixth district as Deputy Lecturer, and held myself in readiness to respond to every call. I have visited San Jose and Salinas Granges, and labored to the best of my ability in Pescadero. I expect to visit Hollister on the 9th of August, and hope to get a meeting of Santa Cruz Grange, and organize a Grange at Bonny Doon in time for the State Grange. Have written to the Master and Secretary of Gilroy Grange, but received no reply.

I am ready and willing to respond to every call and to do the best I can for the Order.

Farmers have been very busy for the last two or three months. I trust there will now be opportunity for Grange work. Many farmers and their families are occupied with their own affairs and know little and care less about the efforts being made to better their condition. Those who take and read the RURAL PRESS are better informed on the subject, but even then it requires considerable effort to get them to join the Grange and take hold with a will in the accomplishment of its purposes.

It is frequently said: "Farmers will not pull together." The fact that many Patrons of Husbandry do pull together most unselfishly for the general good is a sure prophecy of what may be. To those who have labored and waited long for the triumph of Grange principles, I wish to say: Progress is the *law;* never falter in well-doing. The evils we complain of will surely yield to better counsel.

Pescadero, July 29, 1890. I. C. STEELE.

Thanks to Bro. Past Master Steele for his information and good work for the benefit of all. We hope to hear soon, often and favorably from all officers and deputies.

Anti-Debris Conference.

The following circular has been issued by H. C. Ross, chairman of the Board of Supervisors of Sacramento county:

You are hereby respectfully, but earnestly, requested to attend a conference of the Boards of Supervisors of Sacramento, Yolo, Colusa, Yuba and Sutter on Friday, Aug. 8, 1890, at 11 o'clock A. M., at the Court House in the city of Sacramento.

The object of this convention is to take into consideration the present status of the hydraulic mining question, and how best to secure the enforcement of injunctions against illicit mining.

Open Meeting at Hollister.

On Saturday, Aug. 9th, I. C. Steele of Pescadero, Past Master of California State Grange, will be here. Grange will open at 10 o'clock A. M., for the purpose of conferring the third and fourth degrees and for other business.

Harvest Feast in the hall at noon, and at 2 o'clock will be held an open meeting to which all are invited, farmers especially.

Bro. Steele is working under orders of State Grange as visiting Deputy of the Sixth District. He is an excellent speaker, and no farmer can afford to miss hearing what he will have to say. A. DUNLAP, Sec'y.

Watsonville Active.

EDITORS PRESS:—"War and rumors of war" continue to jar unpleasantly on peaceful ears. The political caldron has already begun to sputter and boil. Grain-farmers are heard bewailing their ill luck, while fruit-growers (except those who contracted their crop too cheaply) are rejoicing. So the old whirligig called the Present reveals itself in varying phases, showing to some its crying side, to others its laughing side, to yet others its sober side, its alarming side, or even its wicked side, while all the sides correspond exactly to the range of the mental telescope through which they are viewed.

In conformity to these facts, Watsonville Grange has been scanning the department of mind with the improved telescope of progression, and has made the important and pleasing discovery that she has located the largest number of stars of the first magnitude in her Grange firmament of any subordinate Grange in America. Her new class is super-excellent, and her motto "Excelsior," while whispers of "well done," "superb," "incomparable," are wafted hither on the wings of the wind.

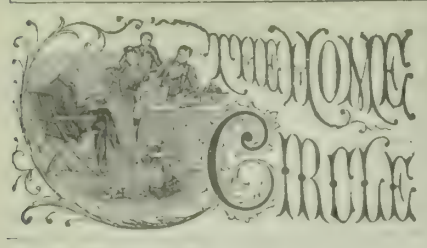
Figuratively speaking, this Grange has leaped from childhood to maturity at a single bound, and has so outgrown its hall that members jog elbows, as "do recruits when flinching."

Another special meeting has been called for this Saturday at 2 o'clock, to receive yet another lot of applications; also for degree work and drill of officers, choir practice and other business.

The third and fourth degrees will be conferred Aug. 16th, while a grand harvest feast, followed by an open meeting, is to be held at the Opera house Aug. 23d. On this latter occasion, E. W. Davis, the silver-tongued Master of the State Grange, and other State Grange officers, are expected to be present and address our farmers. A select program will be rendered and a general good time is anticipated. All farmers and their families are especially invited to the open meeting, as are all others who can see good in their fellow-man, who would learn something of the Grange and what it is, and all who are interested in the reform of abuses which engender discord and entail hardship on the teeming millions whose strong arms of labor support the proudest and best nation terrestrials have ever known.

A. P. R.

FARMERS' INSTITUTES.—In his report as Secretary of Agriculture, just issued, Hon. J. M. Rusk says: It is a matter of no little gratification to me that this great work has nowhere been more fully tried than in my own State, where it was my privilege and pleasure to encourage it in every legitimate way, and nowhere has it reaped a more abundant harvest than in Wisconsin. Experience there and in other States has fully demonstrated the extraordinary benefits arising from these institutes, and I am strongly of the opinion that, without going into details as to the precise way in which aid to the movement should be furnished, the National Government, in pursuance of the policy so strongly marked out by the establishment of the agricultural colleges and experiment stations, should put it in the power of the Department of Agriculture to foster and encourage the work of the institutes in the various States and Territories. The institutes have been justly designated the farmers' colleges. No truer title was ever conferred. I will only add that the strongest lever to raise and uphold the work of superior agricultural education represented by our system of agricultural colleges and experiment stations is to be found in this institute and kindred work.



THAT'S SO!—One of our good Matrons writes brightly as follows: Bro. E. W. Davis, W. M. S. G., made a mistake when he proposed writing less for the RURAL PRESS if others would write more. I am sure none would like to write under those conditions. If he had said he would increase *his* correspondence if other Grangers would write too, then many would have been induced to write, for we all much enjoy Bro. Davis' articles in the RURAL PRESS.

POTTER VALLEY.—Bro. Wm. Eddie, W. M. of Potter Valley Grange, writes us that they would like to have Bro. Coulter visit them about the 1st of September, when harvesting will be over, and think they can get up a good meeting. Bro. E. reports a fair hay crop—all housed—wheat and barley light, corn looking well.

BRO. T. T. HOOPER, with whom all old Patrons sympathize in his paralytic affliction, has left Bartlett Springs, where he has been staying for a season. We are sorry to report to his old friends that Bro. Hooper has been growing weaker the past year. He looks forward with faith and hope to attending the State Grange at Watsonville.

AT HAYWARDS.—Worthy Master E. W. Davis, in a letter of the 4th, states that he will attend Eden Grange Aug. 9th, on the occasion of an ice-cream festival tendered by the Grange to Bro. and Sister Amos Adams.

WATSONVILLE GRANGE, Bro. Roache writes, had a splendid special meeting on the 26th of July, received seven more names and indorsed as a whole the Creston resolutions.

Almost Out of the Woods.

[Written for the Rural Press by Lura.]

PART I.

"We are almost out of the woods," she said,
As they softly smoothed her silvery hair;
"Yes, the path is narrow, but go straight on
Till you see the light—we will soon be there."
On the wrinkled cheeks and the trembling lips
Lay the heated curse of the city air,
But her spirit strayed in the darkening woods
As she whispered still: "We will soon be there.

"'Tis a long, long time since we started, dear;
I will take your basket, 'tis big for you.
Now you run ahead till you find the rest.
No, the path is narrow just here for two.
Never fear for me, for I long since learned
All the steps to take and the work to do.
Keep your strength, dear child, till a time of need,
There's the light ahead, so we're almost through."

As her eyes unclosed with a puzzled look,
And her groping hands lay at rest at last,
She was murmuring still of the narrow path
And the gloomy wood that was almost past,
Till the setting sun kissed the patient face.
"We have found the light! Oh, I knew we should!
But do you go first; there is time for me."
She had dropped her load, she was through the wood.

PART II.

Afterthoughts.

Yes, afterthoughts that will not down!
She bore the cross to wear the crown,
Or so you say, and yet I pause
To weigh the justice of your cause.
Why must a good be bought by pain,
And earthly loss bring heavenly gain?

It seems to me her course on earth
But proved—did not create—her worth;
Yet not *all* worth, for if she shone
By depth of contrast, that alone
Is certain sign of something wrong—
Of great and small, of weak and strong,
Of struggling powers of good and ill,
Of birthright, vice and weakened will,
That cannot conquer when it would,
Of souls *kept* selfish by the good,
And all unequal things that try
Our faith in God with "whence" and "why."

She was a type from out that past
Which wrought the present, bowing low
To forms established long ago,
Till in some fierce, resentful hour,
A daring soul gained birth and power,
Leaped from the brain to eye and thrilled
The wondering world with plans fulfilled
Of crushing vengeance, war's hot thirst
That changes first for last and last for first;
And so the mighty force which saves
But raised up tyrants and their slaves.

But why repeat? You only sigh
As if descending from on high,
And with a faint, indulgent smile
Answer: "Beware of Reason's guile!
I cannot tell. I only know
That she was *good*, she *loved us so*."

A Strike for Eight Hours.

[Written for the Rural Press by Clara Spalding Brown.]

"The carpenters struck for eight hours to-night, Martha. There'll be no more work done till the builders come to our terms."

Mrs. Dayton looked across the table at her husband with a dubious expression on her face.

"Do you think they will give in? I am afraid you will be out of work some time."

"I don't care if I am; eight hours are enough for anybody to work, and it's time the people who have to do the labor of this world showed some spunk and rebelled against being tied down to one eternal grind."

"But you will lose three dollars a day, and we don't want to run in debt. Mouths must be fed, you know, just the same, and the children's shoes——"

"There you go, borrowing trouble right and left! What's the use of trying to cross a bridge before you come to it? I guess there'll be a way provided."

Mrs. Dayton said no more, but she looked anxious as she cleared away the tea things, put the children to bed, and finally sat down to a big basket of mending, just as her husband's snores began to penetrate the sitting-room from the adjoining bedroom. She was very tired, but she could not think of going to bed before eleven o'clock. There was always just so much to be done, and only one pair of hands to do it all.

Eight hours a day's work! Mrs. Dayton smiled grimly. What would become of the work in that house if *she* "rebelled against being tied down to one eternal grind"? Six children, the eldest but twelve years of age, the youngest an ailing baby which she sometimes feared did not receive due attention with so many other cares devolving upon her from early morning until late at night; and Mrs. Dayton was not robust—never had been. She could not "turn off" her work as some women do, but she did the best she could, without complaining.

"If Silas has made up his mind not to go back to work, nothing I can say will change it," she mused. "There's one good thing about it—if he is going to be at home, he can help me in a number of ways."

Comforted a little by this reflection, she plied her needle with renewed vigor, and at last crept wearily into bed, partially arousing her husband, who muttered, testily, "Don't talk to me! I tell you, eight hours are enough," then turned over and started a new series of snores.

"Do you mind holding baby a few minutes, Silas, while I skim the milk?" queried Mrs. Dayton after breakfast the next morning.

Silas had settled himself into his chair with the air of a man who has all day before him and owns no man for a master.

"Hold baby!" he ejaculated. "Do you think I'm here to do women's work? I guess when I get a day off I'm going to enjoy it."

"He's sick with a tooth coming through, or I shouldn't have asked it. I really don't know how I can attend to my work and care for him as I ought. There, there, poor little dear, don't cry."

"Well, if this is the sort of racket I've got to listen to, I'll clear out. Great Scott! just hear him yell! I thought I was going to have a little peace in my own house. You needn't wait dinner for me—I don't know when I'll get back."

The irate man hurriedly got out his fishing tackle and strode off to the nearest wharf. The Daytons lived in the outskirts of a large seaport, had their own little cottage, a cow and chickens, and were altogether very pleasantly situated. Mr. Dayton was a good husband in most respects, and would have stared in amazement if any one had suggested that he was not always perfectly kind to his wife. He was thoughtless, like many other men who do not stop to consider how manifold the duties of a housekeeper are. He would have scouted the notion that his wife worked harder than he did, and the idea of lightening her burdens in any way had never occurred to him.

Mrs Dayton had trained her children to be useful to some extent, but the oldest was a boy, and his ten-year-old sister could only render some assistance in dressing the little ones mornings and do a few chores after school at night. The week passed by. Mrs. Dayton was disappointed in her hopes of deriving any benefit from her husband's idleness. If she asked him to repair something about the house he would do it to-morrow, but to-morrow came and it was not done. When churning-time came he was not to be found. He never seemed to notice when she lifted heavy kettles of water or emptied the wash-tubs, and she strained her arms as usual putting up the clothes-line. Seeing how disinclined he was to have anything to do with the domestic affairs, she ceased asking for his help.

Silas Dayton was enjoying his vacation. He was a good workman and he meant to make the most of his leisure; so he read and he smoked, took naps in the hammock and indulged in long gossips over the fence with neighbor Jones, a professional man whose office hours were short. Did you ever notice how fond the average man is of gossip? He likes to have his fling about the chattering of women, but at heart he relishes a bit of news. When Almira Smith becomes engaged to be married, or her father sells his pasture lot, or Jim Downs gets a clerkship in a store, he is always glad to hear about it, and two men can beat any two women of my acquintance in holding a protracted sidewalk meeting.

Martha Dayton lay awake nights and thought. Saturday morning she arose with an unaccustomed look of determination on her face. In a way that ordinarily mild women sometimes have, she had suddenly become firm as a rock in her resolution to adopt a new course of conduct. "I'll begin at six o'clock," she said to herself. The work was accomplished magically that day; every step was made to count, every minute was used to advantage. By three o'clock the house was in order and a generous baking adorned the pantry shelves.

Half an hour later Mr. Dayton came in and found his wife sitting in the parlor, with her new gingham dress on, reading the morning paper, while the baby crowed on a rug at her feet.

"Expecting company?" he inquired.

"No, I'm just resting."

It was something new for Martha Dayton to be "resting" in the daytime, and it had been years since she had "fixed up" like that, except on the rare occasions when she went out somewhere.

When the supper was served, Mr. Dayton missed some of the usual accessories of the meal. No hot biscuit, no baked potatoes or nicely broiled chops—nothing warm but the tea, which had been made on an oil stove.

"How's this?" he grumbled. "Ain't you cutting us short to-night with your cold victuals? I like a hot supper."

"Oh, I've struck," replied Mrs. Dayton in a serio-comic tone. "I've come to your conclusion that eight hours are enough for any one to work, and that it is time to rebel against an eternal grind. It will necessitate some changes, but since you are firmly convinced of the right of the matter, of course you will be willing to put up with the inconvenience of it, as I have to with the loss of your wages on account of the same principle." That was a long speech for Martha Dayton to make. Silas glared at her with open mouth. She looked smiling and at ease, not at all as if she were bereft of her senses. It wasn't like her to joke, but she must be "funning" now. Trying to be smart, eh? He didn't quite like it.

"What rigmarole are you getting off now?" he said rather roughly. "If you took a lazy streak and didn't want to cook a good supper, why don't you come right out and say so, not throw up that eight-hour business to me? Man's work isn't woman's work. You just attend to your cooking and baby-tending, and I'll see to my carpentering."

"You think I don't mean it, Silas, but I do. My work is just as hard as yours, and more wearing to the nerves. Hereafter I shall consider eight hours of constant labor a day's work, and outside of that I shall do only what cannot be avoided. A woman needs time for rest and recreation just as much as a man does, and the way I have been living it has been impossible to be anything more than a mere housekeeping machine. I should like to improve my mind a little."

"You ain't turning woman suffragist, I hope. I'll bet that Miss Skinner has been talking to you." Miss Skinner was a somewhat noted platform speaker who lived near the Daytons.

"No one has been talking to me, and this has nothing to do with suffrage. It seems that when you said 'people' you meant 'men,' giving no thought to women; but I fail to see why they should not be included in the labor question."

Mrs. Dayton had not been a self-assertive woman, and her husband gave but little thought to her unexpected outbreak. He attributed it to a "cantankerous spell" which would not last long. A strike of housekeepers! Refusal to work more than eight hours a day! It was absurd, ridiculous. I am not sure but Silas Dayton went farther in his thoughts and pronounced it *lazy;* for what did woman's work amount to, anyhow, compared to the hard tussles of a man with the world?

The subject was not mentioned the next morning, when they partook of the usual Sunday breakfast of beans and brown bread. Mr. Dayton, who was not in the habit of attending church, started out for a stroll about town. Mrs. Dayton very seldom went, as she generally had a baby too small to leave. To please Silas, it was her custom to prepare the most bountiful meal of the week for Sunday afternoon, and the day of rest often left her so fatigued that it was an effort to begin anew on Monday morning. If any one called, she was not fit to receive them in her working garb and with her heated face.

It was nearly three o'clock when Silas returned. "Who has he brought home now?" wondered the little woman as she heard strange voices. Silas often brought people home with him to the Sunday dinner; he was hospitable, and he knew that there would be an abundance of good things to eat.

"I ran across my old friend Jabez Hunter and his wife," he explained, as Martha went into the front hall. "Haven't seen them for years. They've got a farm only twenty miles from here, it seems, and they've been to town time and again, and didn't know we were living here."

Martha was shaking hands with a stout, fresh-faced man and a large, comfortable looking woman, and Jabez was declaring that he knew Si in a minute, and he was mighty glad to see Si's wife and babies.

"Si haint changed hardly any," he continued, "but you ain't lookin' well. Kind o' dragged out, ain't ye? Better come out to the farm; we'll fat you up."

Silas was secretly pleased to see that his wife was neatly dressed, and seemed less "put out" than usual by company. Jabez Hunter had been one of his best friends in the old days, and now that Jabez had the air of being well used by the world, Silas was anxious to have his wife, children and home appear in a favorable light.

Soon Mrs. Dayton called them into the dining-room where the long table was spread, and the children already sat in their places, the baby industriously drumming with a spoon on his waiter. With pride, Silas named his boys and girls, who were embarrassed just enough to make their behavior unobtrusive.

"By George, Si, you're a rich man with such a family as this," exclaimed Jabez. Don't it do your heart good to look around and see 'em? I tell Lucy sometimes its pretty lonesome for us out on that big farm where youngsters would have such a good time. Wouldn't you like to go fishing in my trout brook, young man?" addressing Jack, the oldest boy.

"Yes, sir," replied the boy with a broad grin. By this time all were settled and Silas' face wore a look of blank astonishment and dismay. Cold meat, cold bread, berries, cake, and a cold custard pudding.

"My wife, it seems, has made a change in the bill of fare," he finally said ill-humoredly; "we are in the habit of having a good Sunday dinner."

"I don't see anything the matter with this," declared Mrs. Hunter.

"Silas has forgotten that I've struck," said Mrs. Dayton. "I've adopted the eight hour plan, and no unnecessary work on Sunday. Men don't work Sundays—why should women when they can avoid it?"

Silas' face was red with suppressed wrath. A pretty impression of things his friends would get!

Jabez Hunter gazed at Mrs. Dayton admiringly. Given half a chance, she would be a pretty woman.

"What's that?" he chuckled. "Struck? Come now, that's good. Why shouldn't women strike as well as men? I'm sure they have more to put up with. I haint never let my wife grub all day long and half the night as lots of 'em do. Have I, Lucy? And Sundays we don't do nothin' at our house that we can git out of."

"Half the time we make our dinner on bread and milk Sundays," said Mrs. Hunter, smilingly. "I'm bound to have one day in the week when I ain't tied to the kitchen."

"Your wife must have a pile of work to do, Si, with all these youngsters; it's enough to make her look peaked. Lucy finds chores enough on the farm, but we hain't no children and I help her considerable. I s'pose you're handy in the house when you're out o' work, aint ye, Si?"

Silas' face was a study. Mr. Hunter continued, as he took another slice of cold lamb:

"You'd laugh, I expect, to see me with one of Lucy's big aprons on wipin' dishes or turnin' the wringer. I s'pose I do cut a figger, but it reminds me of the time when I used to ketch Lucy unawares a makin' pies or somethin' before we was married, an' she used to git my face all flour behind the pantry door."

"Law, now, Jabez, ain't you ashamed?" Mrs. Hunter's face was rosy.

"I like to think of them old courtin' days, don't you, Si?"

Tears sprang into Mrs. Dayton's eyes; she did not look at her husband. He mumbled an inarticulate answer. The children were delighted with the turn of the conversation; such a jolly fellow had not visited them for many a day.

"I made up my mind when I got married that my wife wa'n't goin' to be drove to death. I'd got her an' I meant to take care of her an' keep her. Seems though some men took partic'lar pains to git their wives out o' the way so they could git another. I ain't anxious for No. 2. Lucy don't look's though she was fadin' away, does she? Tipped the scales at one hundred an' ninety-five pounds (stop yer nudgin', Lucy) the other day."

Jabez beamed affectionately on his discomfited spouse, the children tittered and Mrs. Dayton ventured to smile across the table at her unusually silent husband.

"Now, Mis Dayton, I don't b'lieve *you* weigh much mor'n a hundred pounds. Looks to me like you was pretty near tired out an' needed a change. Bundle her up, Si, with her babies, an' send her out to the farm. You can git along without her a spell better'n you can spare her for good. I don't b'lieve you want a No. 2 to mother all these youngsters."

Silas found his tongue and a chance to use it at last, and the conversation drifted into other channels. Sooner than any of them desired, the time came when the Hunters were obliged to leave, and the Daytons were left with the feeling that a warm, invigorating rift of sunshine had been let into their lives. Evidently Silas had "food for thought" that evening, and it was he who lay awake that night, and his wife who slept. When she was ready to begin her washing the next morning, she found her tubs filled with water and the clothesline ready for use. Volumes could not have told her more than those two simple acts did. In the afternoon, as she sat making aprons for the children, Silas said: "If you want to go out to the farm, Martha, I think likely I can get Mandy Johnson to come and keep house."

"But the children?"

"You can take the baby and Freddy and Stella, and the rest will get along all right going to school here." So it was arranged.

When Mrs. Dayton returned, almost a new woman, she found that a compromise had been effected and Silas was working. She did not attempt to keep up her own strike, but life was henceforward made easier for her. She hired help on extra hard occasions, many little things that had been expected of her were omitted, and Silas, now that his eyes were opened, found that he could save his wife from backaches and help her to get a leisure hour in ways that detracted not a whit from his manliness. The time came when he said to her: "That was a cute idea of yours, Martha—that strike for eight hours. I was mad at the time, but when I saw how much better Jabez Hunter treated his wife than I did you, it made me feel that maybe I hadn't been doing right. I guess I think as much of you as he does of Lucy, and I mean to give you as good a show as I can."

"I am satisfied," said Martha, looking lovingly at her husband; "but I was not before my strike. I was really getting vicious. We are lots happier now, aren't we?"

"I only wish all strikes might end as well as yours did."

A Few Bluets.

A lady was walking through Washington street, Boston, a few days since. She had a bunch of Houstonia in her hand. A little girl on the street, without a hat, and with nothing very definite in the way of shoes, and a dress that needed to visit the washerwoman's, was suddenly attracted by the bunch of blue flowers. She was not one of the shrinking kind. She had been brought up in that street school of independence which teaches a boy and girl not to forego anything which they can get by asking. She ran up to the lady. "May I have a few flowers, please?" The lady stopped, took a third of the flowers from her bunch and

put them in the soiled hand. The "Thank you" was not wanting, and the little girl ran off in perfect glee to share them with her comrades on the corner near by.

We have seen such a sudden glow of interest produced in a crowd of small boys by scattering a few pennies among them, to be followed by a sudden flight to the nearest candy store; but if this little girl had received a five-dollar bill, she could hardly have shown more delight than she did at this little gift of flowers. Her face beamed with smiles, and she went skipping along in joy and exultation.

We do not know for whom the flowers were originally intended, but we wondered if they could have found a better mission. What better office could a flower serve, gathered from wood or hillside, than to bring some of its color and its cheer to the eye and heart of a child in the hot and dusty city? When the flower mission was started in the hospitals, there were some who sneered at the sentimentalism of this form of benevolent activity. But its mission has well been justified. It has brought not only the color, fragrance and beauty of nature to the sick and suffering, but has brought the cheer of kindly words and helping hands. The flowers have served to bring the giver and the taker nearer to each other. Even the street gamin knows that life is not made up wholly of bread and butter. The flowers, too, have their message and their blessing.—*Christian Register.*

Hints for Home and School.

[Written for the RURAL PRESS by MRS. J. HILTON.]

Dear "Lupa" and others who feel as you do, please do not think that I do not know all about the hurried rush and the large mouthfuls, for I also am a farmer's wife; but there are times and times. When we know that there will be haste, as during the seedtime and harvest, there is little use for beauty on the tables. But there are so often other times that a scant meal can be made to appear more satisfactory by a little added beauty; and many little children can be taught to help mamma beautify the table, thus taking them from under foot and amusing them at the same time; and, dear sisters, do not try to eat during the rush when the men do, for the body being so heated and the nerves unstrung always spoils the appetite. Either take your meal first or have a little side table for yourself and baby away from those unsightly fragments, or do as I often do—take your dinner into the cool sitting-room, sit in the rocking-chair or lie on the lounge, take a book or paper and read and eat, or if you do not read, your dinner will be relished and you will be rested and refreshed for your after-dinner work.

Another thing I want to mention: Don't wait five minutes for any one when the meal is ready. Eat your meal and let the rest eat when they get ready. There is no use having your meal spoiled and your body famished because of others. I used to wait and wait, and all the comfort I got was: "Well, what did you wait for?" Some claim that it does not matter to them if they do not have their meals regularly, but I notice that their temper is not nearly as good after an irregular meal as at other times. I know it spoils my good nature when I do not eat regularly. It is impossible to have a cheerful countenance when you know that your well-prepared meal is being spoiled and your stomach is empty. Just eat your meal and then you can be much more cheerful.

Do, dear sisters, think of your own bodily needs. There is no danger of your getting selfish, especially if you have children, for they won't give you time to think much about yourself; but treat your own body as well as you do theirs, and it will be better for them and you, too. It is easy to talk, I know; but if the mind is willing, ways appear.

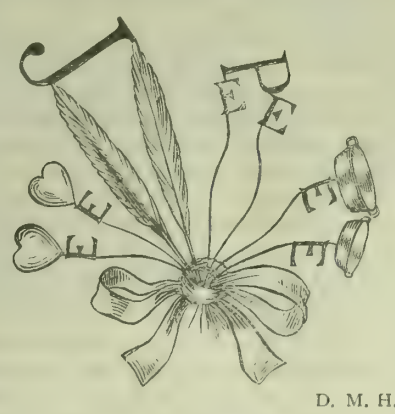
Dear RURAL, I want to suggest to all who are building schoolhouses or refurnishing such buildings, do have the desks high enough so that all scholars will have to sit straight when their arms are on the desk. If I was a school superintendent, I would insist on all desks being made higher than are now used. We have nice patent desks in our building, but the children are getting so round-shouldered that I feel very uneasy about them, and wherever I go I notice the young people would have very good forms if the head could be turned completely around. The back is much fuller than the chest, and the more studious the pupils are the worse it is for them. A little thought in arranging the desks will save many from having weak lungs. I do not advocate high seats, for I know that the feet must rest firmly on the floor. But where it is possible, do have high desks.

Los Alamos.

Chaff.

JUDGE: Prisoner, do you confess your guilt? "No, your honor; the speech of my lawyer has convinced even me of my entire innocence."—*Fliegende Blaetter.*

SHE: I've been told that you are grave and sedate, but I'm sure I find you jolly! He: Yes, I lose my specific gravity when you are the center of attraction.—*Chicago Post.*



JUDGE: Do you think you could give a verdict in accordance with the evidence? Would-be Juror: I do. Lawyer (for the defense, hastily): Challenged for cause.—*N. Y. Weekly.*

YOUNG FOLKS' COLUMN

Tangles.

Enigmatic Snarls, Both Hard and Easy, for Young People of all Ages to Untangle.

214.—A BOUQUET OF FLOWERS.

D. M. H.

215.—ANAGRAM.

I'm "a wonderful thing," and so
'Tis little of me any know.
Some say that I was never known,
While others claim I have been shown,
And many a "CLAIMER" makes pretense
To show me to deluded sense.
Much faith in things that are id al
Is needed to believe me real.

NELSONIAN.

216.—DECAPITATION.

The ocean's strong incoming tide
No one may think to check;
And those who in its course abide,
Their lives expect to wreck.

But I've a plan which will produce
Its decrease speedily;
Behead, and you its bulk reduce—
'Tis much depressed, you see.

BITTER SWEET.

217.—A DISJOINTED NAME.

1. To impair.
2. To liquefy by heat.
3. A forest tree.
4. A common ending to a participle.
5. The aristocracy.

Arrange these words in the order in which they are given, and you will have the name of a lady who is well and favorably known in history.

ETHYL.

218.—DECAPITATION.

The *whole* and gracious sun
Smiled on the waiting *two*,
And warmed its surface through,
And summer was begun.

Up sprang the verdant blade,
To clothe the lifeless sod;
Three every sun-kissed clod
Tokens of life displayed.

BITTER SWEET.

219.—CHARADE.

One two is a pasture lot for *one*;
I've seen *one two* in a *one two*;
In a *one two* I've seen *one* run;
In *one* a quadruped we view,
In *two* a thing to *two* upon. NELSONIAN.

ANSWERS.

209.—Excuse excesses; I am in exuberant spirits.
210.—Mesmerist.
211.—Tom, $1.30; Dick, 70 cents; Joe, 40 cents.

Tramp and Trinkets Abroad.

Tramp and Trinkets went next to Japan, and at last came home by way of San Francisco.

Thus, as one can see from the geography, they traveled all round the world. Flo's papa says he'll wager they are the only dog and doll that ever did.

They got to Yokohama a short time before the great Doll Festival. This is a pleasant custom observed by the people from ancient times. Each year, on the 31 of March, almost every family in Japan gives a grand feast in honor of all the charming race of dolls, and especially of the dolls of the household.

For days before little Flo noticed that the shop-keepers seemed to forget their regular business, and everybody in the whole town took to selling or buying dolls and toys and knick-knacks for the festival. In every house there was the sound of hammering, and of getting ready for the holiday.

At length it came. The special feast to which Flo and Tramp and Trinkets were invited was a very elegant party.

In one corner of the parlor were a set of shelves covered with red silk. On the top shelf were displayed a royal company of dolls dressed in splendid costumes, with a pretty screen behind them for a background. The next shelves were crowded with plainer dolls and all kinds of odds and ends; the lowest held many small, gold-lacquered boxes filled with candies and cake. Arranged on this shelf, also, were a number of scarlet and black-lacquered tables, about five inches square, painted in gold and ornamented with ivy vines and grapes. Set out upon each of these was a tiny dinner service. That they were only mites of things may be known from the number on each table. On the first, for instance, at the left-hand corner, was a rice cup, then a soup tureen, at the other end a covered dish containing stewed fish with gravy, in the center another deep dish. At the right were two wee fishes baked whole, and between the corners sliced vegetables laid on bamboo leaves, the latter cut in the shape of a plum flower. Upon the next table the course following was served, and so on till the last was reached—an almost endless number.

Flo and Tramp and Trinkets, with a very bright little Japanese girl, sat at these dainty tables, and enjoyed the feast of the dolls. Trinkets, to be sure, was too excited to eat much or to take tea from the tiny cup, but Tramp had his own share and hers too, and then what did the dreadful fellow do but tip over one of the beautiful tables! Trinkets was so ashamed of him!

But the prettiest part of it all was when Yona, the little Japanese hostess, went out to the street and asked all the stranger children, rich and poor, who happened to be passing, to come into the feast, as the custom is. Of course they came, and what a merry time they all had, for the children of Japan know how to play as well as Flo does.

Flo's papa and mamma sat at a large table with the other grown folks, but the dinner served to them was just like that prepared for the dolls. Trinkets thought everything was lovely and as it should be. Too much could not be done for dolls! But Tramp growled: "It's all nonsense! all but the cakes and candies!"

Not quite, Tramp. It is not nonsense to make people happy.

They drove back to the hotel at twilight, past the orchards of plum trees, covered with fragrant pink and white and red blossoms.

The next day our friends sailed for home, and in a few weeks Tramp and Trinkets and their little mistress were all back in Flo's nursery again.—*Mary Catherine Crowley, in Pansy.*

GOOD HEALTH

Injuries and Diseases of Nerves.

Nerves must be renewed through the medium of the nuclei which are in the inner side of the sheath discovered by Schwann. These fibers receive impressions and expend stimulus. The process of degeneration in a nerve is first a destruction of the myeline, multiplication of the nuclei and loss of continuity of the axis cylinder. There are not, as previously supposed by some, a special set of nerves which have as their function the creation of trophic conditions; the motor and sensory nerves are of themselves able to produce such a condition.

The return of sensibility to a part of the body supplied by a nerve which has been cut quite through does not indicate positively that the nerve has been reunited; the power of muscular action and other evidences are also required. When nervous power has been lost and partially restored, hope must not be abandoned, even if progress is slow, because months may be required for the recuperating process. Feeling generally returns sooner than muscular power. Nerves which have been injured may have pieces taken out and the sound end stretched till they meet, when they will reunite. Even nerve-grafting according to this author may be possible.

No benefit has been conferred on victims of St. Vitus dance by surgical experiments on the nervous system, but when epileptic fits occur, because of an injured nerve, these fearful spasms have been stopped by dividing the injured nerve between the injured part and the higher ganglion. Tetanus is not found to be caused by injury to the nerves. The best cure for facial neuralgia is found to be nerve-stretching, and is much better than cutting the nerves. —*Journal of Anatomy.*

POISONOUS CHARACTER OF THE OLEANDER.—A German paper says: It is perhaps not generally known that the leaves of the beautiful and gorgeous oleander are endowed with extremely poisonous properties, and that injurious effects may follow the cultivation of the plant in inhabited houses. The poisonous character of the plant is mentioned by Pliny, and recent investigations have shown that the old Roman naturalist was right. In Madrid, a few years ago, several people were poisoned by eating game which for some reason had been roasted with oleander leaves. In the southern parts of Spain and Italy, the grated bark is used as poison for rats, mice and vermin, and places where the oleander grows in abundance are considered as unhealthy as the terrible fever swamps, and are shunned by the people. In Northern Africa, where the oleander grows luxuriantly and adds a wonderful charm to the banks of every stream, it is not tolerated near human habitations, and in some districts its cultivation near houses is prohibited by law. It is a significant fact that the flowers of the oleander are shunned by bees. As the oleander is very common in California, the children should be carefully warned against it, or, what would be better, train it into a tree and prune high enough to keep the leaves and flowers out of the reach of little fingers.

THE HUMAN BREATH A POISON.—At a recent meeting of the Academie des Sciences, Prof. Brown Séquard referred to some experiments he had conducted with a view to determine what, if any, were the toxic effects of the human breath. In condensing the watery vapor coming from the human lungs, he obtained a poisonous liquid capable of producing immediate death. This poison is an alkaloid (organic) and not a microbe, or series of microbes, as might have been imagined. He injected this liquid under the skin of a rabbit, and the effect was speedily mortal. The animal died without convulsions; the heart and large vessels were engorged with reddish blood, contrary to what is observed after ordinary death, when the quantity of blood is moderate and of a dark color. In conclusion, this eminent physiologist said that it was fully proved that respired air contained a volatile toxic principle far more dangerous than the carbonic acid, which was also one of its constituents, and that the human breath, as well as that of animals, contained a highly poisonous agent.—*Medical Press.*

DOMESTIC ECONOMY

LEMON MARMALADE.—Peel lemons and extract the seeds. Boil the peel until soft, add the juice and pulp with a pound of sugar to a pound of lemon. Boil until thick.

SOFT GINGERBREAD.—One cup of molasses, one cup of warm water, half a cup of soft butter, one teaspoonful of soda dissolved in the water, a teaspoonful of ginger and cinnamon mixed, and two cups of flour. When well mixed, drop a tablespoonful in the pan and bake quickly.

STRAWBERRY TEA CAKE.—Two eggs, reserving the whites of one, one cupful of sugar, butter the size of an egg, half-cupful of milk, two cups of flour, one teaspoonful of cream tartar, half a teaspoonful of soda. Bake in three layers. Filling: White of one egg beaten very stiff, three-fourths of a cupful of sugar; beat again, then add half a cup of fresh strawberries bruised to a pulp, and beat till stiff enough to stand alone. This gives a filling of a lovely pink color.

SPICED BREAD.—Sift into a pan one pound of flour, put into a half pint of warm milk a half-pound of butter; stir the milk and butter into the flour and a wineglassful of good yeast and a little salt; mix these well together and set in a warm place, but not too warm to rise; let it rise a full hour, then add a half-pound of sugar, a half-grated nutmeg, large spoonful of cinnamon and a wineglass of rose-water; mix these well into a sponge, pour into a pan, and set to rise again; let it rise a half-hour, and bake in a slow oven.

APPLE PUDDING.—Pare, core and slice a dozen good-sized apples. Measure a half-pound of brown sugar. Melt four ounces of butter. Cut a stale loaf into thin slices. Grease a baking-dish that will hold two quarts, cover the bottom with the slices of bread dipped in the melted butter, now cover this with a thick layer of apples and a layer of sugar, and another layer of bread dipped in the melted butter, and so continue until the dish is very full, having the last layer bread. Pack it down well, cover the baking-dish with the lid, and bake in a moderate oven two and a half or three hours. Let it stand in the dish 15 or 20 minutes before turning out. Serve warm with hard sauce.

MAKING ICE WATER LAST.—A useful attribute of paper not generally known is for preserving ice in a pitcher of water. Fill the pitcher with ice and water and set it on the center of a piece of paper; then gather the paper up together at the top and place the ends tightly together, placing a strong rubber band around the coil to hold it close, so as to exclude the air. A pitcher of ice-water treated in this manner has been known to stand over night with scarcely a perceptible melting of the ice. —*Ex.* [This plan might work to advantage with water taken cold from the well or spring and thus excluded from contact with a heated atmosphere. Will some subscriber try it and report?]

GOOSEBERRY PUDDING — There are green gooseberries already in the market. This calls to mind the delights of a fruit-batter pudding made with gooseberries. An English batter pudding is a delicious dessert, especially when made with fruit, but it requires care in preparation. The ingredients are a pint of milk, a teacup of pastry flour, five eggs, half a teaspoonful of salt and a pint of fruit. If gooseberries are used, simply head and tail them and set them aside till the batter is prepared. Separate the whites and yolks of the eggs. Mix the flour with enough milk to make a smooth batter, add the yolks of the eggs, beaten thoroughly, and then the rest of the milk and the salt, and finally the whites of the eggs. Turn half the batter into a well-greased tin mold, add the gooseberries and the remainder of the batter. Suspend the mold in a pot of boiling water, and keep the water boiling around it for 1½ hours. Serve it with a nice hard sauce.

The Week.

Are the heavy rains at the South an indication that we shall have heavy and early rains in the central and northern portions of the State? Some regular weather experts claim that such is the case, and some who do not usually require much data for their conclusions, hold that last year the heavy fall rains in Arizona were followed by a very heavy October rain in California. However the indications may be, it is only the part of wisdom to get produce under cover at the earliest practicable moment and to arrange to protect raisins and dried fruit which, for the next 10 or 12 weeks, will be spread out under the sky. There is usually occasion for such protection before the season is over, and he is wise who arranges for it.

The fairs at Los Angeles and Ione are in progress this week. Next week's list includes the exhibitions at San Jose and Willows.

The Irrigation Surveys.

It is difficult to learn yet the fate of the irrigation work at the Government expense. So far telegrams seem to indicate the likelihood of the withdrawal of the appropriation for the continuance of the work under the Geological Survey, as both the House and Senate have acted thus far in that direction.

There seems to be a serious conflict in the statements put forth as to the character of the reservation of public lands under the Act of 1888, to which allusion has been previously made in these columns. For example, Senator Dolph of Oregon writes to a Portland paper as follows:

It has been construed by the Attorney-General and Secretary of the Interior as withdrawing all irrigable lands of all the arid region from the operation of the land laws without any action of the department, and it is held by the department that, as the irrigable lands cannot be segregated from the arable lands without a survey, the operation of the general land laws in all the arid region is suspended, not only as to irrigable lands, but as to arable lands, timber lands, etc.

This region, as marked out by Major Powell and adopted for the action of the Interior Department, is substantially bounded on the north by the Dominion of Canada; on the south by Mexico; on the east by a line drawn nearly through the middle of North and South Dakota, Nebraska, Kansas and Texas; and on the west through Oregon and Washington by the Cascade mountains; and through the upper part of California by the Sierra Nevada mountains to about the latitude of Santa Cruz, from which point the Pacific ocean is the boundary, being a tract of land containing approximately two-fifths of the area of the United States.

Such a reservation of public lands from settlement naturally would awaken the strongest opposition from representatives of sections which depend largely upon the settlement of adjacent public lands for their development, and suggest the conclusion which they freely make that the Texas representatives relish that because Texas owns all her own unoccupied lands, and to shut up Uncle Sam's real estate office would send customers to the Texas land-dealers. But this conclusion does not seem to be a fair one if the statement attributed to Secretary Noble in the following telegram is the true one:

An answer to inquiries regarding the irrigation surveys contained in the recent Senate resolution was sent to the Senate to-day by Secretary Noble. He states that the Director of the Geological Survey actually surveyed and marked the boundaries, and that the areas of the sites for reservoirs were by him selected under the Act of 1888, and that the tracts so segregated were so marked that they can be discovered on the ground and delineated on the Land Office maps.

In the reservoir site selections only so much land has in each instance been reserved as is intended to be used for storage of water. It was not intended, the Secretary says, that the surveys and selections under the Act of 1888 should be carried to the extent of planning a system of canals, ditches, checks and furrows for the distribution of water over farms, as it was deemed that people, when they come to cultivate these lands, can better do this themselves.

The general purpose and plan of the department, the Secretary says, is to preserve the sources of water supply from the possession or appropriation of individuals or corporations. It is believed, he says, that it will be the duty of his Department, so long as this statute remains, to enforce it, that its fruits, at least in the preservation of the sources and reservoirs of water, may be kept under either national or State governmental control.

This would indicate that only sites suitable for actual use in the storage of water are reserved and they are clearly marked on the land office maps, and that the claim that "two-fifths of the area of the United States" is locked up is not true. Probably a little more time will straighten out these matters.

The Fruit Crops.

The fruit business continues most actively. Our Market Review gives the details of the trade both at eastern and local points, and shows what an immense amount of fruit is being disposed of at prices unusually excellent and profitable. It is proving to be a fruit-grower's year, and we are sincerely glad that planters are, as a rule, reaping a good reward for their years of working, waiting and bug-fighting. The amount of money which they are bringing into the State will redound directly or indirectly to the benefit of our whole population, for even at high prices, the grower distributes the greater part of his money to his workmen, to the box-makers, wagon-makers, implement dealers, etc., etc., and thus all share his prosperity. This should be remembered when the fruit-grower comes forward asking favors of the Legislature. Other lines of produce are, with some exceptions, also winning good figures this year, but, unfortunately, many find that the reduced weight of their produce is so great that increased market value cannot compensate for the lack in quantity.

Nearly all tree fruits are doing excellently, and choice drying and canning fruits like prunes and peaches are advancing, so that those who sold early at what they considered good figures, could have done better by holding on. There is naturally a strong sentiment now prevailing against too early selling. It is, as a rule, a mistake to sell too early, but of course it would also be a mistake to expect that all coming years will be like this one. Humanity is prone to draw too sweeping conclusions from limited experience.

Just now there is complaint that the grape crop is being reduced by the very hot weather and by the sad effects of careless cultivation. The latter was scarcely avoidable perhaps with the ground in such condition as it was last winter and spring, and yet some who will suffer this year may find some way to do better another time. The officers of the State Board of Viticulture are in receipt of information from various parts of the State, which shows that the hot weather in the interior counties is doing considerable damage to the vineyards. It is said that one-quarter of the crop on Senator Stanford's ranch at Vina, Tehama Co., is destroyed.

At Livermore, Alameda county, 25 per cent of the Mataro grapes, the principal variety raised there, has been spoiled. Damage has also been done in Napa, Sonoma and Fresno counties. The hot weather has, however, had a good effect on the raisin industry. Much more drying has been done this year than any previous season, and while the products of California raisins will be large, the prices will be well up to the standard.

A. C. Morse of this city, who is a land-owner in Southern and Central California, has just returned from an extended trip of nine weeks, looking over the vineyards and orchards of Southern California. Mr. Morse, after visiting and carefully inspecting the large raisin vineyards and deciduous orchards of the southern country, says the fruit crop down there is far in excess of any previous year. The raisin crop, unless the grape-growers meet with an unexpected drawback, will far exceed any former crop. The driers and canners are all running day and night with a double force of help. Prices are high and the fruit men are happy.

Home-Grown Fruit Trees.

Although it is undoubtedly better for most orchard planters to buy trees from nurserymen, and thus secure bearing trees sooner, it is perfectly practicable for those who have no money to invest in trees, even at the low prices at which they are now sold, to grow their own trees from seeds or cuttings which can be had for nothing. Even the enterprising nurserymen themselves encourage this, for they know that any effort which increases the disposition to tree planting will help their business in the end. If the new settler or the farmer with no capital begins by planting a few trees of his own growing, he is apt as his means increase to enlarge his plantations of trees and to seek the nurseries for new or popular varieties.

Fruit-tree growing on a small scale for home planting is not a difficult matter if one has suitable soil and enough water and will take a little pains to inform himself in the art of propagation. Our book "California Fruits and How to Grow Them" gives full and plain instructions which will enable any careful man to grow his own trees, bud, graft and prune them, and in the case of the beginner, will show how leisure time can be turned to excellent account in this effort.

This note is suggested by the experience of a Tulare man in amateur tree-growing, as related in the *Register*, as follows:

J. M. Shackelford has in a small space back of his blacksmith shop on Tulare street a young fig nursery which is an illustration of prosperity under difficulties. Last spring he got hold of some cuttings that had lain around without care for two or three weeks, and they were planted in a little plat in the rear of the shop. They have been watered at times when there was nothing else to do, but have never been cultivated. These cuttings have become fine, thrifty trees, some of them three to four feet high and still growing. To this case is called the attention of those who "haven't money to do anything," as they put it. Here are trees enough to set probably two acres, and they didn't cost two bits. They will be good trees and will be right at hand when wanted.

When such an excellent tree for fruit and shade, and one so well adapted to the hot interior, as the fig can be grown with so little cost and trouble, how unnecessary it is that the valleys should still show so many parched and treeless dooryards and corrals. It is painful to think of such places as homes and it is a duty as it should be a pleasure to transform them into cosy and grateful abodes by a little attention to tree planting. Figs and olives and vines grow readily from cuttings if given a little water and hoeing; apricot and peach trees grow from pits almost as easily as corn from seed and can be easily budded or grafted to good varieties at some later time; walnuts, chestnuts, oranges, etc., are also easily grown from seed—in fact there is hardly anything in the fruit bearing or shade-yielding line which cannot be easily produced on a small scale for house planting if the home-maker will only try and use a little brains and perseverance. It is almost a sin in this State to have a place called a home without its environment of fruit and shade trees.

Saving the Sequoias.

We had a paragraph recently about the arrangement of a Government reservation of sequoias in Tulare county, and commended the wisdom of the act on the part of the authorities. It seems, however, that there is some danger threatening the realization of the project, for Governor Waterman sent the following telegram to Secretary Noble on Monday of this week:

The newspapers report that the surveys suspended by Commissioner of the General Land Office Sparks, including lands in the eastern portion of Tulare county in this State, are about to be declared open to location. These surveys include tracts of land covered with sequoia gigantea—the big trees of California. There is now, I believe, pending in Congress a bill setting aside a portion of these suspended surveys for a national park In view of these facts, I would most respectfully ask that such townships as are mentioned in the bill now before Congress be not declared open for location until Congress decides whether such lands shall be set aside for park purposes or not. The ruthless destruction of these magnificent forests, the largest and grandest in the world, would be an outrage, which I must ask your assistance to prevent.

It seems a little strange that one department of the Government should authorize work which will conflict with measures pending in another, but such conflicts frequently happen. The officers are so bound up with red tape that sometimes their acts, though technically correct, are unwise, if viewed from a common sense standpoint. We hope that Governor Waterman's appeal may result in protecting the trees until Congress shall pass the Act necessary for their reservation.

At the meeting of the California Academy of Sciences on Monday evening of this week, Dr. Gustav Eisen described a visit from which he had just returned to the headquarters of the Tule river. He said that there and on the south side of the south fork of Kings river, in a territory about 15 to 20 miles long and 8 miles wide, can be found the largest number of big trees to be seen anywhere in California. Until a few years ago the territory was unknown. Now the land has been almost all taken up and the beautiful sequoias are being ruthlessly destroyed. On Tule river, said the speaker, he had seen the stump of one tree which had been cut down. It was called the "Philadelphia," measured 41½ feet in diameter and was 250 feet high. Another is called the "Centennial Stump," and still another the "California Tree." The latter is 33 feet in diameter, and when felled, 60,000 shakes were cut from it. The waste of lumber there, had, he said, been simply shameful. The sequoias are a great curiosity, and at once the pride and beauty of California, and he thought the Academy of Sciences should take some steps to preserve what is left. In accordance with Dr. Eisen's suggestion a committee was appointed to memorialize the Washington authorities on the subject.

A Bounty of $10 a head will be paid by the Supervisors of Siskiyou county for lions.

Resistant Vineyards.

NUMBER I.

[Written for the RURAL PRESS by W. B. WEST.]

My apology for writing upon a subject which has been so often discussed and almost exhausted is that the recent accounts of the success of resistant vineyards of France now coming into bearing show that there is but little doubt that the phylloxera problem has been settled, and that it is to the use of the American resistant vines as stocks that we can attribute the success. Nowhere has the combat against this insect been carried on more energetically than in France, and nowhere has so much success been achieved. Insecticides, such as bisulphide of carbon and sulpho-carbonate of potassium, have been freely used. Submersion for weeks has been tried and all have been successful in checking the destruction, but they are very expensive and not so satisfactory as resistant vines; and, notwithstanding their plucky fight for more than 20 years, the formidable insect still goes on ravaging new districts every year.

In Bulletin No. 10, Vol. 2, United States Department of Agriculture, is found the report of the Superior Phylloxera Commission of France, which gives the latest opinion of those experts regarding the phylloxera problem in Europe, as it appears at present. Each year has shown an increasing acreage of reconstructed vineyards on resistant American stocks. The number of acres of these in France was in 1881, 22,000; in 1889 it had increased to 719 500; at the same ratio, in four years, it will have reached the unprecedented amount of 6,500,000 acres. From the report of Consul General Rathbone, I find that the total area of vines in France before the ravages of the phylloxera was 4 542,000 acres; thus it will be seen that in a few years France will have recovered her lost acreage and resumed her place as the foremost wine-producing country of Europe.

All the vine-growing countries of Europe have resorted to vigorous measures to suppress this pest, such as strict quarantine and destroying vineyards infested, so that some countries have not suffered in the same degree as others. Switzerland, Germany and Russia have suffered but little; in Italy, about 4000 acres are affected. The system of defense was very complete, but has been given up and resistant American vines adopted. In Hungary, about one-third of the vines were attacked and one-eighth destroyed. Austria suffers about in the same proportion.

Spain is suffering severely. Letters from an intelligent gentleman, an Englishman who owns a raisin vineyard in the Malaga district, and who has lost a portion of it by phylloxera, gives me the following information: "The planting of resistant American vines has been quite extensive, but I look at the raisin industry with little hope. In their best days there was but little profit for the grower; the merchant took the lion's share, and now when we have to fight insects, to replant the vineyards, to take a less price on account of American competition, and pay an increased price for labor," he thinks there will be nothing left for the proprietor. The diminished crop of Malaga raisins from 1,500,000 boxes in 1878 to 800,000 in 1889, shows how severely this district has suffered.

The difficulty in restoring these vineyards with resistant vines is great; the climate is dry, and the soil is worn. Still the *merchants* are sanguine of success and look for the time when the vineyards will be replaced with resistant stocks. At present the condition of the small proprietors is deplorable. They are reduced to the necessity of abandoning the cultivation of their properties or selling them at much depreciated prices. At Denia there is more irrigable land, and the consequence will be that the vineyards, should they be attacked by the insect, can be replaced with less difficulty.

Portugal is perhaps in the worst plight of all; the land of the northern part is poor and hilly, consequently little able to resist; over 90,000 acres out of 250,000 are dead. The Douro loses 80,000 acres out of 125,000. The following is the

Present Condition of the Phylloxera Question

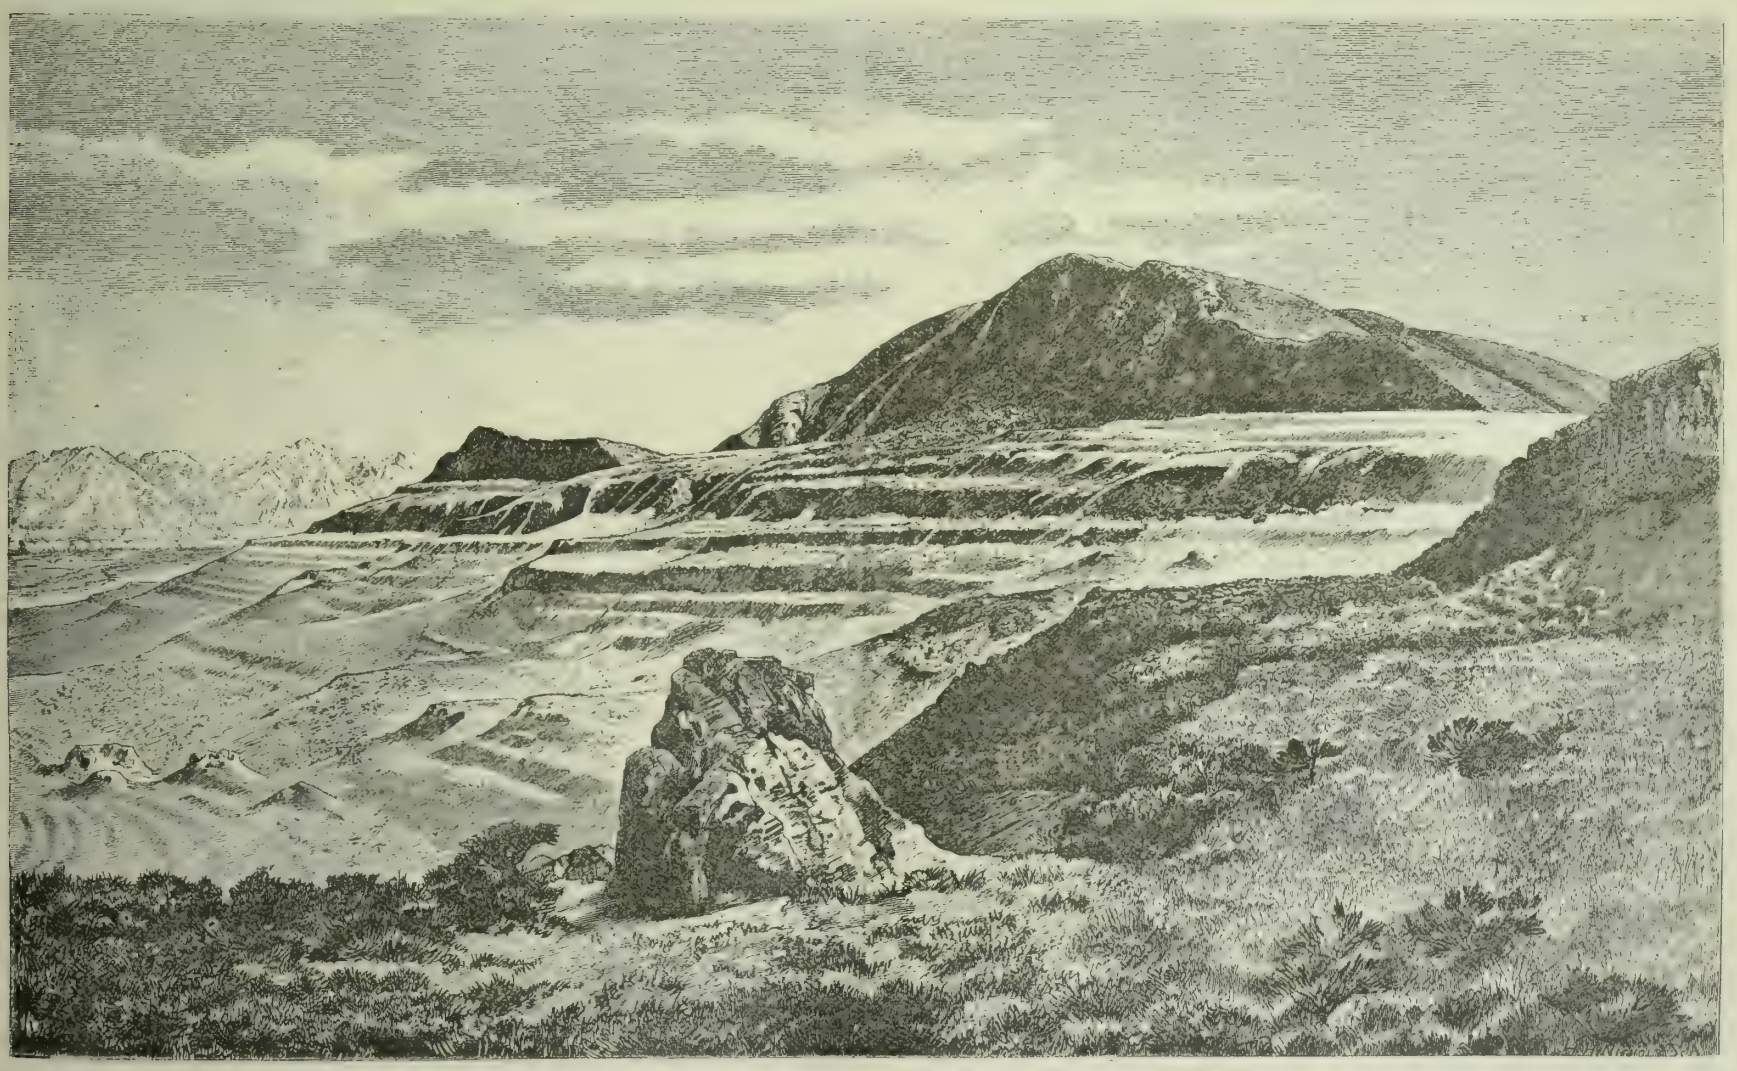
In Europe: France, knowing that the loss of their vineyards meant the loss of a large portion of their income, has, by a vigorous, liberal policy, followed persistently for more than 20 years—practically settled the phylloxera question. The Government has offered a high premium to any one who should discover a practical remedy. In 1887 it passed a law remitting the land tax for four years on newly planted or reconstructed vineyards (a good commentary upon *our* method of assessing vineyard, which is to assess the land at its full value and then the vines as improvements, and that in face of the fact that our products are lower than they are in France).

Societies have been formed in all the different departments with governmental aid, to diffuse knowledge and cheapen the chemicals used in the insecticides, and in every way possible has the policy of the French Government been liberal and enlightened.

Spain and Portugal, by their dilatory action, have allowed the enemy to get possession of a large portion of their vineyards, then, after realizing their loss, have commenced to plant resistant vines. In the meantime the small proprietors have suffered severely, as the immense emigration from both countries to Brazil and the Argentine Republic shows in ten months of 1889, 53 884 persons emigrated from Spain. In five months of same year, 11,000 persons left Malaga alone. Most of this exodus was caused by the decline of the raisin industry.

Italy has found its defensive policy useless, and has accepted the American vines. Germany depends upon its defensive policy, but I am unable to say to what extent the American vines are used. Austria and Hungary must have accepted the American vines, as I find different kinds of stocks in the parts of the State where phylloxera has existed for some time, but in new localities experiments will have to be tried. Wishing to inform myself about this matter, I have spent much time in the two years past visiting vineyards in different parts of the State and getting the views of the proprietors. I find great apathy regarding the question; but comparatively few are making any effort to reconstruct their vineyards. I have been one of those who were not discouraged, and have been planting a little as my old vines die out. I have made some brilliant failures, but think I am now on the right track, and will give my ideas of the right method of reconstructing vineyards in another communication.

Stockton, Cal.



[We are glad to state that Mr. West promises to follow this important communication with another on grafting, stocks, etc. Mr. West's experience in these matters is so large, and his method of thought so careful and conservative, that his words will be given due weight by all who know him, and to others we can earnestly commend his statements.—EDS. PRESS.]

What Is California Doing?

It is a well-known fact that many of the vineyards in the northern part of the State are badly affected and some of them ruined; we also know that it is only a matter of time when all will be destroyed. Is it not better to commence and plant American stocks as soon as the vines show decay? In many parts of the State, land is of little value except for grapes. Shall we let our growing industries, raisins, table grapes and wine, die out for the want of a little pluck to renew them? But that is just what many are doing; they are timid; are afraid that they will not succeed; they say that some one has told that resistant vines are a failure. Think of 719,500 acres in France planted on worn land full of phylloxera. Do you suppose they do not understand the matter?

The fact that there are large vineyards in this State wholly upon resistant stocks and that many plots of 20 to 40 acres are coming into bearing is not fully understood by those who, not having fully investigated, pronounce the resistant vines a failure. There have been some very bad mistakes in using stocks not suited to the soil in which they are planted—mistakes in after-management, such as allowing the scion to form roots; but as a rule, success has attended all intelligent effort.

Enough is now known about the value of notices of large sales to them from the French nurseries. This is the condition of Europe.

SEA CLIFFS AND TERRACES CAUSED BY THE WAVES OF LAKE BONNEVILLE, ON THE NORTH END OF THE OQUIRRH RANGE, UTAH.

ADVANCE IN PRUNE PRICES.—The Pomona *Progress* says: Prune crop all is all contracted. Two months ago $27 to $30 a ton was paid for prunes delivered, then began to advance $2 a ton until $40 was paid July 1st, and at the close of the month $45 a ton was paid for prunes delivered.

Ancient Lake Cliffs and Terraces.

The facility and certainty with which the vestiges of ancient water margins are recognized and traced depend on local conditions. The small waves engendered in ponds and sheltered estuaries are far less efficient in the carving of cliffs and the construction of embankments than are the large waves of larger water bodies. The element of time, too, is an important factor. A system of shore topography from which the parent lake has receded is immediately exposed to the obliterating influence of land erosion and gradually loses its character and definition.

The wave-built terrace is distinct from the wave-cut terrace in that it is a work of construction, being composed entirely of shore drift, while the wave-cut terrace is the result of excavation and consists of the pre-existent terrane of the locality. The wave-cut terrace is overlooked by a cliff rising from its upper margin, and only appears on the margin of an open basin broad enough for the propagation of efficient waves.

The great Lake Bonneville (of the Quaternary period), in the division of the Great Basin of Utah, is known by the records on its ancient shore-lines. All about the Great Basin of Utah the lower slopes of the mountains are skirted by level tracings—not a single line merely at a single level, as in the Coast Range of California, but a series of lines at many levels, testifying to a system of oscillation of an ancient lake. The highest water-line is 1000 feet above the level of the Great Salt Lake, and over every foot of the intervening profile can be traced evidence of the action of waves. The point of outlet of this ancient lake was at the northern extremity of Cache valley. The sill over which the water at first discharged was soft, and yielded easily to the wear of running water, permitting the lake level to be rapidly lowered, but eventually a reef of limestone was reached, by which the erosion was checked and held at a nearly constant level until the outflow was finally stopped by climatic changes which diminished the water supply.

The history of this great lake is written by wave-sculptured topography and by lacustrine deposits. The Bonneville basin is surrounded by and interspersed with mountains. Form and substance conspire to prove that the lake had a beginning as well as an end, and before its inception the lake basin was for a long time subjected to the ordinary laws of sculpture by the action of rain. Nevertheless, the Bonneville shores are almost unmodified.

We give on this page a view of a portion of the shores, showing the sea-cliffs and terraces carved by the waves of Lake Bonneville, on the north end of the Oquirrh range, Utah. This is only one of the many evidences of the existence of this great Quaternary lake.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

DRYING GRAPES.—Livermore *Herald*, July 31: The vine-growers of Livermore valley are now thoroughly committed to grape-drying. Nearly all who have no wine-making facilities have contracted to sell their common wine varieties in the dried state.

GOOD PRICE.—Haywards *Journal*, Aug 1: Our prune-growers have a bonanza this year. As an illustration, we make mention of the sale just concluded by L. H. Brown of Collinsville, who sold 12½ tons of dried prunes, 50 to the pound, coming crop, being future delivery, for 10 cents per pound net, in 25 pound boxes. He was also offered for sale the same size prunes, in cotton sacks, at Elmira, 9½ cents per pound.

Butte.

LARGE FRUIT YIELD.—Chico *Enterprise*, Aug. 2: We interviewed Col. C. C. Royce, manager of the Rancho Chico, and from him we got the following amounts of fruit of different varieties picked in the Rancho Chico orchards:

	Lbs.
Cherries	240,000
Cherry plums	10,627
Apricots	201 [illegible] 0
Peaches	3[illegible]9,150
Blackberries	32 08
Plums	195,367
Apples	114,[illegible]76
Pears	[illegible],[illegible]03
German prunes	13 8 9
Nectarines	1,400
Sweetwater grapes	2 276
Total	1,151,091

Thus we have up to this date one million one hundred and fifty one thousand and ninety-one pounds of fruit picked, which makes a fraction over 575 tons, and would fill 287 cars. But the season is not near ended. The peach crop is only half picked, pears two-thirds, and apples one-fourth. The demand for apples has been greater than the pickers can supply. The crop of French prunes, almonds and Bartlett pears has not been touched yet, and it is estimated that there will be over one million pounds of grapes to pick.

Colusa.

PROGRESS OF THE CANAL.—Maxwell *Mercury*, Aug. 2: Five miles of the canal have been completed from the railroad at a point in the southeastern suburb of Willows, extending northward. The width is 60 feet and the depth a little over seven feet. The canal presents a fine appearance and will look like a small river as it meanders through the valley. Ten more miles of canal remain to be built under Turten & Knox's contract, and they will finish up within six or seven miles of Maxwell.

Fresno.

FRUIT PRICES.—*Republican*, Aug. 1: Driers are paying $40 per ton for green peaches and from 13 to 16 cents per lb. for dried. Green plums bring $25 a ton and green pears from $20 to $25. Dried apricots range from 12 to 14c. per lb, according to size and quality, and dried peaches from 13 to 16c. Expect to begin packing raisins about the middle of September. They are offering 5½c. a pound for unassorted Muscat raisins in the sweat-box, from 5 to 5½ for Sultanas, from 3½ to 4 for Faherzegos, and 3c. for dried grapes.

SULPHURING FIGS.—M. Denicke says: Dried fruit, such as figs, which are to be eaten raw, should not be sulphured. It is as injurious as dyeing candies with mineral or other poisonous colors—improving the appearance at the risk of health. Sulphuring fruit, for that reason, is strictly prohibited in European countries. Sulphur also deteriorates the flavor and eating qualities of the fig and renders it too laxative. It is improper.

Kern.

TWO CROPS AND THEN GRAPES.—Bakersfield *Echo*, July 31: W. Canfield has just finished planting 75 acres of Egyptian corn Last winter he seeded the same land to barley and got a good crop. When that was harvested he irrigated the field thoroughly and then planted the corn. He expects to harvest the corn principally with steers. About the time it is ripe they will be turned in, and experience shows that they will eat the stalks as well as the corn; the fodder and the corn together make a very fattening feed. Next spring he intends to plant the whole field to raisin grapes.

PUMP IRRIGATING—*Echo*, July 31; H. Swain's 30 acre vineyard out in the weed patch is said to be doing remarkably well. He waters it altogether from a pump. The water is carried to the vines in a tank, a small hole is dug and five or six gallons poured in. When it has settled into the ground the hole is filled up. Three men will pump the water and irrigate six or eight acres a day.

Lassen.

THE RESERVOIRS — Susanville *Advocate*, July 31: John C. Davis is working a large force of men and teams on the Honey Lake Water Co.'s Skedaddle reservoir, and within two months will have the dam completed to a hight of 60 feet.... Alex Smith, a stockholder and Sup't of the Red Rock Reservoir Co. of Sacramento, of which E. M. Luckett is president and State Controller J. P. Dunn secretary, has just arrived and is putting on men, teams and scrapers enough to complete their dam this year to 50 feet in hight.... The Antelope Ranch Co. of Madeline are pushing their developments along as fast as men and teams can do it.... Mr. Hutchinson and associates have just purchased two miles of 22 inch pipe, by means of which water will be conveyed from the Hutchinson & Leavitt system on the south to their lands on the north side of Susan river, for their reclamation.

Los Angeles.

FRUIT CROP.—L. A. *Herald*, Aug. 2: The following estimate of the deciduous fruit crop this year is made by one of Pomona's fruit-growers and fruit buyers, and one who has been in the business some years: Apricots, 1600 tons; peaches, 1100 tons; prunes, 530 tons; pears, 350 tons; figs, 95 tons; plums (not known); nectarines, 80 tons; raisin grapes, 200 tons.

FRUIT AND VEGETABLE SHIPMENTS.—L. A. *Herald*, Aug 2: A Santa Fe railroad official says: "We have shipped 75 or 100 cars already, and I have only heard of two which did not arrive in good condition. It is experimental, to a great extent, yet; the science of preparing the stuff and packing it is not yet thoroughly understood, but, as I said, the loss as yet has been a bagatelle. We send large shipments almost every day; last night we sent out ten carloads. I don't know how well it pays, but judging from the eagerness of shippers, there must be a big margin in it."

DRIED FRUIT PRICES.—The prices which agents for wholesale fruit firms in Pomona have offered for fruits range as follows: Dried apricots, 14 cents a pound; dried peaches, 17 cents; dried prunes, 8½ cents.

Mendocino.

HOP CROP.—Ukiah City *Democrat*, Aug. 1: The hop crop in the vicinity of Hopland promises to be up to the usual standard of excellence this year, and the warm weather we are having is just the thing to make hops grow.

Mono.

FOX TAIL.—*Chronicle Union*, July 26: G. B. Day has Indians at work clearing his land of the pest, and every land-owner in this valley should follow suit and do their level best to eradicate it, or it will soon ruin our meadows.

HAYING.—Bridgeport *Chronicle-Union*, July 26: The farmers throughout the county are busy cutting their hay, of which there will be large crops, particularly in the Bridgeport Big Meadows. In Antelope valley, the outlook is not so promising, as the "fox-tail" grass has made serious inroad, particularly on the bottom lands of Kirman & Rickey's ranch, where the wild hay will not be cut this year, there being too much of the obnoxious grass on the bottom lands to make the hay worth cutting.

Napa.

GRAPE CROP.—St. Helena *Register:* S. Adkins writes as follows: Wishing to correct some reports of recent date in reference to the grape crop, I have conversed with a number of grape-growers and have myself examined a number of vineyards, to find that it is a fact that the black variety of grapes are certainly not more than one-half an average crop. The white grapes are a little better, but a light crop. It will be the lightest vintage for a number of years past without question.

San Bernardino.

FROM STOCK TO FRUIT.—Ontario *Record*, July 31: A large flock of sheep passed through town Monday, going East. Eight years ago Ontario was part of a sheep ranch, and the only thing within the present colony limits in the way of artificial vegetation was the group of eucalyptus trees on A street. To-day we have over 4000 acres of orchard and vineyard, and a band of sheep constitutes a first-class sensation for the children that play on our streets.

San Diego.

BEET ANALYSIS.—*San Diegan*, July 28: Secretary Nolan of the Chamber of Commerce has received another letter form John D. Spreckels, giving analyses of beets grown in this county and forwarded to be tested for their sugar-making qualities. The beets were grown by C. M. Schwarzauer of Linda Vista, John Schussler of Tia Juana, and Viric Thompson of Lakeside. According to the analyses, 100 pounds of beets from the different samples would produce sugar as follows: From Linda Vista, 1 51 pounds; from Tia Juana, 6.6 pounds; from Lakeside, 11.3 pounds.

LARGE YIELD OF HONEY.—San Diego *Sun*, July 28: Walter Brothers of Temescal have taken from a single hive this season 150 pounds of honey, and they expect to take 80 pounds more from it before the season is over, making 230 in all.

DISTRICT FAIR —The El Cajon Horticultural Society have issued a call for a mass meeting of the citizens of El Cajon and adjoining valleys for the purpose of arranging for a district fair some time during the month of August.

PROLIFIC POTATOES —San Diego *Sun*, July 29: P. N. Soule of Oneonta brought in some wonderfully fine potatoes, of the Burpee Extra Early. In March of last year he ordered one pound of seed from Philadelphia. He planted the same the first of April and dug in June, the yield being about one bushel. Last winter these were planted, and the yield, dug about a month ago, was two tons, a record without parallel.

APRICOT CROP.—Escondido *Times*, July 31: The apricot crop is about all taken care of by this date, and the peaches will hold the market for awhile. The ruling prices for apricots and peaches are very satisfactory to the fruit-growers, netting from $100 to $200 per acre for four and five year old trees.

IRRIGATION DISTRICT.—*Times*, July 31: An irrigation district has been organized at Anaheim. The people became so tired of the Anaheim Union Water Company, that has so long furnished them with water (it being one of the oldest water companies in the State), that they have organized for relief. They propose to buy the franchise and ditches of said water company. Here is a pointer for the people of this district, and it is a very solid argument in favor of districts owning, building and controlling their irrigation systems.

San Joaquin.

STEALING WHEAT.—Stockton *Independent*, July 30: The officers have discovered the modus operandi of the parties who have been pilfering wheat for several weeks past. At night while box cars were standing on the switch track near the warehouses, the thieves would manage to gain entrance into the warehouses by wrenching the lock, and they would transfer several sacks from the building to the car. The following day the car would probably be switched off to some other location. The schemers would give the number of the car to Fritsch and it was his part of the business to get the wheat from the car and sell it.

Santa Barbara.

THE PECULIAR SEASON.—EDITORS PRESS:—Hot weather the past few days, the thermometer occasionally reaching the nineties. Fruit abundant, apricots selling sometimes at a cent a pound; sometimes suffered to rot under the trees. My blackberries commenced to ripen ten days later than usual, and then mostly ripened all at once, and many bushels of them went to waste, as I could not get pickers and buyers fast enough. The season is peculiar—unprecedented in my experience of California climate; extremely dry and lumpy on the surface and abundantly moist deep in, and crops mostly very tight. I saw several patches of fine-looking Lima beans in Carpinteria, and that is nearly all the good crops I have seen this season. On the whole, farmers are only moderately well off this year.—S. P. SNOW, *Santa Barbara, July 28th.*

Santa Clara.

FRUIT PRICES AT CUPERTINO.—S J. *Herald*, Aug. 1: There is much activity prevailing in the fruit business out our way, and buyers are active seeking contracts. Dried fruits seem to be the chief demand, and Mr. L. Sellinger was offered the other day 9 cents per pound for his prune crop, dried, and many expect that 12 cents will be offered before the season is over. Everything in green fruit is in demand, and holders of Muscat grapes will realize handsomely. Wine grapes are by no means backward in the general advance. A prominent vineyardist says that he was offered $12 per ton all around for his grapes, and the season yet in the future.

Santa Cruz.

BEET SUGAR —Watsonville *Rustler*, Aug. 2: Matters are assuming a lively appearance in and around the beet factory. The graders on the new railroad have reached the factory yard, and a big gang of men is employed in erecting a large double bin and other buildings necessary for handling this season's beet crop. The employes already engaged at the factory number 60, and the force will be increased from time to time, as necessity demands, until the season opens. It is expected that the railroad will be completed on or about the 1st of September.

THE FOURTEENTH DISTRICT FAIR, Sec'y Gordon informs us, will open Oct. 15th and close Oct. 18th.

Solano.

PEAR PURCHASES.—Dixon *Tribune*, Aug 2: J. W. Gates of Vacaville purchased the pear crops of several orchards in this vicinity. The exact price paid in each instance is not known, but it is in the neighborhood of $30 a ton.

LOSS OF TREES.—EDITORS PRESS:—The loss of trees from "sour root" is a leading topic and one giving rise to many diverse estimates. While some have lost nearly all their trees, other large orchards have a loss too small to figure a percentage. Mr. Robbins of Suisun and Vacaville, whose interests are very heavy, says he has spent eight days' steady work to find out the percentage of loss in Suisun and Vacaville, and that it will average less than five per cent.—F. S. C.

Sonoma.

HAY CROP.—Santa Rosa *Democrat*, Aug. 2: The hay crop in this county is unusually heavy this season, but the quality is not up to the standard. As a consequence, the price will range high for the superior article.

HOP CROP —*Democrat*, Aug. 2: M. J. Netter informed a *Democrat* reporter that while the hop crop of the county will not be as large this season as last, the harvest is destined to be one of the most profitable for years. The hops are of a better quality and larger in their development, while the foliage is scanty. Last season the crop of the county was about 6700 bales; this year it will not be over 6000. Eighteen cents is the price offered at present, but the growers seem to think that 20 cents will be paid before the crop is harvested.

HOP GROWERS. — Santa Rosa *Republican*, July 31: At the annual meeting of the Sonoma County Hop-Growers' Association held in Santa Rosa Saturday afternoon, there was a good deal of informal talk in regard to the general outlook of the crop indulged in, and the tone of the discussion indicated that all expected a very good return from their crop. The price for picking white hops, on motion of Mr. Solomon, was fixed at $1 per hundred, growers of red hops to fix their own rates. The association agreed, by motion, that if the State Hop-Growers' Association will change to and adopt the New York standard of tare on hops of 3½ pounds, to adopt the same as a standard, and that the State Association be required to adopt that standard. The communication from the Donahue road agreeing to make the following rates was read by the secretary: Santa Rosa, 18 cents; Healdsburg, 27; Sebastopol, 22; Green Valley, 30; Carrigers, 20.

Stanislaus.

FIELD FIRE.—Modesto *News*, Aug. 1: On Friday afternoon last a fire was started from Wilson & Nye's traction engine on the ranch of E. L Sturgeon, eight miles from Newman, and destroyed about 1200 acres of fine wheat. The grain was insured for $10 per acre.

Sutter.

LARGE YIELD.—*Farmer*, Aug. 1: The productiveness of the soil along the Sacramento river is shown by the following yield of barley from some lands in that section that were not overflowed last winter: Chas. Wood, near Meridian, has harvested 40 acres from which he received 23 sacks to the acre. Geo. Wood, also a resident near that place, harvested 20 sacks to the acre from a 30-acre field.

BANKS CAVING.—*Farmer*, Aug. 1: The long wet season last winter softened the soil to a considerable depth, especially along the banks of our rivers, causing the current to act more effectively on the lower strata and resulting in the caving off of the most exposed places. Along the Sacramento river, in many places, the bank has caved in as much as 15 feet, taking portions of the levee with it. At the warehouse in Meridian, a bad cave took place last winter which will result in compelling the owners to move the building farther back from the river. The levee in many places cannot well be made safe unless it is built some distance inland.

Tehama.

HIGH PRICES FOR DRIED FRUIT.—Chico *Chronicle-Record*, Aug. 1: We are credibly informed that on Wednesday last there were at Vina five different agents representing as many firms, endeavoring to contract for the dried peaches there being made. Competition ran high, and 2½ carloads were contracted for, some of it as high as 20 cents a pound. It seems that some of these fruit dealers have contracted in the East to supply a certain amount and find that it will be almost impossible to meet the engagement at any price. Last year the dried peaches at Vina were sold at three cents a pound—indeed they could scarcely be sold at any price.

Tulare.

RABBIT DEPREDATIONS —*Register*, Aug. 1: We hear much complaint about the depredations of jackrabbits down upon the plains. They are said to be thicker than ever before, and now that the grain fields are being cleared off, they are devouring every green thing they can discover. Here is an opportunity for concerted action. If all hands will put out poisoned watermelon liberally, thousands can be killed at small cost to each, and what are not done away with in this way should be finished up with big drives this fall.

DRY FEED BURNED.—*Times*, July 31: A fire at Adams Flat has destroyed about 40,000 acres of dry feed. The fire is said to have been started by a Portuguese. At last advices the fire was rapidly extending toward Camp Badger, and it was feared that B. Pendola and others would be burned out. If Dry creek on the east and the county road on the north does not stay the flames, they will extend into the pineries, in the vicinity of the Moore & Smith and the Fewell sawmills.

Ventura

REMARKABLE GROWTH.—Ventura *Free Press*, Aug. 1: Two years ago the station of Montalvo was a barley field. In the first 21 days of this month passenger tickets to the value of $300 were sold. During the season there have been shipped 500 tons of fruit.

Yolo.

DRIED GRAPES.—*Yolo Democrat*, July 31: Agents of Eastern and San Francisco houses are offering prices for dried grapes, which, in view of the price of wine and wine grapes, are extraordinary. We hear of houses that are contracting for any quantity of dried grapes at as high as $65 per ton. This is equal, above all expenses, to $16 per ton for the fresh grapes. Nearly all purpose to dry, and it looks now as if the greater part of our common black grapes would be disposed of in that way.

GRAPE CROP, ETC.—Woodland *Mail*, Aug. 2: Yolo county vineyardists are already preparing for the grape-picking, packing and shipping season, which will soon be upon us. The yield promises to be heavy this year, and growers expect a prosperous season. Sweetwaters are now ripe and on the market, also other varieties of early grapes. The majority of the vineyardists have already disposed of their grape crops to San Francisco and Eastern agents, who have visited our county in large numbers during the past week or two.

Yuba.

MARYSVILLE FAIR.—Briggs *Argus:* The 13th District Agricultural Fair will be held at Marysville, commencing Tuesday, Sept. 23, and continuing five days. Premiums and purses aggregating $100,000 are being raised, and fruit-growers are offered liberal inducements to compete in the horticultural department. The races promise to be the best ever held in the 13th district. Accommodations are provided for an immense crowd of people.

State and County.

El Cajon Raisin District.

Editors Press:—A few miles east of San Diego is the Valley of El Cajon (the box), perhaps the best known valley in the county. It is also in some respects the oddest. Standing upon the hills or mesas that entirely encircle it, one can readily see whence came the name. Looking down we see a huge "box" of perhaps 7000 or 8000 acres almost circular in shape without any water-course, and at first sight seemingly without an outlet. The winter rains, however, find their way through the north side of the valley into the San Diego river.

A local writer says: "Here we find boxes within the box, each round-topped knoll helping to mask some small cajon that nestles at its base. They break upon one unexpectedly, a sudden gap between wild oats ridges disclosing at frequent intervals a plat seemingly planned by nature for cultivation, with perhaps a pretty cottage and emerald vines and spreading groves adorning it of whose existence the traveler by steam would never dream." This valley, first a sheep range and next a barley field, is now in fair shape to be called a vineyard.

Perhaps the oldest fruit-grower in the valley is Major Levi Chase, and at his country home, the Villa Cajon, may be found quite a variety of fruits, including apples, peaches, apricots and prunes. Much of this fruit is dried on the place. There are also quite a number of raisin grapes and English walnuts. The major also grows oranges quite extensively, shipping the past season by the car.

Adjoining the Villa Cajon is the home of Mr. Uri Hill, another of the pioneers who came, I believe, in 1869. The fruit crops grown by Mr. Hill are in variety essentially the same as Major Chase's. He has, however, devoted much of his time to the breeding of fine horses, and has done much to better the grade of horse-flesh used throughout the valley. Next to Mr. Hill is the H. T. Christian ranch, Mr. Hill's first effort, and consequently one of the oldest improved places in the valley. West of this are the lands of Dr. C. M. Johnson, who has about 115 acres in raisin grapes and 50 acres or 3600 of orange trees. He is here making for himself a very pleasant home.

West and north of this are the lands of Mr. S. M. Marshall and the El Cajon Vineyard Co. Mr. Marshall personally has about 115 acres in raisin grapes and 100 acres in trees, 35 being in olives and 65 in oranges and lemons; of trees a total of about 7000. As manager of the El Cajon Vineyard Co., Mr. Marshall has under his care about 400 acres in grapes besides his own.

On the opposite side of the valley is, I believe, the banner raisin vineyard of Southern California in size. This, the "Boston Ranch," Souther & Crosby owners, is managed by Mr. J. Donald and consists of 572 acres, all of which, with the exception of 42 acres of oranges, is planted to grapes. The vines were planted 10x12 on this ranch, but having decided to irrigate, the vines were doubled, making them 6x10. Last winter 80,000 vines were thus set between. The water used for irrigating is obtained from the S. D. Flume Co., of which I will give further mention. The water is carried to and partly through the vineyard in flumes 8x10 and 8x12 inches in size. Of these there are 14,000 feet. It is then taken up by riveted iron water-pipes. In exact figures there are of these, of 8½ inch, 11,552 feet; 4-inch, 14,029 feet; and of 2-inch, 2100 feet. Although late in getting the pipe, nearly the whole ranch will be irrigated this season. About two miles of roadways and avenues have been bordered with palm, cypress and other ornamental trees.

For packing, Mr. Donald has a packing-house, 50x80 feet, two-story, to which he is now adding a single story, 26x66, for stemming and sweating. He has also provided some 40,000 trays and sufficient sweat-boxes, and is ready for the crop, which he estimates at from 12 000 to 15,000 boxes of raisins. This vineyard is all young, some not yet bearing anything at all.

Mr. J. T. Gordon, president of the Sweetwater nurseries, has about 150 acres of raisins and 30 acres of citrus fruits. He is demonstrating in a practical manner the utility of the foothills for vineyard purposes, by planting some vines on the same, which are coming on in a satisfactory manner. Messrs. C. B. and H. S. Richards have about 200 acres in grapes. The Cowles estate, which is one of the oldest in the valley, has 140 acres in raisins and 40 in mixed fruits, all bearing. The Holt ranch has perhaps 150 acres in grapes, besides some fruit. Among the other larger tracts of 40 to 100 or more acres are those of Messrs. Asher, Gilbert, Hall, Hawley, Peel and Pennel. These are all principally raisin grapes. Many acres more are held in smaller tracts. Very few ranches except the "Boston" are as yet irrigating. The water mostly used for irrigating is obtained from the San Diego Flume Co., whose reservoir is some 30 miles above, among the Cuyamaca mountains. The flume, in its course toward the city, half encircles the valley, giving abundant opportunity to those wishing to irrigate to do so.

Raisin Trays and Sweat-Boxes.

As some difference exists in sizes and kinds of material used for trays and sweat-boxes, I give sizes used here, which I believe are Riverside sizes also. These items (of trays and boxes) have been kindly furnished by Mr. J. M Edmiston, superintendent of the El Cajon Vineyard Co.

Trays are 2x3 feet, made of four ⅜ inch boards nailed to end cleats ⅞x1¾ inches. Tray boards are usually redwood and cleats pine. The sweat-boxes are 2 feet 1 inch by 3 feet 1 inch in the clear and 8 inches deep. Sides and ends are ¼-inch stuff; the bottoms of ⅜-inch stuff, all pine.

The sweat-boxes, you will observe, are one inch larger each way than the trays. This permits of the easy removal of the trays from the boxes. In storing, after the season is over, much room is thus saved by filling the boxes with trays. Many use the common shake, but this being too light is very unsatisfactory.

The vines are planted all widths, from 6x10 to 12x12. About 3300 acres are in vines, almost every acre of which is raisin grapes. Perhaps 300 to 400 acres are in fruit, which includes everything from a lemon to an apple. With all due deference to the vine "experts" who last season had the vines dying (in their minds), I must say the popular opinion is that they should go into some other business. The report from all sides of the valley is the finest of crops and the healthiest of vines.

El Cajon, 15 miles east of San Diego, is connected with the same by rail, telephone and telegraph. Since the advent of the railroad, some 15 months ago, the valley has made marked progress and is still rapidly improving.

Yours, J B H.

El Cajon San Diego Co.

The Field.

The Snoqualmie Hop Ranch.

The ensuing description of the Snoqualmie hop ranch appears in the *Washington Farmer* for July 25th:

It is owned by a company, incorporated, with capital stock $120,000. Over $200 000 have been expended in improvements. The principal stockholders are Richard Jeffs of White River, president; Geo. W. Gove, vice-president and manager; H. Dutard of S. F., treasurer; G. K. Baxter of Seattle and H. E. Levy of Victoria, B C.

The company began operations here in the spring of 1885. That year they planted 200 acres to hops, and they now have 310 acres of the finest-looking hops that mortal eyes ever rested on. They also have over 100 acres of timothy hay, yielding three tons to the acre; 13 acres in potatoes, and several acres in other vegetables; will harvest 4000 bushels of oats; they have the handsomest orchard in the State, covering 20 acres, and containing apple, pear and plum trees so large that when the pioneers of the State recently held their reunion picnic, they had their festivities under their umbrageous boughs, laden with the choicest of fruits. These trees were planted by Jeremiah Borst, 23 years ago. He now resides at his home adjoining the east end of the great hop ranch. The company purchased of Mr. Borst 700 acres, and obtained 500 acres more of other parties.

The average force employed on the ranch is 20, and during the month that the vines are being tied up to the poles, there are 40 men on the pay-roll. During the month that picking is being done, 800 Indians and 100 white men are employed. From appearances now, this ranch will harvest this year 3000 bales of hops of 200 pounds each. Buyers generally come to the ranch and contract for the crop. Last year the product sold at eight to 9½ cents. Hops are now worth 18 cents; and the 600,000 pounds that the ranch will turn out will command at present prices the neat little sum of $108,000.

Capt. Geo. W. Gove, the manager of this immense plantation, says that, from his experience, and, in fact, from the most authentic statistics, the best time to sell hops is at the time of picking, when a great many buyers from different directions are vying with each other. Capt. Gove says that on old and new contracts over 20,000 bales of this year's crop in this State have been contracted at an average of 14 cents. By "old" contracts is meant those contracts made previous to this year. Some growers contract several years ahead.

The Snoqualmie hop ranch is situated in a natural prairie, surrounded by a dense forest. The soil is a deep loam. The Snoqualmie river flows through the hop-fields, and in bygone ages, before the barrier of rock over which leaps the great falls was reduced to its present level, the site of this ranch was evidently a lake.

The day after our arrival, Capt. Gove hitched up a double-buggy team and drove us three miles through the plantation, which extends almost to the new town of South Bend on the east. We viewed the splendid fields and the improvements with delight. We found 15 hop-houses, two of which are double and five are triple, making on the whole 27 kilns, each 24 feet square. Twenty sheds are distributed at convenient points on the plantation for shelter of Indian pickers. A dozen houses are occupied all the year by Indian families employed on the premises. On the railroad is a warehouse 60x80 feet in which the baled hops are stored for shipment. Leading from this warehouse is a nicely turnpiked driveway to the hotel, a three-story building, situated in the midst of the orchard, and surrounded by a charming lawn, with beds of lovely flowers and rare plants. * * * To the east of the hotel is a boarding-house for employes of the farm, two stories, 36x70 feet, with L 30x36 feet, and between this boarding-house and the hotel is the company's store, 40x100 feet, with warehouse on one side the full length of the store. The average stock of general merchandise is $18 000. Across the lane from the store is a large barn, and near the center of the farm is another. The one near the store is a very complete structure, 90x120, three stories high. Near by are the blacksmith and wheelwright and carpenter shops, and the sheds in which stand the thrashing machine and engine and the wagons and carriages.

This is conceded to be the largest hop ranch in the world. Some years ago, A. J. Luce & Co., at Cazaville, Canada, had 400 acres in hops; but they have since reduced the area under cultivation, and this leaves the Snoqualmie ranch at the head of the list.

California's Stallions.

I beg to announce that, with a view of perpetuating the forms and characteristics of the leading stallions of California, I am issuing a series of lithographic likenesses. Each portrait issued will be an acknowledged likeness, the result of a close study of the horse and an artistic treatment of the subject In order to secure for the series an immense advertising value, from a breeder's point of view, 4000 copies, at least, of each portrait will be issued.

Terms, $100 for first issue of 100 copies. In quantity, for advertising purposes, copies will be furnished at low rates.

H. Boyd, Artist.

268 Golden Gate Ave,, San Francisco.

Wanted, Situation

As foreman of a large fruit ranch. Have had 25 years' practical experience in growing, packing and shipping fruit. Was with John Bidwell, Chico, Butte county, Cal., two years.

[COPY OF LETTER FROM GEN. BIDWELL.]

Chico, Cal., July 14, 1890.

To whom this may concern: The bearer, Mr. J. Luther Bowers, having been in my service for some time, several years ago, as a practical fruit-grower, it gives me pleasure to say that I found him competent and reliable in all respects, and as such I very cheerfully commend him to the kind notice of all persons. Very respectfully,

John Bidwell.

Can also give good Eastern references. Address,

J. Luther Bowers,
Herndon, Fairfax county, Virginia.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, $1; 10 mos., $2; 15 mos., $3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Dissolution of Partnership.—The dissolution of partnership between James M. Haven and Arthur F. Low, under the firm name of Haven & Low, is announced. James M. Haven will continue the practice of law at the former office of the above firm, No. 530 California street, in partnership with his son, Thomas E. Haven, under the firm name and style of Haven & Haven. Judge Haven has been known to us as an able and reliable attorney for over a quarter of a century and we bespeak for himself and son the continued patronage so well deserved.

For Sale.—Valuable land in Tulare county artesian belt. 160 acres, 1½ miles southwest of Tulare city; 480 acres, 7 miles southwest of Tulare, with large flowing artesian well, well-finished two-story horse, large barn, etc.; 160 acres, 2 miles southwest of the above; 480 acres 3 miles southwest of Pixley and about 4 from Alila. For sale by owner in lots to suit at low prices, low interest and very easy terms. For further information, address LAND OWNER, Box 2517, S. F., or A. T. DEWEY, No. 220 Market street, San Francisco, Cal.

Ranch Wanted.

Small general farm, partly improved; not less than 40 acres and costing not over $2000; within few miles of rail or water transportation. Address "Ranch," care Pacific Rural Press.

Track and Farm.

California-Bred Runners.

During no year in the history of the American running turf, says a *Chronicle* writer, have so many records been beaten as during the present racing season. From seven-eighths of a mile to one and one-half miles all former performances have been cast in the shade by the equine heroes and heroines of 1890. The latest record-breaking feat was that of Raveloe in a mile race yesterday over Monmouth course at Long Branch, N. J., the colt traveling the distance in 1:39¼—one-quarter of a second faster than the time made by Racine on June 28th last at Chicago. Both Raveloe and Racine are California-bred colts, and the mile-record breaker is by Joe Hooker, dam Illusion, by Alarm. He is bay in color, three years old, and his previous performances would lead one to think that there had been any number of colts superior to Raveloe bred on Theodore Winters' place. The record of Ten Broeck—1:39¾—stood for 13 years before the Californian, Racine, cut therefrom a quarter of a second. Raveloe and Racine carried 107 pounds each in these record-breaking races, and George Covington had the mount on the former yesterday.

Raveloe does not receive from horsemen the credit of being the hero of a grand performance. The race was run on the straightaway course, and a comparison of the race with those run on the oval tracks does a marked injustice to former record-breakers, unless an allowance of at least three seconds is made in favor of the circular track.

The Trotting Record Lowered.

Another record stands to the credit of California. Yesterday Adonis passed a second heat at Cleveland in 2:11½—the fastest mile ever made by either pacer or trotter in an actual race. Adonis was bred by Count Valensin, and was sired by Sidney, sire of Gold Leaf, 2:11¼, Fleet, 2:24½, and others. His dam was Venus, said to be by Captain Webster.

Previous to Adonis' effort the record was held by Little Brown Jug, who covered the track at Hartford, Conn., on August 24, 1881, in 2:11¾.

For the trotting brigade Maud S established a mark of 2:13½ in 1880, and although thousands have aimed at it since, none have succeeded in tearing it down, unless Sunol's 2:10½ made in the Stanford stakes can technically be construed into a record made in a race. She had a walkover for the event and made her mark while trotting for the stakes, but the affair was conducted with the usual preparations that accompany an effort against time.—*Post.*

Plan for Corrals Wanted.

Editors Press:—Can you or any of your subscribers give me a plan of two round corrals with connecting chute—the chute to be used for haltering and branding horses and cattle? It may interest other subscribers as well as yours truly, S., *Contra Costa Co.*

[The information would surely be of general interest. If readers will write us descriptions and give sketches, we shall be pleased to illustrate their letters with engravings.—Eds Press]

High Prices for Thoroughbreds.—The enormous amount of money in the market for high-class thoroughbreds nowadays is simply astonishing, as witness the recent four-days' sales at Newmarket, when the fabulous sum of £90,000 was realized. At the sale of the Queen's yearlings at Hampton Court, Lord Marcus Beresford, acting on behalf of Baron Hirsch, established a new record by giving 5500 gs. for a sister to "Memoir." This is a fancy figure, but the filly is said to be a very good one, Lord Dudley drew a check for 12,000 gs. to pay for six, two of which were knocked down to his lordship for 3000 gs. each, one for 2100 gs., and the others from 1500 gs. upward. Colonel North gave 3200 gs. for a filly by "St. Simon;" Mr. Hamar Bass 3000 gs. for a sister to "Energy," which was sent up as a part of the Yardley stud, Mr. Douglas Baird's bid of 2000 gs. secured an own brother to "Geologist," and a yearling, a brother to "The Rejected," was taken by Mr. Cooper at 1500 gs.—*London Farmer.*

Selling Horses by Electric Light.—Charles Reed, who owns the Fairview stud at Gallatin, Tenn., and who for many years was proprietor of the Saratoga, N. Y., race-course and grounds, has concluded to sell his yearlings hereafter at night by electric light in Tattersall's of New York, which has for its auctioneer William Easton. Owners of thoroughbreds and racing enthusiasts anxious to purchase youngsters can now attend the races in the daytime and occupy a box at Tattersall's in the evening. That California breeders will follow in the footsteps of Mr. Reed, the originator of this novel scheme for getting a larger crowd out to buy horses, and therefore much better prices, is not to be doubted.

There are more than 22,000,000 acres of unsold land in the Carson Land District of Nevada State, says the Reno *Gazette.*

The Veterinarian.

Pigs with Cough.

Editors Press:—Kindly tell me what to do for pigs affected with cough. They are 14 weeks old.—J. H. D.

A cough is only a symptom of a diseased condition, and not a disease of itself. Cough in pigs may arise from stomach derangement, intestinal worms, irritation of the air passages from parasites, from cold, bronchitis, or disease of the lung structure, each of which would require a different method of treatment.

If the pigs have got cold from exposure, try the following: Chlorate of potash 1 drachm; nitrate of potash ½ drachm; powdered aniseseed 1 drachm. Dissolve in milk sweetened with molasses. Provide shelter and a good bed.

Management of Donkeys.

The donkey is perhaps the hardiest of all domestic animals, and rarely ails much if it gets anything like fair treatment. It is quite unusual for it to be lame, and it more often succumbs to old age or ill-treatment than to actual disease. There are so many who have never seen a dead donkey that I think the prevailing impression is that they do not die.

For children's work, except during the winter months, a donkey should be able to find his living in the fields, and if this is supplemented with a daily feed of oats, it would do well. A shed, if water-tight, will answer the purpose of a stable as well as a more elaborate building. During the winter, oats and hay should be the diet. Carrots, or even fresh garden refuse, will also be useful.

Canine Mange.

Will Dr. Buzard please give me a good remedy for mange in the dog?—V. B., *S. F.*

Sulphur sub., 8 ozs.; whale oil, 8 ozs.; oil of tar, ½ oz.; ung. hydrarg ½ oz.; to be well mixed and applied. Before any application is used, it is necessary that the animal should be well washed with warm water and soap. Repeat in three days if required.

Horse's Leg Injured by a Kick.

Editors Press:—Some weeks ago one of my mares got a kick on her leg bone below the knee. It swelled and I poulticed it, opened it once or twice, applied iodine, but there remains a hard lump. It seems as though a callous had formed on the periosteum. Can any reader tell of a remedy?—Edw'd Berwick, *Monterey.*

It is a case of exostosis—*bony growth from bone*—as a result of periostitis. In the first place it is simply lymphy material thrown out, but later on earthy matter is deposited, and this in time becomes converted into bone. When once exostoses have assumed true bony character, unless surgically removed, they will remain as part of the body, whatever treatment may be adopted. The application of blisters will promote absorption of any surrounding deposit.

A. E. Buzard, M. R. C. V. S. L.
11 Seventh St., S. F.

The Improvement of the Rivers.

We alluded recently to the cruise of the River Commissioners C. F. Reed, J. J. Crawford and C. E. Grunsky, appointed by the Governor under authority of an Act passed by the last Legislature, and instructed to examine the navigable rivers of California for the purpose of collecting information upon which can be based a plan for systematic protection and preservation of waterways and reclamation of low lands. This examination of the rivers and consultation with riverside residents has been completed and the Commissioners will endeavor in their report to show in a general way how different sections of the river should be treated, but will not have time to go into detail. The main difficulty, and the one that they will endeavor to meet, is the division of the work and expense between the United States, the State and the land-owners. They will quote figures showing the value of the river shipping and the great commercial importance of the Sacramento and San Joaquin rivers. The law under which they are acting requires them to complete their report by the 1st of October. The work of inspection is now finished, with the exception of some special examinations at certain points.

Heavy Rains at the South.

San Bernardino, August 5.—Four hours' rain fell to-day, preceded by an unusual amount of thunder and lightning. Fruitmen report some damage to the grape crop. If the weather continues cloudy, the raisin crop will be injured by rot. In Old San Bernardino, the rain was accompanied by a heavy wind, which blew down many trees and destroyed considerable fruit. The fall of rain was much heavier in the latter place.

Tucson, August 5.—Heavy rains have fallen during the last ten days. The rivers are all swollen, and there has been much destruction of property in the valleys. The Santa Cruz is 1½ miles wide opposite Tucson. Many thousand dollars' worth of garden-truck has been lost, and there have been several narrow escapes from drowning, though nobody has thus far been lost. The Santa Cruz river is again flooding this valley, and this evening is higher than at any time during the flood.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING JULY 29, 1890.

433,116.—Grading Scraper — L. E. Ashley, Stockton, Cal.

433,193.—Wheel—Daniel Best, San Leandro, Cal.

433,072.—Valve and Faucet—A. H. Dauchy, San Diego, Cal.

433,198.—Valve and Faucet—A. H. Dauchy, San Diego, Cal.

433,165.—Water-Current Motor—Geo. R. Driggs, S. F.

433 201.—Die for Cutting Metal Screws—Geo. Gibbs, S. F.

433,172.—Bicycle—John Jett, S. F.

433,173.—Velocipede—John Jett, Glen Blair, Cal.

433,130. — Presser Foot for Sewing Machines—Crapo Leak, S. F.

433,131.—Aging Wine—Geo. H. Malter, S. F.

433,133.—Washing Machine—E. McDonald, Willow, Cal.

433,305 —Car Coupling—W. Portlock, San Diego, Cal.

433,216.—Electric Train Signal — A. W. Reppy, Oakland, Cal.

433,098.—Combination Tool—T. P. Schwartz, Stockton, Cal.

433,104.—Feed-Water Heater—A. R. Smith, S. F.

433,110.—Game—Dorner Walsh, S. F.

The following brief list by telegraph, for Aug. 5, will appear more complete on receipt of mail advices:

California—Alexander Johnson, Oakland, assignor to Marshall Improved Furniture Co., San Francisco, sash balance; Almon Ames, assignor to R. J. Davis, San Francisco, pile covering; Charles L. Burbeck, Fort Bragg, oil cup; Alvin T. Church, East Oakland, sash holder; Gertie D. Cluff, Lodi, garment supporter; Gilbert A. Cunningham, San Francisco, safety guard for railways; Samuel H. and C. L. Miller, Stockton, hay press; George W. Parker, San Francisco, street pavement; Assaria Rewrick, San Francisco, traveling block; Charles Silberstein and J. Amos, Los Angeles, smoothing iron: Clara Turney, Sausalito, horse-controlling device; William A. Zumwalt, Farmington, gang plow and harrow.

Oregon—Frank Batter, assignor of one-half to L. Clemensen, Marshfield, device for drawing beer; Richmond P. Smith, assignor of one-half to T. G. Owen, Marshfield, tool for manipulating insertible saw teeth.

Washington — Emma C. Hudson, Seattle, slate sponge.

Arizona—Thomas J. Thorp, Chicago, Ill., assignor of three-fourths to D. J. Brannen, Flagstaff, and G. M. Lockwood, Washington, D. C., wheel.

Note.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

California Fruits in British Columbia.

Mr. Thomas Cunningham, President of the British Columbia Agricultural Association, writes as follows concerning our recently published book: "I have California Fruits by Wickson. It is a truly valuable work; the best I ever read."

Dederick's Hay Presses.—P. K. Dederick & Co. send us a copy of their special circular with illustrations and full descriptions of their various styles of hay presses and other implements and machines. It is a very creditable publication and can be had by addressing the firm at Albany, N. Y.

Buggies, Buckboards, Spring Wagons, Surreys and Road Carts. Write for our new catalogue. Baker & Hamilton, San Francisco and Sacramento.

GRAND OPPORTUNITY FOR SUBSCRIBERS!

READ WHAT FOLLOWS!

VALUABLE PREMIUM.

The article we are going to give away is no cheap or common-place affair. On the contrary, *it is the most valuable gift ever offered by a newspaper to each of its subscribers.*

It is something that every family ought to have, and which they will be glad to get and keep; namely, A Medical Book for Home Use, *the best work of the kind that has ever been printed!*

IT IS ENTITLED

OUR FAMILY PHYSICIAN.

SIX INCHES WIDE.

TWO INCHES THICK.

Sells in the bookstores for THREE DOLLARS. It is so popular that 50,000 copies have been sold in the last six months.

The book contains 480 pages, and in form is what is known as a royal octavo, that is (to give a better idea of its size), it is eight and one-half inches long, six inches wide, and two inches thick. It is printed on extra heavy paper and is handsomely bound in cloth, with embossed covers and gilt-lettered back.

Another Thing (and this is why we think the book worthy of our use in this way), it is different from all other works of the kind ever published, and the difference is such that it makes it more valuable than any or all of them!

This is shown by the following points in which it stands alone and without an equal:

FIRST—It teaches those who have it how to tell what the matter is when a person gets sick!

All similar books tell what to do if you know what the disease is. This book tells you how to detect the disease, and then what to do for it.

No other book published is up to this.

SECOND—When a person is really attacked by a *dangerous disease*, it enables you to know the fact, and in such cases its advice is: "Send for a competent physician at once." But in all ordinary cases, such as can be easily cured (and most of the ailments in a family are of this kind, if only you could recognize them) it gives full directions for treatment. The point is, that it teaches you to distinguish between a *dangerous* and a *trifling* disease, and tells you when it is necessary, and when *not* necessary, to call a physician.

No other book equals this.

THIRD—In its directions for treatment it is not confined to the practice used by any *one* class of physicians; but it gives, *separately*, and for each disease, the methods used by each of the different "schools" of medicine; and in all cases the prescriptions are most eminent men in their respective modes of practice. This makes the work especially suited to the needs of every family, no matter what "school" of medicine they prefer.

No other book published does this.

Besides this, there are three chapters in the work which are worthy of special mention, namely, those on "Diseases of Women," "Diseases of Infants," and "Care of the Sick."

The first of these is a model of its kind. It is chaste in language, contains no disgusting pictures for children to happen on and be over curious about, and taken altogether is the most practical, sensible and straight-forward treatise upon this delicate subject that has ever been printed.

This chapter alone is worth many times the cost of the book to every mother, even if it had to be purchased at its regular price.

The other chapters referred to are equally well written and valuable.

OUR OFFER.

To all old subscribers who will renew their subscriptions for 15 months in advance at $3.00, *and get us one new subscriber at $3.00* [for 15 months], we will give a copy of the book. The new subscriber that the old subscriber gets will also receive a copy of the book.

To all delinquents who will pay arrearages and $3.00 for 15 months in advance, and get us one new subscriber at $3.00, we will give a copy of the book, with *fifteen months* subscription.

To present subscribers who are not in arrears we will give a copy of the book and 15 months subscription in advance for $3.50.

All subscribers who want the book sent by mail must send TWENTY CENTS EXTRA.

REMEMBER!

You will get a splendid paper—*worth more than double its price*—besides the remarkable premium offered.

The book has retailed at $3.00. SUBSCRIBE NOW. *You cannot afford to miss this chance*—it rarely occurs in a lifetime.

The lowest price we will sell the book without the paper is $2.00. Postage and mailing 25 cents extra.

— WE OFFER —

THIS GRAND OPPORTUNITY!

Because we anticipate subscriptions will be continued for years on the paper.

Important Auction Sale

— OF —

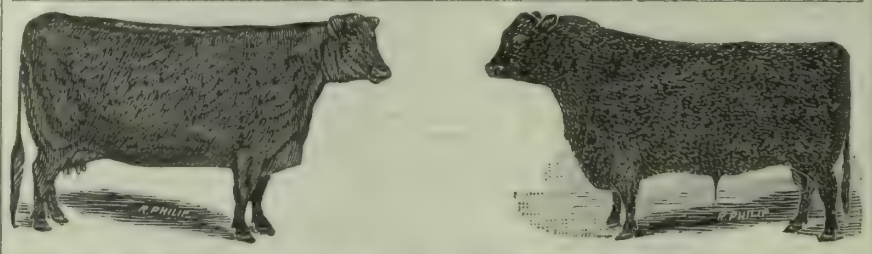
Standard and High-Bred Trotting Horses

— AND —

THOROUGHBRED HOLSTEIN CATTLE.

Property of J. H. WHITE, Esq., Lakeville, Sonoma County, Cal.

On Thursday and Friday, September 4th & 5th, 1890.



At RAILROAD STABLES, Cor. Turk and Steiner Sts., San Francisco.

On account of a contemplated change in business, we are authorized by Mr. White to dispose of all the high-bred stock upon his noted breeding farm at Lakeville, Sonoma County. This comprises over forty head of high-bred Trotting Stallions, Brood Mares, Colts and Fillies, most of them standard and all exceptionally fine individuals. They consist of the get of Stallions by Electioneer, Director, Antevolo and other noted horses. Most of the brood mares are with foal by Hernani, one of Electioneer's most prominent sons. Several have been bred to Director. Taken collectively they are, in size and form, the finest looking lot of trotters yet offered in California, and their breeding is upon the most approved speed lines.

The Cattle comprise over one hundred head of thoroughbred registered Holstein Cattle. The progenitors of this herd were selected of the choicest strains upon the famous breeding establishments East, and have been judiciously crossed with a view to develop to the fullest extent the milking strains. Mr. White has expended a large sum of money and great care in perfecting this band of cattle, and can justly claim it as one of the superior herds of the United States.

Catalogues are being prepared and will be sent on application only. Horses and cattle may be seen at ranch, six miles from Petaluma.

KILLIP & CO., Auctioneers, 22 Montgomery St., San Francisco.

General Banking. Deposits received, Gold and Silver. Bills of Exchange bought and sold. Loans on Wheat and country produce a specialty.

July 1, 1889. A. MONTPELLIER, Manager.

ANY ONE wishing to rent a well-improved farm of 480 acres in a healthy locality, at very moderate cash rent, can learn particulars by applying to "Cash Rent," Box 27, Tulare, Cal.

S. F. Market Report

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Aug. 6, 1890.

General trade in farm products has been quite active, with still higher prices for fruits, beans and barley. The good prices being realized will have a beneficial influence on all industries and cause an easier feeling in the money market. Wheat has been strong at full prices. Abroad, the markets have fluctuated, as they have at the East. The following is to-day's cablegram:

LIVERPOOL, Aug. 6.—Wheat—Firmer. California spot lots, 7s 1¾d to 7s 4½d; cargoes off coast, 37s 9d; just shipped, 37s 3d; nearly due, 37s 9d; cargoes off coast, quiet but steady; on passage, quiet; wheat on passage to Continent, 563,000 qrs; wheat and flour on passage to U. K., 2,206,000 qrs; French country markets, quiet.

Foreign Grain Review.

LONDON, Aug. 4.—The *Mark Lane Express*, in its review of the British grain trade for the past week, says: English wheats are dull; prices related exclusively to old wheats, the scarcity of which caused an advance of 2s. There is no speculation in new. Foreign wheats are weak. Flour is in limited inquiry. Grinding barleys advanced 6d. The demand for corn is strong.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per ctl. for the past week:

	Aug.	Sept.	Oct.	Nov.	Dec.
Thursday	7s4½d	7s5½d	7s5½d	7s 6d	7s6d
Friday	7s4d	7s4½d	7s5½d	7s5½d	7s6d
Saturday	....	....	....	....	....
Monday	....	....	....	....	....
Tuesday	7s3½d	7s5d	7s5½d	7s5½d	7s8d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s3d	37s9d	38s2½	Easier.
Friday	38s3d	37s9d	38s3d	Offish.
Saturday	37s6d	37s3d	37s9d	Easy.
Monday	....	....	....	....
Tuesday	37s9d	37s3d	37s9d	Dull.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.
Thursday	95½	95¼	96	96⅞	97⅛	..
Friday	95½	96⅛	96⅜	96½	9 ⅞	..
Saturday	96⅜	97	97½	98	99	..
Monday	97⅛	98⅛	99½	100	100½	..
Tuesday	98⅛	99⅛	100½	101½	102	..

The closing prices for wheat have been as follows at Chicago for the past week:

Day.	Aug.	Sept	Dec.	May.
Thursday	90⅞	92⅛	94⅛	98¼
Friday	89½	91⅛	94	97⅛
Saturday	91⅛	93⅛	96⅛	100⅛
Monday	93⅜	95⅜	98⅜	102
Tuesday	94⅛	96	98⅞	102⅞

NEW YORK, Aug. 6.—Wheat—$1.02 for cash, 99⅝c for August, $1.00¾ for September, $1.01 for October, $1.02¾ for December, and $1.06⅜ for May.

CHICAGO, Aug. 6.—Wheat—95¼c for August, 97c for September, $1 for December, and $1.04 for May.

Eastern Wool Markets.

NEW YORK, Aug. 1.—Wool is easy; domestic fleece, 33@38c.

PHILADELPHIA, Aug. 1.—Wool is nominal.

NEW YORK, Aug. 1.—*Bradstreet's* says: Business is less active in the wool markets than a week ago. There was then a spurt of interest for a few days, only to be followed by the dullness to which the trade has become so well accustomed. Prices as a rule are in favor of buyers. Few manufacturers are carrying large stocks of wool, and at the same time few are buying beyond their immediate wants. A great deal of machinery is idle, and large imports of foreign fabrics constitute another element of depression. In Boston there is a fair inquiry for Ohio and Michigan fleeces. Combing and delaine wools are likewise wanted, and are comparatively firm. Inquiry for Texas, California and Territory selections amounts to almost nothing, and carpet wools are also neglected.

BOSTON, Aug. 1.—Territory wools have been sold freely, and prices obtained have been about 58@59c clean for fine, 56@57c for fine medium, and 53@55c for medium. In sorting wool there is more doing, with sales at 17@24c as to quality.

The Fig Crop of Asia.

NEW YORK, July 30.—A circular issued by Alfred H. Keun of Smyrna, under date July 12th, estimates the crop of Sultana raisins at 30 per cent less than that of last year, a falling off of 11 per cent in Eleme raisins, an increase of 10 per cent in Black raisins, and a falling off of 30 per cent in figs. The crop of the latter is estimated at 12 900 tons, against 19,250 tons last year, and an average of about 15,000 during the preceding three years. The 1890 crop of Sultana raisins is placed at 15,000 tons. Last year's yield was 21,200. The average for 1886 and 1887 was 27,000 tons.

Short Wheat Supply.

LONDON, Aug. 1.—At the Millers' Convention a report was read estimating the production of wheat in all countries at 10,000,000 quarters short of the season's requirements.

Hops.

NEW YORK, Aug. 3.—Choice new hops will meet a bare market; 25c is paid for large lots of future State. Spot, firm; common to best State, 18@23c; Washington, 19@22c; California, 18@21c. Brewers pay 18 to 19c for the quality obtainable a month ago at 15c. Prime '88's move well at 10 to 15c.

Local Markets.

BARLEY—The sample market has ruled firm, with slightly higher prices toward the close. In futures, trading has been fair at fluctuating prices.

	BARLEY					
	Buyer Season.		Seller 1890.		Buyer 1890.	
	H.	L.	H.	L.	H.	L.
Thursday	134½	134½	123¾	123¾	129⅝	128
Friday	131⅝	130½	120⅞	120⅝	127⅛	126
Saturday	132	132	...	...	127¼	126½
Monday	136	135	...	...	130	129½
Tuesday	132½	131⅛	121⅜	121¼	126⅝	125⅜

The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890 — 300 tons, $1.28¾. Seller 1890, new—200 tons, $1.22½ ₩ ctl. Afternoon Session: Buyer 1890—200 tons, $1.29¼; 200, $1.29⅛ ₩ ctl.

BAGS—The higher prices ruling for silver, together with wheat exporters discriminating against second-hand bags, have caused a combination to advance the prices for standard-sized hand-sewed bags. The range now quoted is 7¼@7⅝c.

BUTTER — Under competitive buying and stronger holding the market has been advanced. At the advance the demand from up North is light, but from the South it is good. Humboldt butter is coming in more freely. Eastern butter is putting in an appearance. Pickled is being inquired for.

CHEESE—The market is very strong at full prices under a good demand.

EGGS—The market has held strong throughout the week. Choice selected fresh laid are wanted at full figures.

FLOUR—The market is steady, with a good shipping and home demand ruling.

WHEAT—In the sample market trading has been quite active both here and in the country. In futures, trading on Call has been active at slight fluctuations. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1890 — 100 tons, $1.44⅞; 500, $1.44¾. Buyer season—200 tons, $1.54½; 200, $1.54¾; 800, $1.54¼ ₩ ctl. Afternoon Session: Buyer 1890—400 tons, $1.44¾; 400, $1.44⅝. Buyer season—100 tons, $1.54½; 200, $1.54 ₩ ctl.

*Overland 450 ctls. †Overland 88 ctls.

Cereals.

The local wheat market has held strong under fairly free buying in the country. An attempt was made to bear the market, but without success, for at the close the market is reported strong. The short crop in this State is a heavy factor in giving a strong tone to the market. The crop this year will not go much, if any, over 1,100,000 tons, against about 1,500,000 tons last year. Deducting 400,000 tons for consumption and seeding, we will have about 700,000 tons surplus. The Oregon and Washington crop this year will be all of from 50 to 75 per cent more than it was in 1889, while the grade will be good.

Barley, after shading off slightly, recovered again. The receipts continue free, but stocks do not accumulate to any extent, which goes to show that the demand for feeding and brewing is larger than at this time in 1889. Eastern and English mail advices are in favor of better markets later on, which will have its influence on ours. The crop in this State is short, but it is said that in Eastern Oregon and Washington the yield is above an average and of good quality.

Oats do not show any material change. Favorable crop advices from Oregon have their influence against sellers by keeping buyers backward. In this State the crop will not be an average one.

Corn continues to hold strong. Choice, desirable samples can be placed at full outside quotations, with at times a slight advance obtainable. Bad crop advices from the Central States, combined with higher prices for wheat, are favorable influences on the market. The stock is light.

Rye is strong under light offerings. A sale is reported to have been made the past week at $1.25 per cental.

Feedstuff.

The demand for ground feed continues free, with higher quotations ruling for both bran and middlings. The reported rains in the southern part of the State will destroy the nutriment in dry feed, which will cause a still better inquiry for feedstuff.

The receipts of hay continue free, yet prices do not shade off, owing to the free demand. Large dealers and feeders are naturally, bearish but holders are not pressing the market, and probably will not unless the weather prospects favor early natural feed.

Fruits.

Strawberries show but few changes. Blackberries are slightly weaker, yet with canners' free buying the market retains a healthy tone. Raspberries are scarce. Huckleberries are coming in fairly free, yet prices do not show any material decline.

Apples are coming in quite liberally, which with liberal supplies of other fruits causes a weak tone. It takes the best to command $1.50 a box. More are being dried. Nectarines are scarcer. The high prices ruling for peaches and apricots bring this fruit into more favorable notice. It is claimed that it will continue to grow in favor. Plums are in free receipt. Canners are buying more freely, taking the white varieties in preference to the others. Green gages are meeting with more favor, chiefly for canning. Choice canning varieties of pears are wanted, and find a quick market at full prices. Peaches are wanted by both canners and dealers. Canners paid on yesterday the unusually high price of $90 a ton for very choice mountain peaches. Although $90 was paid, the usual sales were from $60 to $80 a ton. Apricots made another upward move. For consignments of choice $75@80 a ton is paid.

Grapes are coming in quite freely, causing a low range of values to rule. Growers will not sell their grapes at as low prices as obtained last year. They will, unless getting a higher range, dry the bulk. In the country they are paying better prices. For particulars see "Agricultural Notes."

Dried fruits are hard to quote correctly, owing to a continued excitement brought about by competitive buying. Prices paid in the interior for future delivery are, as a rule, higher than quoted to us in this city. Apricots, bleached, fair to choice, are quoted at 15@18c in sacks. Peaches are virtually out of reach; sales are reported at over 20c for choice bleached in carload parcels. Nectarines are in better demand, with whites going at 14c to 16½c in sacks. Reds range from 1c to 2c lower. Figs, when properly cured and packed in small boxes, sell at from 14c to 15c for white. Evaporated apples are quoted at 10@12½c. For quartered and sliced no quotations are given. Dried grapes are being bid for, and if rains should injure the prospects, better prices may follow. We hear $70 to $90 a ton quoted. Prunes are hard to quote correctly. As near as we can learn the following is a fair basis, with fancy going slightly higher: 60s to 40s the range is 10@11¾c, with ungraded going at 8½@9¾c.

Raisins, September-October delivery are wanted, and for which delivery well-established brands can be placed at $2.12½@2.50. London layers and other grades proportionately less. Outside packs will not command so much, unless well cured, selected and packed. In the sweat the price ranges from 4c to 6c, according to kind and locality.

Hops.

From the London *Agriculture Gazette*, July 21st, we obtain the following: W. H. and H. LeMay report: From all districts we get reports of increase of vermin in the hop gardens; it is following up the young shoots. It is evident now that what hops are grown this year will be of very poor quality. If the temperature is higher, hops will go black faster; if we get a continuance of rain with a low temperature, the vermin will hang about and get into the hops as soon as they are out of the brush stage. Altogether, the prospect points to a crop, under the most favorable circumstances, of less than half our consumption, while it may finish up with only a quarter of what we require. The market continues to rise. An advance of 10s. per cwt. has been made to-day on all hops.

The local market is essentially unchanged. The crop in this State is reported to be a full average and of good quality. In Washington and Oregon the yield to the acre is said to be above an average. The quality shows an improvement. Growers are reported to be generally holding for 20 cents a pound.

Live-stock.

Both bullocks and mutton sheep are weak at slightly lower prices. The consumption is light. Hogs are steady. The stockyard at Baden will, it is said, begin operations in September, when a steadier market for bullocks, sheep and hogs can be looked for. Some expect to see better prices obtain. In milch cows there is nothing new to report. Horses are essentially unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4¼@4½c ₩ lb dressed, 7@8c ₩ lb.; heavy, 3¾@4½c ₩ lb.; dressed, 5¾@6¼c ₩ lb. Stock hogs, 4¼@4⅝c ₩ lb

BEEF—Stall fed, 6½@—c ₩ lb.; grass fed, extra, 6@—c ₩ lb.; first quality, 5½@—c ₩ lb.; second quality 5@5½c ₩ lb.; third quality, 4½c@— ₩ lb.; bulls and thin cows, 2@3c ₩ lb.

VEAL—Small, 6@8c ₩ lb.; large, 4@6c.

MUTTON—Wethers, 6½@7c ₩ lb.; ewes, 6@6¼c ₩ lb.; lamb, spring, 7@8c.

Vegetables.

Garden truck does not show any material change, outside of lower prices for tomatoes and beans. Canners will soon start up on the former.

Onions have fluctuated slightly, prices varying according to receipts.

Under free receipts and accumulating stocks, potatoes have weakened off, closing lower. At the lower prices there is a slightly better demand. The quality is excellent and should induce free shipping orders.

Miscellaneous.

From the *Commercial News* of Aug. 6th the following summary of tonnage movement is compiled:

	1890.	1889.
On the way to this port	268,064	232,681
On the way to neighboring ports	21,877	24,602
In port, disengaged	2,110	20,609
In port, engaged for wheat	41,277	58,948
Totals	333,328	336,840

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to July 31, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls	754,097	853,087
Flour, bbls	86,981	106,415
Barley	24,989	41,622

Poultry is weaker for hens and roosters, but higher for turkeys.

Nuts, new crop, are being contracted for at prices claimed to be higher than obtained at this time in 1889.

Beans are stiff. It now looks as if the market for all kinds will hold up. Crop prospects in the Central and Eastern States are only fair.

Wool is essentially unchanged.

Hides are advancing.

Honey is coming in freely, causing a weaker tone to rule, but no lower quotations are reported.

Exports by sea the past week aggregate as follows: Flour, bbls, China, 14,188; Japan, 2405; Central America, 56; Tahiti, 1278; Hilo, 611. Wheat, ctls, Fleetwood, 47,162; Liverpool, 77,755; Cork, 62,742. Bran, sks, Honolulu, 607; Hilo, 2874. Barley, ctls, Honolulu, 849; Hilo, 1786. Hay, bls, Honolulu, 630; Hilo, 715. Wine, gals, Honolulu, 375; China, 385; Tahiti, 2978. Beans, lbs, China, 7792; Tahiti, 2796; Hilo, 7217.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Aug. 6, 1890.

California Fruits East.

CHICAGO, Aug.1. — The Montgomery Auction Co. sold to-day for account of the Earl Fruit Co. and W. R. Strong & Co. six cars. Tokay grapes brought $3.45; Fontainebleau grapes, $1.65@1.15; Bartlett pears, $2.75@1.95; Howell pears, $2.10; Beurre Hardy pears, $1.80; Gros prunes, $2.20; Yellow Egg plums, $1.25@1.20; Red nectarines, $1.70; Crawford peaches, $2; German prunes, $1.20@1.25.

CHICAGO, Aug. 1.—Porter Bros. sold seven carloads of California fruit to-day as follows: Bartlett pears, a great many overripe, $1.35@2.45; Columbia plums, $1.25; peaches, 50c@$1.70; Beurre Hardy pears, $1.95; grapes, 50c@$1.35; Red nectarines, $1.05@1.75; Gros prunes, $1.50@2.45; Tragedy prunes, $2; German prunes, $1.20@1.95.

CHICAGO, Aug. 1.—California dried fruits are quotable as firm, and ready buyers appeared on the market. So far trade has been in apricots, they being the only line on sale; they are quotable at 17½@18½c per lb for fair to choice. No peaches on sale yet; the supply will be small; this is not due to short crop, but to the fact that growers have obtained good prices for fresh goods and large contracts for canned peaches have been made. It is said prunes have advanced about 100 per cent on the Pacific Coast and a good part of the crop has been sold for future delivery. The unprecedented demand for California dried fruits is attributed to short crops throughout the country east of the Rocky mountains, and with the entire country drawing on California it has made the demand sufficiently large to readily absorb the product of that State.

CHICAGO, Aug. 2.—The Montgomery Auction Co. sold two carloads of California fruit to-day at the following prices: Early Crawford peaches, $1.45@1.10; Muir, $1.45; Bartlett pears, $2.50@2.20; Columbia plums, $1.40@1.25; Egg plums, $1.20; German prunes, $1.65.

Porter Bros. Co. sold eight carloads of Bartlett pears at from $2.80@2.90; one car in bad order, $1.80@2.25; Crawford peaches, 70c@$1.65; all stock in good order, $1.25@1.65; Columbia plums, 85c@$1.50; French prunes, $1.10; Gros prunes, $1.80@2 25; Fontainebleau grapes, 90c@$1.35; German prunes, $1.40@1.60; Foster peaches $1.10@1.50.

NEW YORK, Aug. 3.—California fruits are quoted at $1.50 to $2.50 per crate for peaches, $1.50 to $2.50 for plums, $2.50 to $3.50 per crate for pears. Sales continue large and the demand is undiminished. There is no chance of California getting enough sound fruit here during the summer to glut the market. Raisins, two-crown, $1.85@1.90; three-crown, $2@2.20; London, $2.20@2 45.

NEW YORK, Aug. 3.—Canned and dried fruits hold a strong position, but not strictly up to some of the wild reports that are being disseminated. Outside orders come in freely. Several cars of prunes sold at 11½@12½c, four sizes. Raisins were fairly firm, but there are buyers who prefer to await possibilities of later prices. Sunbeam, loose, sold at $2.05; clusters at $2.30.

CHICAGO, Aug. 4. — The Montgomery Auction Co. sold two carloads of California fruit to-day at the following prices: Bartlett pears, $2.25@2.85; Early Crawford, $1.50@1.75; Foster, $1.70; apricots, $1.25; Gros prunes, $1.90; Damson plums, $1.25; Quackenboss, $1.05@1.20; Jefferson, $1.50; Yellow Egg, $1.20@1.25; Washington, 90c; Columbia, $1.35@1.65; Bradshaw, $1.25; Purple Duane, $1.20@1.25. For the past week the weather has been extremely hot. Besides a heavy glut, the fruit is in bad order. The market is just recovering.

CHICAGO, Aug. 4.—Porter Bros. Co. sold eight carloads of California fruit to-day as follows: Grapes, hf crt, 90c@$2.90; Cling peaches, $1.50@$1.80; Crawford, $1.50@1.80; Mon de Duoy, $1.75; Egg plums, $1.15@1.45; Gros prunes, $1.95@2.05; Hungarian, $1.75@1.85; Bartlett pears, $2.80@2.90; two cars of Bartlett pears, over-ripe, $1.65@2.40.

NEW YORK, Aug. 4.—Sgobel & Day, agents of the California Fruit Union, sold at auction to-day two cars of fruit as follows: Bartlett pears, $3 30@3.60; Tucson Cling peaches, $1.35@2.05; Orange, $1.20@1.40; Lemon Cling, $1.40; Gros prunes, $2.40; Japan plums, $2.50@3 05.

CHICAGO, Aug. 5.—The Montgomery Auction Co. sold to-day for the account of the Earl Fruit Co. one car of California fruit. Bartlett pears, $2.85@3.15; Howell pears, $2.85; peaches, $1.95@1.55; Columbia plums, $1.65; Hungarian prunes, $1.65; Nectarines, $2.

CHICAGO, Aug. 6.—For California green fruits the market is firm with demand good and offerings readily taken, quotable as follows: Peaches, Crawfords, boxes, 20 lbs, $2@2.50; pears, boxes, 45-lbs, $3@3.25; Gros prunes, 20-lb boxes, $2.50@3; purple Duane plums, 20-lb boxes, $1.50@2; Egg plums, $1.50@2; Columbia plums, $2.50@3; German prunes, 20-lb boxes, $2@2.50; grapes, cases, four baskets, Fontainebleau, $1.50@3. Of California dried fruits, arrivals as yet are limited to apricots. They are coming forward a little more freely. There have been no accumulations yet, and the feeling continues firm with a fair demand, quoted at 18@18½c. Peaches are en route, and some sales to arrive have been made at 22½@23c for choice halves, unpeeled.

CHICAGO, Aug. 6.—The Montgomery Auction Co. sold two carloads of California fruit to-day for account of the Earl Fruit Co. at the following prices: Grapes—Fontainebleau, half-crates, $1.65@1.85; Blue Malvoisie, $1.80; Rose de Peru, $1.75; Plums—Yellow Egg, $1.35; Washington, $1.25; Purple Duane, $1.65; Early Crawford peaches, $1.85@1.95; peaches, $1.90@2.05; French prunes, $1.85; nectarines, $2.10.

CHICAGO, Aug. 6.—Porter Bros. sold six carloads of California fruit to-day as follows: Peaches — Early Crawford, $1.50@2.10, mostly at $1.85; Foster, $1.70@2.10; Decker, $1.90; Orange Cling, $2 25; Columbia plums, $1.60@1.80; Golden Drop, $1.60; Egg, $1.60; Fontainebleau grapes, half-crates, $1.25@1.90; French prunes, $2.30; Hungarian prunes, $2.05. Fruit was in good order.

NEW YORK, Aug. 6.—Sgobel & Day, agents of the California Fruit Union, sold at auction to-day six cars of fruit, as follows: Bartlett pears, Anderson brand, $3 25@4 62½; other brands of the same fruit, $3.25; Early Crawford peaches, $1.25@1.95; Gros prunes, $1.90@1.95, half-crate; Columbia plums, $1.95; assorted plums and prunes, 80c@$1.65; most of the latter were in poor order. Most of the pears were of handsome quality and sold at $4 and above. The market was strong for all sound fruit.

Hops and Beans.

CHICAGO, Aug. 6.—The hop market is ruling quiet. The supply is small, with New York hops about sold out. From advices at hand the crop will be favorable, both as to quality and quantity. This covers both New York State and Pacific Coast. There has been considerable contracting of new hops of Pacific Coast with recent prices ranging at 15@17c ℔ lb. In New York State no hops of consequence have been sold for forward delivery. The crop in this quarter usually turns out so irregular that dealers do not care to take hold until it is further advanced and the quality can be more nearly determined. Cable advices from England report continued favorable weather and condition of crop unchanged, which in previous advices was said to be fairly favorable. A few lines of hops remaining on the market are quotable as follows: Washington and Oregon, choice, 23@24c; do prime, 20@22c; do low grades, 18@20c; California choice, 21@23c; do prime, 19@21c. Beans remain salable and firm with higher prices prevailing. Offerings are small, making it somewhat difficult to purchase. Receipts are light. At prices which follow, sales can be made: California Lima beans, choice, 5½c ℔ lb; do common, 2@4c.

THE cannery at Anderson, Shasta county, is now kept busy on peaches.

BUGGIES, Buckboards, Spring Wagons, Surreys and Road Carts. Write for our new catalogue. Baker & Hamilton, San Francisco and Sacramento.

ROAD CARTS in great variety, also our $35 Phaeton Body Cart. Write for Circulars, Frank Brothers, San Francisco.

A NEW BOOK.—NOW READY.

CALIFORNIA FRUITS

—AND—

HOW TO GROW THEM.

A MANUAL OF METHODS WHICH HAVE YIELDED GREATEST SUCCESS; WITH LISTS OF VARIETIES BEST ADAPTED TO THE DIFFERENT DISTRICTS OF THE STATE.

BY EDWARD J. WICKSON, A. M.,

Lecturer on Horticulture in the College of Agriculture, University of California; Horticultural Editor of the PACIFIC RURAL PRESS, of San Francisco; Secretary of the California State Horticultural Society; President of the California State Floral Society, Etc.

Contents.

PART I: GENERAL.—The Climate of California and its Local Modifications; Why the California Climate Specially Favors the Growth of Fruits; The Fruit Soils of California; The Wild Fruits of California; California Mission Fruits; Introduction of Improved Fruit Varieties.

PART II: CULTURAL.—Clearing Land for Fruit; The Nursery; Budding and Grafting; Preparation for Planting; Planting the Trees; Pruning Orchard Trees; Cultivation; Fertilizers for Fruit Trees and Vines; Irrigation of Fruit Trees and Vines.

PART III: ORCHARD FRUITS.—The Apple; The Apricot; The Cherry; The Peach; The Nectarine; The Pear; Plums and Prunes; The Quince.

PART IV: THE GRAPE.—Rise and Progress of the Grape Interest; Propagating and Planting Vines; Pruning and Care of the Vine; Grape Varieties in California.

PART V: SEMI-TROPICAL FRUITS.—The Date; The Fig; The Olive; The Orange; The Lemon, Lime, etc.; Minor Semi-Tropical Fruits.

PART VI: SMALL FRUITS.—Berries and Currants.

PART VII: NUTS.—Nut-Growing in California.

PART VIII: FRUIT PRESERVATION.—Fruit Canning, Crystallizing and Drying.

PART IX: FRUIT PROTECTION.—Injurious Insects; Suppression of Injurious Animals and Birds; Protection from Winds and Frosts.

PART X: MISCELLANEOUS.—Melon Growing; Fruit Packages.

Poultry and Stock Book

Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid 50 cts, Address PACIFIC RURAL PRESS Office, San Francisco, Cal.

Niagara Will Surely Be Harnessed.—So it would seem, at least. The Cataract Construction Company, which proposes to build a tunnel around Niagara Falls, and to run machinery in factories by means of water-power, has signed contracts with the Niagara Falls Power Company. The contracts are not to take effect until some minor difficulties are overcome. By this it may be understood that some people still refuse to sell their land to the company. But this is likely to be overcome. The Cataract Construction Company is an organization formed under the laws of New Jersey. Its officers are New York men. Elward A. Weeds is president, F. L. Stetson, vice-president, and W. B. Rankine, secretary.

To Subscribers and Readers.

A Handy Paper Binder—A. T. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, and very cheapest of all economical and practical file binders. Newspapers are quickly placed in it (as received) and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price (size of this paper, Harper's Weekly, and Scientific American), 75 cents; postage 10 cents. Postpaid to purchasers of this paper, 50 cents. For sale at this office. Send for illustrated circular. Agents wanted.

Newspaper Agents Wanted.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

Dewey & Co., Publishers,
No. 220 Market St., S. F.

Lighting a Match by Steam.—An interesting experiment is sometimes tried with dry high-pressure steam issuing at a jet, which is rather astonishing. If a common match head is held in the invisible portion of the steam jet, close to the nozzle, it at once lights, and the fact seems convincing as to complete dryness, as the faintest moisture would prevent ignition even at the highest temperature. This experiment proves dryness of the steam at the point of contact, but if throttling exists behind the jet, the steam supplied by the boiler may be in itself wet and dried by wire drawing.

Our Agents.

Our Friends can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none out worthy men.

Variation in Diameter of Trees.—The diameter of trees varies not only from summer to winter, but from day to day. They are larger from noon until twilight next morning than from twilight to noon; they are smaller in winter than in summer. Water and the sap of trees expand not only in proportion as they rise above, but also as they go below the freezing point. Low temperature as well as high promotes evaporation, and the trees evaporate from their branches in winter, and so the colder the weather the more they shrink.

THE PELTON WATER MOTOR

Affords the cheapest and most convenient power for Ranch, Vineyard or Dairy purposes, as well as for running dynamos for electric lights, pumps and every other variety of machinery.
It possesses in the same degree the wonderful energy and power that has made the Pelton Wheel famous in all parts of the world.
These motors are made of varying sizes, with capacities ranging from the fraction of one up to 15 and 20 H. P., enclosed in iron cases, all ready for pipe connections, and are warranted to develop a given amount of power with one-half the water required by any other wheel.
The cost, considering capacity and efficiency, is fully 50 per cent less.
Circular, giving full information, sent on application.
Parties writing for information should give full particulars as to power wanted, source of water, supply, with head or pressure. Address

THE PELTON WATER WHEEL CO.,
121 Main Street, San Francisco, Cal.

ORANGE CULTURE A practical treatise by T. A. GAREY giving the results of long experience in Southern California. 196 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by DEWEY & CO., Publishers, S. F

The Cylinder Grader

Has proved the most rapid working machine for GRADING PRUNES, BOTH GREEN AND DRIED, that has ever been introduced. Wherever it was used last season it gave perfect satisfaction, both in the quantity of fruit graded and the way it did the work. The capacity is practically unlimited, as it will grade the fruit perfectly as fast as it can be shoveled into the machine.

I make all sizes of this Grader, from the large 30-inch cylinder down to a small hand machine for the use of growers whose crops are small. I furnish the Grader mounted complete, or the Cylinder alone if, as is often the case, the purchaser prefers to mount it to suit himself.

Send for circulars and prices.

HEADGATE AND WASTEGATE OF KERN ISLAND CANAL, TAKING WATER FROM KERN RIVER.

The Head Works of a Kern County Canal.

Our engraving shows important parts of one of the leading irrigating canals of Kern county, and gives the distant reader a little idea of the work undertaken to make the waters of our streams available for pushing the large crops usually secured from irrigated lands. In Kern valley, and mainly on Kern island, there are upward of 30 canals, some of them with branches and all with distributing ditches, the main canals aggregating more than 300 miles in length and covering about 500,000 acres of land, of which perhaps one-third is now producing irrigated crops. Kern Island canal, of which our illustration shows the head, is one of the most important of the system of waterways alluded to. It is taken from the south side of Kern river, about 2½ miles northeast of Bakersfield, through which town it passes and furnishes the local water supply, besides the water-power for a flouring-mill, as the canal makes a vertical fall of 20 feet at Bakersfield. The canal is 18 miles long, with a width at the headgate of 48½ feet and a depth of 4 feet. It has two main branches, the longest ten miles in length, with a width on the bottom of 20 feet, a depth of three feet, with slopes of three to one. This canal appropriates 20,000 inches of water, equivalent to 400 cubic feet per second. Its location dates back to 1870.

The headgate and wastegate of this canal are the main features in the engraving. The former was built in 1878, and its construction required 75,000 feet of lumber. It is shown on the left of the engraving, and the wastegate is on the right; both are 50 feet in width. The wastegate is made to open from the bottom with chains, in order to flush the sand away from the headgate, which admits the water to the canal. The water through the wastegate goes back into the river. The water is brought to the headgate by means of a wingdam, shown in the foreground of the picture, and the amount taken into the canal is regulated, of course, by the raising or lowering of the wastegate. The water goes into the canal over the gate boards, thus preventing the sand from entering the canal.

In the construction of these gates, the piling is Oregon pine, but most of the lumber is redwood. The timbers of the headgate are 6x6 inches; those of the wastegate, 6x8 inches. The posts are 4x6 inches. Two-inch planks are used. There are 410 running feet of sheet piling, set 12 feet deep. The headgate and wastegate each has 12 bays. There are 100 anchor piles for staying the flow, the piling being 4x12-inch Oregon pine. The sills are 3x12 redwood set edgewise. These details of construction, with the view of the structure in operation, will give the reader a good idea of the arrangement which has done long and good service in diverting water from a river.

THE ARID LAND PROBLEM.—It is telegraphed from Washington that Representative Morrow expressed the opinion that the outcome of the present controversy between the two houses of Congress on the subject of arid lands will be a compromise. It is not improbable, though Mr. Morrow does not make such a prediction, that the compromise will embrace the provisions of a bill by General Vandever to reserve the lands in question from settlement except under the operations of the homestead laws.

THE Payne break in the Sacramento, a few miles below Boruck, is about 20 feet deep, and the cost of repairing it will be about $20,000.

Correspondence

Correspondents are alone responsible for their opinions.

Lower Lake Notes.

Editors Press: Below the lake are some thousands of acres of tule land. There are two creeks coming in from the mountains that throw their currents across the outlet of the lake. When it is raining these streams carry such a volume of water as to make a dam that holds back the water of the lake and often creates a current from the outlet to the lake. In the suit, years ago, brought by the Water Co. against those who tore out the dam at the outlet of the lake, it appeared in evidence that a man once rode a saw-log up stream over the dam. The testimony was held up to ridicule by opposing counsel as paradoxical and absurd, but old citizens maintain that it was a fact and that many things have been found in the lake that have floated in from the outlet where Anderson and Herndon creeks were so high as to form a dam and hold back the outer water. Mr. J. Bower informs us that the proceeds from sales of swamp lands were designed by law to be used in their reclamation, and that the fund so created has been called the Swamp Land Fund and that county officials have long been in the habit of drawing on this fund for various expenses not otherwise provided for. Last winter's experience emphasized the importance of its use for the purpose designed, and now the county is likely to be called on to make good the amounts taken from this fund. Improvements are needed to prevent flooding of what is usually dry land around borders of the lake. If, besides this protection, any portion of the tule land can be reclaimed, it will be the most productive land in the county. To accomplish this, work must be done on the channel of Cache creek, beginning some little distance below the Lower Lake ridge. Higher up it will be necessary to straighten the winding channel and provide against the back-water caused by currents coming from Anderson and Herndon creeks. This should require careful survey and well-made plans by good engineers. Old settlers, who are careful men, estimate that the value of the waters of Clear lake, when they shall some day be used for irrigating lands in Sacramento valley, will be far more than that of all the land in the county. It seems very hard to devise a plan by which this end can be accomplished and protect the rights of all interested.

Railroad Plans.

The people of Lake regard their future prosperity as closely linked with transportation facilities, and rumors of new railroads coming in have been so many and so disappointing that they cause far less excitement than at first. Still it is hard to see how the Southern Pacific built from Madison to Ramsey unless they expected to run up Cache Creek canyon to Clear lake. It is easy to see that if the company should put a fine hotel somewhere near the foot of the lake, and advertise as they have done for the Hotel del Monte, they could draw several times the travel that now comes to the county. Even at present those who have watched the stages coming from Brooks, Sites, Ukiah, Hopland and Calistoga would regard 100 passengers each way as a low daily average. The more this Switzerland is known, and the easier of access, the greater the travel. The route from San Francisco would be a very attractive one, passing the orchards of Suisun, Vacaville and Winters, the wheatfields of Yolo, the beautiful valley of Capay, and through the wild scenery of the canyon to this beautiful lake nestling among the grand old mountains.

Traffic Manager Gray of the Southern Pacific was up here for a week lately, and held out every encouragement for the early completion of the road. In case of its building, it is predicted that the principal town of Lake will be at the terminus of the railroad, near the outlet of the lake. It is thought that better means of transportation will cause many mines to start up that cannot now be worked at a profit, and, in general, that it will open up the channels of trade so that the life-blood of commerce will flow more freely. The present system of barter, by which one thing is traded for another and the dollar a stranger, is doleful.

A Promising Orchard.

Five miles north from Lower Lake, in Burns valley, S. Graham has an orchard that shows unusual thrift, which we think is due more to the extra care apparent than to special advantages in other directions. Indeed some of his neighbors wondered that a sensible man should plant an orchard in such a forbidding place.

His neighbor, Mrs. J. A. Tennisor, has a fine vineyard of which she is justly proud, as most of the labor has been done by her own hands. Planting a vineyard where land requires clearing of chemisal and stone demands plenty of hard labor.

In Burns valley they have built a new schoolhouse that would be a credit to any country. We noticed a beautiful flag flying while the school was in session, but it was lowered as soon as it closed. The school building is located upon a common of several acres, and upon another side is a fine hall used for social meetings. Mr. Beakbane, who has been largely instrumental in building up this section, is now on a visit to his old home in England, and it is hoped that his visit may result in a large accession to the colony here. F. S. C.

A Lake in the Redwoods.

Editors Press:—Leonards lake is situated in the Mendocino county redwoods at the farthest head of Russian river, about 20 miles northwest of Ukiah, and is the property of Henry Boyle of San Rafael. It is a beautiful little gem of water in an emerald setting of redwoods. On three sides the great evergreen forest environs it, leaning over to shut it in, but on the other side the soft curves of a chaparral-covered mountain offer a charming variety, and by contrast intensifies the grandeur of the forest.

Long and winding in its outline, the lake is not at its greatest breadth over 400 yards across, and except at either end the banks are for the most part precipitous. While to the east the view is only ended by the blue top of the chemisal-covered mountains, to the west the trees come down to the brink of the lake and dip their branches as if to drink of the clear waters, while the eye wearies in going to their tops, which obstruct all view on that side and after noon shading all of that side of the lake. On rowing down the lake, a succession of charming views and surprises await the lover of Nature. Here a precipitous rock now clothed in mosses and ferns, brightened with a few gay flowers which find a home in its crevices, there a little cove filled with rich soil by the winter's rain is a tiny vale, dampened by the lake and a congenial home for the wild flowers and a thicket of hazel where in season the gray squirrel holds high carnival, chuckling to himself over the harvest of nuts. In this nook a giant of the woods, felled by winter's storms, is moored, and in the light sheltered by it a mass of water lilies have ensconced themselves, covering the water with their rounded leaves, while their snake-like stems are lost below in a profusion of water grasses and mosses which cover the bottom of the lake wherever the water is shallow, while of the great trunk Nature's hand, ever ready, has transformed into a floating garden, occupied by a dozen species of plants, reveling in the mold which time has gathered there, and helping themselves to water from the lake. Tiny water plants and mosses are there, too, and lichens on the drier parts of the giant who once lifted his head so proudly above them. All combined make a picture of quiet beauty on a miniature scale. The wind soughing in the tops of the redwoods scarcely ripples the surface of the lake, and deep down in its sheltered home even winter's storms disturb its peace but little. On this spring day the sun shines down brightly, and the shaded side is the more desirable. There one can lay in contentment and watch the fish swimming among the moss. The speckled trout is there, and now and then the eager pike, tyrant of these waters. Lazy turtles, basking in the sun, go down with a splash as we near them, raising tiny waves in an ever-widening circle till they are lost in the placid bosom of the lake. Out toward the center there is a large snag. One of those big redwoods took a header into the lake some time past. Its top stuck fast in the bottom of the lake, 40 or 50 feet down, and is securely anchored there yet, while the body broke off at the surface of the water. Floating along or paddling aimlessly, we reach a narrow bay which invites exploration. So narrow that the trees fairly overshadow it, the long moss streamers grow from the bottom and cover the surface on both sides, leaving a narrow water-way winding through the center. At the end a path leads into the woods, well beaten. Many a foot has preceded us as we wind around trees and logs and blackened stumps through ferns and underbrush, till it ends where a tiny spring bubbles up in a basin formed by the roots of the trees.

They may talk as they please, but there is no water like this of the redwoods. If you would taste water in its greatest excellence, go to the redwoods, and from where it flows among the ferns seemingly flavored by the aromatic roots, drink it pure and cold and realize what you have missed. Here in the cool shade we will stop to guess at the monograms cut in the bark of the trees, and guess who they all were, and here we will say to the reader: "Good day."

The Apiary.

Bee Culture.

Editors Press:—Few people can form any idea of the magnitude of the bee business in this country. There are at the present time about 300,000 bee-keepers in this country who consume millions upon millions of square feet of lumber in honey-boxes and bee-hives. Tons and tons of honey and wax are produced every year. The annual income in honey and wax alone amounts to over $75,000 000. Of so much importance has this industry become that the Government has arranged for statistical reports of its production, and the number of hives in the United States will be included in the census this year.

Since the advent of movable combs in wooden frames by Rev. L. L. Langstroth, great improvements have been made in the appliances of the apiary. Improved methods of management to secure greater yields of honey and the importation of foreign races of bees have put this industry on to a firm foundation. The common black bees generally found in farmers' hives are fast being superseded by the Italian or Carniolan races, noted for their superior and extraordinary powers in every direction.

The honey extractor has caused a wonderful revolution in this business. It is now about 23 years since Mr. A. I. Root of Medina, Ohio, took the first 1000 pounds of honey ever taken with an extractor from 20 colonies of bees. There are now over 10,000 of these original extractors in use, and considering the fact that honey extractors are manufactured by several other firms, and that these machines are in use not only in every State and province of the United States and Canada, but in nearly every civilized nation on the globe, we can justly conclude that this business is of no mean proportions, and its development has been wonderful indeed.

The annual yield of honey in the United States has been estimated at 200,000,000 pounds or more, and it is believed that two-thirds of this was taken with the extractor.

Comb foundation is another great discovery in connection with this business, the manufacture of which has assumed immense proportions. One firm alone manufactures several tons annually. The breeding of queens has become a separate branch of this industry, and thousands of queens are sent through the mails annually, not only in this country but to and from foreign countries.

Notwithstanding the fact that there are hundreds of thousands of bee-keepers in the United States, and millions of pounds of honey are produced annually, yet no one is robbed of a cent's worth of his earthly possessions and the soil is not impoverished.

How Beeswax is Made.

One of the most interesting productions of a colony of bees, and perhaps one of the most curious, is that of making the wax which forms the receptacles for the nectar that the bees gather from every opening flower, and which, when melted, forms the beeswax of commerce.

If you examine the under surface of a cell-building worker-bee, you will find beneath the abdomen four pairs of white plates projecting from as many pockets in the rings of this part of the body. These are the wax-plates and are made from the life-blood of the worker.

If you now examine with a lens one of the hind legs you will find that the stoutest joints are "square-shouldered" at the hinge, and that the hinge is well over to one side, so that the shoulders form a pair of jaws which open when the limb is bent and closed when it is straightened. The upper jaw has a row of spines which bite on a plate on the upper jaw. With this apparatus, piercing it with these spines, the worker withdraws a wax-plate from its pocket, transfers it to the front legs and then to the mouth, where it is laboriously masticated with a salivary secretion. Unless it undergoes this process it lacks the quality requisite for cell-building. Few people would imagine that the tons upon tons of this article which is produced in the United States every year originates from such a minute and wonderful laboratory of Nature. Wm. Styan.

San Mateo.

Fruit Preservation.

French Prunes in Southern California.

The trees must be grafted or budded on plum stock, and be one or two years old—I prefer one-year-old trees. They must be planted about 21 feet apart, so it will take 100 trees per acre. Good trees ought to be had for 20 cents apiece, or by the thousand for 15 cents. The holes must be dug from two to three feet square, according to quality of the soil.

The fourth season after planting, and even the third if your trees have been well taken care of, you will obtain about ten pounds of prunes to each tree—enough to initiate yourself to the drying business. The fifth year you will get about 60 pounds to each tree; the sixth year, 120 pounds or more to the tree. After that your trees are in full bearing, producing, according to location and care, from 150 to 300 pounds to the tree.

The only trouble now is the drying of the prunes in a satisfactory manner, without spending thousands of dollars in building driers. In California we can dry the French prunes to perfection without driers, sometimes in one week and more generally in two weeks, by following the subjoined instructions:

Do not pick the prunes by hand, as they do not ripen all at the same time, but in about three weeks. Begin to shake your trees toward the last of July, then every week after, and on the fourth time pick them clean.

Now for drying. The only apparatus needed is an iron kettle holding from 25 to 50 gallons of water. To each 20 gallons of water add one pound of the best American concentrated lye; have the water boiling; then take a wire basket of some kind—the home-made one will do best—put 20 pounds of green prunes in your basket, dip them in the boiling kettle, let them remain in there about one minute, till you perceive that the skins of your prunes are cracked all over, then take them out and lay them on a tray, and in one week or ten days, according to the heat of the sun, your prunes will be dried enough to put them loose in any kind of boxes holding 50 or 75 pounds. The trays can be made very cheaply (about ten cents each) with four sawed redwood shakes three feet long, nailed on a very primitive frame, by anybody who ever used a saw and hammer.

Now, when your prunes are all dried and you want to give them the finishing gloss for the market, do as follows: Fill your kettle again with water, but this time no lye is wanted, and when the water is boiling, steep your prunes in it with your wire basket for about a minute, till every prune is made quite hot; then expose them to the sun for that day, and the next morning you can pack them in boxes or sacks, as you prefer. This last steeping will make your prunes very clear and glossy, and will kill every insect and destroy their eggs effectually.

If you follow the above directions you will turn out an article equal to the best in the market, and will obtain the best price.—*M. in Pomona Progress.*

The Fig Business in Smyrna.

The oldest and most influential fig importer of this city, says the New York *Star*, is Mr. Nicholas Catrevas, who, though a native of Smyrna, is an American citizen of many years' standing. In discussing his singular business, he said:

"There is a large amount of ignorance lying around loose among the American public respecting the chief import of my native land. In the first place, figs as seen in the market are not grown in Smyrna, but at Aidin, Tshailies and Erbeili, far in the interior of Asia Minor. These districts lie from 250 to 600 miles away from the Mediterranean coast. They are wonderfully rich and fertile, and produce, if not the finest fruits of all kinds, at least the finest figs in the world. Horticulturists have repeatedly taken up trees from the territory and transplanted them in various parts of Greece, Italy, France, England, Spain, Portugal, Morocco, Algiers and Tunis; but in every case the resultant fruit was no better than the native article. Some of the results were very odd. In Italy the figs ran to an aromatic woody fiber and were roasted and used as an imitation coffee. In Morocco they grew into pulpy masses and were used chiefly to make jellies and marmalades.

"The fig tree is not cultivated like ordinary fruit trees. Fertilizing increases the size of the fruit but deteriorates the quality and its flavor. Unlike most fruits, the fig is not picked. Around the trunk of every tree a circle is built of stones and gravel on which the fruit falls when it is perfectly ripe. It is allowed to stay there until it is dried, when it is gathered and sent to the factories to be packed. The trees are grafted and regrafted, sometimes annually. The young trees bear better than the old, and young grafts bear far better than the branches of old trees. In most of the fig orchards they graft the trees every year.

"When the fallen fruit is comparatively dry, it is assorted and packed in bags weighing from 200 to 400 pounds each. These are loaded in couples upon camels, each couple being termed a load. This was the universal practice up to a late date, when the iron horse invaded Syria. Now a good railroad runs from Smyrna to Ephesus and brings a large part of the fig crop to the former city. No prettier sight exists in the world, to a Greek eye, than a great line of camels laden with bags of figs coming into Smyrna from the towns of the far interior.

"Once arrived, the camels are unloaded and the figs displayed in the open market. It is singularly like Washington Market in the early morning, when the farmers come in with their produce from the country districts. The marketmen are Armenians, Turks, Jews and Greeks. Even in Smyrna, which is under the Turkish rule, through the shrewdness and commercial sense that has made the race conspicuous in the financial history of the world, the Israelite has become a leading member in all business circles. The marketmen make money easily, and too often questionably. They advance money upon consignments and act both as bankers and factors. They control the market both in buying and selling, and enjoy a practical trust of their own.

"The figs are bought by the merchants and shippers and sent to the factories. Here they are emptied in long rows and carefully assorted by men, women and children, who sit cross-legged with the fruit on one side and baskets and boxes on the other. They sort the different qualities and shape each fig in the oblong form so familiar to the New World. The boxes are cased in wooden forms, called skeletons, which weigh from 250 to 350 pounds net. Each skeleton contains from four to 350 boxes, according to the weight of the latter. The finest qualities are made into what are called layer figs; those next in excellence are molded into oblong shape and are known as 'macaroni.' The poorer sort are packed into boxes, crates and bags. Smyrna exports annually about 55,000 skeletons, of which England takes 35 per cent and the United States about 60. Boston formerly controlled the trade, but now New York has the lead, doing nine-tenths of the business."

The managers of the San Luis Obispo Fair announce that to any couple who get married during fair week, they will give a pipe organ worth $150.

Horestry.

Three Great Trees of Washington.

Anybody who travels in the western part of Washington, or visits the numerous islands in Puget Sound or farther up in the Gulf of Georgia, will remark a peculiar tree, occupying the rugged, barren domes, where there is scarcely a handful of soil. Like the great cardon cactus of Mexico, *Cereus giganteus*, this peculiar tree grows where no other plant would grow, though it has no similarity whatsoever with the cactus. It belongs to the coniferæ, and it is commonly called western red cedar or juniper. Among the scientists it is known under the name of *Juniperus occidentalis*—a marvelously easy name, if we take into consideration the nomenclature of some other plants.

This red cedar of ours is a very peculiar tree and differs in leaves, wood and fruit from a similar Eastern species. The trunk is frequently enormous, for it measures often eight feet in diameter, though the tree itsel is not tall, especially in higher altitudes. It has very strong and powerful limbs, mostly bare at the ends, though here and there densely covered, while the top in old trees is almost always dead. Sometimes the tree is as broad as it is high and is merely a weathered stump, though if by accident the soil is good the juniper of Washington attains quite a considerable hight.

The red cedar is more like a block of rock than a tree. Even its bright cinnamon-colored bark looks something like a deep hue of porphyry. The wind of the Olympic mountains has no power over it; the heavy and rigid trunks of this tree defy the power of the storm. It is always silent, no matter if the wind roars in canyons and uproots pines and firs; or if the day is calm and full of sunshine, the burly juniper is always immovable, always rigid, like a column of ice, and grand in its silence; and if it dies, it is only from old age, for the juniper can brave the storms of centuries.

If we will leave now the rocky shores and immense islands of Puget Sound and descend into some valleys of the interior of this State, one will remark another peculiar tree, in some respects similar to the juniper, yet in others very different. It is the Western mountain pine, sometimes called simply mountain pine. Its Latin name is *Pinus monticola*, or *Pinus prophyracarpa*, rather a long name, but of course the pine is not responsible for it.

The mountain pine is long-lived, strong, brave and hardy, like the juniper, but here the similarity ends. In every other respect it is different. It does not grow in the rocks, but requires a moist soil and an abundant rainfall, and its trunk is not to be compared with that of the juniper, for it attains sometimes the hight of 90 or even 100 feet, and two-thirds of this tall trunk is free of limbs, though close, fringy tufts of sprays occur all the way down. The bark is furrowed very deeply, the parallel furrows connected by conspicuous cross-furrows, and is of a deep reddish-brown color. With the exception, perhaps, of the sugar pine, which is over twice as tall, and to which it is closely allied, no other mountainous tree is so capable of individual expression as this mountain pine of Washington. With its extended arms, its tall, graceful form, this pine forms a vision of beauty in the forest not soon to be forgotten. The cones are clustered on the branches, and when ripe, they are from four to eight inches long. They are cylindrical and somewhat curved, becoming pendulous as they increase in weight. This Western white pine is like the juniper, very tough, and defies storms and frosts, and if left alone, the pine of Washington would die also of old age, for even a thousand-year-old is yet strong and robust.

If we go now toward the new cities on Bellingham bay, and perhaps a little farther to the eastward, we will meet with a singularly beautiful tree, so slender in its axis that it will bend like a stalk of wheat, while the branches divide into innumerable moving sprays, slender and delicate like twigs of the weeping willow. The cones are purple and do not hang in clusters, but are free and hang from all the sprays from top to bottom. This tree is the Williamson spruce or hemlock. Its first Latin name, *Tsuga pattoniana*, is rather difficult to remember, but its second name, *Abies Williamsoni*, will not be so easily forgotten. This glorious tree grows in this State to an elevation of over 3000 feet, though in California it is found on mountains 10 000 feet high. In British Columbia it scarcely reaches the elevation of 2500 feet. It likes snow, and sometimes entire groves of young trees are buried in snow every winter. In the autumn the white flakes lodge in the leaves, weighing down the branches; then the axis begins to bend, forming an arch, and finally the whole young tree is buried in its winter sleep, not exposed to the biting storms and warmly wrapped until the snow becomes soft in the sunshine of spring and sets it free—fresh and featherly like a young fern.

The spruce is about as tall as the mountain pine, but its diameter is only two to four feet, while the diameter of the *Pinus monticola* is from five to six feet.

Though this tree looks very elegant and rather delicate, yet it surpasses other coniferæ in storm-enduring strength. It is powerful enough to meet the wildest onset of the hurricane, it bows gracefully to the ground and recovers immediately its elasticity.

At the age of 25 the tree becomes fruitful; its cones are then of a lovely purple color and hang at the ends of the slender sprays, contrasting strangely with the dark-green foliage. As soon as they are ripe they open their shell-like scales and swing free in the breeze until the coming of a fresh crop. No one who ever saw the spruce in a forest will ever forget it, for even if compelled to crouch in dense thickets it still manages to throw its delicate branches and sprays trying to feel the light and bathe its green foliage in it. Even when old and covered from head to foot with green branches, it never looks heavy, but always graceful and always fresh.

Here I have given a short sketch of three coniferæ found in this State. Only three, yet how many cone trees are in Washington, and what are the coniferæ if compared with the immensely rich flora of this new State! The field is rich and room for investigation more than sufficient.—*M. Lopatecki in Seattle Post-Intelligencer.*

Mr. Vandever's Bill.

WASHINGTON, July 28. — Representative Vandever of California to-day introduced a bill to set apart from the public domain the tract of country in which are located the famous mammoth trees of California, and make of it a public park. The following is the full text of the bill:

WHEREAS, The rapid destruction of timber and ornamental trees in various parts of the United States, some of which trees are the wonders of the world on account of their size and limited number growing, makes it a matter of importance that at least some of said forests should be preserved; therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the tract of land in the State of California known and described as Township 18 south, range 30 east, Mount Diablo meridian, is hereby reserved and withdrawn from settlement, occupancy or sale under the laws of the United States, and dedicated and set apart as a public park or a pleasure ground for the benefit and enjoyment of the people; and all persons who shall locate or settle upon or occupy the same, or any part thereof, except as hereinafter provided, shall be considered trespassers and removed therefrom.

SEC. 2. That said public park shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be, as soon as practicable, to make and publish rules and regulations as he may deem necessary or proper for the care and management of the same. Such regulations shall provide for the preservation from injury of all timber, mineral deposits, natural curiosities or wonders within said park and their retention in their natural condition. The Secretary may, in his discretion, grant leases for building purposes for terms not exceeding ten years, of small parcels of ground not exceeding — acres at such places in said park as shall require the erection of buildings for the accommodation of visitors; all of the proceeds of said leases and other revenues that may be derived from sources connected with said park to be expended under his direction in the management of the same and the construction of roads and paths therein.

He shall provide against the wanton destruction of fish and game found within said park, and against their capture or destruction for purposes of merchandise or profit. He shall also cause all persons trespassing upon the same after the passage of this Act to be removed therefrom, and generally shall be authorized to take all such measures as shall be necessary or proper to fully carry out the objects and purposes of this Act.

The Sequoia Land Will Be Reserved.

In our last issue we noted the protest of Governor Waterman telegraphed to Secretary Noble against the reported opening of the Sequoia lands to entry. The following show that such opening is not contemplated:

WASHINGTON, D. C., Aug. 5, 1890.

To Hon. W. R. Waterman, Governor, Sacramento, Cal.:—Your telegram received. It is not true that the lands you mention are about to be open to survey. The *Sequoia gigantea* have been protected by a very recent decision of this Department and orders to reserve all of the ground upon which they are growing, both in Tulare county and the Yosemite, for the latter of which, as you state, a bill is pending in Congress. I have written you this day, showing the full correspondence on this subject, which is most positive and energetic in defense of the *Sequoia gigantea.*

JOHN W. NOBLE, Secretary.

The Letter.

The following is the letter mentioned above:

Dear Sir:—I herewith inclose you the copy of a letter addressed to me by the Commissioner of the General Land Office, to whom I handed your telegram this morning concerning the *Sequoia gigantea* in Tulare county, also my response thereto of the same date. I also inclose you a previous direction made by me for an investigation and report as to those trees. You will be interested in the decision recently rendered by me on the same subject, a copy of which I send you. You are no doubt familiar with the efforts being made by Representative Vandever to have the trees of the Yosemite valley brought into the national park. In a word, I am aiding, by all the means in my power, to prevent the appropriation of these wonders of nature to private speculation, and will be glad to receive from you at any time suggestions that may assist me in this direction.

Following is the Secretary's letter to Commissioner Groff, noted in the above letter:

Yours of this date has been received in which you say the order of suspension issued by Commissioner Sparks, dated December 24, 1885, is still in force as to all the townships enumerated, except 15 and 16, Range 26 and Township 17, Range 30. The two former were relieved from suspension by the letter of Mr. Sparks, March 11, 1886, and the latter by my letter of May 23, 1890. You will please renew the suspension order in each of these cases until there is a complete report upon the fact whether there are existing thereon any of the trees called *Sequoia gigantea.* It is my purpose, by the order as directed to be made, to preserve these wonders of nature until such time as opportunity may be had to place them in parks by the National Government, as such I believe is the intention of the Legislature, and it is demanded by the public opinion of our people. Your report as to where these trees exist, with an accompanying map, as heretofore requested, I hope you will be able to present in a short time.

The Dairy.

A Large Butter Dairy in San Diego.

The following article from the San Diego *Union*, describing with minuteness some dairy methods which are commonly known in California, although perhaps seeming trite to some of our readers, yet may contain information even in these regards to distant subscribers. Many dairies, it should be remarked, are substituting improved machinery for cream separation and other improved appliances for the arrangements described. We quote as follows:

An industry which disburses annually $10,000 to its workmen, which pays the Julian Stage Co. between $1200 and $1500 in freight charges, and which probably puts into circulation over $10,000 during that time, is what the Pioneer Dairy Co. of this county is doing without any one of the members of the firm of Martin, Bloom & Brackett seeming to care whether it is appreciated or not. Mr. Martin, whose home is at San Francisco, is well known to old residents also as the pioneer dairyman of the State. He owns several thousand acres in Marin county, where he and his partners have long had in operation the most successful dairies of California. Notwithstanding his already important interests—being at the head of a large firm, engaged in wine-making, and in the salmon-canning industry—Mr. Martin found time to investigate the dairy possibilities of San Diego county in 1885. He concluded that a dairy was needed, that the conditions would warrant it, and was of the opinion that better butter could be furnished than the county was then importing from anywhere in the East. Mr. Bloom, one of his partners in former dairy properties, and who also is a large real estate owner at Petaluma, Sonoma county, was of the same opinion. J. S. Brackett, since deceased, also a holder of realty in Petaluma, and owner of a large dairy in Marin county, joined with them in the purchase of a stock range in San Diego county. They chose the highest of the large mountain valleys, the Santa Ysabel grant, which is 54 miles northward of San Diego, purchasing the 17,711 acres from Mrs. A. H. Wilcox for $75,000.

Durhams.

The range was stocked with Durham cattle from Sonoma and Marin. A dairy-house was erected on the southwest portion in the lee of a knoll separating it from that portion of the tract occupied by an Indian rancherie. All improved appliances for butter-making were shipped down to the ranch, and then came a company of Swiss experts who monopolize the work of the dairies in the northern counties. This was four years ago, and it took some time to convince San Diego commission merchants that the much-abused "back country" could really beat the world in butter-making.

The firm erected a store at the other end of the valley beside the Julian stage-road, and the traveler who may have occasion to wait there an hour or two any day in the week will discover that J. B. Brackett, a son of J. S. Brackett, is doing what would be termed here a "rushing" business. F. O. Brackett of Sonoma and Miss Brackett of Salinas are the other heirs to their father's portion of the Santa Ysabel property.

The success of the first dairy caused the firm to erect a second about three years ago, but farther up the valley on the south side, and that was followed by the establishment of a third dairy about a mile and a half back of the first. Several different superintendents had been employed up to a year ago, when Samuel A. Rotanzi was induced to leave a similar business in Sonoma and take charge of the three dairies and the range. He is an enthusiast in the work and believes there is no place superior to this county for making butter. Mr. Rotanzi personally looks after every department of the industry, and exercises much judgment in the management of his employes. He has won the good-will of the Mexicans, while the Indian population on the ranch have the highest regard for his wishes. They understand they must behave well if they want to be employed by him in the busy seasons, and those whom he selects as herders know that slack work will lose them any further business with the superintendent. Mrs. Rotanzi exercises a like gentle but firm influence over the Indians with whom she comes in contact, and many of them would suffer at times but for her thoughtful generosity.

Butter-Making.

The Santa Ysabel has a line fence some 30 miles in length; and with the cross fences dividing it into ten fields, from a few acres up to 400 or 500, has about 60 miles of barbed-wire fence. The wild oats, burr clover and bunch grass which mat the fields with green in winter and which when ripe in summer are equally good food, are generally sufficient for the nearly 2000 head of stock now on the ranch, of which 700 head are milking cows. It has happened only three or four times in a season that extra food was necessary. The grant has springs all over it, in addition to the always running Santa Ysabel creek, and the fields all inclose watering spots. The calf crop averages from 300 to 500 head a year. Some of the stock is sold for beef, possibly 100 to 200 head annually, and Julian usually gets some of it. Hogs as well as calves are fattened on the waste milk, and 100 head or more find their way to market yearly.

This season Mr. Rotanzi has had small fruit orchards set out at the dairies as an experiment to find what will grow best in that region, and it is expected that extensive orchards will be planted as soon as the matter is decided. The dairies are raising vegetables, and each makes enough cheese for its own consumption.

The average number of men employed in the dairy industry is 25, exclusive of herders and other help. Mr. Rotanzi now has 12 at Dairy No. 1. The business compels them to be early risers. At 4 A. M. two go out to one of the small fields and drive the herd up to the corral to be milked, which the other ten set about so as to get through before 8 o'clock breakfast. A pipe from a big tank in the dairy-house extends to the corral, ending in a strainer. Into this each man pours his bucket of milk. Within the dairy another employe handles a large bucket combined with a funnel strainer. He turns a faucet in the bottom of the tank and strains the milk a second time in filling his bucket. Ranged around the room are revolving racks capable of holding 50 or more pans each. The rack is a square post fitted each way alternately with two cross-pieces at the proper distance, so that each pair holds one of the broad, shallow pans. Nearly 1000 pans could be accommodated in the room. The milk is allowed to stand from 30 to 40 hours before the cream is skimmed off for butter-making. A stand on castors is wheeled to each rack. The skimmer uses a little wooden knife to loosen the cream from the pan, and gives the latter a quick tilt which slides the cream off into a big tin can. The milk is poured into a basin, from which a pipe runs it to a trough in the hog-pen.

The Cream

Is left to set awhile and is then poured into a funnel, which carries it below to a churn in the cellar. This is a 3x10 box of wood, revolving on a frame and worked by a band running over a wheel. The shaft passes to the outside of the building, where it is turned by horse-power, the average 100-pound churning taking an hour and a half. The full capacity of the churn is 300 pounds. No one knows better than the horse, treading his round outside, when the butter has come. He is sure to stop of his own accord when he knows the work is accomplished. The band is then slipped from the wheel and the butter-maker bares his arms for vigorous exercise. There is a hole in the center of the churn which admits his head and shoulders, so that he can reach all around in it with a short-handled wooden paddle to gather every particle after the buttermilk has been drained off through a hole in the bottom of the churn, and then through a funnel to the hog-pen. The estimate of milk to a pound of butter is three gallons.

He lifts the yellow mass out on the paddle and heaps it up on a round table having a double top, the upper part revolving on a pivot. This is the "Allen butter brake," and has a long paddle working lever-fashion from a hinge on the farther side of the table. The handle is grasped by the workman and the nearly flat blade is brought across the butter, kneading it thoroughly as the table is whirled by the man's other hand. A shower-bath overhead is turned on and the mass washed thoroughly free from milk before table salt is sprinkled on and kneaded in. Then the butter is patted flat and cut up into chunks with wooden paddles. A wooden mold, worked with a pincher handle, is used to snap up these chunks, which are squeezed into a two-pound cylinder form. The ends are lopped off, butter cloth dipped in brine is wrapped around it, the Santa Ysabel stamp is firmly pressed into one end, and the product is ready for market. Each shipping-box holds from 55 to 60 rolls. A square two-pound mold is also used. The year's supply of this butter-cloth for the three dairies is about $500 worth, and comes from San Francisco. Some 100,000 pounds of butter are now shipped to the San Diego commission-men annually, and 10,000 pounds are disposed of at Julian and in that neighborhood. In midwinter the San Diego shipment is from 500 to 600 pounds daily, but in the warm season it is necessarily less, because there is no ice in that section for preserving the butter. Over 400 pounds a day is now being shipped by Foster & Frary's stage-line.

Increased Values.

The water system of these dairies is very perfect, a cistern being made at a spring, and a pipe conveying the water to a cement tank in the cellar, where it is almost ice cold. Hot water for the pans and buckets is got in the washroom of the dairy, where a covered brick tank with an oven in the lower part is always full of water. In the winter it is sometimes necessary to put a stove to maintain the right temperature for the milkroom. Mr. Rotanzi reports semi-annually to his company, paying off the men from the income and placing the surplus in the bank.

The assessed value of the Santa Ysabel land has quadrupled in value in the past year because of the dairy industry alone.

PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

The Grange.

At the suggestion of Bro. John Trimble, Worthy Secretary of the National Grange, we reproduce the following article, which, he informs us, was the result of an interview by a special reporter for the N. Y. *Sun*, and appeared in that journal Sunday, July 27, 1890. The italics are our own:

The oldest and most thoroughly organized combination of agriculturists in the country is the National Grange of the Patrons of Husbandry. Its primary objects are essentially non-political, and most of its work has been in other fields—social, educational and commercial—but the tendency toward political activity which has rapidly developed among farmers within a few months is making itself felt in the Grange. It enjoys the distinction of being the first secret organization in the country which admitted women to full membership.

The history of the Grange is a demonstration of the difficulties which arise in attempting to make any practical combination of farmers. Nominally it has been in existence since November, 1867, when seven men met in Washington and organized what they ambitiously termed "The National Grange of the Patrons of Husbandry." For four years their work in organization throughout the country brought little or no result. But they met regularly under their original title, yielding to no discouragement, although at the third annual session Worthy Master Saunders delivered his inaugural in the presence of Secretary Kelley as his only auditor. The address was printed next day, however, in one or two morning papers, and was distributed throughout the country. Before the fifth annual session was held there had been organized about 200 Granges. In 1872, the Order began to boom, and before the close of the year, 1074 Granges scattered over more than half the States had been organized. During the next two years the Grange had a

Marvelous Growth.

In 1873, 8668 subordinate Granges were organized, and the next year the number was 11,941, but the growth was too rapid for stability. With more than 20,000 subordinate Granges averaging a membership of 40, the Order had become perhaps the largest in the country, but it was weak through lack of organization and discipline. Its membership had not been properly restricted. Everybody wanted to join the Grange then—lawyers to get clients, doctors to get patients, merchants to get customers. A Grange was organized on Broadway, New York, with a membership of 45, and representing, perhaps, as many millions, composed of bank presidents, merchants, sewing-machine makers, and Wall street speculators. The only member who could lay claim to having an interest in agriculture was a merchant who owned a house and lot in the White mountains, where he usually spent his summers. A similar Grange was organized in Boston, and in New Jersey a Grange was formed with a general of the army as its Master, a stone-mason as its Secretary, and the owner of a grain elevator as its Chaplain.

The rapid growth of the financial resources of the Order led to a foolish demand that the surplus cash in its National treasury be distributed among the subordinate Granges. More than $50,000 was thus distributed, and the treasury of the Grange was thus depleted.

Practical Achievements.

Nevertheless the Grange did excellent work for its members in two or three great emergencies. The grasshopper plague of the Northwest brought a generous relief movement from members of the Grange in all other parts of the country. The educational work of the Grange was promptly felt everywhere. Postmasters in all the States testified that the Order had greatly increased the bulk of the mails, and one said that there were 30 newspapers taken at his office where but *one* was taken before the establishment of the Grange. The Executive Committee of the Order found themselves able to make liberal arrangements with manufacturers for the supply of all manner of things to members of the Order at substantial cash discounts. Reapers that were selling at $275 were reduced to $175; threshers at $300 were bought for $200; sewing machines that commanded $75 and $100 tumbled to $40 and $50 These reduced prices were secured under the seal of the Grange, and were issued to members of the Order in confidential price-lists. These reductions and the aggregate purchases of the Patrons startled the middlemen; trade with farmers became disorganized, and it was impossible to permanently maintain such a system of liberal discounts. One point was gained, however, for the reduction in price once secured was never lost. A more permanent advantage was gained by the establishment of co-operative stores all over the country, most of which are still conducted according to the original plan.

Since the great boom which the Grange had in 1872 and 1873, it has suffered a serious reaction. It still numbers more than 26,000 subordinate Granges, but the membership constantly fluctuates and no figures are made public by the officers. The leaders of the Alliance naturally claim that their Order is making heavy drafts upon the membership of the Grange. *It still remains true, however, that the Grange is doing the most valuable and systematic work for the yeomanry of the country, and that its influence, political and otherwise, has scarcely deteriorated.*

In politics the Grange has always been strictly non-partisan, and, indeed, until recently, it has figured almost as a non-political organization.

The Legislative Committee.

Latterly, however, the Grange is doing active work in seeking to protect agricultural interests both at Washington and in State capitals. Its Legislative Committee now consists of J. H. Brigham of Delta, Ohio, Master of the National Grange; John Trimble, Secretary of the National Grange, and Leonard Rhone of Pennsylvania, Chairman of the Executive Committee. These gentlemen have been at Washington during the present session of Congress urging upon the Congressmen the adoption of such measures as were advocated at the session of the National Grange held at Sacramento last November. The Grange has taken a distinct stand upon most of the practical issues now before Congress. Its members demand the passage of pending bills to prohibit the adulteration of food and other commodities. They ask for the suppression of gambling in farm produce; they have declared uncompromising war against trusts, and they favor free coinage and complete remonetization of silver. The representatives of the Grange at Washington have taken an active part in the hearings upon the pending Tariff bill. The Grange is neither a free trade nor a tariff organization. It demands in substance that if there is to be a tariff, the farmer shall get his full share of protection.

While the Grange has taken no official action regarding the sub-treasury plan urged by the Alliance, it may be said that the older organization does not support it. Fully three-fourths of the members of the Grange are, however, in sympathy with the declaration of the Alliance in favor of free coinage of silver.

There is a larger proportion of women in the membership of the Grange, Sec'y Trimble estimating their numbers at 40 per cent of the whole. The Grange is still growing. Last year 204 new Granges were chartered, while this year the number up to date is 363 There are fully 45,000 members in New England, where the Alliance has not yet gone, and there are organizations in every State and Territory in the Union. The next annual convention of the Grange will be at Atlanta in November.

That the Grange has reached a point in politics where it is in a mood to make demands instead of offer prayers, is evinced by the tone of an address which it issued to the members of Congress three months ago.

The article closes with liberal quotations from the Legislative Committee's address, most of which was published in the RURAL PRESS for May 3, 1890.

Hollister Grange.

EDITORS PRESS:—According to announcement, Hollister Grange held its meeting on Saturday, the 9th inst. To the great disappointment of all, Bro. Cressey was not there. W. M., Nash met me at the train on the evening of the 8th and I was entertained at his home with a truly generous hospitality during my stay at Hollister. It is a lovely home in a beautiful country. Sister Nash and their two bright children gave me a hearty welcome, and I shall remember my visit with pleasure.

The Grange was called to order by W. M., Nash, and with the assistance of the officers and members he conferred the third and fourth degrees on a class of twelve.

Hollister Grange has 115 members and 16 applications for membership. There is good material there for a Grange of 200. With the fostering care of the State Grange it will acquire that number by the time the State Grange meets at Watsonville. W. Sec'y Dunlap's books are well kept and in good order. Working tools all right.

After the degree work, an elegant repast, prepared by the sisters, added much to the pleasure of the occasion.

The repast finished, the Grange and invited guests returned to the hall for the literary program, which embraced songs by the Grange, the Misses Smith and Minnie Brown; a solo by Miss Lacque; recitations by Vons, Carrie and Erastus Nash, and Alpha Gray; and an address by Bro. I. C. Steele. These exercises, in which the young people received much applause, completed a pleasant, and, I trust, profitable meeting.

In company with the W. M., I visited his brother, ——— Nash, and family, and sampled their delicious peaches. They have a lovely home, and I greatly enjoyed the visit.

The W. M. also took me to call on Bro. Brown and family. Bro. B. is W. A. S. of Hollister Grange, and a model farmer besides. The immense vegetables, thrifty corn and beautiful fruit that loads the young trees in his well-kept orchard abundantly attest the fertility of the soil and the skill of the husbandman who tills it.

The family horse that Sister Nash drives is a beauty, and can go in 2:20. What do you think of that, Bro. Flint? Don't you want to visit that Grange?

The crops about Hollister are good, the hospitality of the people unbounded. The Grangers and farmers there have formed a union and started the largest general merchandise establishment in the place. They keep everything which a farmer needs. They can furnish goods at greatly reduced prices, and the farmers get the benefit. They are able to regulate prices, and, with good management, the enterprise bids fair to be a success. If they adhere to Grange principles, they will not fail. Every failure in co-operative effort, so far as I know, has been caused by a departure from the teachings of the Grange. I. C. STEELE.

From the State Lecturer.

EDITORS PRESS:—Everybody is busy thrashing (who is fortunate enough to have anything to thrash), fruit-picking, drying, etc. Have just returned from a trip over the Santa Lucia mountains.

Growing Orchards.

Orchards in that section are nearly all young—recently planted—but looking thrifty and promising. The country about Templeton, Paso Robles and San Miguel, in fact all the eastern portion of San Luis Obispo county, will become a great fruit-producing district in the near future.

Rumor says that a large tract of land on the Carissa plains has recently been purchased by a wealthy fruit-grower of this State with a view to planting in fruit trees of various kinds. Remember that this region a few years ago was considered good for nothing but to graze sheep and cattle. Who knows but this long neglected and apparently God-forsaken region may vie with Kern, Tulare and Fresno in the production of choice fruits? When the much-talked-of railroad from Tulare to Port Harford is built (as it surely will be before many years) this region will settle up with a thriving and industrious population, who will root out the old sheep and cattle herders and rapidly develop its latent resources.

Crops

In the vicinity of Templeton, saw thrashing machines at work. Some fields of wheat are yielding well and the quality is excellent. Mr. John Gibson had a field of wheat which would compare favorably, both in yield and quality, with the production of any previous year.

The completion of the S. P. R. R from Santa Margarita to Ellwood is the all-absorbing topic in this neighborhood. We all want something, and we think it is the railroad just now.

Read "Wanderer's Return from the North" with much interest. Hope Sister McConnell will favor us again and often from the quiet retreat of her happy home.

Thanks to Bro. Hilleary for copy of Oregon State Grange Proceedings. Hope he and other good Patrons from Oregon will favor us with their presence at the coming session of our State Grange.

Grange matters are very quiet in this section just now; farmers all too busy to give any special attention to Grange work. Next month we hope to take hold with renewed interest and vigor.

Arroyo Grande Grange

Has held regular meetings right along, with fair attendance at each meeting. The Arroyo Grande Patrons are very determined to make their votes tell at the coming State election, so far as possible, in favor of the farmers' interests; intend to support good, competent and trustworthy men only for State and county offices.

At the last meeting of our Grange, on the 2d inst., we discussed the question of co-operation in the purchase of supplies. The members present, without a dissenting voice, favored the Pennsylvania or some similar co-operative method of making purchases.

Co-operation.

What is the matter with the Patrons, the subordinate Granges of the State, that they do not respond to the proposition of our State Executive Committee, issued some time ago? Unquestionably the Grange is doing much toward educating its members intellectually, socially, politically and morally; but there can be no doubt that successful co-operation among them on some financial line—say in the purchase of *all* the supplies needed by the farmer—would greatly promote and strengthen the growth of the Order. Why this hesitancy on the part of subordinate Granges to take hold of this matter and push it to a successful issue? I hope this subject will be largely considered at the approaching session of the State Grange.

Our Grange has determined to confer the third and fourth degree, have a Harvest Feast and open meeting on the third Saturday in September. All Patrons are invited to attend

GEO. STEELE.

THE INTERSTATE COMMERCE COMMISSION has issued an order, to take effect on Sept. 1st, for a reduction of rates in food-products, based on a report sent to the Senate on June 7th. The order is accompanied by a copy of that report, also an opinion of the Commissioner overruling the protests and motions of roads to dismiss for want of jurisdiction. This opinion reviews the powers and duties of the Commission in the matter of beginning and conducting the investigation, and the Commission holds that its proceedings are legally sufficient and the reductions are necessary to make rates reasonable.

Notes of Preparation.

EDITORS PRESS:—The people of Watsonville and vicinity are beginning to realize that a great State conclave is soon to claim their hospitality and enjoy the beauty of their valley and its environments for at least a week. The energetic City Trustees, fully alive to the golden opportunity presented for benefiting the prosperous commonwealth which they have the honor to represent, declare that they will push to completion all city improvements now under process of construction, have the streets sprinkled and the city put in its Sunday clothes generally.

One enthusiastic Trustee even went so far as to offer to give up his room and bed, if necessary, to accommodate visitors. Said he: "We must treat these Patrons in such a manner that they will always remember their meeting here as the pleasantest one of their lives," an expression which will be ably seconded by our people, and with a little of the fire borrowed from our wide-awake "City Dads," not only will the Grangers be well received and entertained, but Watsonville will become noted as the rising star for public favor, which cities of denser population but no better facilities have lacked the energy to secure.

In verification of this it may be in order to state that Watsonville has already received the additional honor of being selected by another great State body as the place of holding its annual convention next year.

The Board of Fair Directors will doubtless be heard from later in an unexpected way, as they will not be caught napping. The most amicable relations have always existed between the W. C. T. U, the Native Sons and Daughters, and the Grange, fraternal greetings often being exchanged.

The Native Daughters, especially those of Sacramento, conferred lasting honors on every Grange in the Union by their splendid treatment of the National Grange. Their womanly sentiments and kindly acts not only made Californians proud of them, but gained them volumes of praise in the annual reports of State Masters before their Granges. It is needless to add that those of our valley are composed of like pure metal, with the same true ring. All classes of citizens will vie with each other in making the stay of the distinguished visitors (the delegates of the foundation of all wealth) interesting and agreeable.

A pleasing feature will be the meeting of the southern Granges with their northern neighbors—an event which has not occurred for years, owing to their great distance from the center or Grange home. This time they are met midway and, of course, will respond with heavy delegations. In the event of large numbers taking the higher degrees (which is confidently expected), Worthy Master Davis is contemplating an unlooked-for pleasure for them.

Following are hotel rates for Grangers at Watsonville:

Mansion house, first-class board and lodging, $1 50 per day.

Lewis house, first-class board and lodging, $1 50 per day.

Watsonville house, first-class board and lodging, $1 25 per day.

Washington house, first-class board and lodging, $1.50 per day.

Morning Star hotel and restaurant, first-class board and lodging, $5 per week.

Germania hotel, first-class board and lodging, $1 per day, $4 per week.

Other hotels and restaurants will be reported later. Patrons wishing to engage rooms in advance can do so by addressing Box 263 Watsonville, Santa Cruz Co., Cal A. P. R

A Kindly Protest from the Alliance.

EDITORS PRESS:—In the PRESS of June 28th, in the column headed "The Master's Desk," W. M., Davis of the S. G. says: "If it be true, as is stated, that the managers of the Farmers' Alliance in Texas have squandered or stolen $1,000,000, then it is time for farmers who are thinking of joining the Alliance to inquire into the new organization and its management."

I doubt not Bro. Davis (for we are brother Grangers) was sincere in his words of caution to farmers; yet he himself seems to have omitted "to inquire into the new organization and its management" before giving currency to a statement which would, if true, reflect such discredit on the local officers or managers of the Alliance in Texas, and I am ready to believe that he will be only too glad if it is shown that so far as squandering or theft is concerned, the statement is wholly false.

The appended slip is from a letter to J. S. Barbee, State Organizer of California, by J. H. Turner, Sec'y National Farmers' Alliance, Washington, D. C:

The report from Texas, to which you refer, is the same old story, and is circulated by our enemies, the subsidized press, for the purpose of injuring the Order. . . . The Order in Texas is in a better condition than it has been for two or three years. Doubtless the exchange has made some blunders, but that can never stop the people from their demands for justice.

The following letter from S. O. Daws, Sec'y Farmers' Alliance of Texas, was received by me a few days ago:

SPRINGTOWN, TEXAS, July 26, 1890.

Mr. L. Jared—DEAR SIR AND BRO:—Yours o

5th inst. at hand, and will say that the statement published, that the officers or managers of the Farmers' Alliance of Texas have at any time in the history of the Order swindled the members out of vast sums of money, is false. . . . There is not now, nor has there ever been, a complaint or charge of fraud by the outside or the inside world that can be substantiated.

S. O. DAWS,
Sec. F. A. & I. U.

(In the above letter I have omitted what does not bear directly upon the published charge of fraud.)

Mr. E. Morris, a gentleman from Texas, and a member of the Order, while there, says he knows exactly where the report was coined and in what paper it was first published; that there was a clique of politicians in Texas who, when they found they could not make use of the Order for party purposes, incubated the lie and set it afloat in a paper controlled by themselves.

That the officers or managers of local organizations may have made mistakes in the conduct of a business which is new to them, and withal somewhat complicated, may be frankly admitted. The Farmers' Alliance would be a marvel of human perfection indeed, if, with a membership of 3 000,000 and conducting the vast business of its National, State, county and subordinate organizations, together with its exchanges for the sale of farmers' products and its business with wholesale houses and manufacturing establishments in most of the large cities—it would indeed be a living wonder, a veritable miracle, if, in the conduct of all this business, it made no mistakes. I think that even its warmest friends make for it no such extravagant claims of superhuman perfection.

L. JARED.

War on the Lottery.

Dispatches from Baton Rouge (La.) state that the Anti-Lottery League, which held its convention there on the 7th and 8th inst., with 400 or 500 delegates in attendance, has issued an address to the people of the United States, denouncing the Louisiana lottery and averring that it uses its immense revenues to corrupt the Legislature and the moral sense of the people. It also declares that the lottery is fraudulent, which is shown by the fact that the lottery company can sell 75 per cent of its tickets, pay 10 per cent for selling them, lose all the prizes provided for in the scheme, pay $1,000,000 for expenses, and still make $3,000,000 profit per annum. The address recommends to Congress the immediate adoption of an amendment to the Federal Constitution, prohibiting any State from chartering or licensing any lottery or gift enterprise, abolishing those already established, and giving Congress power to enforce prohibition by appropriate legislation. Pending the adoption of such an amendment, it urges that all lottery matters be excluded from the mails and express companies.

Among the resolutions adopted was one to boycott the *Times Democrat* and the *Daily States* of New Orleans, on account of their pro-lottery sentiments.

The Newspaper Committee reported that $30,000 had been guaranteed for a newspaper to be published in New Orleans in opposition to rechartering the lottery.

At a meeting of the Farmers' Alliance at Baton Rouge on the 9th, resolutions were adopted denouncing the Alliance men in the General Assembly who voted in favor of rechartering the Louisiana Lottery as traitors to the cause and principles of the Union, refusing to affiliate with them as members of the Order, and recommending subordinate Unions to expel them; also reiterating pledges relative to the lottery, denouncing it as a vile curse and enormous iniquity, which they feel more determined to-day than ever to combat, and resolving not to let their energies relax until this enemy is driven from the State.

An Interstate Commerce Decision.

On the 7th instant the Interstate Commerce Commission announced its decision in the case of the San Bernardino Board of Trade against the Atchison, Topeka & Santa Fe Railroad Co. and others. The decision is in favor of complainant.

The complaint alleged that the railroad companies charged more on certain specified commodities from Missouri-river points, St. Louis, Chicago, Cincinnati, Detroit and New York to San Bernardino, Cal., than for a longer distance over the same line, to Los Angeles.

The points decided are briefly stated as follows: "Where the complaint alleges that a greater charge in the aggregate for the transportation of a like kind of property is made for a shorter than for a longer distance over the same line in the same direction, the shorter being included in the longer, and that unlawful preference is thereby given one locality over another, it is held that the complaint is sufficient to put the carriers on proof that the services were performed under such dissimilar circumstances as to justify the greater charge. Water competition which will justify a greater charge for a shorter distance by railroads must be actual. Possible competition will not justify such greater charge under the provisions of the fourth section of the Act to regulate commerce.

"The filing of schedules of rates with the commission, as required by the statute, raises no presumption as to the legality of such rates, and no omission or failure to challenge or disapprove the schedules of rates so filed can have the effect of making rates lawful which are unreasonable."

Magnolia Grange.

EDITORS PRESS:—By kind invitation of Bro. and Sister HORN, I appeared at Clipper Gap Friday afternoon to accompany them to Magnolia's anniversary on Saturday. The day being a little warm and no wind stirring, the brothers invited me to take a seat in the family rocking-chair under the wide-spreading boughs of (probably) the largest English walnut tree upon this coast.

A Giant Juglans.

The limbs cover a space of about 90 feet in diameter, and the trunk of the tree, one foot from the ground, is nearly three feet in diameter. It stands 16 feet from their two-story house and three of the limbs cover almost the entire roof. It seems to be well loaded with nuts, which sell readily at 20 cents per pound for planting purposes. It grows in red soil in a ravine but has not been irrigated. I think the RURAL PRESS once had a description of this tree, which is about 30 years old and the largest but one I ever saw. While at Interlaken, Switzerland, last year, I saw one that took one clasp of my arms and two of my companion's to span it.

There is something about this red soil that is famous for tree and vine growth. Bro. Horn has

The Kittatinny Blackberry

With stocks 16 feet high and canes as large as the largest-size walking sticks.

Saturday morning, with a strong and willing pair of horses and easy-riding wagon, the brother and sister, with myself and three young Grangers, started over the hills and through the valleys for Magnolia Grange, a distance of nine miles.

We Forded Bear River.

Looking up and down the stream for the animals from which, I suppose, it took its name, I saw nothing but immense beds of gravel, which to own would make a Sacramento contractor chuckle in his boots. This celebrated river is the dumping ground for Dutch Flat and Gold Run hydraulic mines. The river is very low, but the muddy water shows that mining is still going on.

Approaching the hall, we saw Bro. Huffman from Lodi, with his broad-brimmed hat, and about 20 others sitting around in the shade of the great oaks and pines. The hall and one farmhouse are situated in an opening or clearing, and no other buildings are to be seen, which slightly discouraged the brother from Lodi, as he could not see where any more Grangers could come from. Soon he peeked down under the trees and chaparral and saw them come pouring out, with double teams, saddle-horses and on foot—to his astonishment. Owing to a fatal accident to one of their prominent members, the attendance was not so large as expected, and the evening party was omitted. Every one seemed in the best of spirits, and all did their best to contribute to the enjoyment of

The Anniversary.

It was more of a picnic than a Grange feast, for instead of setting a table in the hall, they spread their lunch under the trees, where several families joined.

Lunch being over and the footrace finished, all were called around the speakers' stand, where an excellent program was rendered.

The writer being a little off on account of malarial fever, Bro. Huffman came to his rescue manfully and made a fine speech, which was well received.

The program included dialogues, recitations, songs and pieces in character, some of which greatly amused the audience.

This exhibition demonstrated the fact that Magnolia Grange is not second in talent to any other in the State. She may lack a little in practice, but nothing in confidence and will-power. The active part the young people took to-day goes far to compensate their parents for the hours of anxiety devoted to their welfare. What a gratification it must have been to their fathers and mothers to see them in their nice clean holiday suits, acquitting themselves so well!

The Grange

Is the very training school for old and young, to prepare them for the active public duties of life.

Sister Still had charge of a booth where were dispensed cool temperance drinks, ice-cream, watermelons, nuts and candies. She may be growing older in years and losing some of the sparkle of the eye and bloom of the cheek possessed by the numerous young ladies present, but for activity of motion and being in the right place at the right time, no 16 year-old girl has the best of her; and as to her making a cup of tea to quench the thirst of a tired Granger, consult Bro. Overhiser.

When all the young people and youngsters present join the Grange, they will have to put on an addition or build a new hall. It is seldom that so many children are seen at a Grange entertainment.

I think Bro. Huffman is prospecting for a new location, for he remarked to me with a great deal of satisfaction that he never saw such fertile soil or so prolific a section.

Brother Grangers of Lodi, see that he is made contented, or the attractive foothills will be in possession of your chief wrangler!

Bro. Still acted as Master of Ceremonies with the coolness and good judgment for which he is noted.

May Magnolia Grange be as conspicuous in our Order as the fragrant flower from which she takes her name.

D. F.

TRACK AND FARM.

How Salvator Won.

The gate was thrown open, I rode out alone,
More proud than a monarch who sits on a throne.
I am but a jockey, but shout upon shout
Went up from the people who watched me ride out,
And the cheers that rang forth from that warm-hearted crowd
Were as earnest as those to which monarch e'er bowed.

My heart thrilled with pleasure so keen it was pain
As I patted my Salvator's soft silken mane;
And a sweet shiver shot from his hide to my hand
As we passed by the multitude down to the stand.
The great waves of cheering came billowing back,
As the hoofs of brave Tenny ran swift down the track;
And he stood there beside us, all bone and all muscle,
Our noble opponent, well trained for the tussle
That waited us there on the smooth, shining course.
My Salvator, fair to the lovers of horse
As a beautiful woman is fair to man's sight—
Pure type of the thoroughbred, clean-limbed and bright—
Stood taking the plaudits as only his due
